California State Library

No. 68470

*When, from whom, and how this volume was obtained,
with the price paid, if any, may be found opposite
the above number in the Register of Books,
which is always open to inspection.*

Extract from the Political Code.

SECTION 2296. Books may be taken from the Library by the MEMBERS OF THE LEGISLATURE, DURING THE SESSIONS THEREOF, and by other State officers at any time.

SEC. 2298 The Controller, if notified by the Librarian that any officer has failed to return books taken by him within the time prescribed by the Rules, and after demand made, must not draw his warrant for the salary of such officer until the return is made, or three times the value of the books, or of any injuries thereto, has been paid to the Librarian.

SEC. 2299. Every person who injures or fails to return any book taken is liable to the Librarian in three times the value thereof.

No person shall take or detain from the General Library more than two volumes at any one time, or for a longer period than two weeks. BOOKS OF REFERENCE SHALL NOT BE TAKEN FROM THE LIBRARY AT ANY TIME.—[Extract from the Rules.]

The foregoing Regulations will be strictly enforced.

Vol. XXXV.—No. 1.

SAN FRANCISCO, SATURDAY, JANUARY 7, 1888.

\$3 a Year, in Advance.
SINGLE COPIES, 10 CTS.

Shire Horses.

Importers and breeders of Shires may well feel encouraged at the outlook for these noble horses. They have grown gradually in public favor in the United States for 14 years, and rapidly during the past five; they have gone ahead with a rush the last two years, carrying everything by storm, having won first prize at every prominent show throughout the West where they have come in competition with other draft breeds.

At the Chicago Fat-Stock and Horse Show they have won first for three years in succession. For two years it was won by Geo. E. Brown & Co.'s Holland-Major (3135), and was open to the world for draft horses of any breed.

The reason why the Shire impresses every practical horseman favorably at a glance, and bears a critical examination, is because of his nicely balanced proportions, together with his wonderful bone and muscular development. There is no surplus or useless weight about him—every part being available and every part in proper proportions. We refer our readers to the picture of the imported Shire stallion Scampston Tom, which appears in this issue. He is a grandson of old Honest Tom 1111, one of the most noted Shires and greatest prize-winner in England.

How many times we see heavy horses whose weight is a positive disadvantage to them, for the reason that their bone is too light and muscle and sinew deficient. Some that appear to have strong legs will not bear close inspection, for the bone is found to be round and covered with meat instead of being backed by sinew. This fault is rarely found in the Shires; their legs are not only large, but the bone is flat and flinty in quality and the sinew well defined and not hidden by fat or flesh.

A well-bred Shire has a clean, bony head; prominent, bright eyes; neck well set on massive shoulders, and carried high, rising gracefully from his withers; the body is deep; ribs, well sprung; loin, strong; quarters, long and carried well out to the tail and not drooping; thighs, heavy and extending well down to the hock, a point where many others are deficient. They vary in weight from 1600 to 2000 pounds; the larger ones measure 11 to 12 inches below the knee and 14 inches below the hock; and their feet are exceptionally good. English breeders are compelled to be particular on this last point, for a poor foot could not stand the stone roads of the country nor the granite pavements of the city.

No other horse has the hardy constitution or natural energy of the Shire, and it is these qualities that are bringing him to the front.

They are worthy the careful attention of all breeders of heavy horses for practical purposes. They are commanding high prices in the Eastern cities and in the lumber regions.

INCREASING USE OF BISULPHIDE OF CARBON.—M. Pasteur anticipates that bisulphide of carbon will become the most efficacious of all antiseptics, as it is also the cheapest, costing but a fraction of a penny per pound in large quantity. It is also the best insecticide known, and for this purpose may perhaps be useful to preserve woodwork in tropical coun-

A Great Canal in Asia.

The proposed canal between India and Europe by way of the Euphrates Valley, the Persian Gulf and Syria, has been discussed in all its bearings by the French Academy of Sciences, a communication on the subject from M. Eude forming the basis of the discussion. The line marked out by M. Eude is stated to be what was the great route of commerce in ancient times, before the founding and development of Alexandria diverted it on Suez, eventually leading to the Suez canal. This new route is avowedly put

Our Wool Product.

In view of the tariff agitation the statistics of the California wool crop for the year become of special interest. We will give in our next issue an annual review in detail of the subject, but may state at this time that statistics show the yield of last year to have been the smallest since that of 1873, and a decline of over 25,000,000 pounds from the crop of 1876, which was the largest in the history of the State. Another way of stating it is that the crop of 1887 was less than three-fifths of the crop of the centennial year. Of course this decrease has been in part directly due to the fact that the old sheep ranges of the valleys have been found more profitable for other uses, and that now orchards, vineyards, and even thriving towns and cities stand where the sheep tramped ten years ago, but this great decrease of the product would not have been experienced had not the tariff-reform fever started in about that time, and has raged ever since, until the whole business has been discouraged and unsettled. If the favoring conditions had been held out to the wool-growers which ministered to the uprising of the interest from 1867 to 1875, the taking of the richer lands for more profitable cultures would not have so reduced our wool product. The sheepmen would have sought places in the waste lands, which are still in immense area in this State, and would there have maintained their flocks and sent on their large clips. Besides this, a good price

for wool would have induced a large keeping of sheep on small farms, where, by the aid of alfalfa and other tame pasture, we should have increased and improved our wool and mutton product by better feeding and better breeding than sheep ever had on the wild ranges. This being true, it is clear that to the tariff reformers is due the decline of this important interest, and all that is needed to carry on the unfortunate decrease is to complete the program of the free-traders and put wool on the free list. Then California will well-nigh expire as a wool State, and our flock-masters can sit on their fences and count the cars of Australian wool which will keep up the wool traffic of the overland lines.

This will not be a good state of things. It is true that we have other sources of wealth and are progressing rapidly in developing them, but we are not rich enough, nor shall we ever be rich enough, to dispense with the golden tread of the sheep. Our prosperity calls for the utilization of all resources, and the pickings of the sheep upon our mountain-sides should always afford livelihood to thousands of well-to-do people.

ENGLISH SHIRE STALLION SCAMPSTON TOM—IMPORTED BY GEO. E. BROWN & CO., AURORA, ILL.

tries. Some idea of the use it is already put to may be gathered from the fact that over 8,000,000 pounds of the substance are used annually to check the ravages of phylloxera. Carbon bisulphide, as first produced, is about as foul-smelling a compound as it is possible to find; but it is capable of purification till all offensive odor is removed and it is sufficiently pure in smell almost to mix with a perfume.

THE MIRAGE OF SOUND.—M. Fizeau, of the French Academy of Sciences, calls attention to a curious acoustic phenomenon, which is sometimes observed at sea, and to which, from its analogy to the well known phenomena of light, he terms the "mirage of sound." Under the influence of strata of air of various temperatures, he finds that the sound waves may be deflected upward to a very marked extent. He considers this phenomenon responsible for the numerous recent collisions between ships provided with powerful fog-signals.

MRS. WATSON, who some time ago established a home for girls in Los Angeles, has at length succeeded in her later project of starting a similar home for boys in that city.

forth as a parallel way to that of Suez, and the project contemplates, in fact, a canal with a double aim, viz., a canal of irrigation and navigation—and by which means it is expected that fertility will be restored to those wastes. The plan is to create a river from Souseidieh to the Persian Gulf, by making the Euphrates flow to the Mediterranean by Aleppo and Antioch; from Beles, in deepening the river from Beles to Felondjah, near ancient Babylon; in passing from the Euphrates to the Tigris by the canal of Saklavijah; and lastly, in descending the Tigris from Bagdad to Kornab, Bassora, and Fao on the Gulf. Such a canal would shorten the going and coming voyage to Bombay by six days; and, notwithstanding the vastness of the work, the engineering difficulties are not considered extraordinary, except the stony banks of Abou-Said and Kerbeleh, which, however, would not resist modern appliances.

An iron pier is to be built at San Pedro, just beyond Deadman's island, to be a double-decker and to extend far enough into the water to allow the largest steamers to discharge passengers and freight upon it.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Green Valley, Sonoma County.

EDITORS PRESS:—This is the time of the year when we usually read in the papers that the early rains have spoiled the dry feed, and as the young grass is not yet grown enough, cattle are suffering, and consequently farmers are complaining, but this year it is all different for a change.

We did not have rain to hurt dry feed till after Thanksgiving; even now in sheltered places there are good sound grapes hanging on the vines, and when the rain did come it was accompanied by mild, growing weather, so that the hills are already showing the effect in the fresh green color, and even Green Valley greets us with a greener grin; but the farmer is again reported as complaining; this time they say that during all this glorious weather, stock ate up all the dry feed and now there is no feed of any kind, dry, spoiled or unspoiled, or green feed either.

Improved Farming Methods

Each year add some farmers to the list of those who realize that a few animals well kept are more profitable than a large herd of poor, starving brutes. That we have an unrivaled climate for raising domestic animals is true enough, but when they have eaten everything green and dry within reach, it is time to concede that they cannot live on climate only, but need some of the productions of our soil and climate combined. It is not so many years ago that the pastures of some of our sheep-raisers would contain almost as many dead lambs and sheep as living ones, and that owners of six or seven cows bought milk from neighbors who only kept one or two. It may be that the improvement in that line is due more to financial than humanitarian causes, but the effect is the same.

General farming is also done in a much more systematic way than formerly. It was a common practice to sow the same fields every year successively to grain and afterward to wonder why the grain should contain so much more mustard and radish than it did in former years, and why hay should be so much of the sheep-sorrel variety. But the fruit tree and the grapevine are crowding hay, corn and potatoes so much that we have to get even by raising more to the acre.

Orchard Notes.

It is easy to see what is a farmer's favorite piece of land. In former years what manure our farmers did not put on their vegetable plot would go to the hayfield, but lately the peach trees receive the friendly dose. Something curious about this is that without almost a single exception the manure is piled three or four inches high right around the trunks of the tree, and no one seems to bear in mind that a good healthy tree should have its fibrous roots scattered all through the ground between the rows and surely not at the stump.

Nurserymen expect a large demand for peach trees this year, and have prepared to meet it by fixing the price of trees at 25 cents. Different persons here complain that they had engaged olive trees at a certain price during the summer, but have been notified that trees could not be delivered. The nurseries are out of that kind of trees, not because they did not raise them, but that kind of trees are now transferred to a higher priced department, where we will be pleased to receive orders from our many friends and former patrons, who will find all our trees free from insect pests and true to name.

Pruning has begun in earnest and will be our principal occupation for some time. Most of the grain is sown and up. There has been just about enough rain for plowing, and not so much as to make the ground too wet.

Weather Prophecies.

The oldest inhabitants are again predicting all kinds of winter. A sportsman once told me that he had noticed rabbits, or rather hares, would be very fat before a heavy winter, and without a sign of fat in case of a mild winter.

It was a few days before Thanksgiving; there had been a light rain which cleared the air of smoke, and nature looked so fresh, the sun shone out so bright, and the air felt so balmy, that I concluded to give myself a holiday to see how my neighbors were getting along, and took my gun to be prepared for the festive jack, whom I wanted to dissect, so as to know what sort of winter was in store for us.

Notes of a Ramble.

Green valley is divided from the Santa Rosa plains by a strip of rolling land or very low hills, of which every foot is cultivable.

Beginning at Sebastopol, a place of 400 or 500 inhabitants, this strip of land is almost level with the lowland of Green valley and the Santa Rosa plains, but rises almost imperceptibly toward the north. At the edge of town, so close that some of the houses built on it constitute part of Sebastopol, is the tract of land known as the Hunter place. Fifteen years ago this place of several hundred acres was offered for sale at \$5 an acre; it was covered with fir and manzanita, and now what a change! As I strolled along through young orchards and vineyards, I noticed the improvement in the modern way of building the houses found on every 20 or 30 or 40-acre place. Why is it that people never found out before that by building

a house three or four feet above the ground, and putting in one or two bay-windows, the same material will make a cottage that looks twice as neat as the old-style house?

As I walked along I saw places enough where the rabbit had tasted from the growing plants and the apples under the trees; but when you have a gun you never see any game.

After leaving the Hunter tract, we, that is, my gun, my dog and I, found the places a repetition of the former ones, though not quite so far advanced, little orchards and vineyards, intermingled with patches of brush and fields, just cleared, with the wood piled up ready to be hauled off.

Respect for the Picturesque.

A new settler's aim is always to clear a piece of land, and he generally begins near his dwelling and fences each piece as it is cleared, making his place a labyrinth of fences and gates and without a single shade tree. But most of our new-comers are people from towns, whose object is to have a nice home, and as I passed along I did not find it hard to see the difference. They build their house on the prettiest spot they can find; if the land is not all cleared they keep a grove of natural trees and shrubs, to hide the barn and outhouses, and surround their dwelling with fruit and ornamental trees and vines, with a driveway to the front door and no more fences than possible. A place like this, without a solitary pig or cow or chicken in sight, may be lonesome, but it is surely pretty. When I had passed through three or four miles of these little farms I came upon a young vineyard of about a hundred acres in one piece and surrounded on four sides by brush. This is to be the future home of a San Francisco furniture manufacturer. A little further on I saw about a mile ahead on the highest place in sight what looked like a one-story Chinese pagoda, and thither I went through a piece of forest, a good sized orchard, a vineyard, a stubble field, another orchard, another vineyard, then some brush land, and there I was. The pagoda contained a 25,000-gallon water tank and was to be filled from a well nine feet in diameter which was just in course of construction. The property belonged to Mr. Tucker. Last year Mr. Tucker bought 40 acres of brush land and cleared and planted it all to vines before spring. This year Mr. Tucker bought again 40 acres which will also be planted without delay. Mr. T. told me it was his intention to purchase more land until he had as grand a home as any man in the county. We climbed the stairway which leads to the top of the building, and a beautiful view we had within a distance of a mile and seeming all below us. Mr. Tucker pointed out the 160-acre vineyard of W. Hill, the Petaluma banker, the 100-acre farm of Mr. Frye, four 50-acre vineyards belonging to Messrs. Copius, Clark, Cessary and Surryhne, and nearly a dozen smaller ones, among which was Mr. Tucker's. In a few years this will be the center of a solid block of 3000 or 4000 acres of grapevines.

Just as I was preparing to take some notes of the surrounding landscape the gong told us that dinner was ready, and as I was only clothed with a pair of overalls and a cotton shirt, I thankfully declined an invitation to dine, and pursued my way toward the Hill vineyard, which was in sight.

A Fine Outlook.

Without knowing that the ground was constantly rising and busy to make up with second crop grapes what I had lost by going without a dinner, I suddenly became aware that the tank which I thought the highest point in the neighborhood was quite below me, and far beyond to the south over the top of that tank I saw the gum tree covered hills of the Petaluma sheep ranges and beyond them Mt. Tamalpais and the hills skirting San Francisco and San Pablo bay. Toward the east came first the central valley of Sonoma county, about eight miles wide, with Santa Rosa in the distance, guarded by Taylor mountain, a spur of the Mayacema mountains. There was Bennett peak holding guard over Bennett valley, and Hood's mountain of the Guilocoos valley.

A little more to the north was Fulton and St. Helena mountain in the distance and the hills toward Cloverdale. On the west the redwood-covered hills, the freshest, pleasantest looking border of them all, and right before me was

Green Valley.

There's not another valley in all Sonoma county half as pretty, nor as fit for a country home. And as I saw the houses and orchards and vineyards all around where five or six years ago was only brush and timber, I sat me down there on the ground among the vines, in the middle of November, coatless in the sunshine, chuck full of grapes and admiration for the country around me, and wondered how any one who had the money to pay his fare could want to live in any other land.

How to Hit a Jackrabbit.

Suddenly there was a yelp—my dog had started a jack. I jumped up, saw where the jack was going, marked the place where he would next jump, sent a load of shot there, and the jack jumped into it and died. This is quite easy. I can send the load of shot every time the gun goes off, and the jack jumps into it at least nine times out of a hundred for me.

But whether it was the sight of blood or what, I do not know, but nature had lost its charm for me, and I dragged myself and that jackrabbit along the seven miles of road toward

home, and I got there tired, hungry and disgusted.

The rabbit was the fattest I have ever killed, and the winter so far has been so mild that any one but a Californian would be glad to have it for a spring. A GRANGER.

Green Valley, Sonoma Co., Cal.

HORTICULTURE.

The Apricot.

[An essay by Dr. Edwin Kimball of Haywards, read at the Santa Rosa Fruit-Growers' Convention and furnished for publication in the PACIFIC RURAL PRESS.]

It was a happy thought of the old mythologist in giving a distinct personality to all things. There was a real life in all; the material as well as the invisible became living spiritual personalities. The sea spoke of peace, joy, remorse and eternity. The rolling thunder was the voice of the mountain and the lightning was the flash of Jove's resplendent armor and his invincible power. The wind spoke with a hundred tongues. Each leaflet of the forest, each blade of grass, murmured the song of hope, love and exaltation. Nature far and wide, above and below, was a revelation. And so to the devoted orchardist, as he walks alone and in silence among his trees, come the quiet whisperings of their wants, their hopes and fruition. They trust him like children. His will is their law, for he is their creator. So in thinking of a fruit tree we may elevate it to the dignity of a living, breathing personality that may live after us and bestow its blessings in annual gifts upon our children.

Among all our fruit trees, the apricot is one of the most beautiful. Away back in the dimness of years, it was first known in Western Asia, the cradle of the human race. It has survived the rise and fall of dynasties and all the mutations of empires and kingdoms. The Assyrian, the Babylonian, the Persian, have in turn planted the imperial tree, rejoiced in its fruitfulness and bestowed its delicious conserves and delicate wines in offerings and oblations on the altars of their divinities. It still abides in its old home and may be found in all the orient. The traveler may now sit under its broad-spreading branches from the Euphrates to the Mediterranean, and from the Black sea to the Persian gulf. It has followed the march of man and civilization west through Southern Europe and Northern Africa to the pillars of Hercules. It has crossed the sea, traversed a continent, and found at last in our generous soil and genial climate the land of promise and hope.

There is no exhibit that demonstrates more thoroughly the richness and glory of our fruit wealth than a well-kept apricot orchard. The fruit is beautiful and luscious; the tree is grand and imposing; its branches reach out in their strength and greet the strongest breeze with joy and delight. The almond is only in advance in its bursting blossoms in the spring-time, but soon is overshadowed by the richer, warmer beauty of its expanding petals and golden crown. Its first leaves tell us of its Eastern home, tender, delicate and variegated as the song of the Persian poets. They broaden out in richest green, luxuriant and triumphant in orchard beauty. The orange is solemn, rich, magnificent; it is for all the year and lives a century. But the apricot comes like a surprise. It runs riot with joy and promise and culminates like a golden dream of riches.

The apricot is at present the tree of hope for many parts of California. It belongs to us alone, for no other State of this broad land can raise the apricot with success and profit. No fruit tree is more vigorous in its growth, more rapid in its development, and swifter in repaying a hundred-fold the generous care bestowed by the intelligent orchardist. The way is clear for the future of a great industry, and the question arises, where in this great State, of almost boundless extent and possibilities, the apricot should be planted to attain the most productive results. It can be grown on all our hills and in all our valleys, for it is tenacious of life under the most adverse conditions; but it is in deep, rich, alluvial soils, thoroughly drained, where the temperature is even, and where the atmosphere is softened by the breath of the sea, that it attains its greatest size, its most beautiful coloring, and its most exquisite flavor. It is in bloom earlier in the bay and Southern coast counties than in the interior valleys; but the intense, dry heat of the interior brings the apricot to maturity a month earlier than in the more temperate region of the bay and coast. Thus it will be perceived that the intelligent orchardist will select a suitable location if he desires in this branch of orchard industry sure and substantial results. Many extensive apricot orchards have been planted in this State that have been positive failures, and many that produced indifferent and uncertain crops of fruit.

The apricot will grow almost anywhere in California. Down on the banks of the Colorado river, stimulated by the intense heat and abundant irrigation, its growth is rapid, and in fruiting it is precocious. Even under the burning sun and desiccating atmosphere of the Colorado desert it triumphs and yields its tribute of the earliest fruit in the State to the salamander-like cultivator. It flourishes in the many oases that the hands of diligence and labor have developed in many of the southern portions of the State. From the Tehachipi through the great

inland empire of the San Joaquin, along the foothills of the Sierras to the Shasta mountains; through the broad, rich valley of the Sacramento, in all the valleys around the Bay of San Francisco, in all the sheltered nooks of the Coast Range down to San Luis Obispo, where it reaches down almost to the ocean shore and continues to the Mexican line. Here is a wide scope of country where its cultivation is possible. But its success is certain and its cultivation the most profitable where it breathes the salt air of our magnificent bay and looks out from the tranquil shores of the Pacific.

The Asiatic coast of the Black and Mediterranean seas has been noted in all time for this beautiful fruit. Greece, Italy, Southern France, Spain and Portugal now cultivate the apricot, and with them we must contend for the possession of the world's market. We may safely claim the whole North American continent as our exclusive heritage for marketing this fruit. Our superior product and import duties preclude the possibility of any interference with this great empire and its teeming millions.

Varieties.

The varieties of this fruit are marked and distinct. The Moorpark is doubtless the largest and finest flavored of all apricots, but there are many places where its fruit is uncertain, and when it does produce it ripens unevenly. It is the tenderest tree of the whole apricot family. If the months of January and February are too warm its buds swell too rapidly, and a cold rain or lower temperature will chill the sap and arrest the future development of the blossom buds. I have seen this phenomenon in three consecutive seasons.

The Blenheim or Shipley, generally sold by nurserymen, has also its disadvantages; while its quality is good, it ripens too swiftly, and in large orchards of this variety there is almost a certainty of great waste in picking, shipping and properly manipulating the crop.

The Royal all in all is unmistakably the apricot for the best results. Always productive by judicious pruning and thinning, it is almost as sure as the seasons. And when properly grown it is of good size, excellent quality, ripens gradually, hangs long on the tree, is eagerly sought by the canning fraternity and makes a splendid dried fruit.

The Planting and Cultivation

Of the apricot embraces a broad and fertile field of investigation and experience. It has been tried on all varieties of stocks and under all imaginable conditions of soil and temperature. Some orchardists have endeavored to compel the tree to grow and produce under the most formidable conditions. If the soil is heavy adobe or a light loam over an impenetrable clay subsoil, then grafted or budded on the Myrobalan plum stock, it can be made to grow and produce some fruit, but the success of the experiment will be as problematical as the conversion of the Mongolian to modern ideas or the Christian faith. The peach stock is widely used and with generally good results, for it grows well wherever the apricot can be profitably raised. But in deep dry loams there is no stock that will make such magnificent trees or produce such perfect fruit as on stocks grown from pits of the Royal, Blenheim or Early Golden apricots.

The cultivation of this naturally thrifty tree is simple and well understood. The winter months are the best time to plant; broad, deep holes and thoroughly pulverized soil should be the sure foundation for the future tree. They should never be planted less than 25 feet apart, for it is a tree for a generation of men. When planted the ground should be kept thoroughly cultivated. It is possible and even better with ordinary winter rains and deep, generous soils to produce the most perfect fruit without irrigation, even in our hottest, driest central valleys, while in our more favorable locations of the bay counties irrigation would ruin the quality of the fruit.

The pruning of the apricot is the rock on which many young and inexperienced fruit-growers in their anxiety for immediate results run and are wrecked. It is a tree that, like our youth, needs early and effectual discipline until its habits are formed and it enters upon its golden age of maturity and productiveness. The most prolific of all our fruit trees, its very abundance is a source of embarrassment. The trusting fruit-grower looks with delight upon his acres of thrifty trees bending under their weight of green fruit and anticipates the golden harvest, forgetting that nature is always prolific and provides security for a never failing posterity. The law governing the profitable growth of all our fruits, ignores nature's great motive of reproduction, and by judicious pruning of the tree and thinning of its fruit preserves for a generation the vitality that would otherwise be wasted in a decade of years. No tree demonstrates this more thoroughly than the apricot. A tree will cease to be profitable when its vigor is gone and its vitality destroyed by overbearing of inferior crops of almost worthless fruit. The fruit pulp protects only the precious pit or seed and nature is indifferent to its desirability for the taste or nourishment of man. And here is where the skill and experience of man for centuries has evolved through endless experiment and selection all our richest and choicest fruit.

Our illustrious progenitors in the primeval Garden of Eden fresh from the Great Master's hand possibly may have revealed in the most delicious and nectar-like fruits, but the presumption is strong that their pristine simplicity and trust in the wiles of the tempter was paralleled

also by severe poverty in their primitive pomological wealth. The prudent, careful orchardist must use the knife unsparingly for the first four years, unmindful of fruit, and the tree will grow in strength, symmetry and beauty. Every branch will have its allotted place, and the sunshine will look in on all the limbs and twigs and give color and sweetness to the ripening fruit. No general rule may be given for the pruning of the apricot, only that its growth be directed, its exuberance restrained and its annual growth kept, if possible, in equilibrium.

The apricot kept always in vigorous growth, and fruit well thinned, will yield almost sure annual return. With a full setting of fruit, three-quarters at least should be removed, and then there will be twice the amount of available fruit pulp at the time of harvest. The apricot tree is subject to but few diseases. Nature has endowed it with such wonderful recuperative power that, although riven and broken by the tempest to apparent destruction, it sends forth new branches and is soon stronger than ever. Trees of 20 years' growth may be cut back in the winter months to half a dozen forks with sloping cuts well covered with a solution of shellac and linseed oil, and they will be renewed in productiveness, quality of fruit and apparent longevity.

Occasionally a tree perishes in May with the blight. From full vigor of leaf and growing fruit it withers in a day. There is seemingly no known remedy for this acute disease that some seasons affects other varieties of trees.

The shot-hole fungus has often trenched on the profits of apricot orchards in some parts of the State. This pest illustrates the necessity of vigilant action in blotting out this trespasser on the most beautiful of fruits. It appears in the incipient stage immediately on the setting of the fruit and the expanding of the leaf, with rough, wart-like specks and patches on the skin, destroying its beauty and seriously impairing its flavor and rendering it unfit for canning or the market. When the fungus affects the leaf it destroys its substance, and the leaves have the appearance of having been riddled with shot. Air-slaked lime thoroughly and plentifully sprinkled over the tree immediately after the setting of the fruit and bursting of the leaf has proved an effectual remedy.

The Apricot in Commerce.

The present large and increasing acreage in apricots is unprecedented in the history of its cultivation. Millions of people in the United States are totally ignorant of its great value as an attractive, wholesome, commercial product. As a table-fruit, when well-grown and thoroughly ripe, it rivals all other. When properly canned, it is the most delicious of all California fruits, and when properly dried it has only to become known, and it will be the favorite dried fruit of the world.

The time has now come that only the best and most desirable varieties should be grown. Extra care should be taken in pruning, thinning and cultivation, so that only the best, largest and most attractive fruit should be produced. The canners and shippers will soon accept no other, and the thousands of busy hands now needed will soon have to be increased tenfold, and no time should be wasted on small, inferior and imperfect fruit, that destroys the reputation and checks the domestic and foreign demand. The prospective annual increase of thousands of tons demands the most careful preparation and organization to successfully handle the vast amount. It should be arranged with the care and precision of a military campaign. Canners must double their forces, and those that ship should have large numbers of boxes in reserve.

Drying Apricots.

The time is at hand that the grower must depend on drying as the only method of disposing of the vast surplus. Evaporating or machine-drying for this large amount is an impossibility. Every grower should provide the means to dry his entire product, regardless of canners or the market. It will sustain the price and enable him to act independently of the canners and the vicissitudes of the daily market. All possible arrangements should be made for the needed labor. Schools should be vacated in the drying season, and the rising generation have a practical lesson in industry and economy. Trays and all necessary conveniences should be prepared weeks in advance. Sun-drying must be the main dependence. It is cheap and effective. To make a perfect dried fruit it must be thoroughly ripe and the product will never be a disappointment. The market demands an attractive, even product in dried fruit. To accomplish this, the fruit, immediately after cutting and placing on the trays, should be subjected to sulphur vapor for 20 minutes in a close cabinet or box, with slides prepared for the purpose, or placed on low trucks and rolled on tramways into small, close, suitable rooms, prepared for fumigating the fruit. It will then rival the most carefully evaporated product. Sulphuric acid, if existing at all, will be found only in infinitesimal quantities. The sanitary question is one for the chemist and public to settle; but the generation that wears tight shoes, stays, eats arsenic and is saturated with nicotine and tobacco juice, with the necessary adjuncts of drugged liquors, beer and wine, will hardly call in question the premature and moderate use of brimstone.

Upon the proper management of the dried fruit business depends the prosperity of the orchards of this great State. All of our fruit interests are to-day in

the ascendant. Orchards and vineyards will soon cover the land. The olive and almond will soon displace the chaparral on a thousand hills and embellish them with homes of plenty and peace. Surely this highest of all husbandry should elevate and ennoble the race. The world of fruits, like the world of men, rises on every swelling tide of cultivation, material prosperity and peace, and ebbs away in their decline and poverty almost to the verge of extinction. The Aegean shore saw the birth, culmination, and death of a race favored of the gods in form, strength, grace, inventive genius, and mental power. The artist's brush lost its skill, the sculptor's hand its power, to make the spotless marble radiant with life, beauty, and strength. The flowing numbers of her poets and the melody of her minstrels faded away like a dream. The inspiration of matchless oratory was a thing of the past. And with crumbling temples and desolate shrines, art, knowledge and law passed away. The decline and destruction of a great people means not only moral, mental and material desolation, but the fading away of nature's richest ornamentation—the flowers and fruits that have adorned, refined, and made glad the race. Every great advance in the world is preceded by some wonderful evolution in nature's great laboratory of plant life. Thus, from the springing blade and bursting ear ushering in the harvest-time, the unfolding blossom full of hope and promise, comes all that is good, elevating, and progressive among mankind; and in the labor and experiences of man in the garden, the field, and among the trees, we may learn the story of his religion, his civilization and all his life.

THE FIELD.

How to Destroy Rabbits.

The Parisian journal, *Le Temps*, published the following letter addressed to it by M. Pasteur, in which the illustrious savant indicates a method for destroying rabbits. We are indebted for a copy to M. Ch. Joly of Paris, of which the following translation has been made for the columns of the *RURAL*:

PARIS, 27 November.

Your journal announced a few days since that the Government of New South Wales was, in a manner, powerless, in struggling against a plague of a peculiar kind—the abundant multiplication of rabbits, and that it offered a prize of 625,000 francs for the discovery of a process that would exterminate them. Some considerable portions of New Zealand, not less ravaged than Australia, are abandoned by the farmers, who have given up the breeding of sheep on account of the impossibility of feeding them. Every winter they kill the rabbits by millions without the slaughter appearing to diminish the number. Will you permit me to convey to those distant countries, through the medium of the *Temps*, certain ideas the application of which, perhaps, might be found successful.

Mineral Substances

And notably some phosphureted combinations have been employed up to the present time for the destruction of the evil. In selecting such means have they not taken a wrong course? To destroy creatures which propagate themselves according to the laws of a progression of life so appalling, of what consequence are such mineral poisons? Those kill upon the spot in which they may be deposited, but in truth, in order to reach living beings, is not necessary rather, if I dare say so, a poison like them endowed with life, and like them having power to multiply themselves with surprising fecundity? I wish, then, that they would endeavor to carry death into the burrows of New South Wales and of New Zealand by trying to communicate to the rabbits a disease having power to become epidemic. There exists one

Known as Cholera des Poules

(Chicken cholera), which has been made the subject of studies closely attended to in my laboratory. This disease is equally adapted to the rabbits. Now among the experiments which I have instituted this is found: I brought together in a limited space a certain number of chickens, and gave them food tainted by microbe, which is the cause of chicken cholera, and they soon died. The poultry-yards are sometimes ravaged by veritable epidemics of this disease, of which the propagation is due without any doubt to the dejections of the first diseased chickens, which taint the soil and the food. I imagine that the same thing would occur to the rabbits, and that, returning to their burrows to die, they would communicate the disease to others who could propagate it in like manner. But how arrange in order that the first rabbits may take into their bodies the disease destroyer?

Nothing is Easier.

Around a burrow I would place a detachable barrier, surrounding a certain space, in which the rabbits would come to seek their food. From experiments, we have learned that it is easy to cultivate in a state of perfect purity, and upon a scale as great as may be desired, the microbe of chicken cholera in the *bouillons* (broth) of any kind of meat. With these liquids, full of microbes, the food of the rabbits should be sprinkled, and very soon they would go to die here and there, and spread the disease everywhere. I add, that the parasite of the disease of which I speak is inoffensive to animals of

the farm, except, of course, to chickens, but these need not live in the open country. I doubt not that there may be in the infested countries some persons quite ready to apply the means that I propose, means very simple, and which, at all events, is worth the trouble of trying.

Please accept, Monsieur le Directeur, the assurance of my most distinguished consideration.

PASTEUR.

Claus Spreckels on Beet Sugar.

Claus Spreckels, organizer of the Western Beet Sugar Company, has prepared the following for the information of those interested in the beet-sugar enterprise:

My belief is, that the cultivation of sugar beets will soon be one of the largest agricultural pursuits, not only in California, but in all the Western States and Territories, both soil and climate being more favorable to the purpose than even in Germany. The failure in the past to manufacture sugar from beets, on a paying basis, has been mainly due to the absence of the best available machinery. The beets that were grown have been suitable for the purpose, but the machinery has been deficient. This, however, will be obviated in the future, as I have secured the right for the whole of the United States of all the latest mechanical appliances and manufacturing methods that are now in use in Germany, which is the largest and most successful beet sugar-producing country in the world.

The soil best adapted for growing sugar beets is a rich, sandy loam. Beets must not be grown successively in the same soil, and they must never be manured. Land that has produced a crop of beets should be planted in grain the next year, then manured and planted again in grain, and in the third year it may be replanted with beets, but it must not be manured that year. Thus, a farm of 150 acres would enable a farmer to grow 50 acres of sugar beets in each year, and I think I may safely say that the 50 acres planted in beets will prove more profitable each year than the whole of the other 100 acres that are producing grain at present prices. The price of beets will be determined by the percentage of saccharine matter that they contain, a few beets being taken from each load, as delivered at the factory, for analysis, the result of that analysis forming the basis upon which each load shall be paid for. By this means the best beets will obtain the best price, and the farmer will be encouraged to careful cultivation.

I propose to erect one factory at Watsonville at a cost of about \$400,000, which will be in full operation by September 1, 1888. This factory will consume 350 tons of beets in every 24 hours, but the consumption will be doubled by the following year. At present it will require 100 cords of wood and seven tons of lime daily during the four or five months that it is in operation. This will show the necessity of having good supplies of wood and lime close to the factory, which should also be near to a line of railroad or to suitable water facilities for shipment of raw sugar to San Francisco. The lime is a good fertilizer, and can be returned to the soil again. The pulp from the beets can be fed to cattle, and will keep them in fine condition.

Before erecting a factory anywhere I must be guaranteed that at least 2500 acres will be planted in beets every year for a definite number of years. I must also be assured of sufficient supplies of wood, water and lime in the neighborhood and good transportation facilities. It requires from 15 to 20 pounds of beet seed to plant an acre of ground. The seed costs 10 cents per pound in Germany, and would probably cost 12 cents per pound here. I am importing 25 tons which are now on the way, and some of this will be distributed gratuitously, in small packages, to those who desire to experiment on their farms. But I shall expect in return that those who do make such experiments from seed that I give them, will send me samples of the beets that they grow and the soil in which they are grown, for the purpose of analysis. It must be remembered that the large beets are not the best for making sugar. If the soil be very rich the beets should not be planted more than four inches apart in the rows. If the soil be of good quality the beets should be six inches apart in the rows, and eight inches apart if the soil be not so good. The rows should always be 14 inches apart from one another.

A factory will cost about \$325,000, but, for the first one, some of the machinery must be imported from Germany. Subsequently I anticipate no trouble in its being manufactured in this country. A site of from 30 to 40 acres is necessary wherever each factory is erected, so as to give ample room for the large quantity of machinery and buildings; also for the prompt handling of the great number of wagons that will be delivering beets at the same time so that the wagons may not be delayed and the work of the farmers impeded.

It is impossible yet to determine where factories should be located. I have received invitations from all sections of California, Oregon and Washington Territory to visit different localities, and I will endeavor to do so as quickly as possible. From the foregoing remarks, however, you will be able to form an idea of what is essential to the erection of a factory. Such information as I have indicated, if forwarded to me in conjunction with samples of soils and beets, will materially assist me in locating the sites for future factories.

THE STOCK YARD.

Spaying in Arizona.

For the first time in the history of stock raising in Arizona, says *Hoof and Horn*, the spaying of cows has been resorted to. The parties to first call the knife to their assistance in this direction is the Erie Cattle Company of Cochise county, one of the largest stock-growing concerns in the Territory, and one which, until a very short time ago, was credited with possessing all the range facilities it might want for its stock for years to come. The announcement, therefore, that it has let a contract for the spaying of 1000 cows, marks the entrance of a new feature into the economy of beef-producing in the Territory. It means in effect that overstocking has ceased to be a mere subject for discussion, and has instead become a tangible and well-defined evil that must be met and overcome, even to the extent of limiting the productive capacity of the stock, a class which until recently were valued more highly on account of this very power of reproduction that is now sought to destroy. While the operation of spaying is almost unknown in Arizona, but a very faint conception of the vast number of animals that have been subjected to it is entertained by even the best-informed of stockmen. An eminent authority in recently speaking on this subject made the statement that not less than 50,000 heifers were spayed so far during the present year, a number which seems incredibly large when it is remembered that spaying as applied to range cattle has hardly a record beyond 1885, although in European countries, and France especially, it has been practiced extensively for years, being used on all cows to prepare them for the butcher, and on dairy cattle which thereafter milk well for a few years and then become very fat and make beef of excellent quality. The popularity which spaying is destined to achieve will be great. Through it the strain on ranges can be reduced to a minimum, while the production of beef can be raised to the highest possible point. The risk attending it is almost nominal. Sparks & Tinnin, the cattle kings of Idaho and Nevada, report having spayed 4000 heifers during the last summer, and claim to have lost out of that number but two or three animals, a percentage of loss almost as small as that attending the universal custom of branding.

THE VINEYARD.

Grape Pruning.

EDITORS PRESS:—I see in your issue of Nov. 12, 1887, "Vine-Grower's" request for information on pruning. I have not written a book, but I can give the information he needs.

Early fall pruning is equivalent to root pruning and will not be followed by bleeding, but will stimulate new growths the next season with a heavy set of fruit buds. Late spring pruning after the leaves are well expanded will not be followed by bleeding, but will stimulate the growth of fruit buds for the next year.

Bad pruning is in order at any time after the fruit buds have so far advanced as to show where and how many clusters are to grow from a bud. Some vines bear close pruning, leaving a cluster to terminate the branch without leaves. The internode between two clusters so treated will make no wood and but little growth.

Other vines require a few leaves beyond the fruit to keep them alive. If properly pruned during the growing season, you have in the fall only to strip off the branches made—"little foxes" where they are not wanted. When your cane has reached a desirable length, bud-prune the end and all branches that are not desired, for canes should not be allowed to grow beyond three leaves or internodes, except when the strength of the vine is found to force the next season's fruit bud into premature action. Varieties differ in this tendency, and it can only be determined by experiment just how close to prune. The Clinton here bears the closest pruning. But in pruning, as in everything else, *experience teaches*. No varnish or paint is needed on the cut surfaces, and the cut is best made at a joint, as you thus avoid the dead, unsightly internode stubs.

GEO. F. WATERS.

8 Beacon St., Boston, Mass.

[This is written from an Eastern point of view and deals with a different system of pruning and different grape varieties than those we grow, but it has points of interest which may be suggestive to our growers.—EDS. PRESS.]

UTAH'S CATTLE.—The time for owning large herds of cattle to roam at will is rapidly waning, says the Salt Lake *Enterprise*. The encroachment of the locator of valley-land has changed the winter feeding ground to such an extent that the question of getting the herds through the winter, even in the southern portion of the Territory, is a serious one. Many, seeing the certain outcome, began last year to sow alfalfa, which, as a winter feed, has no superior, and also gives the cattle-owner fat cattle for the early spring market instead of a herd of moving skeletons. Fifty acres of alfalfa will return at least 200 tons of winter feed, which will keep in good condition 300 cattle.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

San Jose Grange Discussions.

The Grange at San Jose has been discussing very practical questions of late. At the meeting of Dec. 24th, the subject of planting trees in orchards was taken up. The *Mercury* says that the only question on which the opinion of the members divided was in the preparation of the holes for the reception of the trees.

Hiram Pomeroy, in opening, advocated the subsoil plowing of the land before the trees were put out. He did not believe in merely digging a hole in the ground, no matter how big, but termed such excavations mere "pot-holes," which confined the roots to that portion which had been spaded up. When the tender rootlets reached the outer wall they would naturally turn in, and the final result would be a matted growth that would defeat the real object of the root growth, which is to extract as much nourishment from the ground as possible, the greater the surface the better.

G. W. Tarleton agreed with Mr. Pomeroy, believing it better to plow the whole ground. This would have the nature of converting the entire field into a receptacle for the tree. His method was to use a subsoil plow, which would result in turning or breaking up only the under soil. He did not think it was a good idea to turn the surface soil under, as a waste of moisture and fertility would occur. Mention was made of tall trees which had been set out in ground only a small portion of which had been broken up, the roots of which became so entangled and matted that insufficient support was given to the trees and they would topple over very easily.

The discussion was quite prolonged, several others taking part.

At last Saturday's open meeting insect pests were considered, and Messrs. Block, Britton and Wilcox urged vigorous war measures against the fluted scale.

Grange Elections.

FLORIN.—John Reese, M.; Wm. Johnston, O.; Effie Dresser, L.; Minnie Smith, S.; Frank Robinson, A. S.; Sister I. H. Casey, C.; D. H. Buell, T.; L. H. Fassett, Sec.; M. A. Casey, G. K.; Carrie Neuhie, P.; Lily Casey, F.; Mamie Brown, Ceres; Nettie Jackson, L. A. S.; Ella Dresser, Org.

SEBASTOPOL.—Martin Litchfield, M.; Alex. Ragle, O.; Mrs. L. O. Coon, L.; James Sinclair, S.; Stephen Morse, A. S.; Mrs. Geo. Harris, C.; Geo. Harris, Sec.; D. Litchfield, T.; Elias Shaw, G. K.; Miss Sophia Litchfield, P.; Miss Anna Dows, F.; Miss Laura Litchfield, Ceres; Miss Vina Litchfield, L. A. S.

SOUTH SUTTER.—Roger Mahone, Sr., M.; W. W. Monroe, O.; A. L. Chandler, L.; Roger Mahone, Jr., S.; Ann M. Roberts, A. S.; John M. Jones, C.; Alex. Donaldson, T.; Parthena Hall, Sec.; Wm. E. Roberts, G. K.; Annie Chandler, Ceres; Lucy Purinton, P.; Ella Hall, F.; Almeda Monroe, L. A. S.; R. S. Algeo, Trustee.

TEMESCAL.—Saturday, Dec. 17. [Corrected list.] S. Goodenough, M.; W. Renwick, O.; Mrs. S. H. Dewey, L.; N. Sewall, S.; A. T. Dewey, A. S.; Mrs. E. Kelsey, C.; L. Frink, T.; Mrs. N. G. Babcock, Sec.; John Paine, G. K.; Mrs. Whiddon, P.; Mrs. John Paine, F.; Mrs. Eliza Brooks, Ceres; Mrs. Jones, L. A. S.; Miss Anita M. Dewey, Organist; Mrs. W. Renwick, Trustee.

WOODBRIDGE.—Victor Jahant, M.; J. Thompson, O.; E. J. McIntosh, L.; E. G. Williams, S.; N. B. White, A. S.; E. Fiske, C.; G. H. Ashley, T.; R. G. Williams, Sec.; R. J. Parsons, G. K.; Mrs. E. J. Thompson, P.; Mrs. Lizzie Boice, F.; Mrs. Mary Williams, Ceres; Mrs. W. B. White, L. A. S.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

Grange Installations.

Alhambra—January 7.
Danville—January 7.
Grass Valley—January 7.
Sebastopol—January 7.
Yuba City—January 7.
Eden—January 14.
Florin—January 14.
North Butte—January 14.
Santa Rosa—January 14.
South Sutter—January 28.
Valley—January 28.

THE *American Citizen* well says: We believe that in America there should be no nation but Americans. The Irishman who thinks more of Ireland than of America, the Englishman who remains a subject of the Queen, the German who loves "Das Vaterland" more than this, the Italian who sighs for sunny Italy, are not Americans; and instead of being of any benefit to our country, are a direct and permanent injury.

JOINT INSTALLATION AT HAYWARDS.—Brothers Flint, Coulter, and other leading and gifted Patrons have been invited to participate in the exercises at Haywards on the 14th inst., when Eden and Temescal Granges are to hold their joint installations. Any members of the Order who can be present will be welcomed and a pleasant time is confidently looked for.

A Representative Granger.

Hon. A. L. Chandler, of Sutter county, whose "counterfeit presentment" accompanies this sketch, was born in Vermont, July 26, 1831. He received his education in the public schools of his native State, and lived there until 1852, when he started for California by way of the Isthmus of Panama.

Landing in San Francisco May 22, 1852, he went immediately to Nicolaus, Sutter county, where he has since resided. He teamed and taught alternately until 1855, when he began to till the place which is now his home, and has since followed farming and stock-raising, although engaged to some extent in teaming, and interested for several years in lumber and milling enterprises in Santa Cruz county.

Since the organization of the Farmers' Co-operative Union of Sutter County in 1873, he has been a Director in that body. He was a charter member of Yuba City

successful co-operation at that early day has been worth millions to other farmers since.

As a legislator, he has from the first steadily grown in influence. His reputation as an unswerving, incorruptible Senator has its weight, in a quiet, silent way, far greater than he is ever likely to receive credit for. His is a growing influence on the right side of general legislation for the public welfare. It is by the increase of such responsible, candid and reliable members, of all parties, that we may look for greater economy in the administration of government and for the improvement of our laws.

Bro. Chandler was elected a member of the Executive Committee of the State Grange to fill the vacancy caused by the resignation of Bro. Daniel Flint, soon after the latter's election as State Lecturer at San Jose. He was unanimously re-elected at Marysville in 1886. He has shown an ability and fealty in the work of the Order of which any Patron may well feel proud.

A FINE SENSE OF HONOR.—As a friendly token of the high appreciation in which the

HON. A. L. CHANDLER.

Grange, but withdrew to join South Sutter Grange and helped to build the Grangers' Hall at Pleasant Grove.

He is a Republican, having been identified with the party for 30 years. In 1873 he was chosen to represent Sutter county in the Assembly; was re-elected in 1879, and again in 1880. He has served as an Assemblyman in three regular sessions, and one called session during Gov. Perkins' administration. In 1882, he was elected Senator from Yuba and Sutter counties; was re-elected in 1884, and again in 1886 for the term of four years. He has served as Senator in three regular sessions, and two extra sessions called by Governor Stoneman, making nine sessions' service in the Legislature; but he has never been an office-seeker nor courted a nomination.

Senator Chandler was married in 1860 to Caroline J. Noyes of Vermont, by whom he has six children living, five daughters and one son.

Bro. Chandler was one of the foremost men in the early farmers' movement, at the time of the organization of farmers' clubs in Sutter and other counties, and finally of the State Farmers' Union, which were really forerunners of the Grange in this State.

Bro. Chandler and his associates were the first farmers, so far as we remember, who co-operated in buying grain sacks in large quantities and to great advantage in this State. The example of their solid and

members of Temescal Grange hold Bro. Coulter, and of their hearty enjoyment of the address with which he favored them on the anniversary of the Order's birth, that Grange—as we mentioned two weeks since—voted a small sum toward defraying the expenses of his trip. But Bro. Coulter, while much gratified by this expression of kind feeling and esteem, writes: "We had contemplated visiting your Grange on that occasion, before the receipt of your invitation, and would have been there without it. I incurred no expense by reason of the action of your Grange, and do not feel that I ought to be a burden on its treasury. If I had left my business, and gone to serve you at your bidding, it would be otherwise." The delicacy and nobleness of such a spirit are above praise. May it spread and prevail among the young men and women of our commonwealth!

BRO. FLINT and wife have extended their trip southward to San Diego and National City. At the latter place they were delightfully entertained by Warren and Flora Kimball. His letter in this week's *Patron* is full of admiration of the climate, the enterprise of the people and the improvements going forward.

BRO. T. T. HOOPER, W. M. of Montezuma Grange, writes from Manchester, Mass., that he had just been down in the State of Maine, where he found the Order flourishing, and had fine times visiting the State, Pomona and Subordinate Granges.

ANNUAL MEETING.—The regular annual meeting of the stockholders of the Grangers'

Bank of California for the election of directors for the ensuing year, will take place at the office of the bank, San Francisco, on Tuesday, Jan. 10, 1888, at 1 o'clock P. M.

WORTHY MASTER OVERHISER went to Springfield, Mass., and attended the State Grange. He and Sister Overhiser expected to start from the East on the 4th, hoping to visit Sister Jeanne C. Carr at Pasadena, and perhaps to meet Bro. and Sister Flint on their way homeward.

MERCED GRANGE will elect officers on the 10th inst., having been prevented by stormy weather from getting a quorum together on the 28th ult.

State Horticultural Society.

The regular December meeting was held on the 28th at the rooms of the State Board of Horticulture, 220 Sutter street. Senator Buck occupied the chair until the arrival of the president, Prof. Hilgard.

I. A. Wilcox spoke at length on the coming sessions of the American Horticultural Society, to be held at San Jose and Riverside, and closed by stating that he was authorized by the joint committee of citizens of San Jose to extend an invitation to the State Society to assist in welcoming Eastern horticulturists upon their arrival.

Prof. Husmann read a letter from Parker Earl, president of the American Horticultural Society, under date of December 16th, stating:

"Our railroad complications are now settled. The society starts from St. Louis January 11th, going by El Paso and Los Angeles, and will hold its first meeting at San Jose, January 24th to 26th, and its second at Riverside, on February 7th to 9th. I hope that this will harmonize all interests, and will secure two great meetings in every sense of the word. Now you people of the North must take hold earnestly to make both meetings a success."

The letter concluded by requesting Professor Husmann to prepare a paper on "The Outlook for American Grape Culture."

Mr. Block moved the acceptance of the invitation from the San Jose committee and urged upon the society the necessity and importance of making a grand display of the horticultural productions of the State at the coming meetings. Mr. Block's motion was carried.

Prof. Husmann remarked that there will be present at San Jose and Riverside from 400 to 1000 of the prominent fruit growers of the country. This will be the best opportunity ever offered to advertise California, for this large number of representative men will scatter abroad the impressions they receive by their visit.

On motion of Dr. Kimball of Haywards it was resolved to appoint the president and secretary as a committee to issue a circular urging all members to attend the San Jose and Riverside meetings and to do all in their power to make the displays complete and representative.

Upon motion the State Board of Horticulture was invited to co-operate in securing this result.

The following telegram was received from San Jose during the course of the meeting, and was read and the invitation accepted:

E. J. Wickson, Secretary State Horticultural Society: The Program Committee, by request of General Committee, extend to your society a cordial invitation to join with us and participate in the reception of the American Horticultural Society, Jan. 24, 1888.

DR. W. S. THORNE, Chairman.

Seedling Fruits, Etc.

Secretary Wickson continued the reading of notes on various new varieties of fruits, the paper having been begun at the preceding meeting.

Mr. H. L. Mosher exhibited branches of the strawberry tree (*arbutus unedo*) in fruit from his ranch near San Jose.

Mr. Allegretti showed pears of different kinds kept by his process, the fruit being firm and in good condition. Some had been in store 2½ months and then taken out and left three weeks. They had ripened up well, while those just from the storage remained in the state in which they were put in.

The Tariff.

Dr. Edwin Kimball addressed the society on the subject of the tariff. He said: "I think it would be appropriate for this meeting to take some action in respect to the action of the present Congress and the recommendations of the President in regard to a lower tariff on fruit. This society is directly interested in any action Congress may take in this matter, and it affects the pocket of every fruit-grower, not only in this State but throughout the country, and we should make an earnest protest. There are numbers of men throughout this State who have spent years in developing their orchards, and now, just as the fruit is almost ready to be placed upon the market, all our hard work, all the toil of years, is to be destroyed by Congress at one blow. Before he went to Washington, Senator Hearst promised to do what this society would ask him to do, and now I propose that we communicate with him. The question is one of vital importance to us. It is one which far exceeds all others in the matter of importance. Our very existence depends upon the action that Congress takes in this matter, and we must act to protect ourselves. I move, therefore, Mr. President, that a committee of

three be appointed to draft resolutions to be forwarded to the Legislature and to our representatives and senators in Congress urging upon them the necessity of protesting and acting against a reduction of the tariff on fruit."

Several others favored the motion and it was carried without opposition. On motion of Mr. Block, Dr. Kimball, President Hilgard and Secretary Wickson were appointed to draft and forward a memorial expressing the wishes of the society, and to report the same at the meeting in San Jose in January.

The annual report of the treasurer was read, and showed that during the year \$364 had been received, and that there was a balance on hand of \$154.46. The report was referred to the Board of Directors for audit.

It was decided to postpone the question of shipping fruit until the February meeting.

The society then adjourned to meet in San Jose during the American Horticultural Society meeting which will begin January 24th.

AGRICULTURAL NOTES.

CALIFORNIA.

Butte.

PROFITABLE CROPS.—Gridley *Herald*: The one-acre orchard owned by Morgan Bros. yielded over \$150 worth of almonds this season. It is situated within the town limits and has received no attention, aside from plowing every spring, for several years past. Henry Robbins realized \$325 profit from 20 acres of castor beans between June 1st and Nov. 1st. The land is now sown in grain for next season. From 20 acres of river-bottom land on A. W. Campbell's ranch, four miles southeast of town, Chinamen have made a comfortable living, paid big rent and laid by \$1800 since Jan. 1, 1887, raising fruit. Three acres of blackberries alone netted them \$700 clear of all expense. A company of Chinamen have about 240 acres rented on the Morrison ranch, three miles from town. They pay \$1500 per annum, raise vegetables principally, and cleared \$2800 this year.

Contra Costa.

RAISINS.—Martinez *Gazette*, Dec. 24: Wherever raisin-drying has been attempted in this county the result of the effort has left no room to doubt that this branch of the business could be profitably pursued, in some portions of the county at least. On the east side Mr. Plumley and others have demonstrated that a strictly first-class article can be produced. There is no difficulty in growing the grapes to perfection almost anywhere, but near the bay the dampness of the air is unfavorable to sun-drying. In Green Valley, however, Mr. B. W. Stone has shown that raisin-making can be made as successful and profitable as any reasonable person could desire. The samples left at the *Gazette* office on Monday, to which we invite the attention of those interested in knowing what can be done in this line, are as perfectly cured, as finely flavored, and as handsome in appearance, as any in the market. Of these raisins, raised and dried at his ranch, Mr. Stone has already sold for cash at the rate of \$125 per acre profit over the expense of cultivation. He has still enough left to pay all his expenses besides, has had all the grapes he wanted for family use, has made 20 gallons of grape syrup, and grown Egyptian corn enough between the rows of vines to pay for cultivation of the whole tract. Of course, in achieving this result, Mr. Stone has not spared his labor in cultivation, but what he has done others can do.

Fresno.

RETURN FROM 20 ACRES.—Fresno *Republican*: Below we present the results obtained from a 20-acre farm in the Nevada Colony, about five miles from this city, during the present year. We give this statement not because the showing is an extraordinary one, for it is hardly up to the average, but because Mr. H. A. Wemple, the owner, kept a record of his products and what they sold for. No account is taken of what was used by the family. The actual net sales of produce from the 20 acres were as follows:

Strawberries	\$ 74 40
Blackberries	25 00
Apples	209 00
Pears	57 35
Peaches	268 40
Raisins	665 25
Watermelons	85 50
Hogs	72 00
Eggs	103 00
Pumpkins	60 00
Sweet potatoes	26 00
Chickens	40 00
Figs	8 00

Total.....\$1,693 80

No account is given of the value of forage grown for cows or horses, nor of the family garden, and when it is taken into consideration that the yield per acre throughout the entire county was short of average crops this year, it must be admitted that the above showing is below what may reasonably be expected from an average 20-acre colony farm in Fresno county, one season with another.

Humboldt.

THE BUTTER OUTPUT.—Eureka *Standard*, Dec. 22: During the present year the 16 dairies on the Russ estate turned out 197,340 pounds, or nearly 100 tons of butter. There are many productive dairies scattered through Eel River valley, between Centerville and the

mouth of the Van Dusen river, and along the last-named stream. There are many on Eel River island, prominent among which is the Riverside, owned by A. Putnam of Ferndale. A large quantity of butter is made in the Arcata and Mad river sections, and along the coast as far as Redwood creek. Mattole valley is also prominent in the butter-making industry. The butter yield of Humboldt county during the year cannot fall far short of 200 tons.

FROM THE SHEEP RANGES.—What little information has been received from the ranges on which sheep are quartered during the winter is very gratifying. As was the case last year, the coming of winter found the flocks in good flesh and strength, and well prepared to enter upon the inclement season. Thus far there have been no severe storms and no cold weather worthy of mention. Even with a good coating of snow on the ground, sheep which are in fair condition will manage to subsist and thrive, particularly on ranges which are partially covered with brush, and where good browsing is afforded. There is hope for a favorable outcome of the winter so far as the sheep ranges are concerned.

Inyo.

AGRICULTURAL DIRECTORS.—Independent, Dec. 31: Gov. Waterman has made the following appointments of directors for Agricultural District No. 18: W. S. Enos to succeed himself, term expired; James C. Crocker to succeed T. J. Goodale, term expired. At the organization of the Board last spring Mr. Goodale was one of two who by lot were chosen to serve for the first short term of one year. The year ended December 1st and Mr. Goodale refused to serve again. He made a zealous and capable director. The new appointments are for the full term of four years.

A MULE'S ENDURANCE.—Not long since Pat Downs brought his pack-train down from Mazourka canyon. Darkness set in while the train was yet in the mountains, and it was not until the valley was reached that one of the mules was missed. It was expected the animal would follow the train, but he failed to appear and was supposed to have been taken sick and died from thirst and starvation. Thirteen days afterward Mr. Downs was again passing over the road and saw where the animal had fallen. The beast was encumbered with an aparejo, and, having fallen on his back, was unable to get up. The aparejo was loosened, the mule was helped upon his feet and was able to get down to the valley. He is getting along all right and begins to laugh he haw, he haw, at his long fast.

Kern.

ARTESIAN WELLS.—Visalia *Delta*, Dec. 29: The following list of artesian wells in Kern county, with the depth, daily flow of water and name of owner of each, has been prepared very carefully and is furnished by Mr. Geo. A. Raymond. These statistics are interesting and valuable and show what may be accomplished in the way of irrigation from artesian wells in this valley:

Owner.	Sec.	Tp.	R.	Depth.	Gallons.
Spring.....	28	25	23	355	2,000,000
Raymond.....	33	"	"	340	1,500,000

Haggins.....	6	"	"	400	900,000

This makes a total of 41 wells, with a daily flow of 48,020,000 gallons, within a tract of country 18 miles by 14.

Placer.

VETERAN ORANGE AND FIG TREES.—Anuburn *Republican*, Dec. 28: Last week Captain Moger measured the famous big fig tree on the Rice place at Newcastle, and found that it measures one foot from the ground, eight feet four inches in circumference. It has three branches which measure at five feet from the ground—one 47 inches, one 41 inches and the other 34 inches in circumference. Its branches cover about 2500 feet of surface. The two large orange trees on the same place are 28 years old and measure at one foot from the ground 38 inches in circumference. Each orange tree is from 25 to 28 feet high and well loaded with oranges.

A FAMOUS FOOTHILL VINEYARD.—The vineyard of J. B. Whitcomb, near Colfax, has produced single bunches of Chasselas grapes weighing five pounds, and it has single vines which have yielded from 60 to 70 pounds of fruit each. The vineyard contains over 20 varieties, and it has carried off the first premiums for the quality of its fruit for several years. This year the crop was light, but Mr. Whitcomb reports that from 12 acres his receipts were \$1765; expenses, \$265; net profit, \$1500. An acre of land that will return \$125 a year is valuable property.

Nevada.

ORANGES FOR LOS ANGELES.—Nevada City *Herald*, Dec. 17: Several boxes of oranges, olives and Japanese persimmons raised in this county were shipped from this city to-day by the Land Association, to be placed on exhibition in Los Angeles. The oranges were from the orchards of John Kuhlman at French Corral and Messrs. Cole and Cooley of Bridgeport, in the lower part of the county. Among the collection were several fine clusters of large, healthy-looking oranges—indisputable proofs that certain parts of Nevada county are well adapted to the production of citrus fruits.

San Bernardino.

BEEVES FROM ARIZONA.—San Bernardino *Index*, Dec. 31: Mr. John Burcham has recently arrived from Williams, Arizona, bringing with him 1000 head of magnificent cattle for this market. We saw some of the dressed meat at the Mojave Stock Ranch market on D street yesterday, and we believe it to be the finest ever brought to this market. The cattle are all fat, of an extra-large size, and the meat very firm and fine looking. One thousand head of cattle may seem like a great number, but the gentleman informs us that, with his extensive business, they will be disposed of in a short time.

San Diego.

COTTON.—San Diego *Union*, Dec. 22: Five thousand pounds of cotton for shipment to S. F. was received at Stewart's warehouse yesterday. This was grown by John W. Moore, on Anderson's ranch in Bear valley, and a number of experts who have examined samples pronounce it to be of exceedingly fine texture. The present crop is an experiment, and has been so satisfactory that a considerable area will probably be planted to the staple next season.

San Joaquin.

EDITORS PRESS:—North winds have so far counteracted the benefit of our early rains, and vegetation is very backward, showing only a tint of green here and there; but the copious rains of the last 24 hours will doubtless cheer every heart. At present writing there is good prospect for more.—Mrs. J. M. K., Tracy, Dec. 29th.

BIG SALE OF NURSERY STOCK.—Independent, Dec. 31: Yesterday E. D. Middlekauff of Middlekauff & Co.'s nursery, sold to W. M. Williams of Fresno 20,000 peach and apricot trees, 25 pomegranates, 3000 orange trees and 10,000 Muscat grapevines, all to be delivered within 10 days.

San Mateo.

THE FLAX EXPERIMENT.—Redwood City *Times and Gazette*: The flax factory of Wm. Hatfield has closed for the winter. Other improvements we understand are necessary which could not be completed in time last year. Some of the flax was thrashed and the straw manufactured into tow. Difficulty was had last year in getting farmers to engage in flax-raising, and owing to foulness of soil in many places the flax was too weedy to be used for the purpose that Mr. Hatfield intended it. Flax grown on the mountains is superior to any grown in the valley. Mr. Hatfield has been offered inducements to go into a southern county, but we hope the offer will not be entertained.

San Luis Obispo.

BIG VEGETABLES.—Nipomo *News*: Our real estate agents are on the alert. W. H. Strowbridge has been scouring the country the past week, hunting up specimens of the products of our wonderful Nipomo valley. From Mr. Miles, who lives about three miles from town, he obtained a silver-leaf onion that weighed 4½ pounds and measured 25 inches in circumference; another onion, common variety, that weighed 5½ pounds; a sack of potatoes, none of which weighed less than 2½ pounds. From a neighbor of Mr. Miles, he secured five sacks, none of the spuds contained therein weighing less than two pounds. These were of the Peerless variety. He also found some mangel wurtzel beets, the largest of which weighed 82 pounds; two others weighed 75 pounds apiece. A friend of Mr. Strowbridge will exhibit a portion of these vegetables at the coming New Orleans Exposition.

Yolo.

HUGE HOG.—Yolo *Mail*, Dec. 31: Probably the largest "porker" that has ever graced a meat-market was placed on exhibition at the Mossmayer city market yesterday morning. It was raised on the Kinchloe ranch near Woodland and weighs 1020 pounds, dressed. A large crowd of curious and amazed spectators were present during the removal of the huge swine from the meat-cart into the market.

FINE HORSES.—Wm. Hays of Madison shipped to Fresno Tuesday to Messrs. Stranbe, Butler & Co., a span of matched geldings, blood bays three and four years old, standing about 16 hands high and weighing about 1100 pounds each. The price paid was \$600. Mr. J. J. Stevens also shipped to the same firm a fine bay

gelding, for which he received \$300. A sired by Mr. Hays' stallion Duplicate.

Yuba.

PORK AND LARD.—Marysville *Appeal*, Dec. 23: The packing and lard-preparing establishment of P. C. Slattery is now operating to its fullest capacity. Fifteen men, with all the modern machinery, are engaged in handling about 40 hogs per day. The season will not close until next March, and by that time they expect to slaughter 4000 hogs, make 8000 hams of an average weight of 15 pounds, and cut 32,000 pieces of bacon and smoke them—the average weight of each to be six pounds. From that number of hogs 9000 pails and cans of lard are expected.

CITRUS SAMPLES SENT SOUTHWARD.—Specimens of fruit from orange and lemon trees in and around Marysville were yesterday shipped to Los Angeles, in care of J. J. Morrison, who has charge of the Placer county exhibit. The call for the fruit was made by the Placer county people, not to show a great quantity, but to demonstrate the great scope of country over which oranges and lemons are grown in Northern California, and also their superior quality. In the 500 pounds of citrus fruit forwarded from this city last night to Los Angeles were some specially selected oranges and lemons whose superior merits will undoubtedly attract attention. But two clusters of fruit were sent. One was a cluster of lemons, six in number, from a tree in W. G. Murphy's yard. Not one of these lemons measured less than 12 inches in its greatest circumference. They were entirely free from scale, and the skins were perfectly clear. The other cluster was of oranges, taken from one of the magnificent trees in J. B. McDonald's yard. The fruit in this compact bunch of 12 was ripe, well colored, and as free from the pestiferous scale as any oranges ever grown.

NEVADA.

NORTHEASTERN RANGES.—Elko Cor. *Reno Gazette*, Dec. 27: Stock of all kinds look exceedingly well and in some instances better than a year ago. Quite a number of our stockmen have commenced to feed the late-weaned calves and the old and feeble cows. Sparks & Tinnin, Hardesty and many other heavy holders feed but very little, for the reason that it would be almost impossible to gather and cure sufficient hay for such immense bands as these gentlemen control. Another reason is, that they have splendid winter quarters. The same is also true of Byrne & Bro., on the Bruneau, in Southern Idaho; also Hill, Horn & Fisher, who occupy what is known as the Big Field. Messrs. Bradley and Russell of Elko have the major portion of their large band upon the upper tributaries of Snake river, in Idaho. This locality furnishes an abundance of water and grass, and is a splendid summer range, and lower down upon the same stream a good winter range is also found. These gentlemen have suffered but little loss on account of hard weather or short grass. Jeff Bradley and H. Mason are the owners of nearly all of the available land for hay and pasture purposes on Mary river, a large portion of which is under a four-wire fence. They have cut and stacked a greater quantity of hay than any other firm in the county, and will feed during the coming winter the late and small calves with a few other head of cattle that seem to need some assistance to tide them over the present winter. The day is not far distant when cattlemen will have to feed and confine their stock upon their own ranges, and no one in this locality has foreseen this event sooner than Messrs. Bradley and Mason.

OREGON.

CARRIER PIGEONS.—Oregonian, Dec. 30: Mr. J. F. McMunn of Shedd, Lion county, has for some time been training carrier pigeons, with good success, on the O. & C. railroad trains. Last week one of his birds, "Champion," flew from Gervais to Shedd, a distance of 55 miles, in 57 minutes, and the same bird has flown home from Salem, a distance of 39 miles, in 35 minutes. "Volunteer," a young bird, flew from Eugene to Shedd, 32 miles, in 35 minutes. In two weeks more he will have one liberated at Portland, as it has already been liberated within 25 miles of this city, and the next stage will bring it here. Mr. McMunn's birds are of the best strains obtainable in New York, Cincinnati and San Francisco.

APPLES TO CALIFORNIA.—H. E. Battin, the well-known fruit-dealer, left Friday for Medford to look after the shipment of four carloads of apples overland to S. F., the first railroad shipment of fruit into the Golden State. Mr. Battin has bought a large share of the surplus apples of Southern Oregon, and much of the stock which was intended for the Montana and Dakota market will go southward during the next month.

A WYANDOTTE PULLET belonging to J. G. Warner was seven months and five days old Dec. 18th. She had laid at that time 26 eggs. Mr. Warner is anxious to know if this record can be beaten. The mother of this pullet is valued by her owner, Mr. Hawkins of Lancaster, Mass., at \$150.

SAN DIEGO'S assessed valuation increased during the past year from \$4,582,000 to \$11,000,000, and 2000 substantial buildings were erected.

Why?

The sky so dull and drear,
So steadily fell the rain,
It seemed as though the sunlight clear
Would never come again.

Drenched and somber and sad
Was hill and vale and tree—
No sound of a bird-note glad,
No cheerful thing to see.

And darker the storm-clouds grew,
The rain fell thick and fast,
When sudden gleamed a sun-ray through,
That heaviest fall was the last.

Then the birds sang sweet and clear,
And the trees sang soft and low;
Why did we not feel the sunshine near,
When the darkness brooded so?

—Elihu M. Hickok.

Unpleasant People.

[Written for the RURAL PRESS by ELISE ANGE.]

Two ladies were calling at the house of a friend, when the hostess, turning to one, inquired:

"You found it quite a distance to come, did you not?"

"No," was the answer. "I was in such pleasant company that it did not seem far to me."

The friend who had accompanied her laughed appreciatively and exclaimed: "Did you ever see such a woman as Gladys for paying compliments and saying pleasant things?"

Then Gladys answered, lightly: "Well, Mary, think how many people there are that never pay compliments."

Gladys was right. There are scores of such people, and it actually seems to be part of their religion to avoid praising others or speaking well of them. They pass through life with critical eyes and unsympathetic lips, and as often offend by their silence as their words. I have heard some say that they never flatter from principle, and thus excuse their churlishness by branding those who are more deservedly popular than themselves as flatterers.

Who in looking over the past does not recall with feelings of aversion some visitors to our childhood's home that embittered our existence by their presence in the house? A well-known hat and walking-stick in the hall, or a familiar, feminine voice in the sitting-room, has filled our souls with dread, and Heaven only knows how reluctantly we have gone in to shake hands with Mr. Grim, or Mrs. Blunt or Miss Sharp. We were not as cordial as we might have been, and our kind mother has excused us on the grounds of shyness.

"Shy!" came in satirical tones from the depths of an easy-chair. "She didn't seem very shy when I saw her tearing through the streets yesterday with her hat off and a big hole in one of her stockings. Really, Mrs. Blank, I couldn't believe that such a tomboy was your little girl."

These visitors always saw us when we were had in church. They knew when we climbed fences, or broke windows, or took jaunts on the sly. They were on hand when dirty faces and torn clothes were in the ascendency. They always remembered Captain Cattle's injunction to make a note of it, for it was all stored up for future reference, and never forgotten as long as they lived.

They were fond of asking: "What was going to become of that boy?" or "What would be done with that girl?" They would smile superciliously or shake their heads doubtfully when more lenient critics predicted an honorable future for us. Then, in after years, when we had not turned out so badly as they expected, they still looked upon us with wary eyes. I was dubbed "a crooked stick" by such a one in my childhood, and he only knows me as a crooked stick to this day. I heard a lady say that she had a good mother of this type, and whenever it happened to be her ill-fortune to meet her on the street the poor child always shut her eyes and ran as for dear life. "I thought if I could not see her she could not see me," she explained.

Is it any wonder that we shed no tears when the Grimms and Blunts and Sharps of our younger years died? But alas for humanity, their descendants are numerous and flourish like a green bay tree! These are not always known by their hate or walking-sticks, by their sinister gaze and surly speech, as we formerly knew and feared them. There are young people with charming faces and apparently winsome manners, yet those most intimate with them will tell you that they never lose an opportunity of being spiteful or disagreeable.

A teacher recently asked one of her pupils if she did not need her wrap, as it was a very cold day.

"Oh! her pride will keep her warm," answered the Miss Sharp of the class. Now, if

a girl of 16 or 18 years can be so unlovely, what will she be 10 or 20 years hence? We have only to look around among our acquaintances to find out. All their sweetness has departed with their youth. They may be, at times, plausible in their manners and gentle of speech, but we, who understand them, are prepared for the covert sneer or the unkind sting which follows close upon their insincere pleasantry.

There is the man or woman who prides himself or herself upon being frank and outspoken. It is sufficient to state that such persons are as cordially disliked as they deserve to be. Then the close-mouthed people that say little, but look volumes, are just as detestable. Changeable people are unpleasant acquaintances, because we never know where to find them—they are our friends one day and strangers the next. Quizzical people are amusing until we begin to suspect that we ourselves are not exempt from the shafts of their ridicule. Then there are satirical and cynical people. We all know what cruel wounds they can inflict, the former by words, which strike like well-aimed arrows at the heart of the victim, while the latter looks upon the world with jaundiced eyes, and strives to shake the faith of others even in those most worthy of their regard.

"But people cannot help their dispositions" is a very familiar expression. I was acquainted with a young man whose satire was as cutting as a two-edged sword. I met him afterward as a genial, kindly man, and knew that he allowed opportunities to pass when he could have been brilliant at the expense of others.

I know women that will not permit themselves to be jealous of the beauty or prosperity of their friends. A lady called on an old schoolmate, to find that the latter had exchanged a very simple cottage for an elegant home. I heard her give her experience as follows:

"I could hardly believe Nellie lived there, even when I saw the name upon the door, and while I waited in the parlors for her to make her appearance I felt myself growing bitter as I looked around upon such luxury, for I had always lived in better style than she had. All at once it struck me that I must conquer my jealous feelings, and as my friend entered I greeted her warmly and said: 'Oh, Nellie, what a beautiful home you have!' All my bitterness vanished and I had a most enjoyable visit."

It is natural to be outspoken, hence the terrible small boy or girl so well recognized in literature; yet many of these little people learn before they are grown that they must watch their lips and be careful of offending others. Rude and cranky children often develop into well-mannered men and women. The "black sheep" of the family has sometimes become the mainstay of the parent's declining years. So we can, in a measure, overcome our feelings by cultivating these graces of character which we find so attractive in those we most esteem and admire.

One of the sweetest, most lovable persons I ever met was a young woman of plain features and insignificant appearance; yet she gathered about her a large circle of warm friends. It was with pleasure that she produced her album and displayed the many beautiful faces that adorned its pages. She was proud of her friends, and dwelt enthusiastically upon their charms. She said more than once: "Why should I grudge others the beauty which has been denied to me?" While she was gay and humorous, she was also tender and sympathetic, with smiles for the happy and tears for the sorrowful. Is it any wonder that she was considered lovely by those who knew her, and that she was always greeted with pleasure wherever she went? Is it any wonder that her place is still vacant in the hearts of her friends although it is nine years since she entered into rest? Hers is a precious memory, fragrant as with the perfume of violets, and I am glad that there are many such as she in the world, that dispense the balm which heals the wounds inflicted by our less amiable associates, the Grimms, the Blunts and the Sharps.

A TRUE GENTLEMAN.—This instance of genuine unselfishness is told in the Boston Post: Last September we took a canoe trip together, and in going down some rapids were upset and found ourselves floating about in a sort of bay where the river widened. As the weather was cold we were pretty thickly dressed, and our boots were heavy, so that the situation was rather precarious. We were struggling toward shore, and he had his paddle, but I had lost mine. Seeing that I was in difficulties, although he was just as badly off himself, he said: "Take my paddle, old fellow, I don't want it; do oblige me." I believe I should have laughed if I had not been afraid of drowning, at the contrast between his statement that he was all right and the grasping voice in which it was spoken. However, we got ashore safely.

A NEW GAME.—An exchange says a new game called "Editor's Delight" is played in this wise: Take a sheet of ordinary writing paper and fold it up carefully, inclosing a bank note sufficient to pay all arrears and a year in advance, and mail to the editor. What adds immensely to the pleasure of the game is to send along the name of a new subscriber or two, accompanied by cash. Keep your eye on the editor, and if a smile adorns his face the trick works like a charm. Being near the first of the year, now is an appropriate time to play the joke. Just try it.

Sunset, Sunrise.

[Written for the RURAL PRESS by N. P. C.]

I.
Crimson-tinted, golden-streaked clouds are hiding
Earth's sparkling, blushing, low-set sun;
Darkened chambers chill my heart, and death abiding,
Shade my soul's sweet star of love-light.

II.
Slowly dawns the light of heaven, bright and more
Bright,
Full on waiting hill and lowland;
God is gracious; when is passed life's cold, dark
Night,
Dawn will bring unending rapture.

The Lazy Board.

[Written for the RURAL PRESS by DR. J. W. GALLY.]

It is not needful at present that I should tell my exact age nor the precise place where I first saw daylight, but I may truthfully say that more than a half a century of years ago I was playing marbles up against that great American topographical and political fence known as "Mason and Dixon's Line." That was when I was a boy. Then there was no railroad there because George Stephenson, in England, had invented the locomotive railway about the year I was born, and it had not, in my earlier boyhood, crossed the mountains which divide the waters of the Potomac and Ohio rivers. In place of the railroad there was the National road, a fine solid wagon-road built by the Acts of Congress from tide-water at Baltimore to steamboat-water at Wheeling, on the Ohio. One of my earliest attractions was the jingle of the house bells upon the six big Pennsylvania horses drawing each wain, or road-wagon, along this National road. Sometimes in the afternoon of a summer day there would be 10, 20 or 30 of these wains in procession, all with arches of different-sized and toned bells over the tops of the hames above the housen, and such a jingling and jangling as they kept up is not often heard nowadays. Each six-horsed bell team was managed by one man, and he rode upon the high horse at the wheel and drove with only one line. Upon this, "the saddle-horse," there either were no bells or else the bells were upon his breast so as to permit the driver—he called himself a "teamster"—room to handle his line and black-snake whip. Over the top of each arch of bells was a roof of black bear-skin, which came down at each end of the bell-arch some six or eight inches, and these hanging ends were often decorated with tassels of silk or with gold-cord fringes. The harness, upon the wheel-horses particularly, was a marvel of strength, breadth and weight, the breeching being of heavy solid sole-leather, six to ten inches wide, and all other leathers in proportion; but no leather went behind any horse's tail, for a back of that came iron chains. The harness was "gears" in those olden days. The first time I ever heard the word, harness, was from a newly arrived gentleman from Northern New England, and he called it "harness." When these wains arrived at what, in the older times was called the "tavern stand," they drove into the yard, which was usually paved with small broken stone—that is to say, macadamized—and supplied with gear poles scattered about. In this yard the teams were unhitched—not unharnessed—and the gears hung upon gear poles thrust through the wheel-spokes so as to catch under the wagon-bed or coupling pole; and the heavy leather housen acted as roof over the gears. Then when the horses were stripped, two of them were fed from an iron-bound trough suspended behind the wagon, and four of them from another larger iron-bound trough, temporarily fastened by iron latches to the top of the tongue or pole. A sack of oats was emptied into this four-horse trough and each animal ate all he could eat—proportionally the two-horse trough was similarly filled. The old National road wagoner did not feed much hay, and what he did feed was fed from the ground or from canvas racks suspended below the troughs. The horses were blanketed, but not stabled, and were bedded with straw or sawdust. What the wagoner most thoroughly despised and profanely cursed was a wet winter, and, next to that, a rainy, late springtime; for in those seasons the pulverized limestone, ground to a surface of white dust on the road by the heavy wheels, became a coating of thin, gray slush that splashed over the four forward horses until they were half covered with it, and their tails hung down like icicles of mud. The wagon drawn by one of these teams was weighty; the wheels and "run gear" generally were of wood and iron, and very strong and heavy, the tires being six to eight inches wide and 1½ inches thick, but the box, or wagon-bed, was the pride of the wainwright, or wagon-maker. It was framed up of the toughest wood, and ironed and bolted at all joints, then faced inside the framing with poplar boards; it scooped up in front and behind, and sagged in the middle, so that when the bows and canvas were put on it looked like nothing else that I can now think of. This box was from six to eight feet deep, and as long as you'd a mind to make it, and had an iron-bound, iron-fastened gate at each end, also two or three chains with "finger-hooks" to keep the box from spreading under heavy pressure from inside. From this old "National Road" the ancestors of the drivers of the prairie schooners of the Pacific Slope learned the art of heavy teaming, and improved on it; but it could

not have been much improved on had it not been for the invention of the brake, or rub-lock. When I was a boy there was no such thing as a wagon brake. I never saw one until I was ten years old, though I saw all sorts of wagons and stage-coaches every day. The old-time wagoner had a curious collection of lock-chains, but everything was for locking the wheel, or wheels, solid. He had a simple lock-chain, then a slide-lock, a drag-lock and a scratch-lock. The first rub-lock I ever saw upon a wagon was a curiosity as compared with the wagon-brakes of to-day. It had a wooden block-beam and iron brake-rods and beams somewhat as they now are, but the hand-lever was between the hind wheel (above the hub) and the wagon-box, and upon the lever was a little chain that could be hooked, link by link, as the lever was pulled down, upon an iron pin in the block beam. At first the driver stopped his team and got down off his horse, to work this lever several times in going down a long slope; because at intervals there were slight embankments in the road to carry off the snow-water and frequent rains of that country. But there was soon invented what was called a "lazy-board," that is, a board which could be pulled out in front of the brake-beam, from under the wagon-box, far enough to give a man a place to sit. In this position the driver would let his team keep the road while he worked the brake. That style of brake lever held its place for many years before we got to—or tumbled to—the long brake-rod and lever that enables the driver to keep his driving-seat and work the brake with hand or foot. I have cause to remember the lazy-board. One Saturday, in that season of the year which is called Indian summer, though wherefore "Indian" no man knoweth, I was taking a boy's holiday ride on horseback along the National road about four miles eastward of the city of Wheeling, and riding up a long grade I saw a big team coming toward me down grade, but seemingly going out of the road without a driver. Presently, before I reached it, the big wagon went over on its side in the ditch—on its right side, too. I had seen no driver and supposed there was none, but I notified the neighbors of the catastrophe and went on my way, and afterward found out that the neighbors discovered a dead man under that wagon. It was the driver. He was riding on the lazy board, when he fell asleep and the wagon tipped over on its side.

[When I began this writing some years ago, I seem to have intended it as the beginning chapter of a short romance, but I suppose I may think that man is safe under the wagon in the hands of the neighbors, and so let the writing go as a pretty good description of how wagon-brakes, as we now see them and use them, came to happen, and leave to some abler pen the other chapters of the romance of "The Lazy Board."]

For Young Men Who Are Thinking of Marriage.

Select the girl.
Agree with the girl's father in politics and the mother in religion.

If you have a rival, keep an eye on him; if he is a widower, keep two eyes on him.

Don't wear to the girl that you have no bad habits. It will be enough to say that you never heard yourself snore in your sleep.

Don't put much sweet stuff on paper. If you do, you will hear it read in after years, when your wife has some esopical purpose, inflicting upon you the severest punishment known to married men.

Go home at a reasonable hour in the evening. Don't wait till the girl has to throw her whole soul into a yawn that she can't cover with both hands. A little thing like that may cause a coolness at the very beginning of the game.

If, while wearing your new summer trousers for the first time, you sit down on some molasses candy that little Willy has left on the chair, smile sweetly and remark that you don't mind sitting on molasses candy at all, and that "boys will be boys." Reserve your true feelings for future reference.

If, on the occasion of your first call, the girl upon whom you have placed your young affections looks like an iceberg and acts like a cold wave, take your leave early and stay away. Woman in her hours of freeze is uncertain, coy and hard to please.

In cold weather finish saying good-night in the house. Don't stretch it all the way to the front gate, and thus lay the foundation for future asthma, bronchitis, neuralgia and chronic catarrh, to help you to worry the girl to death after she has married you.

Don't lie about your financial condition. It is very annoying to a bride who has pictured for herself a life of luxury in her ancestral halls to learn too late that you expect her to ask a baldheaded parent who has been uniformly kind to her to take you in out of the cold.

Don't be too soft. Don't say: "These little hands shall never do a stroke of work when they are mine," and "you shall have nothing to do in our home but to sit all day long and chirp to the canaries," as if any sensible woman could be happy fooling away time in that style; and a girl has a fine retentive memory for the soft things and silly promises of courtship, and occasionally, in after years, when she is washing the dinner dishes or patching the west end of your trousers, she will remind you of them in a cold, sarcastic tone of voice.—Ex.

After Christmas.

[Written for the RURAL PRESS by MRS. J. M. K.]

It is Christmas eve. The young folks are all in bed, and the stockings, well filled, all hang by the chimney. What great long stockings! Not a real baby sock among them any more. Even the baby has been playing Santa Claus this year, testing the truth of the words, "More blessed to give than to receive."

Well! the mother can draw a sigh of relief from the constant care of babyhood; but will it be the only feeling expressed by that sigh? How we miss the merry prattle, the wise sayings of which every mother, no doubt, could fill a volume.

Now, as I sit by the firelight alone, tired with the day's work, but thinking of the good cheer of to-morrow—of Christmas bells and Christmas carols—I seem to hear the merry chimes of many bygone years, yes, almost hear down the long ages the voice of the heavenly messenger saying "Behold, I bring you good tidings of great joy, which shall be to all people. For unto you is born this day in the city of David, a Savior which is Christ the Lord." Almost hear the triumphant music of the celestial choir singing "Peace on earth, good-will to men." Is it not a pretty story? A beautiful oriental fable?

To how many of us is it anything more? Surely not to those who turn their eyes toward the light of Asia, or grope for wisdom among the writings of Hindoo sages; who turn from the sweet, strong simplicity of this Gospel of great joy to study the esoteric doctrines of Buddhism. For me, I want no man's wisdom. What are sages of any age or nation but poor mortals like myself, groping in darkness, vainly striving to solve the problems of life and death? My soul cries out for a "thus saith the Lord." Prove to me the sweet, old story is but a myth, and I close the book. Prove to me the promised Savior did not come, did no mighty works, did not seal His testimony by a well-attested resurrection and ascension, and I lay the book upon a shelf; I read it no more. Until you can do this, although I cannot thrust my hand into His wounded side, or put my fingers into the print of the nails, I will cry out with Thomas, "My Lord and my God."

Failing to finish my musings Christmas eve, interruptions occurred, until now, when I again take up my pen, the sound of the Christmas bells is growing faint. Merry greetings from east and west have all been received, and precious love tokens laid away.

Ere these lines can reach the reader's eye the death of the Old Year will have been tolled, and the New Year rung in with glad acclaim. I have this season more than usual realized the gladness of the Christmas-time; the solemnity of the closing year and the opportunities and responsibilities of the New Year; but in trying to express them am tempted to lay down my pen in despair, for what can I say that has not often been better said or sung, of good resolutions for the future, turning fresh, unsoiled pages in life's book, and the certainty that some who welcome the New Year will not live to see its close. Oh, that the spirit of loving self-sacrifice, the peace and gladness of the Christmas-time, may linger as a sweet benediction in every heart, and the New Year mark a grand intellectual and spiritual advancement for all.

Tracy.

Colluding With Swindlers.

The *Salinas Index* puts things plainly and tersely in the following article:

Every now and then there appears simultaneously in many country papers (and in some daily city papers, also,) an article from four to six inches in length, purporting to be a clipping from some S. F. paper, and telling how such and such a person has won a big prize in the Louisiana lottery. The seductive article often goes on to say that the lucky winner was a poor man; that with his prize-money he paid off all his debts, bought a comfortable home for himself and family, and placed a snug sum in the bank for a rainy day. There is nothing to indicate that these articles are advertisements and paid for as such; yet such is the case. The agent who sends them out is very particular to stipulate that there shall be no mark attached to the articles in question to distinguish them from the general reading-matter in the paper, or to indicate that they are advertisements. * * * Now then, publishers who insert these articles in their papers must know that they are aiding a barefaced swindling concern to fleece their readers, even if they are ignorant of the fact that they are guilty of a misdemeanor every time they do it. Section 322 of the Penal Code of California declares that every person who aids or assists, either by printing, writing, advertising, publishing, or otherwise, in setting up, managing or drawing any lottery, or in selling or disposing of any ticket, chance, or share therein, is guilty of a misdemeanor. Another section of the Code declares that any person who sells or gives another a lottery ticket, or share therein, is also guilty of a misdemeanor, and subject to punishment accordingly. John A. Morris, the owner of the Louisiana State lottery, is worth \$10,000,000, all of which he made out of the dupes who buy tickets in his swindle. He gave his daughter a million-dollar check for a wedding present a few days ago.

YOUNG FOLKS' COLUMN.

Fables.

[Written for the RURAL PRESS by C. P. NETTLETON.]

I.

The Sheep and the Lion.

Some Sheep coming suddenly on a Lion at the edge of a forest were about to flee, when one of their number noticed that the Lion was entangled in the bushes, and called to his companions that there was no danger, as the Lion could not move. Hearing that, they returned and gathering round him, commenced to make fun of him, saying that his mane was too long and his feet too short, and wanting to know of what use he found his tail.

The Lion got so enraged that, making a stronger effort than ever to get free, he succeeded, and quickly killed the whole flock and ate them all.

Moral: Every one can find fault in others, but only the truly wise know when to speak of them.

II.

The Bear and the Deer.

A certain Bear did not come out of his den one spring till later than usual, and being very hungry ate some dead Squirrels he found. Soon he began to feel sick, for the Squirrels were poisoned, and conscience smiting him for all the wanton mischief he had done in the many years of his life, he tried to think of some way to atone for it. Seeing a Deer passing some distance off, he called to him, told his trouble, and asked advice. The Deer replied that the only thing to be done was to prevent further distress and offered to assist the Bear, if he were really in earnest, to a place where he could drown himself. The Bear refused, however, and now waited anxiously for the effect of the poison to wear off, which it finally did.

But with returning strength came a renewal of the old nature and immediately he went in search of the unconscious Deer. Having found him, the Bear was about to kill him when the Deer asked for what reason he wished to slay an innocent Deer, especially in view of his recent regrets for just such deeds.

"Because of your unfeeling and unreasonable advice when I was sick," replied the Bear.

"But," said the Deer, "you asked me for my advice and honestly did I give it."

But the Bear would hear no excuse and instantly killed him, then composed himself to enjoy a rich feast.

Moral: Honesty may be the best policy, but there are times when silence is best of all.

III.

The Man and the Rattlesnake.

A Man who was taking a walk in some woods was suddenly startled by a Rattlesnake just ahead of him sounding his rattle. Instead of quickly getting out of his way, which he could easily have done, the Man did not move and was struck by the Snake. He started for home at once, and on reaching there told his family what had happened, and added that he was sorry he had been predestined to die by a snake bite.

"Fool!" said his wife, "why did you not avoid the Snake and save your life?"

"Why," the man replied, "if it were ordained that I should die by the bite of that Snake, I could not have helped myself; we have to submit ourselves to Providence!" And in three hours he was dead.

Moral: God looking in the future, sees man, able and obliged to choose for himself, decide between heaven and hell, and then, having allowed him to elect whether he will have life or death, predestines that as his choice is in time such shall it be through eternity: this is predestination.

Home-Made Scrap-Books.

[Written for the RURAL PRESS by F. M. PATSON.]

Any one who has never tried her hand at making them has no idea of the artistic possibilities of scrap-books.

To any one with a little patience and taste the work of making them is quite fascinating, and one well made is interesting not only to little ones but affords pleasant entertainment for older ones as well.

If one has plenty of time and a little money and wishes to make for some little friend a delightful gift for a birthday, let her take fine, heavy black linen, and cut from it leaves (large enough to fold double) say 15x17 inches for each page, and laying two thicknesses together, buttonhole them all around the edge with scarlet yarn or zephyr. If desired, a few leaves of white linen may be interspersed and make a pretty addition.

Now collect all the colored pictures you can of any and every description for filling it. All sorts of colored advertisements, picture cards, cheap "chromos," etc., work in nicely and add to its beauty.

Put no whole picture in, but cut out all the figures or groups and lay on the dark background. No matter how temptingly pretty a picture may look as a whole, remember it will spoil your book to insert it.

Where the entire picture is not useful, cut out the parts that are and use them, as you will need a great many.

Having collected your pictures, proceed to arrange them in all sorts of odd ways; the more

odd and irregular the better; diagonally, sideways, every way, using taste and care in their arrangement.

Select some especially fine, large, appropriate ones for the covers, and put the name of its future little owner and the birthday greeting either in painted or applique letters carelessly across the front cover; now tie the backs together with scarlet ribbon bows and it is finished.

I have seen books made in this way too handsome to be kept anywhere but on the parlor table, and so elegant and truly artistic and beautiful as to attract the attention of old and young.

Black bristol-board may be, if preferred, used in place of the cloth. If not quite as durable, it looks equally well, though the scarlet edges cannot be used.

Such a book as I have described is very beautiful, and well worth the work and time, but really costs quite as much as a handsome one bought outright; therefore, for one whose time and purse are limited, the black and white scrap-books are preferable.

These may be made very plain and common, or extremely beautiful, according to the work put upon them, and if well made, certainly repay the time put upon them, since the commonest pictures can be utilized to make a truly beautiful thing.

For a common book for little children, where large pictures are to be used, any old geography or book of that shape will do nicely, after it has had every other leaf carefully cut out to make room for the insertions.

To fill a book of this kind requires little time or taste, as it is merely a matter of trimming the edges of the pictures and pasting them neatly to fill page after page.

The covers of a book of this sort may be covered again with gay-colored paper and illustrated with pictures in the same manner as the inside, and no matter how cheaply finished, the gift will always please a child, since all children love to look at pictures.

However, if one can get a blank-book of any kind, and cut out the pictures the same as in the colored book, most beautiful and artistic effects may be had, almost equal to fine engravings, merely by using taste in selecting and arranging the pictures upon this white background.

Make each page of a separate character and work to produce a certain effect with your pictures. Parts of different ones may be so nicely pasted as to entirely deceive the eye, and in that way, bit by bit, designs may be built up out of fragments. A child's figure here, a spray of flowers there, a bit of tracery in another place, all dextrously cut out and applied with brush and paste, make a new picture grow under your hands, so that, if one desires it, an entire book of poems may be beautifully illustrated in this manner, as I have seen it done several times.

Children delight in such books, and if they have pages devoted to different subjects, a dog and a cat page, a boy and a girl page, the delight is enhanced.

I know of no more charming work for an invalid than to amuse herself by playing artist with pastepot and scissors for the benefit of her little friends, and my own experience goes to prove that these home-made books are valued far ahead of anything attainable in the stores, no matter how beautiful it may be.

KINDLY TACT.—It would be hard to afford a stronger evidence of being well bred than of a society leader who had among her dinner guests one evening a relative from a distant rural district, who, though refined and well educated, knew but little of society ways and manners. Soon after the dainty finger-bowls were placed on the table the rustic visitor took up the bowl and drank from it. The hostess observed it, and showed admirable tact a moment after by drinking from her own bowl, thus sparing her guest the mortification which might otherwise have resulted. Another case where generous consideration and tact was shown was where a well-known lady of Boston was traveling in Europe not long since. She went to London for only a day or two for the sole purpose of seeing a friend who, by the way, belonged to the nobility. When strongly urged to meet a few friends at dinner next evening she declined, and on being pressed for a good reason was frank enough to say that she had with her no suitable dress for such an occasion, but only a black silk. "Wear your black silk and I will wear one, too, so you may feel quite at ease," said the hostess, and a promise was given to be present. What was the surprise of the Boston lady, on entering the drawing-room, to find all the ladies in black silk gowns. Lady Dash had written her guests requesting them to "wear black silk."—*Boston Courier*.

ARCHDEACON FARRAR says that Cruikshank the artist, offered \$500 for proof of a violent, crime committed by a total abstainer from intoxicants, and that the money remains unclaimed to-day. The Archdeacon says that he will give the same amount for proof of any one case, either in the church or out of it, where drunkenness has been cured without total abstinence.—*Exchange*.

SENORITA MATILDE MONTOYA is the first Mexican girl to become a doctor. A committee of young men of the City of Mexico got up a bull-fight in her honor, and devoted the proceeds to the purchase of books and instruments for her. A country that is civilized enough to have women doctors ought to abandon bull-fights.

DOMESTIC ECONOMY.

Kate Has Made a Pie.

"I cannot ask you up, Ben Blend,
To dine with Kate and me."
Thus spoke a drummer to his friend,
And sighed right heavily.
"I know I promised to, but then—"
A tear stole from his eye—
"The cold, frost-bitten fact is, Ben,
My Kate has made a pie.
"The pie is not so deadly when
An expert wields the plate;
But that's a different pie, dear Ben,
From pies composed by Kate,
She's not an artiste with the flour,
The spice, the lard, so I
Cannot invite you to our bower,
For Kate has made a pie.
"You are an honest bachelor, Ben,
Let me some truths unload;
Some little facts to ponder when
You're out upon the road.
Our honeymoon was filled with joy,
No cloudlets swept the sky;
Things might have thus continued, boy,
But Kate, she made a pie.
"A parody upon the pies
My mother used to make!
A thing to breed a wild surprise
Mixed up with stomach ache.
A pie to conjure spirits up
From Sheol's sulphurous state,
On which might Macbeth's witches sup—
That pie first made by Kate.
"What strange fatality attends
The young wife's pie-us art?
Pre-matrimonial pastry blends
Not with the wisely heart.
Before the orange blossom fades
Wide opens many an eye;
E'en unsophisticated maids
Should make a better pie.
"And so I cannot ask you, Ben,
With us to come to dine;
Some other day—some Sunday, when
My wife has ceased to shine
As empress of the kitchen range—
Grown more discreet—and fly—
So, Ben, old boy, don't think it strange,
But—Kate has made a pie."

Broiled Chops.

The choice of chops for broiling is generally decided by the price the customer wishes to pay. As a matter of fact, those cut from the lower neck and shoulder are the sweetest in flavor; those from the loin the richest, because the fat is largely distributed throughout the lean, and the kidney-fat, which is attached to them, is preferred by epicures. Chops cut from the middle part of the leg show the most meat in proportion to fat and bone; the so-called French chops, cut from the rack, or ribs, are the most expensive, because all the fat and flesh is trimmed away from them, except that small portion at the thickest end.

After the outer skin has been stripped from the chops, and the superfluous fat cut off to be tried out for drippings, they are to be scraped lightly with the back of a knife, or wiped with a wet cloth, to remove bone-dust or any other foreign matter; place them between the bars of a double-wire gridiron, and expose them to the hottest fire available. The rapid browning of the surface of meat determines its juiciness and flavor, and, therefore, the fire should be hot and clear; brown both sides as quickly as possible, and then move the meat far enough away from the fire to prevent burning. During the cooking do not apply salt until the surface is brown, because if it comes in contact with raw meat it draws out the blood and deprives it of flavor. After the meat is cooked to the desired degree, season it palatably with salt and pepper, and moisten the surface with a little butter; but do not cut it until it is carved, and do not put any water upon the dish with it. Be sure that the dish is hot upon which it is served, and use hot plates; the dishes can be heated without injury by immersing them in a pan of hot water while the meat is being broiled.—*Juliet Corson, in Good Housekeeping*.

Scalding Brine for Meat.

EDITORS PRESS:—While there have been a number of excellent recipes and directions about salting pork and bacon, one very essential requisite has been omitted, and that is a thorough scalding and skimming of the brine before it is applied to the meat. After all impurities that may arise have been carefully removed, it should then be poured on to the meat while it is hot. Even if it is hot enough to start the grease, no harm will result. I have tested this plan for more than 40 years, and I never have lost a pound of pork yet. I have sweet nice side-pork now which was put down in this way last August. J. S. TIBBITS.

FRIED POTATOES.—Peel them and boil in salted water; do not let them boil until they are soft. Beat one egg and have ready some fine cracker crumbs; roll the potato in the egg, and then in the cracker and fry in butter until a light brown, turning frequently that the color may be uniform; or the potatoes may be dropped into hot lard. In this case a cloth should be laid over a plate and the potatoes should be drained for a moment in this before sending them to the table.

The Week.

The storm which opened so well as we went to press last week has continued with intervals of sunshine, and now enters upon its second week with new indications of strength and duration. This Wednesday morning the higher hills around the bay were snow-capped, but the rain soon removed the unwonted covering. The rainfall is now reaching excellent figures and the State is drenched from end to end. We give the record of a few widely separated points, which show how much more generously we are being served this year than last:

Localities.	This Season.	Last Season.
San Francisco.....	7.75	4.65
Pleasanton.....	5.95	1.99
Suisun.....	5.67	2.51
Merced.....	2.80	1.30
Fresno.....	2.65	.34
Hanford.....	2.28	1.15
Tulare.....	2.30	1.10
Los Angeles.....	9.67	1.58
San Jose.....	5.95	1.96
Santa Cruz.....	8.17	4.09
Monterey.....	5.11	2.08
Salinas.....	5.31	2.24

Soledad.....3.17 1.19
Paso Robles.....5.01 1.06

As we go to press the storm is still on. Enough rain has fallen to answer for all immediate requirements and probably to insure a year of exceptional productiveness.

The Eastern Fruit-Men.

It seems likely that the coming this month of the excursion of members of the American Horticultural Society will be one of the most notable events in the horticultural history of California. The latest reports from the secretary, Prof. Kagan, indicate that much greater numbers are applying for privileges than had been anticipated, and estimates vary as to the probable size of the excursion all the way from 400 to 1000 persons. This will constitute a notable body, because they will be, for the most part, people who have given their lives to horticultural pursuits, and they come upon a special mission to inform themselves upon California's deeds and adaptation in their special line. It will be a discriminating body of visitors who have cultured eyes and know how to use them effectively. Such an inspection we should court, if we have faith in our own works and our conditions, and it is plain that we should do all in our power to afford opportunity for inspection. No better opportunity could be found for mass displays than at the two citrus fairs, at San Jose and at Riverside, and an effort should be made as never before to set forth our best products of fresh and preserved fruits, and plants and flowers as well, for the excursion will include horticulturists in the broadest sense of the term.

There seems to be so far most activity at San Jose, and a host of committees are at work upon all the features of the occasion, the reception, the entertainment and the display. The co-operation of all is invited, and the invitation should meet with a general acceptance. Fruit and fruit-products should be sent from all the upper half of the State and from as much wider area as the growers choose. We do not discover from the Riverside papers that preparations are proceeding very actively, but possibly it is early. Certainly, as we stated last week, the effort should be to show the whole State to advantage, and the two meetings seem to afford a good chance for that. If both parts of the State do their very best there is no danger of doing too well, for it is not likely that in a generation as good an opportunity will present itself to show California horticultural products and to dispense California hospitality.

The Tariff and Fruit Products.

There has naturally been considerable feeling among those engaged in our various fruit industries as to whether dried fruits would be caught in the free-trade shower which seems to be prevailing at the East. The State Horticultural Society, as reported in the account of its meeting given elsewhere, appointed a committee to draft a forcible memorial to Congress calling attention to the hardship which would be brought upon our growing fruit industries by such a course. Various efforts have also been made to ascertain, if possible, what were the intentions of the Eastern tariff reformers with reference to these special articles. Telegrams have been received from New Yorkers who are well informed as to public movements that the present scheme does not reach to fruit products. It is reported that Abram S. Hewitt, Mayor of New York City, whose acquaintance with public affairs is generally known, has said that the tariff reformers will follow the line marked out in the President's message and endeavor to remove, or at any rate lower, the duty on such raw material as enters into the manufacture of necessities with the aim of reducing the cost of living, and that raisins at least will be considered as a luxury, and not be included in the list. Such in brief is the report which comes by wire, and we give it for what it may be worth. It will be just as well, however, to continue efforts to impress upon Congressmen and the whole Eastern public the fact that our fruit-producing interests are in a promising condition, but cannot stand the throwing open of the gates to foreign competing products. It would be very easy to strike a blow at California's prosperity which might be fatal, and we do not believe any intelligent Congressman, with a full knowledge of the facts, would wish to do it.

Report on the Pacific Railways.

The Commission appointed by the last Congress to investigate into the affairs of the Pacific railways, which enjoyed the bounty of the Government and yet have failed to meet the obligations placed upon them in its bestowal, has made two reports. The majority report is by Commissioners Anderson and Littler and the minority report by Commissioner Pattison. It can hardly be claimed that either report adds much to the general knowledge of the policies and methods of these corporations, but there is a connected and emphatic restatement of old facts which are well to have on formal record, and in this form they may prove of lasting public benefit.

Of the majority report it may be said that it is conciliatory in tone, and though it finds that the roads have not lived up to their obligations to the public, it advises extension of time and such other favoring conditions that the companies may ere long make partial return at least for the value intrusted to them. The majority report gives an elaborate analysis of the aid given the different lines and the manner of construction and management of the lines; its scheme for allowing the companies to repay their debts to the Government is also elaborate. We have not space for them nor does the general reader care for the information. All who desire to make special study of the subject can, no doubt, obtain full copies in the form of Government documents which they will, doubtless, soon assume.

The minority report by Ex-Governor Pattison of Pennsylvania presents the affairs of the companies in a pointed way and reflects the opinions of many people as to the character of their misdeeds. Here is a paragraph which will be found to accord with a wide experience within the territory traversed by these roads.

"The original purpose of Congress," says the Commissioner, "was to promote the public interest, and the companies were made trustees for that purpose, but the public interest has been subordinated by these companies to the stockholding interest. Nearly every obligation these companies assumed has been violated. Their management has been a national disgrace. Since the date of their inception they have been conducted upon a purely speculative basis. Their permanent prosperity has been lost sight of, while their managers greedily strove for temporary advantage.

"They increased the cost of living. They laid proprietary claim to the traffic of large sections of the country. They constituted themselves the arbiters of trade. They attempted to dictate the channels that trade should follow and to fix rates of transportation that were extortionate. They discriminated between individuals, between localities and between companies. They favored particular individuals and companies. They destroyed possible competitors and they built up particular localities to the injury of other localities, until matters had reached such a pass that no man dared engage in any business in which transportation largely entered without first soliciting and obtaining the permission of a railroad manager. They departed from their legitimate sphere as common carriers, and engaged in mining articles for transportation over their own lines. They exerted a terrorism over merchants and over communities, particularly in election contests.

"In their relations to the Government they resorted to every device their ingenuity could invent in their efforts to evade the plain requirements of the law."

The Commissioner finds that the four men who controlled the Central Pacific, Messrs. Stanford, Huntington, Hopkins and Crocker, had diverted the earnings of that company through contracts made by themselves with themselves for construction, leases and repairs and divided over \$142,000,000 in cash and securities; that they built 17½ miles of adjunct lines, and, as directors of the Central Pacific Railroad Company, took leases of their own lines from themselves for the Central Pacific at the rate of nearly 13 per cent per annum.

Fifteen months ago three of these directors contracted with themselves to build an extension of the California & Oregon division of the Central Pacific a distance of 103 miles, the actual cost of which work was \$3,505,609, while they paid to themselves \$8,000,000 in stock, and \$4,500,000 in bonds; the market value of the stock and bonds at that time having been \$8,340,000, so that they personally profited by that single transaction to the extent of \$4,834,391. As directors of the Central Pacific, they also loaned the funds of that company to themselves to build the Southern Pacific, a competing line, across the continent.

The Central Pacific Co. also expended \$4,818,355.67, of which the manager declined to give any explanation or to permit others to explain. The balance sheet of the Central Pacific for 1886 should have shown a deficit of \$14,000,000, but by omitting the Government interest from the debt side and marking up the value of the unsold lands from \$12,500,000 to \$23,500,000, an apparent surplus of over \$28,000,000 was presented.

The foregoing is but a part of the sharp arraignment which Gov. Pattison makes of the methods and policies which have prevailed in the conduct of the overland lines, but these will serve to call attention to the subject. Of course, holding such views of the behavior of the three companies after receiving Government bounty, which the report places at the colossal sum of \$447,729,470 in the aggregate, the commissioner is forced to the conclusion that there is little

need for temporizing or giving favors, and he recommends that the charters be declared forfeited and that suits be carried forward to recover as much as possible of the property to which the Government can show title.

We understand that the managers of the companies stated before the commission that an attempt to force payment of sums due the Government would close the issue. If this should be done, and one continuous line across the continent should thus come into the hands of the Government, it would afford a good opportunity to test the Government conduct of railways in this country. If the Government should get possession of the Union and Central Pacific, and should run them, it would give us an overland line which could not be brought into pooling arrangements and the like, but would serve as a permanent check upon such arrangements by other roads. It may be objected that the Government cannot conduct a railway successfully. This is decidedly opposed to the experience of European countries where the tendency is certainly toward Government operation of all railways, and where the Government roads thus far have proved a public benefit. Again, it is not likely that the Government could run the roads itself and lose any more than it has lost during the last 20 years by aiding them to the benefit of private parties rather than the public. The times seem ripe for Government railways and Government telegraphs in this country, and the course of events may bring the Government into position to try the experiment on a considerable scale.

Placer at Los Angeles.

In our Placer County Notes a fortnight since it was briefly stated that a carload of oranges, persimmons, olives, etc., had been dispatched from Newcastle, to be put on exhibition at Los Angeles, and that E. W. Maslin, P. W. Butler, J. J. Morrison, J. F. Madden and other gentlemen accompanied the fruit. This step was taken by the Placer Board of Trade in order to present to the Eastern visitors, with whom Southern California is swarming, an object-lesson which should convince them past all doubting that foothill regions in the central part of the State enjoy a climate well adapted to the growth of citrus fruit, and in respect to freedom from insect pests superior to any other section.

Ample room for the display was secured in the most frequented portion of the City of the Angels, and the fruit was arranged against the wall to the height of a dozen feet, presenting nearly 100 square yards of bright, scaleless oranges. As we mentioned last week, the exhibit drew a deal of notice and aroused much admiration. The hall was thronged day after day and night after night with interested and inquiring visitors; a large map hung beside the fruit, showing the position of Yuba, Nevada, Placer, El Dorado and Sacramento counties, and the gentlemen in charge talked themselves hoarse in elaborate and repeated explanations, until the show was brought to a close last Tuesday evening.

The result of this stroke of enterprise and peaceful invasion has been to send scores and hundreds of home-seekers to Placer county prospecting already, and it will probably send many more settlers thither.

And it is pleasant to hear Mr. Maslin testify: "From the old citizens of Los Angeles we met nothing but kindness, and they were free to express their surprise and pride, as Californians, that Placer was able to make such an exhibit." Indeed there is no cause for any sectional jealousy in such matters; for, with the flood of immigration now turning toward the Pacific Slope, the fertile acres of our favored State will prove none too ample for the use of the coming millions.

BUTTE COUNTY FRUIT-GROWERS.—It is announced by telegraph that 300 citizens of Biggs neighborhood in Butte county have organized an association to develop the fruit interests of the section of Butte county along the Feather river. In half an hour pledges were made to set out fruit trees to the extent of 400 acres, and it is believed that there will be shares enough taken in the association to insure the setting out of at least 600 acres during the coming month.

ACCORDING to reports received from various parts of the State, crop prospects are very bright.

A Glimpse at Santa Cruz.

Our correspondent who recently visited Santa Cruz and vicinity has given interesting accounts of the country and its development. He paid especial compliment to the energy and zeal of the Santa Cruz Development Association and the excellent work which is being done under its auspices for the improvement of the town. Alluding to these letters which have appeared in previous issues of our journal, we give now a glimpse of the city of Santa Cruz as seen from an adjacent elevation, the view being westward out upon the bosom of the Pacific ocean. For this engraving we are indebted to a publication by the association already named and written by the secretary, Mr. I. H. Raymond. It is one of the best written of the descriptive pamphlets now being issued about California points, and should have a large circulation. The history of the region from the first period by Cabrillo in 1542 is sketched in a very interesting manner. The charms and resources are all faithfully put forth, and not least interesting is the appendix which contains a list of the fish of Monterey bay and the native trees and shrubs of the Santa Cruz district by Dr. C. L. Anderson. We have not space to reproduce these important matters. In connection with the engraving, however, we give a paragraph descriptive of Santa Cruz City as follows:

Situated on the northern side of the bay of Monterey, that magnificent horseshoe-shaped sheet of water, 22 miles from point to point, which indents Monterey and Santa Cruz counties, the city of Santa Cruz extends backward from the beach across a slightly elevated plateau, and then climbs two or three terraces, which encircle the lower part of the town like the seats of an amphitheater. The business portion of the town lies on this plateau and along the water front. The main street, Pacific avenue, is of good width, and extends from the foot of Beach Hill nearly a mile to the Lower Plaza. It is paved with the fine native bituminous rock, large deposits of which are found in several portions of the county. This forms, without combination with any other substance, an elastic and practically indestructible pavement for streets, sidewalks and crosswalks, and is being used to replace other kinds of walks and drives throughout the city. It is possible to go from the bath-houses at the beach to the Bay View school-house, a distance of nearly three miles, without once leaving an admirably kept sidewalk. Intersecting Pacific avenue are a number of rural-looking tree-lined streets, bordered with cozy, picturesque, and even elegant homes, almost every one envired by well-kept lawns and gardens abloom throughout the year. This portion of the town contains the courthouse, City Hall, Hall of Records, postoffice, two fine buildings belonging to the I. O. O. F., a Masonic Temple, a pavilion for floral and agricultural fairs, numerous excellent hotels and boarding-houses and several churches. The terraces, mentioned in the letter above, offer most attractive building sites, many of which are occupied by residences and grounds, where the owners have vied with each other in tasteful ornamentation and adaptation of the wonderful possibilities afforded by climate and soil. Mission Hill is formed of two semi-circular terraces and a plateau, which was the site of the original Mission of Santa Cruz, and where the Roman Catholic church of to-day stands. Hotels and churches are also found on this hill. "Beach Hill" intervenes between the business portion of the city and the beach and is a favorable location for homes and hotels.

In 1885 bituminous coal was the most valuable mineral product, but in 1886 it was surpassed by pig iron, which had a higher total value than silver and gold combined.

WOOL FROM BUENOS AYRES.—The State Department is informed that the Argentine Republic will repeal the export duty on wool.

The Orange Crop of 1888.

Accounts seem to differ somewhat as to the output of oranges from our southern counties this winter. The real estate excitement has damaged the crop in some parts by cutting up the orchards into town lots, and by winning the attention of the people away from production and into speculation. On the other hand, there are other parts where the boom has taken more moderate phases, that new orchards have come into bearing, and old ones increased their bearing capacity, so that a large increase of crop will be enjoyed. There has been, however, during the last few days, a windstorm which has knocked off 10 to 15 per cent of the crop, according to the Riverside Echo of Dec. 29th. On the whole the available surplus will be larger than last year, and for the most part of very fine quality.

The Los Angeles Express gives an interview with Mr. Germain, the leading fruit-packer of that city, in which the following points are set forth:

I have just received full reports from my examiners, which show that the Los Angeles crop

earlier have gone as high as 2500 carloads. Probably the lower estimate will be nearer the truth. Last year the surplus was 1600 carloads.

Potatoes at the East.

We have a letter from Sgobel & Day of New York, alluding to our recent mention of the potato shortage at the East, and stating that there are now arriving in New York from Europe fully 20,000 sacks of potatoes which will partially supply the Eastern lack. The best of these potatoes are coming from Scotland and are of the Magnum Bonum, Regents and Champions, and having been grown on light soils are very attractive in appearance. We recognize in these varieties the ones which we have read most about in our English exchanges as comparatively new sorts, propagated largely because of their resistance to rot. If we remember correctly, some of them have been introduced for trial in this State.

Our New York correspondents write that the potatoes from England grown on dark soil do not look as well as the Scotch tubers, and those

ENTOMOLOGICAL.

The Fluted Scale in Town and City Gardens.

W. G. Klee, State Inspector of Fruit Pests, has issued the following circular addressed to town trustees and city aldermen in California:

I desire to call your attention to the fact that the fluted or cottony cushion scale (*Icerya pur-chasi*) exists in large numbers in the midst of your town, being found on your streets as well as in your gardens. It is impossible for me personally to agitate the suppression of this insect in every one of the localities affected by it, since it is found in gardens and yards of all descriptions. I hereby appeal to you, as the representatives of the municipality, to do all in your power to prevent its further spread, and, if possible, to accomplish its total extermination. It should be borne in mind that the whole community is vitally interested in this matter, for the presence of this scale renders the cultivation of most of our garden plants and ornamental trees almost an impossibility. Let the whole community take hold and every property-holder do his share; and, if united, their efforts are bound to tell.

As a step in the right direction, I advise the removal from the streets of all locusts, acacias and French elms which are found to be the least infected, and the eventual substitution for these of trees less liable, such as the olive and the large-leaved California maple. In gardens, we recommend a severe cutting-back of all deciduous bushes affected, the total destruction of the pittosporum, the entire cleaning-out of all annuals, the thorough overhauling of the premises, the burning-up of all infested twigs, and the raking-up and burning of all leaves and rubbish.

If the infection of the *Icerya* is simply confined to a few trees in any portion of your jurisdiction, we advise the most thorough destruction of everything infested, and the infested spot should be closely watched for at least six months afterward. The peculiar habit of this insect of crawling into the earth, crevices and cracks, together with its power of subsisting without food for a long time, makes this insect by far the most difficult of extermination, and we ask every lover of plant life to do his share in preventing a spread of this insect; otherwise it will only be a question of time when it will be found all over this State.

A valuable cheap remedy deserving thorough trial has been found in the resin washes first recommended by Prof. Riley: Four pounds of resin; three pounds of sal-soda; water to make 36 pints. Dissolve the sal-soda in a few pints of water; when thoroughly dissolved, add the resin. Heat until dissolved, and add water finally. Use two pints of solution to the gallon of water. Use at a temperature of about 100° Fahrenheit. Also the following: 60 pounds of resin, 60 pounds of tallow, 10 pounds of potash, dissolved in 10 gallons of water; 10 pounds of caustic soda (Greenbank, 98 per cent.) Dissolve the resin and tallow; when dissolved, add caustic water slowly. After mixture is made, add ten gallons of water. Use at the rate of one gallon of mixture to ten gallons of water.

These solutions are cheap, and if rightly and persistently applied, will clean off smaller trees and bushes. But we concede the impossibility of exterminating this insect by spraying on large trees without complete defoliation.

We hereby repeat the recommendations made last year and also give the sulphide of soda soap mixture in a slightly different proportion: 10 pounds of best whale-oil soap (80 per cent soap). Dissolve in 50 gallons of water, and boil 1 pound lye or 4 pounds of Greenbank caustic soda with 1½ pounds of sulphur.

When thoroughly dissolved it is a dark-brown liquid (chemically sulphide of soda). Mix the two, the soap and the sulphide of soda, well, and allow them to boil for about half an hour, and it is ready for use. Apply it warm, at about 130° F., by means of a spray pump. Used warm its effect is better, and less material is required than when cold. It must, however, be remembered that the minute scales are especially numerous on the under side of leaves. This fact makes the extermination on a large

will not, on the whole, be a good one. By the Los Angeles crop I mean that of what is known as the Los Angeles district, i. e., Santa Ana, Anaheim, Ranchito, Downey, Norwalk, Fulton Wells and the country immediately adjacent to this city and between it and Santa Monica and Compton. The great trouble with this district is that the orchards have been too much cut up into town lots and acre villa tracts, thus ruining their crop. The trees have been largely neglected in the craze of real estate speculation, and many of them are therefore infested with white scale. The crop will be as good on those trees that have been taken care of, but it will be late. Oranges will not be fully ripe before February or March. They will be yellow before that time, but sour. The yield will be 500 carloads—about the same as last year. Fully 200 carloads have been wasted by neglect of the orchards.

Next comes the San Gabriel belt, i. e., San Gabriel, Pasadena, Duarte, Azusa, Santa Anita, El Monte and Savannah. The Duarte crop will be full and good; the San Gabriel, light, but good fruit, what there is of it. The Duarte and Pasadena, and the foothill oranges generally, are better than those of the valleys. The Duarte fruit is the best in the county and is entirely free from scale, but both red and black scale is found on the San Gabriel valley fruit. The yield for this district will be 400 carloads—about the same as last year.

The Pomona district, i. e., Pomona, Puente, Spadra, Claremont and surrounding towns, will yield an excellent crop, almost free from scale. There will be 50 carloads from this district, to 25 carloads last year.

San Bernardino county—including the San Bernardino foothills, Riverside, Arlington, etc.—shows even finer fruit than it has for years past. This district will yield 1000 carloads of magnificent fruit, to about 400 carloads last year.

Mr. Germain thus puts the surplus this year at about 2000 carloads. Other estimates made

from Germany, though of good quality, have suffered from cold weather there and are not arriving in good condition.

Sgobel & Day are large receivers of these foreign potatoes, and they write us that prices on December 23 were \$2.25 per bag of 168 pounds net on the Magnums and \$2 per bag on Regents and Champions. The freight is 23 cents per bag, and the duty 15 cents per bushel of 60 pounds, or 42 cents per bag, and present prices leave a fair profit to shippers.

As the Government estimate of the American crop is lower than it was in 1881, when over 500,000 of these bags were imported, Sgobel & Day believe that very heavy supplies will be received for the rest of the season. Potatoes grown in the Eastern States have considerable rot in them this season, do not keep well, and orders are coming to New York from Chicago, St. Louis and other Western cities for the foreign goods, which demand, they think, will grow to large proportions later on.

These facts indicate that the East has other large sources of supply than we considered in our previous allusion to the subject. Still the coming weeks are likely to state these supplies, and if a good new potato can be sent East early enough and cheap enough, it seems to us that large sales could be depended on.

AN IMMENSE OIL PIPE-LINE.—The projected Standard Oil Company pipe-line will be 1000 miles long, extending from Chicago to New York.

CAPITAL has been subscribed to build a lumber mill at Woodland, Yolo Co. The land has been donated.

tree in full foliage almost next to impossible. Only small trees may be successfully treated in this way. Large trees must be either deprived of their foliage or cut down to a few limbs. Neither of these methods can be safely applied on tender trees during a season when sharp frost may be looked for. A spraying should, however, be done, as it will check their spread most effectually. Too great pains cannot be taken in removing infected limbs, as the insect spreads often in this way. A canvas should be spread around the tree, so that none of the insects can escape. When the tree has been treated, spread hot ashes around its base and apply tight-fitting bands smeared with a greasy substance around the trunk to prevent any insects reascending.

For the treatment of orchards we earnestly recommend that every one interested make himself acquainted with the workings of the hydrocyanic gas remedy, as tried by Mr. F. W. Morse of the University of California.

Our wholesale condemnation of the locust and acacia is based on the belief that the *Icerya* has spread, and is still spreading, to a large extent by means of these two trees.

In conclusion we would still emphasize the fact that the insects, unlike other scale insects, are active travelers, and that they may adhere to your clothing and thus be carried many miles.

*Bulletins explaining this method can be obtained by addressing Prof. E. W. Hilgard, Berkeley.

A Foe of the Cottony Cushion Scale.

The project of sending some one to Australia to seek out natural foes of the cottony cushion scale and to bring them here if any are found, has been under discussion among our horticulturists for a long time. The Riverside convention last spring adopted a resolution favoring the idea and other horticultural bodies have done likewise since that time. The measure seems to be the wiser from the fact that effective foes of the pest are now being found in Australia by local observers. The following letter recently received by State Inspector W. G. Klee from Frazer S. Crawford of Adelaide, South Australia, gives information concerning it and its work:

I announce the receipt of your letter about the *Icerya* parasite with much pleasure, as I hope it may lead to correspondence that will be to our mutual advantage.

I had intended writing to you about this very matter as soon as I found that I was in a position to do something; so that your letter has only caused me to write sooner than I otherwise would.

Since Mrs. Ormerod's little work was published I have made what I think is an important discovery, viz., that one of our native coccids, a *Coelostoma*, is likewise attacked by this parasite fly. The *Coelostoma* is a very large sluggish insect, capable of living a long time without food, and one that could be conveniently sent through the post. I therefore propose to send you some specimens, of course taking the chance of their being attacked by the parasite. I will do the same with Maskell in New Zealand. I might also try the effect of posting some *Iceryas*, as they might live long enough to survive the voyage.

The parasite so completely did its work that I have not a single *Icerya* left in my garden. I am now trying to introduce it again, but it has some other enemy that I must find out. Some two months ago, I received a small branch of the common gooseberry covered with *Icerya* egg sacs nearly full size. One-half, containing say 50 *Iceryas*, was placed in a lemon tree, two or three of the finest specimens being put separately. The other part, with about a similar number, was placed in a glass bottle. Now, at the present time, the gooseberry branch in the lemon is as bare as it could be—not a vestige of the *Icerya* is to be found; but that in the bottle is nearly as thick as ever, although two coccinellidæ larvæ have been living and fattening upon them for the last two months, while the bottle is swarming with myriads of newly-hatched larvæ running about. This shows that the coccinella larva is not of great efficacy in putting down *Icerya*, but what clears off the rest in the lemon tree I am quite at a loss to make out, unless birds, and if so, in all probability the English sparrow.

My next experiment will be to cover over some *Icerya* (should I succeed in rearing some from the larvæ in the bottle), with wire netting, so that no bird can get at them, and then note the result.

As soon as Mr. Klee received this interesting communication, he took steps for the introduction of the fly described by Mr. Crawford, and it is expected that a small consignment will arrive within a few months. Mr. Albert Koebele of Alameda, Prof. Riley's local assistant, has kindly consented to take charge of the importation and will endeavor to multiply them until enough are secured to distribute them for location where the cottony cushion scale is abundant in different parts of the State. For this purpose a small orange tree infested with cottony cushion scale will be completely covered with fine wire gauze so that no escape of the minute fly is possible. It is of course possible that mishaps may occur with the introduction or breeding, but the effort will be continued until definite conclusions are reached.

The Cabbage Louse.

EDITORS PRESS:—In our struggle for existence with the passive yet active scale bug, his humbler congener, the cabbage louse, gets neglected, "gets left," unfortunately.

I want to know all about him from the authorities, especially the readiest method of slaughtering him. The work a single louse can put in by way of reproduction is, I know, both theoretically and practically, something appall-

ing. Will some kind friend increase my New Year's happiness by instructing me in the most effective method of warfare against this ubiquitous and ever-vigilant enemy?—EDW. BERWICK, Monterey.

Velvet and Felt Hats.

Fig. 1, in the group shown on this page, is a high-crowned hat, with a medium brim that widens at one side near the back and is caught up in a point. Bronze velvet covers the entire shape in the smoothest fashion. A fold of velvet is about the lower part of the crown, and wide loops of it stand up high on one side and in front. Against these rests a white bird with brown spots upon its wings. A pin of dull bronze is just in front.

Fig. 2 is a black felt hat; the crown is of medium height and square, and the broad brim is only covered slightly at one side. It is effective to outline the brim with binding showing black and gold. Two straps of velvet are

VELVET AND FELT HATS.

about the crown, and they are drawn to stiff loops in front and each fastened with a small gold butterfly. At the side, quite far back and well up on the crown, are several full though short ostrich tips, from out of which springs a dainty aigrette of the somber hue.

Fig. 3 shows a hat for a girl; it is a very large shape in brown and white felt. The broad brim, which curves slightly at each side, is faced on both sides with brown velvet. In the crown near the front are stuck two gold crescents, and the other decoration is a soft mode ribbon, plainly drawn about the crown and tied in long loops and ends at the back. The simplicity of the hat is most commendable, for there is nothing in such bad taste as an over-trimmed hat on a little woman.

WILD SILK IN YUCATAN.—The *Economista Mexicana* says that the Government of Yucatan is experimenting with the product of the wild silkworm, *Bombyx Psydii*, which is closely allied to the domestic silkworm. The silk on the cocoons proves to be elastic and of an excellent quality, though rather uncertain in color, varying from white to pale brown. It presents a peculiar difficulty, however, it being covered with a gum which is not easy to dissolve.

Citrus Fair Premiums.

The various notes of the Butte County Citrus Fair, which have come in since our last issue, only go to deepen the impression in its favor. It is claimed that "while previous expositions of similar character may have excelled this one as regards quantity, none have equaled it in quality or variety. This judgment has been corroborated by the public expressions of parties from Los Angeles and other points in Southern California." Even people who had lived for years in Butte appear amazed at the successes achieved. Extensive land-sales in Thermalito and other places near Oroville have already resulted from the fair, and a general desire is evinced by Eastern people to visit and inspect the several valley districts of the county.

The Oroville Register publishes the awards, which we condense below. The exhibitors are of Oroville, when no residence is named. The Gridley Herald remarks: "The awards are based upon actual merit, and ought to give

- LIMES—Best indiv. exh.—1st, C. H. Wilcox.
OLIVES—Best indiv. exh.—1st, Wm. Dunstone, Wyandotte; 2d, Mrs. G. F. Jones, Chico; 3d, V. Bunnel, Biggs.
OLIVE OIL—Best indiv. exh.—John Bidwell, Chico (exhib. by Chico Board of Trade).

PRESERVED AND CANNED FRUITS—Best individual exhibit—1st, Misses Orton & Hingham, Berry Creek; 2d, Jesse Wood, Mesilla Valley; 3d, B. F. Allen, Chico.
GENERAL EXHIBIT—Largest and most varied exhibit by one person—1st, Joe Entzman, Table Mountain; 2d, M. V. Roe, Nimshew; 3d, Heckert & Co., Mesilla Valley.
Largest and most varied exhibit by any association or community outside of Oroville—1st, Chico Board of Trade, gold medal; 2d, Mesilla Valley, silver medal.
Most tastefully arranged exhibit of citrus fruits by an individual or association—1st, D. K. Perkins, orange church; 2d, Chico Board of Trade, citrus cottage; 3d, H. C. Bell; 4th, Mrs. S. S. Boynton; 5th, D. F. Fryer.
Largest exhibit of oranges by one person—1st, O. G. Le Rossignol.
Largest exhibit of minerals—1st, W. E. Duncan, Jr., Oregon Gulch, gold medal; 2d, Ingraham & Utterback, Magalia, silver medal.
Largest exhibit of canned fruits, catsups, etc., Mrs. Dr. Bussey, Thermalito.
Finest display of flowers and plants—1st, Heckert & Co., Mesilla Valley; 2d, Mrs. E. W. Fugg.
SILK COCOONS—Best individual exhibit, W. W. Long; 2d, Mrs. H. Poppe, Cherokee.
TOBACCO—Best individual exhibit—1st, John B. Thomas, Cherokee; 2d, J. W. Snyder, Wyandotte.
COTTON—Best individual exhibit—1st, J. E. Allen, Bangor; 2d, Edward Fagin, Gridley.
POTATOES—Best individual exhibit—1st, A. Liebhauer, Forbestown; 2d, N. W. Slater, Forbestown.
MELONS—Best individual exhibit—1st, S. C. Phillips, Gridley; 2d, A. Capura.
HOPS—Best individual exhibit—1st, Frank Cress, Wyandotte.
The committee are of the opinion that the following localities are entitled to honorable mention for the general excellence of their display, and the care and attention given the exhibits by residents of the several places during the fair: Clear Creek, oranges, apples, etc.; Biggs, grains, oranges, nuts, preserves, etc.; Bangor, citrus fruits, nuts, persimmons, dried fruits, etc.; Paradise, apples, dried fruits, etc.; Gridley, nuts, persimmons, grain, etc.

OREGON SWAMP LANDS.—Gov. Pennoyer has written the General Land Office at Washington that Colonel Elliott, Special Agent, has forwarded reports to that office of all his examinations of swamp land in Oregon, and Colonel Shackelford has informed him that all of his reports will be completed and forwarded by the 1st of February next. The Governor asks the commissioner to act at once upon such reports, and cause patents to issue to the State of all the swamp lands so reported on by the 1st of March next. He also informs the commissioner that the State relinquished all claims to the lands embraced in list No. 38 rejected by the Land Office March 21, 1883, for want of proof, but which lands are yet withdrawn from settlement in the local Land Office, except as to such lands concerning which supplemental proofs have been furnished, and asks that with these exceptions the land embraced in said list be opened for settlement.

NO DELAY.—We have received notice from the Hiram Holt Co. of East Wilton, Maine, that the burning of their shops on the night of Dec. 20th will in no way interfere with the prompt shipping of all orders made upon them for Lightning hay knives, their storehouses not being damaged.

AGRICULTURAL DIRECTORS have lately been appointed by the Governor as follows: For District No. 19: W. B. James of Santa Barbara, E. O. Roedor, Santa Barbara. For District No. 16: P. W. Murphy, L. M. Warden, and E. Leedham.

AGRICULTURAL SCIENCE.

The Extraction of Color and Tannin during Red-Wine Fermentation.

University Experiment Station Bulletin, No. 77.

The observations of wine colors made last season in connection with the experimental fermentations at the Viticultural Laboratory, showed unexpectedly great differences in the behavior of the wines from different grapes during the period following fermentation. It was found that some grapes while yielding a very deep color at pressing would lose it rapidly afterward, and frequently fall below others that at pressing had shown materially less color. It was also shown by comparative experiments in fermentation of the same grape under different conditions, that not only the initial intensity of color (i. e., at pressing) varied materially, but also that the rate of loss was different, and that apparent advantages gained (e. g., by hot fermentation) in securing intensity of color do not hold out, and that in certain cases an actual inversion of the proportion at first existing between different samples derived from the same grape may take place. It was further shown that with the deposition of color the tints of wines change from the purplish-reds toward red, and from the reds toward orange-red.

Considering the importance at present attached, commercially, to depth of tint, it was determined to study more closely, this season, the exact course of the development of color in the wines formed under different methods of fermentation, in order to determine the conditions that would secure the greatest depth of tint from the same grape, not only at first but permanently. While the question of permanency cannot, of course, as yet be decided with respect to the present season's wines, the results already obtained are of sufficient interest to render a preliminary statement desirable. It is not intended to discuss at present other points elicited, that require a longer time for their full demonstration.

As it is usually supposed that the extraction of color and tannin go together and continue to the limits of the ordinary periods of drawing-off, no special arrangement for the control of the progress of tannin extraction was made in the first series of fermentations. But after these had shown conclusively that the above supposition is incorrect, another set of two was carried through with the very last grapes available for the season, viz., a lot of third-crop Zinfandel courteously sent by Mr. John Gallejos. The material for the first series, amounting to some 2500 pounds of excellent Carignane (sugar 25.75, acid .53), was donated for the purpose by Mr. A. Salazar, Jr., of Mission San Jose. The upper part of the table below refers to this last-named lot, the lower to the Zinfandel; (sugar 21, acid .60.)

The conditions established for the several fermentations were as follows:

The bulk (eight) of the first series of fermentations was carried out at the air temperature of 75°, which may be considered as practically the most desirable for most purposes. The charge was 200 pounds for each tank. Four of the tanks were provided with grating frames ("false bottoms") to hold the pomace submerged; one having three of these (Perret's process) so as to divide the pomace into three equal portions; another having the grating placed half way down, so as to hold all the pomace near the bottom of the tank. The two others had the grating placed near the top of the mash, as is usually done; but in one the wine was pumped over from below and sprayed over the top twice daily, in lieu of any other mode of stirring or aeration; while the other (788) was left to complete its fermentation without any kind of agitation. Of the other four tanks, one (794) was charged with unstemmed grapes, to be gradually crushed by daily stirring ("Morel" process); another (792) was left open and stirred twice daily with a cross-peg stirrer; the third (793) was similarly left open, but was stirred by pumping air to the bottom; while the fourth (787) was treated according to the method adopted for general purposes in the laboratory, viz., a floating, solid cover and twice-daily stirring.

One charge of 230 pounds (796) was fermented according to the same method, with an air temperature of 62°. In this, as well as in the eight preceding, the mash was set at 63°.

Two charges of 230 pounds each were fermented with the air temperature kept at about 90°; the mash was set at 86°. One of these tanks (795) was provided with floating cover as above; the other (797) was left uncovered and both received twice-daily stirring.

The observations given in the table are those made at 9 A. M. In the second series, two tanks only were used, both with floating top and stirring, as above; but one (799) with an air-temperature of 75° and set at 63°, the other (800) set at 86° and kept in a warm chamber with air at about 90°; the charges in this case were 60 pounds each; the observations were made at short intervals in order to be sure of not missing the maxima of color.—The latter are printed in full-face type, for a readier view of the facts.

The figures given in the columns headed "Intensity" refer to the scale in which a disc of wine four-tenths millimeter or about the sixty-

second part of an inch in thickness is equal in intensity to the type discs of Chevreul's color scale.

In the columns headed "Tint," r. means red and v. r. violet-red, the figures referring to the numbered tints of Chevreul's scale.

The last column to the right shows the percentage of decrease, referred to the deepest tint observed, taken as 100.

A glance at the full-face figures shows at once the very great differences in the greatest intensity of color attained in these experiments, under the varying conditions. The maximum, 77.0, was reached on the third

when, as in the case of No. 789, the pomace was held down near to the bottom of the tank, a maximum of 60.0 of the color scale was reached within the same time. Where the single frame was used near the surface, but the wine pumped over from beneath (No. 790), 55.0 was reached, and that two days earlier; where the three frames were used (No. 791) 57.1 was the color, the maximum being reached at the same time as in the two former, viz.: on the sixth day.

Comparing the three tanks treated in the same manner, but at different temperatures, to wit, Nos. 796, 787 and 795, having a floating cover and stirring twice daily, it appears that the same maximum of 70.0 was reached within the same time (fifth day) both with air-temperatures of 62° and 75°; in the one kept in a chamber at 90°, the maximum of 77.0 was attained on the morning of the third day. This marked influence of high temperature upon the extraction of color is also shown in the second series of the table, as well as in last year's.

Contrary to expectation, the "Morel process," in which the frequent stirring and prolonged fermentation would lead one to expect a deep color, comes next to the lowest, with only 50.0 of color, reached on the sixth day.

It thus appears that in all but one of these cases (795) the maximum of color was attained between the fourth and sixth days. After reaching the maximum, whether the wine is drawn or not, there immediately begins a decrease, which, on the whole, is the more rapid the higher the intensity that has been reached. But the percentage of decrease (see last column of table) varies materially, according to the method of fermentation employed, as will be seen from the figures in the last column to the right. But what interests us most is the absolute intensity remaining after the same lapse of time; and in that respect the color readings last made (Dec. 12th) are very instructive, as they doubtless foreshadow the ultimate outcome more or less accurately. It will be seen that the deepest tint (45.0) was at that time retained by the wine made according to the mode (with floating cover and twice-daily flogging) adopted in the viticultural laboratory, and at 75° air temperature (No. 787). Next highest (38.0) are Nos. 796 and 791, the first also fermented with floating cover but at 62°, the second, according to Perret's method, with three frames. No. 795, fermented with floating cover but at 90°, and at first showing the deepest tint of all, comes next below (35.3) having lost 54.2 per cent of its color. Nos. 792 and 793, both greatly exposed to air during fermentation, stand respectively 12 and 14 points below No. 787, fermented with cover on; and the same influence of excess of air in diminishing colors is even more strikingly shown on comparing Nos. 795 and 797, both fermented at the high temperature but one with cover on, the other open; the color ratio being 35.3 to 20.0.

Omitting for the present the discussion of the causes of these differences, the broad fact remains that in all cases the maximum of color was reached, and its diminution began, long before the fermentation was completed; that therefore the increase of alcohol beyond a certain point which from actual measurement in one case was only five per cent, has no influence in promoting extraction of color. Also, that the long-continued maceration sometimes practiced with the idea that it increases the color, is erroneous.

In the second series of the table, as in the first, the hot fermentation completed the extraction of color (12 hours) sooner than the cooler one; and it is interesting to note the rapid course of these fermentations, as compared with the long-drawn-out process in the Carignane series, due, of course, to the difference in the sugar and acid contents. The high temperature in this case rushed the fermentation right through, but the maximum reached was only 98.5° against 106° in the former case. Here also the color was at first much deeper in the hot than in the cold fermentation (66.6 against 55.8), but the decrease was also more rapid, as is shown in the later observations.

But during the whole time there was a steady increase in the tannin contents, ending with .20 per cent for the hot and .144 for the cooler fermentation. As it is proved that in sound wine there is no subsequent diminution of tannin, this shows that longer time on the pomace steadily increases the tannin, as has been supposed; also, that hot fermentation materially favors the extraction of tannin.

The practical precepts following from these experiments may then be thus stated:

1. Maceration of the wine on the pomace after fermentation is through, increases tannin, but adds nothing to color.
2. When blends are to be made for the sake of color, or when blends of white and red wines are to be made, it should, whenever possible, be done before fermentation, in order that the white juice may help to hold up the color that otherwise will come down very rapidly during the first weeks after drawing-off.

Berkeley, Dec. 30, 1887. E. W. HILGARD.

Grape-Growers' Meeting.

At a meeting of the Grape-Growers' and Wine-Makers' Association in this city on Tuesday, I. De Turk of Santa Rosa presided in the absence of the president, Capt. H. W. McIntire.

Mr. John T. Doyle introduced and supported the following resolutions:

Resolved, That the increased and increasing production of wine and the decline in prices renders it highly important to enlarge the market for California wines, and that we urge on our delegation in Congress an earnest effort to secure an exemption from tax of pure grape brandy used in fortifying such wines.

Resolved, That while we desire the privilege of fortifying pure wine with pure grape spirits free of internal revenue tax, we are of opinion that if that privilege cannot be obtained for all purposes, our delegation in Congress should use their efforts to secure the privilege of so fortifying for exportation, and that a measure conceding the latter privilege should not be antagonized merely because it fails to give us all we ask for.

The resolutions were vigorously opposed by J. H. Wheeler. Mr. Estee offered an amendment to Mr. Doyle's second resolution, adding the word "sweet," as referred to by Mr. Wheeler, and also to change the word "brandy" to "spirits" in the first resolution. Mr. Doyle accepted the amendments, and the resolutions were adopted.

On motion of Mr. Estee, a committee of 12 was appointed for the purpose of representing the different branches of the grape and wine industries; to take into consideration the future of the grape and wine industry of the State, and to formulate such action for the benefit of producers and wine-growers as may seem necessary to protect these industries; the committee to report at the next meeting of the society. The following were appointed such committee: M. M. Estee, E. C. Priber, George West, John T. Doyle, Captain C. de St. Hubert, L. J. Rose, E. W. Davis, H. M. Larue, E. W. Maslin, J. P. Smith, H. W. Crabb and F. Pohndorff.

Considerable discussion was given to the holding of a grape-growers' convention in March next. It was finally decided by adoption of the following resolution:

Resolved, That a committee of five be appointed to co-operate with the Viticultural Commission in holding an annual convention of viticulturists, and that such committee see that a proper time during the convention be set apart for the annual meeting of the association.

The following were appointed as the committee: Messrs. Priber, Estee, Humann, Portal and Rixford.

Prof. Hilgard addressed the meeting upon the subject of extraction of color and tannin during red-wine fermentations. The subject-matter of the address appears as University Bulletin No. 77 on another page of this issue. The association then adjourned to the first Tuesday in March.

Geo. W. Meade & Co.

A meeting of the creditors of this firm, whose suspension was noted last week, was held on Tuesday. A very considerate and kindly feeling seemed to prevail. The following statement of resources and liabilities was made:

LIABILITIES.	
Bank of California.....	\$ 30,287
Bills payable.....	110,500
F. A. Schneider.....	33,480
Accounts payable.....	6,859
Unpaid bills.....	21,922
Los Angeles bank.....	10,000
First National Bank of Fresno.....	10,000
Unpaid accounts at Fresno.....	5,000
Total.....	\$288,048
ASSETS.	
George W. Meade & Co., in Los Angeles..	\$ 27,166
Assets receivable.....	19,714
Bank of California securities.....	12,000
Merchandise, per inventory.....	155,354
Plant at Fresno.....	22,400
Plant at Santa Clara.....	10,000
Surplus in hands of Eastern consignees.....	153,240
Real estate of George W. Meade.....	208,910
Etc., etc.....	6,636
Total.....	\$615,420

From the two tables it will be seen that there is a surplus amounting to \$387,276. Mr. Meade proposed to make payments in full in three parts, the first payment to be due in six months, the second in nine and the third in 12 months, with interest at seven per cent. A committee was appointed to consider this proposition as follows: Thomas Brown, D. D. Shattuck, J. Woodward, Frederick Gibbs, Frank S. Johnson and H. L. Dodge. After a day's deliberation, the committee decided to advise the creditors that the proposition be accepted. The real estate is deeded to the Bank of California in trust as security for the notes. It is stated that all creditors for sums less than \$100 will be paid at once.

The valuable cargo of sheep gathered from various parts of Vermont, and shipped for Australia a few weeks ago, arrived in London safe and sound. None of the sheep died on the voyage, although about 100 cattle on the same vessel succumbed on account of the unusually rough weather.

MR. MOULTON of French Corral, Nevada county, harvested 100 pounds of large, juicy, well-flavored clingstone peaches in November.

Truman, Hooker & Co.

The following circular has been sent to some of the patrons of the above firm, and will no doubt be of interest to many other users of agricultural implements:

SAN FRANCISCO, Dec. 27, 1887.

DEAR SIR:—We desire to inform you that A. H. Isham is no longer a member of our firm and that his connection ceased the 20th inst., though he was restrained previously from transacting business for the firm. The new firm of Truman, Hooker & Co. will continue the business with increased facilities for the transaction of a large trade, and thanking you for past favors desire a continuance of your orders, which shall have prompt and careful attention. We are selling agents for the David Bradley Mfg. Co. of Chicago, one of the oldest, most successful, and the makers of the best steel and best chilled plow in the world. They have now put on this market what they call their Square-Corner sulky 2-gang, 3-gang and 4-gang riding plows and 3 and 4-gang walking plows. These new Bradley plows give great satisfaction. The following telegram is just received: "Williams, Colusa Co., Dec. 23, 1887.—Gang trial Grimes' Landing yesterday, Bradley Square-Corner victorious over the 'New Deal,' 'New Model' and 'Williams Gang.' Sold six Bradley walking gangs." Signed, Geo. W. Bruckner. The new Bradley Gangs have iron center molds and shares. The others have common sheet-steel molds. This is why the Bradley is more durable. They have the rear wheel, which makes the draft lighter than other plows. The Bradley Garden City Clipper Steel plows are models of perfection. They scour in any soil.

We are also agents for Messrs. Biddle, Smart & Co., the largest carriage-makers in Amesbury. We carry a full line of their carriages, buggies, surreys, etc., and will be pleased to give you prices for either a carload or single vehicle.

The Milburn hollow iron-axe wagon is greatly improved in material and workmanship. They are guaranteed.

The McCormick mowers and binders were the best last year, and are perfection this year. It will pay you to buy these if you need a mower and binder. We have a full line of implements, buggies, carriages, etc. Thanking you for past favors, we desire your patronage and influence in the future. We wish you a merry Christmas and a happy New Year.

Yours truly,
TRUMAN, HOOKER & CO.

THE CHINO VALLEY MANUFACTURING AND IMPROVEMENT COMPANY has lately filed articles of incorporation at San Bernardino in order to push a great industrial enterprise, which is outlined as follows in the Los Angeles Times: Richard Gird has sold 23,000 acres of his famous Chino rancho to a Minneapolis syndicate for nearly \$4,000,000, himself retaining a handsome interest. The syndicate includes Mr. Gird, H. L. Drew (president of the Farmers' Exchange Bank, San Bernardino), R. B. Hunter, H. M. Ryan, J. R. Wolcott and others. The capital stock is \$10,000,000, all subscribed. The company intends to spend at least \$1,000,000 within the next 18 months in the way of improvements on the property. Rolling-mills, blast furnaces, pipe-mills, etc., will be erected at the new town of Chino, which Mr. Gird has already started, and which the company proposes to make the Pullman of Southern California. The company controls an immense deposit of fine iron ore, 25 miles from Daggett, said to be better than Lake Superior ore, which has driven European ores out of the market. To get plenty of coke cheap the company has purchased a lot of Washington Territory coal lands, from which an excellent coking coal is being mined. It is claimed by the company that it can manufacture pig iron in Southern California for only \$3 per ton more than Cleveland prices, while freight from Cleveland costs \$15 to \$16. Such an establishment, operated in a town of its own workmen, will be of great financial importance in Southern California.

A GREAT EVENT WITH THE TEACHERS.—The California teachers had a grand time in Berkeley last week, when several hundred of them gathered in the halls of the University to hold their semi-annual convention. Three days were passed in discussions, etc., relating to the science and art of teaching, and the season was pleasant and profitable to all. One of the most interesting items of action to the public was the arrangement for the meeting of the National Teachers' Association, which will be held in California next summer, and which will bring several hundred Eastern educators to our State. It is evident that they will be received warmly and hospitably.

AN ITEM OF ESTEEM.—A friend writes us that in his locality it is the practice with our subscribers to lend their copies of the RURAL to "all their neighbors for five miles around." We are glad people think enough of the RURAL to go that far to borrow it, for it shows that they must think something of it. Possibly a "borrower's edition" printed on cloth would not be a bad thing for people who get their information that way. We submit, however, that the time expended in going so far to borrow would be worth more than it would cost to have a copy of one's own. Then, too, the RURAL should not only be read but should be filed for reference. However, we will not complain; if the RURAL is so valuable to you, get it any way you can, except by stealing it.

The tonnage of the United States vessels engaged in the coasting trade increased largely last year.

The public debt was diminished during the past year \$117,016,000.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING DECEMBER 27, 1887.

- 375,471.—CHAIR-BACK AND HEAD-REST—F. Binder, Alameda, Cal.
375,344.—SECURING SASHES IN WINDOW-FRAMES—S. R. Deacon, Los Angeles, Cal.
375,480.—CABLE RAILROAD CHANNEL—W. Dunham, Igo, Cal.
375,486.—GRAIN SEPARATOR—J. Grider, Stockton, Cal.
375,490.—APPARATUS FOR DISTILLING WOOD—G. Hunziker, Cloverdale, Cal.
375,496.—MUSIC CHART—C. S. Mason, Orange, Cal.
375,565.—TWO-WHEELED VEHICLE—N. S. Parker, Salem, Ogo.
375,509.—WAD-SORTER—P. Selby, Oakland, Cal.
NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & CO., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

ATTENTION is called to the advertisement in another column of M. Ehret, Jr., & Co. This company are the largest manufacturers and distillers of coal tar, asphaltum and roofing material in the United States, their output on roofing alone being 200,000 squares, or 500 carloads. Their celebrated Black Diamond roofing has been in use in all climates in the United States, Canada, West Indies and Europe, nearly six years, and it is considered all and more than they claim for it. They claim superiority as a roofing covering from the following: Any one can put on six to eight squares per day; it is water and fire-proof and adapted to any climate; it is inexpensive and will outlast metal or shingles with less expense for repairs, and weighs but 75 pounds to 85 pounds to 100 square feet. They guarantee the goods first-class, and make shipments anywhere delivered, or at their houses at St. Louis, Mo., at satisfactory prices.

Bees in a Chimney.

EDITORS PRESS:—Several of my swarms have left their hives and gone into a chimney where a large number have collected during the last two years. Can I by placing a weak swarm on top of the chimney trap them so they cannot get down the chimney again? Any information how to recover them would be gladly received through your columns and would no doubt be of interest to other readers besides. WM. STYAN, San Mateo.

WELLS, RICHARDSON & Co's

IMPROVED Butter Color.

EXCELS

IN STRENGTH PURITY BRIGHTNESS

NEVER TURNS RANCID.

Always gives a bright natural color, and will not color the Buttermilk.

Used by thousands of the best Creameries and Dairies. Do not allow your dealer to convince you that some other kind is just as good. Tell him the BEST is what you want, and you must have Wells, Richardson & Co's Improved Butter Color.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE! FERTILIZE! NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

DR. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

DR. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

S. E. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 4, 1888.

The three days' heavy rains the past week have put farmers and dealers in farm products in a more cheerful mood. As the rains were well distributed, plowing is reported to be very general. In farm products the New Year opened dull, but with prices showing no material change. Eastern and English advices continue to give a strong wheat market.

Foreign Review.

LONDON, Jan. 2.—The *Mark Lane Express*, in its weekly review of the British grain trade, says: English wheat is firmer. In the provincial markets the supply is smaller and quotations are 6d to 1s higher. In London the prices have advanced 6d. The sales of English wheat during the past week were 41,560 quarters at 30s 9d against 34,766 quarters at 35s for the corresponding week last year. Foreign wheat was stronger, and Indian, Russian and American winter wheat better. In Liverpool the prices are 1d to 2d per cent higher. Linseed has risen 1s. There were two arrivals of wheat cargoes; one was withdrawn and three remain. At to-day's market both English and foreign wheat were held for 1s advance; 6d to 9d was readily obtainable. Flour was 6d higher. English barley is dearer.

Eastern Grain Markets.

CHICAGO, Jan. 4.—Wheat, 77½¢ for Jan., 78¢ for Feb., 78½¢ for March and 84½¢ for May.

NEW YORK, Jan. 4.—90½¢ for Jan., 91½¢ for Feb., 92½¢ for March, 93½¢ for April and 94½¢ for May.

California Fruit at Chicago.

CHICAGO, Jan. 2.—The *Tribune*, in its annual review of this morning of the commerce of Chicago for 1887, says: During the year about 800 carloads of California fruit arrived, including oranges. Owing to the light crop in some sections of that State, the shipments of grapes did not show any increase over 1886, and were estimated at 150,000 packages, averaging \$2 per case. The usual number of pears, apricots and peaches arrived, while few lemons were off red. Navel oranges were popular with the trade, while other varieties ranged at \$2 to \$3.

Honey.

NEW YORK, Dec. 24.—The *Mail and Express* reports that California honey is bringing about double in this market what it did one year ago. The stock is small.

Local Markets

BAGS—There is an improved inquiry for June-July delivery, but so far as can be ascertained, the price remains at 7½¢ to 7¾¢.

BARLEY—Owing to the heavy rains, many thought prices would break, and have been surprised at the strength of the market. On Call, there was free selling of futures, but strong buyers took all offered, only allowing prices to shade off a little. To-day's sales on Call are reported as follows:

Morning Session: Buyer season—300 tons, 95½¢; 300, 95½¢ per cwt. Afternoon Session: Buyer season—300 tons, 95¢. Buyer 1888—100 tons, \$1 per cwt.

BUTTER—The market is bare of pickled. Many large retail dealers are selling solid packed. Owing to rains and improving pasture, receipts of fresh roll are not kept, but worked off as soon as possible.

CHEESE—New mild cheese is wanted at full figures; old, strong cheese is slow. Eastern is unchanged.

EGGS—Under free receipts and accumulating supplies, prices are weak at a lower range.

FLOUR—The market is steady for standard brands, but in Oregon and interior brands, more or less cutting in prices continues.

WHEAT—The sample market holds strong, with no sellers, except at figures, and even then only a few are willing to let go. Buyers still bid down, notwithstanding higher prices in England and lower charters. On Call, trading was fair up to Saturday, but on Tuesday nothing was done, both buyers and sellers appearing to be afraid. To-day's sales on Call are as follows:

Morning Session: Buyer season—100 tons, \$1.48½; 800, \$1.48½ per cwt. Afternoon Session: Buyer season—100 tons, \$1.48½; 100, \$1.48½ per cwt.

[COMMUNICATED.]

Market Information.

The following are the receipts of the principal items of California produce at San Francisco from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year.

	July 1 to Dec. 31, '86.	July 1 to Dec. 31, '87.
Flour, qr, sks.....	2,530,269	1,815,149
Wheat, cts.....	8,866,015	4,937,617
Barley, cts.....	1,778,147	1,558,241

Cereals.

The estimated production of all India as officially given is 251,690,880 bushels wheat in 1883-84, against 299,155,384 bushels in 1884-85; 258,317,632 bushels in 1885-86 and 238,885,947 bushels in 1886-87. The aggregate gives an average of 261,937,511 bushels. In 1884-85 the average yield was nearly 11 bushels per acre, and last year a fraction under 9 bushels. The average yield taking several years together has been about 9 bushels.

The wheat exports from India from January 1 to December 3, 1887, have been 27,672,000 bushels, comprising 13,984,000 bushels to the United Kingdom and 13,688,000 bushels to the continent of Europe, against 41,232,000 bushels the corresponding time in 1886, comprising 18,356,000 bushels to the United Kingdom and 22,876,000 bushels to the continent of Europe. The decrease for 11 months of 1887 is 13,560,000 bushels.

English advices report that the stock of wheat in the leading seaports is fully up to last year at the same time, but the stock in the interior is considerably less.

The New York *Produce Exchange Reporter*, Dec. 25, reports as follows: A strong effort was made to break the market, but it was only partially successful; the inherent strength of the position (and which is now better understood) caused buyers to take hold boldly and a marked change in public sentiment was soon apparent. Every day's experience makes the situation more pronounced, and it is becoming plain to all that the exporting power of the country has been overestimated, and the very unpromising condition of the growing crop is an element of great strength which should not be ignored. It cannot fail to be interesting to dealers in options to note the fact that an unusual proportion of the spring crop grades below No. 2. The lower prices of Nos. 3 and 4 spring has attracted the attention of feeders of live-stock, as at the current low prices they are cheaper than new Indian meal, because they possess fattening elements in a large degree and are selling at low figures, and the latter is true of all grades. The export demand has continued extremely light, more so than any one familiar with the trade had any idea of, but notwithstanding the paucity of the output, prices of spot have slightly improved and a feeling of confidence is noticeable on all sides; this is chiefly due to the fact of the visible supply being so much below that of last year and the quality on passage is also much smaller. Our correspondents in the winter wheat States all agree in saying that the quantity in the hands of farmers is much less than at the corresponding time last year; this accounts for the reluctance of farmers to sell, which is almost universal.

The same authority says: "The news from the West the past three months has been of more than usual interest, especially south of this parallel, where the cold weather they have experienced has created much apprehension for the growing crop, as they have very little snow to protect the wheat plant. In many localities the plant looks poorly; the growth this month has been slow, though in some sections very much better than others. The cold wave they have experienced during the week has created some anxiety for the growing plant and some damage is reported. The general condition in the Western wheat belt is much below that of last year. We have discouraging reports of the crop from Kansas, also from Illinois, Ohio and Michigan. From the Southern States we have few complaints. At the Northwest there was a decided falling off in farmers' deliveries, and after this month the visible supply is likely to decrease steadily. Our domestic wants it is believed will exceed farmers' deliveries during the month of January. The consumption of spring wheat in this country is rapidly increasing; it is being used in the winter wheat States more generally than ever before; it is claimed this will exert a marked influence in its value later on."

Portland, Oregon, advices report that the wheat shipments from that place from August 1, 1887, to January 1, 1888, aggregate larger than for the like time in 1886. The demand was fair from exporters, with California buyers still taking freely of the more choice grades. Prices ruled the same as reported in last week's *RURAL PRESS*.

In this State plowing is very general. It is now claimed that a larger acreage will be seeded to wheat than last season.

The stock of wheat in this city and Port Costa was on January 1st over 20,000 tons less than on December 1st. As the tonnage on berth is large with new charters being made, it is not at all unlikely but the stock will show a much larger decrease on February 1st.

The wheat market in this city is very strong, with holders holding off, and buyers not in the market. As the latter's wants are known to be quite large, they will be forced to come in soon. Private cables from England report a very strong market and further advances looked for. If this is realized a higher range of values is looked for in our market.

Barley is very strong; the late rains not affecting the market to the extent looked for, indeed values did not go off a cent a cental, owing to stocks being under good control. The consumption continues free, while receipts are only fair. The stock here January 1st was a little over 38,000 tons, a reduction of about 1500 tons since December 1st.

The stock of oats shows a further reduction on January 1st. As receipts are light and demand good it is claimed that a higher range of values is likely to rule before the end of the season.

Corn is very strong at a further advance for choice grades. The stock in the city shows a further reduction on January 1st. The prevailing impression is growing that the output of the 1887 crop will not come up to the preliminary estimate of 1,453,000,000 bushels, some estimates being nearly 100,000,000 bushels less. The corn crop in the six commercial States, or those from which the surplus is largely moved for local use and export, is probably less than the crop of 1881 therein. The advance of three weeks ago was too rapid to hold, and a part of it has been lost, but is generally expected to be again resumed and a further advance obtained. The Argentine Republic exported 9,627,035 bushels of corn in 1885 and 5,583,970 bushels in 1884, with a

still larger movement in 1886. Southeastern Europe, if all accounts shall be confirmed, will have much less surplus in 1888 than usual, and the only countries that can make up the European deficiency are the United States and the Argentine Republic. If, however, the price shall be too dear, Europe's consumption will be diminished.

Both rye and buckwheat rule strong at full figures. The stock in hand is light and under good control.

Fruits.

Cold-storage grapes come in sparingly. The quality is good, but the demand is slow. Some of the grapes have been in store over four months, and show nearly as well as at the time of picking.

Pears are in light stock, but as the demand is slow, values are unchanged.

Oregon continues to send us fair supplies of apples, which, with free receipts of California and Eastern, cause the market to continue at unchanged prices, notwithstanding the demand is good.

California oranges are weak, under free receipts and a light call. Receipts so far are considerably below last season for the like time. At the lower prices and more settled weather, a better demand is looked for.

Lemons and limes are slow. Mexican limes are strong and California weak.

Dried fruits are quiet. There are no buyers in the market, consequently any selling pressure will be met by low bids. The stock is not large for the season, particularly of the more choice grades.

Holders are indifferent, believing in better prices before the close of the season.

Raisins are dull, but as the stock is light, no lower range is looked for unless a selling pressure sets in, which is hardly likely. Eastern advices report a light stock for the close of the year, smaller than for several years past. This causes a generally expressed opinion that values will rule much higher before another season.

Feedstuff.

Bran and middlings are lower and weak at the decline. Feedmeal and ground barley are firm. The call for all kinds is only fair.

Under continued light receipts, hay rules firm, particularly the better grades. The supply to draw from is reported light, while the consumptive call is unabated.

Live-Stock.

Bullocks are in lighter receipt, and as the demand is good, prices show a slight advance for the better grades. Considerable poor is offering.

Mutton sheep are firm, but no higher. More calves have come to hand, but the market took all at full prices. Spring lambs are scarce and high. Grain-fed hogs continue scarce and high. Acorn-fed are arriving more freely. In horses, there is nothing new to report. The rains stopped trading, but with more settled weather and improved driving, a good demand is expected for general utility horses, driving horses and matched teams.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 8½¢; first grade, grass fed, 7½¢ to 7¾¢; second grade, 6½¢ to 7¢; third grade, 5½¢ to 6¢.

MUTTON—Ewes, 5½¢ to 6¢; wethers, 6 to 6½¢.

LAMB—Spring, 12½¢ to 15¢.

VEAL—Large, 6 to 7¢; small, 6 to 8¢.

PORK—Live hogs, 4½¢ to 4¾¢ for heavy and medium; hard dressed, 6½¢ to 7¢ per lb; acorn fed, 4 to 4½¢; dressed, 5½¢ to 6½¢; soft hogs, live, 3½¢ to 4¢. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Rains and milder weather have caused more active outdoor work.

Cabbages are strong for the better grades. The demand for the moment is quiet, but an improvement is looked for before the close of the month.

Mushrooms are strong and in light receipt.

Root vegetables are quiet, but as the supply is only fair and vegetation backward, the market holds strong.

Under light receipts and a good demand, potatoes are strong at a slight advance. At the close, buyers only take for immediate use, fearing that with more settled weather, heavy receipts will follow and a lower range of values result.

Onions are lower, but at the decline the tone is firmer, as receipts have fallen off.

Miscellaneous.

The market for turkeys is quiet and weak, but for hens, roosters, broilers and ducks, the demand is good, with receipts light, as are stocks in dealers' hands.

In wool there is nothing doing. The stock on hand is 6,000,000 lbs. against 4,500,000 lbs. last year at this time. The bulk now held is inferior and hard to place.

Hops are slow, with nothing reported to be doing. The bulk of the holdings is poor and undesirable. Both Eastern and European advices report a slow and low market.

Deerskins are 5c a lb. higher. Hides are weak at last week's prices.

Both honey and beeswax are strongly held at full prices.

Beans rule very strong. Stocks are light, receipts fair and Eastern inquiry good.

The tonnage movement compares with last year at this date as follows:

On the way..... 320,644 215,943

In port, disengaged..... 121,477 63,981

In port, engaged..... 23,865 49,241

Totals..... 465,986 329,165

To obtain the carrying capacity, add 60 per cent to the tonnage.

Charters have fallen to 22s for wooden vessels and 25s for iron to U. K.

San Francisco, Jan. 4, 1888.

THE STATE BOARD OF TRADE has now 26 affiliated organizations. El Dorado county is the latest that has come in. Dr. G. G. Blanchard of Placerville has presented his credentials as delegate from the county Board of Trade which was organized Dec. 29th. An exhibit of the products of the county is being prepared and will soon be forwarded to the headquarters of the State Board in this city.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Cottony Cushion Scale.

At last the remedy for this pest has been found. About five weeks ago the orange orchard of Mr. Frank M. Pixley at Corte Madera (badly infested with cottony cushion scale) was treated with Ongert's Liquid Tree Protector, according to direction. The insects and all eggs are killed, the trees are now free from this pest and also from black smut, and show increased healthy growth. As Ongert's Liquid Tree Protector does not contain any poisonous, caustic, or corrosive substance it can be handled without any danger.—From *Argonaut*, Dec. 31, 1887. For sale by Woodin & Little, 509 and 511 Market street, San Francisco.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and liberal terms. Address, J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Sorghum.

Now that sorghum is once more attracting the attention of farmers throughout the country and has this time apparently come to stay, it is well to know that the Sorghum Hand-Book, a valuable treatise on the cultivation and manufacture of sorghum may be had free of charge on application to the Blymyer Iron Works Co., Cincinnati, O.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3.

A Positive Fact.

Clothes boiled in a suds made from the King of Soaps become white and clean with each successive washing.

THE MUSICAL 1888.

As the musical NEW YEAR heaves in sight, we greet it with the "sound of Cornet" (or any other musical instrument, for all of which Oliver Ditson & Co. provide the very best Instruction Books).

With the New Year, many new pupils will commence to learn the Piano; to them and their teachers we commend

RICHARDSON'S NEW METHOD FOR THE PIANOFORTE.

A peerless book, which has held the lead for many years, and, unaffected by the appearance of other undoubtedly excellent instructors, still sells like a new book. Price \$3

CHILDREN'S DIODEM

(30 cents, \$3 per dozen) is filled with happy and beautiful SUNDAY SCHOOL SONGS, and is one of the best of its class. The newest book.

UNITED VOICES

(50 cents, \$4.80 per dozen) furnishes abundance of the best SCHOOL SONGS for a whole year. The newest book.

Books that Sell Everywhere and all the Time:

College Songs, 50 cents; War Songs, 50 cents; Jubilee and Plantation Songs, 30 cents; Minstrel Songs, new and old, \$2; Good Old Songs we used to sing, \$1.

KINKE'S COPY BOOK (75 cents), with the Elements and Exercises to be written, is a useful book for teachers and scholars.

Any book mailed for the retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 867 Broadway, New York.

John Saul's Washington Nurseries

STAR SPRAY PUMP,

With Two Hose and Bamboo Extensions, Barrel and Nozzles—all complete in operation.

The above cut represents our Double Acting Star Spray Pump arranged for one or two Sprays or Hose. This Pump is especially adapted for spraying liquids or poisons of any kind upon trees, shrubbery, orange trees, vines, etc., affected by bugs, worms, insects, etc. The valves are constructed entirely of Brass and even to the packing it is made of asbestos, which resists acids or hot mixtures of all kinds, and is capable of doing infinite more service than any other pumps in the market, as it is of greater capacity, and, being double-acting in principle, throws a continuous and powerful stream.

The need and usefulness of a Pump of this kind as an aid to the Orchardist and Fruit Grower, is so well known as to hardly need any encomiums from us, although we could ap end hundreds of letters from private parties, as well as prominent members of State Agricultural Societies, which show this to be the only reliable and effective manner of treating these pests. We make these pumps so they will fit on the head of an ordinary barrel, capable of holding from 30 to 50 gallons of the liquid to be used, according to the purpose intended. With one of the Star Spraying Pumps attached, this barrel may be placed on a wagon or stone boat, and a spray directed from either ONE OR BOTH SIDES, as may be required, thus saving nearly one-half of the labor usually consumed in doing the same work.

ONGERTH'S LIQUID TREE PROTECTOR should be used for spraying to kill the Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect.

Send for Prices and Complete Circular of Spraying Outfits.

WOODIN & LITTLE,

NURSERIES

Fresno, Cal.

We would respectfully call the attention of the public to our very complete list of Nursery Stock for the ensuing season, consisting of a full line of all the Standard Varieties of

APPLE, PEAR, PLUM, CHERRY, PEACH, APRICOT, NECTARINE, Etc., Etc.,

BESIDES A LARGE STOCK OF THE GENUINE

WHITE ADRIATIC FIG,

Guaranteed, and the NEW LYONS CLING PEACH. We have an immense stock of ROOTED VINES, comprising 86 varieties. We carry also a full line of CITRUS FRUITS, well grown and warranted free from all pests and true to label.

Send for Catalogue and address all correspondence to FRESNO, CAL., Box 175.

FANCHER CREEK NURSERY,

Fresno, Cal.,

OFFERS THIS SEASON FOR SALE A FINE ASSORTMENT OF

FRUIT & ORNAMENTAL TREES.

SPECIALTIES:

WHITE ADRIATIC FIG, SAN PEDRO FINEST TABLE FIG, JAPANESE FRUITS, OLIVES, POMEGRANATES, MULBERRIES, TEXAS UMBRELLA TREES, and also a fine collection of PALMS, YUCCAS, ROSES, and OLEANDERS.

Send 10 cents in stamps for a sample of the dried and cured Adriatic Fig. Fall catalogue now ready. Address all letters to F. ROEDING, Fresno, Cal.

SEEDLESS OONSHIU ORANGE TREES.

Over 40,000 received this season; from 2 to 5 feet high, showing fine new growth. Pear Stock (100,000 coming shortly). Every kind of

Japanese Fruit and Ornamental Trees, Etc., Etc.

Circulars on application. Correspondence invited. All orders and inquiries command prompt attention.

JAPANESE TREE IMPORTING CO., 120 Sutter St., San Francisco.

SURPLUS STOCK.

CHERRIES—5000 Royal Ann and Black Tartarian.

5000 Bartlett Pears.

5000 Plums, Coe's Golden Drop, Kelsey's Japan,

Washington and other good sorts.

Also some Apricots, Peaches and Apples.

1000 Camellias in pots and open grounds. 25,000 Cypress transplanted in boxes. 1000 Cypress,

2 years old. 10,000 Gums, Blue and Red, in boxes. 2000 Laurus Tinus. 2000 Palms,

1 year old in pots. 1500 Pines, 2 year old. 2000 Peppers, pot grown. 25,000

Roses. Also an immense assortment of Pot Plants and Flowering

Shrubbery at bedrock prices. Address

NEVADA CITY, CAL.

SPECIALTIES:

NUTS, PRUNES AND GRAPES.

The Finest Collection of "Nut-Bearing" Trees to be Found in the United States.

21 Varieties of Walnuts,

INCLUDING

CLUSTER WALNUT (Juglans Racemosa).

The newest, most prolific and valuable variety ever introduced into this country.

PRÆPARTURIENS,

Or FERTILE WALNUT, introduced into California in 1871 by Felix Gillet.

"Second" Generation Præparturiens, (California Grown).

"Second Generation" trees, grown from nuts borne on the original tree; 80 to 90 per cent guaranteed to be "pure," or having retained the characteristics of the original Præparturiens, chief among them the surprising fertility of that type.

Third Generation Præparturiens or common French walnut (Juglans Regia), grown from nuts borne on Second Generation trees, all California grown. Vigorous and fertile variety, but the nuts smaller than those of the second generation.

GRAFTED WALNUTS.

Franquette Parisienne, Mayette, Chaberte, Meylan, Vourey and "Weeping" Walnuts, the leading varieties of Europe, highly recommended for the size, beauty and quality of the nuts, fertility, and above all, "hardiness" of the kinds.

We offer this season imported trees of the seven above sorts, expressly grafted for us, regardless of cost. The difficulty in grafting the walnut is such, and grafted walnuts accordingly so scarce, that we are compelled to decline orders for such trees in quantities over a dozen. Only a limited number of trees of each kind from four to six feet.

"MARRONS." or French Chestnuts.

(solely propagated from grafting.)

MARRON COMBALE (California grown).

10 Varieties of the finest kinds of Marron-Chestnuts to be found anywhere; at the head of the list "Marron Comble," which we have been fruiting upon our place the last 13 years; very large and sweet nut, prolific; one of the very best for market.

7 Varieties of Filberts.

4 Varieties of Almonds.

4 Varieties of April Cherries, the earliest and most prolific in California.

245 Varieties of Grapes, from all parts of the world, including the earliest Table Varieties known, some of them 25 days earlier than Sweet Water.

61 Varieties of English Gooseberries, all shapes and colors, some large as walnuts; all "true to name."

CORK OAK, 2-year-old Trees, from Spain.

Prunes! Prunes!

Lot D'Ente, or D'Ente "true from the root," one of the best and finest types of the "French Prune" and the kind so extensively cultivated in the prune district of France. This type is not propagated from grafting, which would do away with its chief qualities of being more vigorous, more long-lived than grafted trees, and a "gum-resistant" stock.

Also, the finest grafted types from the home of the Prune D'Ente or D'Agen, on Myrobalan, St. Julien and Almond stock.

Saint Catherine (true from the root), one of the finest desert Plums, and one of the best for preserving and drying.

Puymerol D'Ente, Blue and Red Perdigran, German and Italian Quetsche, Alsace Quetsche, Knight's Green Drying, etc.

Apricots, Peaches, Pears,

Quinces, Plums, Mulberries,

Figs, Fancy Fruits, Etc.

FRENCH, ENGLISH, GERMAN AND AMERICAN

STRAWBERRIES.

Send for General Descriptive Catalogue, illustrated with forty-one cuts, representing Walnuts, Chestnuts, Filberts, Prunes, Medlar and Sorbus.

{ \$3 a Year, in Advance.
SINGLE COPIES, 10 Cts.

Driving the Jack-Rabbits.

We present on this page an ideal sketch of one of the rabbit-drives which are becoming so popular on the plains of the upper San Joaquin

By two o'clock in the afternoon a large number of people had gathered, some on horseback, others in light vehicles. They had a commanding officer and a few field-managers. No dogs were allowed upon the ground, and but a few

was found that the drive had been a grand success. By actual count after they were killed, there were 1126 rabbits in the pen. Another march was ordered, and by passing over the same territory 796 rabbits were corralled and

5075 of the nimble nuisances are shown by actual count to have been destroyed. This beats the Tulare county record.

Our picture calls for but little explanation. The upper left-hand corner gives a ground plan

IDEAL SKETCH OF A RABBIT-DRIVE AS PRACTICED IN THE GREAT VALLEY OF CALIFORNIA.

valley. The plan first put in practice near Pixley two months ago, and since repeatedly pursued there with so gratifying results, has been adopted in Kern county with even greater success.

The Bakersfield people celebrated New Year's Monday with their initial round-up of the rabbits, at Henry Borgwardt's ranch, four miles from town, westward. There was a circular corral at the corner of his alfalfa-field where the sagebrush and pasture lie side by side. From this inclosure two wings of lath fence were stretched at right angles for a few hundred yards.

guns in the hands of experienced sportsmen. The crowd having been so distributed and marshaled as to form a curving line about a mile in length, a signal to move forward was given and the drive toward the corral commenced. The area inclosed by the drivers must have been less than a square mile, but the *Echo* says that "as they drew near the apex of the triangle it seemed as if there were acres of rabbits. Of course a great many ran back past the people, and several hundred were killed with sticks while doing so, their fright being so great that they would run within a few feet of one's conveyance. When the corral gate was shut it

killed, besides a large number that fell by the way. It was generally believed that 2500 was a safe estimate of the total number killed in the two drives."

Of course no firearms whatever can be used inside the corral; only clubs are permissible. Another observer writes: "It looked like very cruel sport, but their destruction is an inexorable necessity. Relentless war must be waged against them or they will take entire possession of the country."

The farmers of the neighborhood appear to have been pushing the campaign farther, for a dispatch from Bakersfield, 10th inst., reports that

of the fence. The line of beaters would of course be thrown much farther off and more in the form of a semi-circle at the beginning of the drive, while the persons would be more widely scattered.

This method of dealing with the destructive rodents bids fair to become quite general, where they abound and the lay of the land favors; and as our "rabbits" are all *hares*, which know not the trick of escaping into burrows, the results of the process are comparatively certain. The conceit of the artist in the lower corner must be a melancholy reminiscence of the days before drives were introduced.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Meandering the Mokelumne.

EDITORS PRESS:—One frosty morning in December last I "pulled out" from the pleasant village of Woodbridge, bound for New Hope, another small but ambitious town on the Mokelumne river, a few miles below.

My first adventure was to help an old friend "corral" a band of hogs, and I was rewarded for my trouble by a cordial invitation to help myself to as many apples as I wished, of which fruit Mr. Axtell has a large and thriving orchard, and several hundred barrels of red and white beauties, stored for winter use. I believe that these river-bottom lands will produce as fine apples as Oregon or any other State in the Union.

My next halt was at the finely improved farm of Mr. Robert Boyce, whom I secured as a subscriber to the RURAL. Right here in this neighborhood can be found a satisfactory answer to the question: Does wheat farming pay in California? The Boyce Bros., of whom there are several, own quite an extensive tract in this vicinity, and for the last 20 years have been almost exclusively engaged in raising wheat.

By thorough cultivation and judicious management, these gentlemen have plainly demonstrated that wheat can be raised with profit on any of the lands bordering on the Mokelumne river. Farther west I passed the fertile fields of the De Vries Bros., old subscribers to the RURAL and Patron. These gentlemen were among the early settlers of this county, and, judging from appearances, they, too, are making wheat-raising profitable.

But the greatest surprise of all was still in reserve for me after I reached the vicinity of New Hope. Twenty-five years ago I sailed a boat over the present site of this village, and the Sacramento river was making a clean sweep directly southward, with such a mighty current that the channel of the Mokelumne could not be distinguished save by the trees that outlined its course. That was my last visit to this place prior to this, and it seemed difficult to realize that a quarter of a century could make such a change. Now this region is almost entirely one vast wheat-field, and last season's crop was simply immense, many farms yielding from 60 to 75 bushels per acre.

The Sargent brothers own a very large tract near here, and are extensively engaged in both grain and stock-raising.

At New Hope I found my genial old friend, Arthur Thornton, looking as young as ever and still taking the lead in every project for public improvements in this section. Mr. T. is in the merchandise business at this point, and largely engaged in general farming besides. He is very enthusiastic as to the future of this part of the county, and if the levees on the Sacramento river can be made permanent, I see no reason why Mr. T.'s hopes may not be realized. Before leaving I convinced Mr. Thornton that he needed the RURAL to make everything complete, and he kindly gave me his order for a year's subscription.

Turning southward from this point, I visited the ranches of Jacob Brack, Sargent brothers' home place, Treadways, J. Fowler, Harsen, Gillinghams, and many others, and so back to Woodbridge, where I arrived after dark, cold and hungry, but very well satisfied with my day's work, and well pleased at the signs of substantial prosperity to be met with on all sides in the region between this town and the tule.

The next day I went to Clements via Lodi and Lockford. Lodi, as most of your readers are aware, is on the line of the C. P. R. R., and about one mile south of the Mokelumne river, and is somewhat celebrated in modern history as being the "watermelon center" of the State. It is truly wonderful what an immense quantity of melons an acre of this land will produce without irrigation, and planted, too, after all the rain for the season is over. Judging from the way melons grow, it seems to me that this land ought to raise any kind of fruit if the people only knew how.

Lodi met with a very serious misfortune last fall from a fire which almost destroyed the business portion of the town; but rebuilding is going on with vigor and Lodi will soon present a much better appearance than before the fire.

Lockford, eight miles east of Lodi, is a thriving village on the narrow-gauge railroad, and also on the Mokelumne river.

There are a great many prosperous farmers in this vicinity. Land is rapidly rising in value, and almost everybody seems hopeful of brighter times in the future. The bottom-lands on the river from here to Clements, seven miles above, are among the very best in the county. Ranging in width from one-fourth to one mile, seldom overflowed, these river-farms are bound to be very valuable in the near future, and to those who were so lucky as to locate here in time have no reason to complain, for this bottom-land will grow anything to perfection they see fit to put into the ground. The crops of alfalfa, corn, potatoes, hops, pumpkins, etc., as well as grain and fruit, almost surpass belief.

I spent the night with Mr. Thos. Clements, from whom the town received its name, and found him to be quite enthusiastic on the sub-

ject of fruit culture, especially of the olive. He thinks that the culture of this fruit will soon become one of the leading industries of the State, and says he will furnish 500 acres of good land to any one who understands the business, to go in with him in the olive-branch trade. Mr. Meyers of Stockton had better correspond with Mr. Clements.

Mr. Jos. Putnam, an old subscriber of the RURAL, is also quite a successful fruit-grower. His ranch is about one mile above this place. This town can boast of the handsomest public schoolhouse of any town of its size in the county. There is a fine bridge across the river at this point, and, going over this, I next took in that portion of San Joaquin county lying between the Mokelumne river and Dry creek, the boundary line of San Joaquin and Sacramento counties. This tract contains about 75 square miles of the very best land in the county. It is in this section that A. T. Hatch of Solano and Senator Buck of Vacaville have been making such extensive purchases of late. These gentlemen have bought 1200 acres of the Langford tract, and are already hard at work preparing the land for the reception of various kinds of fruit—apricots, almonds, olives, etc.

From what I have seen and heard in regard to the former efforts of these parties in the fruit-growing line at their old homes, I can readily believe that they will make a grand success of this venture also. And if they do there is no telling to what prices land may jump in this locality. There have already been some tracts sold at prices ranging from \$100 to \$110 per acre, which is pretty good for land that 10 years ago would have been thought dear at \$50, and 20 years ago was thought to be almost worthless.

There is quite an excitement on both sides of the river on the irrigation project, and the Ditch Company are hard at work on their dam at Westmorelands bridge, and if the water is brought out, it will doubtless give a decided boom to this portion of the county. After leaving the Langford tract I visited the town of Elliott, more widely known as Hawks Corners. How it came by the name is one of those things that no fellow can find out. Instead of being on the corner of anything, or at the crossroads, the village, or what is left of it, is right in the middle of a section, and only one road passing by it.

There is but little doing around here in the way of fruit culture as yet—nothing but wheat, wheat all along the line. Heading again to the westward, I passed many neat and substantial homesteads, among which may be mentioned those of Wm. Carter, Wm. Smithson, Lyman Titus, Herman Childs, Justus Schomp, J. W. Holmes, the Jahant Bros., J. G. Nolans and many others, all showing that with industry, perseverance and good soil combined any man can win a comfortable independence, if not all the luxuries of civilization, out of wheat-growing in Northern San Joaquin.

On my return to Woodbridge, I passed through Acampo, quite an important shipping point on the C. P. road, two miles north of the river. Here is located a fine brick warehouse, under the management of Smith & Wright of Stockton. The wheat in store at this place amounts to about 2000 tons. This house is a great convenience for the surrounding district, and I can hardly understand how the farmers got along without it.

From this point I went down into what is known as the "Pocket" at the junction of Dry creek with the Mokelumne, and then retraced my steps to the old town of Woodbridge, which still retains a fair proportion of its former greatness. Owing to the fine school facilities of this place, it has not gone down as bad as some of the ancient cities of California.

During my three days' trip around this part of the county, I met with a great many old acquaintances and made quite a number of new ones, besides, all of whom I hope to meet again in some of my future rambles in the interests of the RURAL. My next trip will be to the east and south of Stockton, and after that to Stanislaus county, where you may, perhaps, hear from me again. W. W.

Foothills of Calaveras County.

EDITORS PRESS:—Very little has ever been written concerning this section. To many, Calaveras is associated with mining and stage-robbing, while its agricultural features are almost unknown. Scattered throughout the entire foothill region are charming little valleys dotted over with cozy homes of well-to-do ranchers. Up to the present time the principal crop has been barley for hay. On almost every ranch a small garden spot in the low moist lands has been set out to trees, while here and there a vineyard and fruit-ranch of considerable size greets the eye. In no portion of the State can a finer wine grape be grown than in these redlands of Calaveras, grapes raised without irrigation commanding \$25 a ton the past season. As for her fruits, apples, pears and prunes, equal to any, excelled by none, grow to perfection in every locality. The fruit-growers have but to learn what every other fruit section has long since proven, that the highlands are exempt from frosts and best adapted to fruit culture. Once this fact is admitted, the old orchards in the bottoms dug up and planted in pears or other hardy fruits and the sides and tops of the hills set out in Bartlett pears, peaches, prunes,

the late blossoming and exceedingly fertile Proporturians, English walnut and Tokay grapes, and the prosperity of the county's foothill section is assured. So far her hill land, in most cases, has been deemed of little value and is held at very low prices. In time it will be proved the most valuable. No section can raise a finer Tokay grape than can be grown anywhere on these hills, which, in most cases, are deemed worthless except for pasture. To the poor man, seeking a cheap home, Calaveras offers every inducement—a mild climate, free from fogs and malaria, with almost any desirable altitude. That this section will in time become one of the great fruit and grape-producing counties is evident. That she can and does raise unexcelled fruits of the kinds adapted to her soils has long since been proven. That the people of this foothill section are not aware of the great possibilities of their section is evident to any one that has traveled over other counties in the same altitude. So to the homeseeker I would say, take a trip through the foothills of Calaveras and locate 160 acres of Government land or buy the same improved for what three to five acres in some other counties would cost. E. H. SCHAEFFLE.

SHEEP AND WOOL.

The California Wool Product of 1887.

We have received from George Abbott the following statistics in relation to the wool trade of the State for 1887. The receipts for each month of the year were as follows:

	Bags.		Bags.
January.....	53	July.....	8,016
February.....	64	August.....	4,020
March.....	2,200	September.....	7,588
April.....	11,715	October.....	9,916
May.....	18,224	November.....	7,963
June.....	14,756	December.....	1,020
Total bags.....			85,555

The following is the description and weight of the above total; also the amount carried over from 1886:

	Pounds.
Spring wool, 56,768 bags, weighing.....	17,881,920
Spring wool shipped from interior.....	1,916,270

Total spring production.....19,828,196

Fall wool, 28,787 bags, weighing.....	9,643,645
Fall wool shipped from interior.....	757,100

Total fleece wool.....20,228,941

Pulled wool shipped from San Francisco and interior.....1,335,290

Total production of California.....31,564,231

On hand December 31, 1886.....	4,500,000
Received from Oregon, 24,187 bags.....	7,256,100
Foreign wool received, 133 bags.....	40,466

Grand total.....43,560,737

The exports during the past year have been as follows:

	Pounds.
Per rail, inclusive of shipments from interior.....	22,048,564
Per sailing vessel.....	1,835,426
Per steamer.....	3,557,960

Total shipments.....27,461,950

On hand December 31, 1887 (about).....	6,000,000
Value of exports.....	\$5,000,000

Difference between receipts and exports arises from consumption of local mills and wool on hand awaiting shipment in the grease or scoured. Foreign wool is chiefly from Australia in transit to Eastern markets. The weights of above are gross. Tare on bags received, three pounds each; pressed bales shipped, 14 to 16 pounds each.

Quotations on spring clip are as follows:

Choice northern (Mendocino and Humboldt).....	21@23 1/2 c
Good northern (Red Bluff, etc.).....	18@21 c
Defective northern.....	15@17 c
Good to choice San Joaquin.....	15@18 c
Good San Joaquin (12 months).....	14@17 c
Southern coast.....	13@15 c

Quotations on fall clip are as follows:

Choice northern (Mendocino and Humboldt).....	14@16 c
Good northern.....	12@14 c
San Joaquin.....	9@12 c
Heavy San Joaquin and southern.....	8@9 c

Quotations for Oregon wools are as follows:

Choice valley.....	22@27 c
Choice Eastern.....	18@22 c
Good Eastern.....	16@20 c

The production of wool in this State since 1854 was as follows:

Year.	Pounds.	Year.	Pounds.
1854.....	175,000	1871.....	22,187,188
1855.....	300,000	1872.....	24,255,468
1856.....	600,000	1873.....	32,155,139
1857.....	1,100,000	1874.....	39,356,781
1858.....	1,428,000	1875.....	43,532,223
1859.....	2,378,000	1876.....	50,550,970
1860.....	3,055,325	1877.....	53,110,742
1861.....	3,721,998	1878.....	40,862,091
1862.....	5,993,300	1879.....	46,903,360
1863.....	6,268,480	1880.....	46,074,154
1864.....	7,923,677	1881.....	45,076,639
1865.....	8,049,931	1882.....	40,527,119
1866.....	8,532,047	1883.....	40,848,690
1867.....	10,288,600	1884.....	37,415,330
1868.....	14,232,657	1885.....	36,561,390
1869.....	15,413,970	1886.....	38,509,160
1870.....	20,072,660	1887.....	31,564,231

Freights during the year have been on grease

wool by rail 1 cent per pound, by sailing vessel 1 1/2 cents per pound, and by steamer 60 cents and 75 cents per 100 pounds. On scoured wools freights by rail have been about \$1.15 to \$1.50 per 100 pounds, and by steamer 60 cents to 75 cents per 100 pounds.

Wool-Growers' Meeting.

Pursuant to a call the wool-growers and wool-dealers of Mendocino and Sonoma counties met in Cloverdale, Thursday, Dec. 27th, to discuss and pass resolutions pertaining to President Cleveland's message relative to placing wool on the free list. The meeting, which is reported by the *Reveille*, was organized by electing E. M. Hiatt of Yorkville to the chair, and Geo. B. Baer, secretary. Mr. Hiatt on taking the chair made some appropriate remarks pertinent to the subject. After which W. P. Ink and J. G. Heald were appointed to act with the chairman, E. M. Hiatt, in drafting resolutions. A recess was then taken, and on again convening, the following resolutions were unanimously adopted:

WHEREAS, The wool-growing industry is of great importance to the financial prosperity of the State of California, by increasing her wealth, building up manufactures and furnishing employment to thousands of laborers at good and remunerative wages. But owing to our foreign competition of cheap labor, cheap lands, the reduction of the tariff of 1888 and other discouragements, our wool product has greatly decreased. And, furthermore, the recommendation in President Cleveland's late message to Congress to put inoperative wool on the free list is disastrous, if not entirely fatal to the progress and existence of the great wool-growing industries, not only of California, but of the whole United States. Therefore be it

Resolved, By the wool-growers and wool-dealers of Sonoma and Mendocino counties in convention assembled, that any reduction in the tariff on wool would seriously cripple this industry and greatly decrease if not fatally destroy its production in this State, because our wool-growers cannot compete with the cheap labor and cheaper ranges of foreign countries without the protection which the tariff affords.

Resolved, That we are opposed to any reduction in the tariff on wool and manufactured woolen goods, and furthermore, we protest against reducing the tariff on wool and retaining it on woolen fabrics, as such legislation would be an unjust discrimination between two great industries without affording any relief to the consumer of manufactured woolen goods, and we are unalterably opposed to promoting the manufacturing interest of the East by legislation at the expense of the great consuming masses of the nation, and by the same means discouraging the production and development of the wool industry of the great West.

Resolved, That we appeal to Congress to neither repeal nor reduce the tariff on wool, and we hereby earnestly request our Senators and Representatives in Congress to use their united efforts to maintain our present tariff.

Resolved, That we heartily indorse the views expressed by the National Wool-Growers' Association and extend to them our hearty co-operation in their endeavors to protect the wool industries.

Resolved, That a copy of the above resolutions be forwarded to the Senators and Representatives of our district and also to Senators and Representatives of other districts, that speedy and effectual action may be taken. E. M. HIATT, Chairman.

GEO. B. BAER, Secretary.

THE VETERINARIAN.

Equine Pneumonia.

EDITORS PRESS:—I have read with much interest the article written by Mr. H. Baker of Hollister and published in your issue of Dec. 31, 1887, on the subject of a disease of horses, of which several have died in that vicinity recently. I have lost eight head of horses between 1872 and 1881 with what I afterward learned was pneumonia or lung fever and congestion of the lungs, the symptoms of which as I have observed them are clearly described by Mr. Baker in his article referred to.

While it is some satisfaction to a man when he has lost a fine animal to be able to determine the nature of the disease and the cause of death, yet that does not enable him to prevent further loss from the same cause unless he has a remedy to apply. Mr. Baker may think his description of the disease is sufficient (and I admit it to be correct according to my experience and observation), but if he wishes to do the public a favor, why does he not give a remedy if he has one? Possibly he thinks to give the public the benefit of his knowledge he would sustain pecuniary loss. In the latter part of his article he says: "It now alone remains for me, sir, to express my opinion upon the cause of death in some of the cases—which is, that two out of the three animals lost by Mr. McDonald died from congestion of the lungs."

While we regret to hear of our friends losing valuable stock or of a disease spreading through our country, it matters little to the public, nor is the public greatly benefited by a man's opinion regarding diseases, unless they are informed of a remedy that they can apply in case they have an animal affected as he describes. His article reminds me very forcibly of one written by a gentleman from San Diego county, I think in 1875, if I remember rightly, giving a description of the disease called fistula and poll evil in horses, assuring the public that he was in receipt of a specific remedy, but he was

careful not to let the public know what that remedy was. I immediately forwarded to you a tried remedy, which you published and some of your subscribers preserved it and made some tests with it since.

Now, I have been a constant reader of the PRESS for 16 years, save a part of one year, and I hardly know how I could dispense with it, as many of the articles contributed by your able correspondents and subscribers are worth the year's subscription. As I have been benefited by the experience of others, I feel like giving to the many readers a recipe for the treatment of pneumonia in horses, which I obtained free from a veterinary surgeon of the U. S. Army, and with which I have treated six of my horses successfully during severe attacks of pneumonia. I feel that I have given it a fair test; besides, I have personal knowledge of five horses that were treated at the same time in this community with the same remedy and every one was saved. Now for the remedy:

When it is a settled fact that the horse has the pneumonia (and that may be determined by Mr. Baker's description of the disease), place him in a warm house or stall, taking care to avoid any circulation of air, and proceed to sweat him by wrapping him from ears to tail in cotton cloths or barley sacks (three thicknesses), dipped in a tub of hot water. Over this place dry blankets or a carpet, wrap closely and tie with a rope to keep the cloths close to the body and effectually exclude the air. At the same time inject a 25-cent plug of tobacco previously soaked in warm water as far up as the arm can reach. Keep him sweating two to three hours; then remove the wraps and rub vigorously till dry. Now take a teaspoonful of gum camphor, drop on it 15 to 20 drops of tincture of aconite; add one teaspoonful each of capsicum and pulverized ginger; wet with water, or, better still, alcohol. Mix to a mass, roll out into a large pill or pills, roll in flour, pull the horse's tongue out, lay the pills well back on the back part of the tongue and let loose the tongue, when he will immediately swallow. Repeat the pills twice a day for three days, and sweat once a day for three days, taking care that he is not exposed to cold wind. Give all the cold water he will drink. I have not known a single horse lost where this remedy was employed.

Retention of Placenta.

EDITORS PRESS:—If Mr. John H. Eden and neighbors, who are troubled by their cows retaining the placenta, will feed them liberal rations of roots and house them warmly, I think they will have no trouble with their cows in calving. It is customary to put the cow up the day before calving in a roomy, warm, quiet place. In the evening give her, in the feed of bran, one pound of ground flaxseed—not cake meal—after calving another pound, and for the next three days a half-pound. Nothing more, as a rule, is necessary. Should this fail, however, inject a warm two-per-cent solution of corrosive sublimate, due care being exercised to have the proper strength and no more.

E. H. SCHAEFFLE.

Murphys, Cal.

Mistletoe for Cows.

EDITORS PRESS:—A correspondent from Nevada City wants to know what to give cows to make them clean. Allow me to make known through your valuable columns what is a sure remedy here. Take an armful of green mistletoe from an oak tree and give the cow. They will generally eat it without much trouble. If not, allow them to get hungry and they will eat it. If one batch does not do it, give another. I never knew it to fail.

Big Bend, Butte Co. WM. H. MULLEN.

Swine Pest.

EDITORS PRESS:—A year or more ago it was stated that a hog disease had made its appearance near Woodland. Since then I have not seen a word in regard to it through the papers—not even here, where we are peculiarly interested, but about the same time it was the neighborhood talk that the same or another disease had shown itself in the lower part of Colusa county and just across the river in Sutter. The destroyer has continued on its slow but sure and fatal march north along both sides of the Sacramento, until now it is within six or seven miles of Colusa town, having traveled a distance of 15 or 20 miles in a direct line during the past summer and is still traveling. It has not kept up on the Sutter side, so far as I have heard.

Not having made personal examination of affected herds, I can only state what I have heard. The affected swine refuses to eat, coughs, vomits, runs off at the bowels, becomes very much emaciated, and then it lingers and usually dies in from one to four or five days. Many herds have been almost exterminated. A neighbor told me this morning that he had lost 40, and they were still dying, he having 18 left. He had killed his winter's pork about a week before the first were taken. Another whose drove was affected earlier in the season risked butchering, after a lapse of about a month from the last death.

Sulphur and bluestone water have been tried,

but with what results, beneficial or otherwise, I have not heard.

The spread seems to be from one ranch to another, but one man was at a loss to know how it crossed the river. In one case a man bought about 60 head from one who had suffered losses, and after removing them several miles north they nearly all died.

I have waited long before writing these lines, but think others should be warned, and am in hopes some cure may be found. Hundreds of thousands of hogs are raised along the Sacramento river and throughout Colusa county, and anything affecting this interest would be a severe blow to our farmers.

If the disease is contagious, and indications point that way, then it would seem as though some kind of a quarantine should be effected before the whole State becomes infected and hog-raising becomes a thing of the past, or very uncertain at the least.

E. G. MORTON, JR.

Sycamore, Dec. 31, 1887.

P. S. Since writing I saw, by reference to your index, that this disease was spoken of as existing in Sutter, page 287, and remedies, etc., given, page 401, but as to the application of these remedies to this disease, I know nothing.

E. G. M.

[The subject is of great importance, and we should like to hear from our readers who have experience with it, both as to the character and effects of the disease and any remedies they may have tried.—EDS. PRESS.]

THE FIELD.

Ramie Culture.

EDITORS PRESS:—I note in the last issue of the Visalia Delta an article on ramie culture, copied from the Florida Horticulturist, and signed by Dr. Gustav Eisen, which is calculated to create an unfounded prejudice against what, in my view, is one of the most promising cultures for California. As one who has for 15 years past followed closely every phase of this subject, and has personally witnessed the culture of the plant both in Louisiana and in California, I may feel justified in setting up my judgment in opposition to the derogatory statements and opinions set forth by Dr. Eisen, some of which seem hardly to do justice to that gentleman's practical and scientific knowledge, as heretofore known to me.

After stating that "as to the growing of ramie little difficulty need be experienced," Dr. Eisen proceeds to demolish that assertion in detail, by averring that the plant requires the richest soils, and that even in these it cannot be depended upon for more than three years, being one of the most exhaustive culture plants known.

The latter statement is simply and absolutely incorrect, except upon the assumption of the most irrational practice of culture, viz., that the trash and leaves are continuously wasted, instead of being returned to the field. When the latter is done, ramie is one of the least exhaustive crops; just as it is the case with cotton when all but the lint is returned.

It is true that ramie appreciates a good soil, but three-quarters of the lands of the great valley of California, and of the larger Coast Range valleys, have soils amply adequate to its demands, and a good many (e. g., alkali lands) on which ramie will do better than anything else now known.

In reply to the allegation that ramie will yield only three paying crops even on the best lands, I simply state that the ramie plantation on the University grounds at Berkeley, made with roots in 1881, has just yielded its fifth crop, at the rate of five tons of dried stalks per acre; in two cuts, which is all the cool climate permits to grow. This without a particle of manure, in a soil filled with the roots of a row of trees adjacent, without the return of any waste and without any use of water save once, in order to promote the second growth for a special purpose. That with the use of irrigation, at least three cuts can be made in the San Joaquin valley; as in Asia, has been abundantly shown by experience; and this at the rate ascertained at Berkeley, would come nearer seven tons per acre than the 4½ upon which Dr. Eisen makes his calculations. His further assertion that the soil needs to be kept "constantly wet," is conclusively disproved by our experience. Any soil moist enough to grow field corn will grow two cuts of ramie without irrigation. But it is doubtless desirable to irrigate once after each cut, in order to promote growth; just as is done with alfalfa and Egyptian corn.

The further count in Dr. Eisen's indictment, that "ramie once in the ground cannot be displaced for years," would weigh even more heavily against alfalfa. But we have yet to learn that the culture of this, our great stand-by, is under a cloud for that reason. A year's diligent cultivation under some hoed crop will dispose of ramie as well as of alfalfa roots.

As regards the last count, viz., that referring to the expensiveness and laboriousness of the cleaning of the fiber, the allegation that the best machines at present known, or in this State, cannot produce over 200 pounds of fiber per day, would have been reasonable some

years ago. While I have not had an opportunity to gauge accurately the output of the machine now at San Francisco, what I have seen of its work under unfavorable conditions has led me to set down its efficiency at fully four to five times 200 pounds per day. If Dr. Eisen has reason to make a lower estimate, it is easy enough to set the question at rest by an actual trial. But it is true that a machine of which the work is based on the brittleness of the stalk may not work well in Florida and Eastern India, but may nevertheless do excellent work in the dry summers of California and Arizona, in which both stalk and rind break away from the flexible fiber like so much glass.

As no one pretends that ramie should be grown in this country except upon the basis of cultivation by our usual methods, and extraction of fiber by machinery, I fail to see the relevancy of Dr. Eisen's reference to the pauper or coolie labor of other countries as a condition of this culture. His question, why the Hindoos and coolies do not become rich by ramie culture, is answered very simply by the consideration that even they cannot afford to spend their labor upon the hand stripping and scraping of the stalk and bark, except in spare time; hence the smallness of the production and the scarcity of the fiber in commerce.

It is well and necessary to be cautious in making heavy investments in new and untried industries. But ramie has been grown in California for 18 or 20 years past, and its success as a culture plant is a well-established fact. The only unsettled question about it has been the economical extraction of the fiber, for the market demand is practically unlimited. If, as the rapid development of ramie culture in France and Algeria and my own observation lead me to believe, this problem has been solved, the importance of this industry for California cannot easily be overestimated. It deals with a product capable of long transportation, being of high value and indefinite conservation—qualities of especial importance in our remote location. It requires less manual labor than cotton, and will flourish wherever cotton will, and in many regions where cotton will not. It is too promising to be lightly discarded, and it assuredly should not be upon any such grounds as those set forth in Dr. Eisen's article.

E. W. HILGARD.

Berkeley, Jan. 5, 1888.

Culture of the Sugar Beet in Austria.

EDITORS PRESS:—The proposition to introduce the culture of the sugar beet in this State makes it appear opportune to publish something about the culture of this plant in a country where this industry has become a leading branch of farming, supports thousands of families, and supplies, by its taxation, a very good revenue for the Government. Of course it would be a great fault simply to transfer the methods of cultivation from that country to this State, because here are quite different conditions in climate, soil, and, what is the principal thing, in human labor; although it may be that the practical farmer might use something from this essay.

The sugar beet (*Beta vulgaris* L.) has become biennial by cultivation and has several varieties. For culture such are to be selected as answer the following conditions required by the sugar manufacturer:

1. Rich in sugar; 9 to 16 per cent.
2. Regular form like a cone, pear, or olive; many side roots or prongs (*anastomosis*) are disadvantageous because they make the cleaning difficult and cause more waste.
3. A medium size, one to two pounds, as small beets give a small crop and large beets have usually little sugar.
4. A white, compact, brittle flesh. Such beets are more resistant against destruction while in storage.
5. A small head standing only a little if any out of the ground. The reason is that the head must be cut off because it contains only very little sugar.

The varieties which answer the above demands are: The white beet of Silesia, the Quedlinburger, the Imperial, the sugar beet of Moravia and the famous Vilmarin.

Conditions Required for Production.

The sugar beet requires a warm location because it is very sensitive to early frost, and experience shows that the sugar capacity increases and diminishes with the amount of heat of the locality. The sugar beet needs very much water and requires, therefore, in a dry climate, a fresh, deep, rich soil. The best soils are deep humus clay (loam) and marl. The roots of the beet go very often 3½ to 4 feet in the ground, and take nourishment out of the deeper soil, where fertilizing is impossible. It is, therefore, economical not to raise more than one crop of beets in three or four years on the same ground. However, a rich soil will produce a good crop for several successive years (we have examples of raising beets on the same ground 10 successive years without any fertilizer, and yet a good crop), but in the same time the vegetable and animal enemies of the beet will be increased enormously.

Preparation of the Soil.

The beet follows usually wheat or rye and is followed by barley. A direct application of manure to the beet increases the crop, but also, at the same time, the amount of nitrogen and

ashes; it is best, therefore, to raise beets the second year after manuring. The best fertilizers are, guano, ashes, potassic salts, superphosphates, bone dust and compost. If beets are raised year after year, and the leaves are not needed to feed cattle with, it is very good to spread the leaves all over the ground and then to plow 12 to 15 inches deep. If it is the intention to raise beets after grain, it is good to plow shallow as soon as possible and to plow deep after several weeks. Care has to be taken that no "dead soil" comes to the surface, as it would tend to stop the growth of the beets, at least for the season. During winter-time the land remains in "rough furrow," and in spring the harrow is used and the roller for pulverizing and leveling the land. If there are many weeds on the land it is necessary to cultivate or to plow. The principal thing is to keep the moisture in the ground, and the beet-raiser has to pay his first attention to this point.

Different Methods of Sowing.

Of course it is necessary to select for sowing only seeds from beets with above-named conditions. In Austria, sowing commences the last week of March and continues till the end of April. Occasionally, if the time is unfavorable, or if the first sowing is destroyed by insects, seed can be sown till the middle of May. The sowing is performed in four different manners:

1. Drill, distance 1-1½ feet; amount of seed, 13-17½ pounds per acre.
2. Beet-planter (Dippel machine G.) distance, the same as by drill. The machine is so constructed that 4 to 5 seeds are planted every 6 to 12 inches in the row; amount of seed 8 to 9 pounds an acre.
3. By marking the field with the marker, making a hole on the crossing point, and putting 3 or 4 seeds in the hole; amount of seed, 8 to 9 pounds an acre.
4. For a moist country it is customary to form small ridges and to put the seed in them; the beet gains by this method a somewhat drier stand and is more capable to suppress the weeds. For this last method a machine has been invented by Director Bartel, general superintendent of the imperial estate in Bohemia.

It is not recommended to transplant beets which are raised in a seed bed; the transplanted beets produce many prongs, and are, therefore, unsuitable for the sugar factory.

The use of the corn-planter with the check-rower for planting beets would be worth an attempt. The seed must not be laid deeper than one inch in a moist country and two inches in a dry country.

Cultivation.

The beet has to be cultivated as soon as possible, as otherwise it is overgrown by weeds. The first hoeing will be given as soon as the rows are visible. Where human labor is cheap it is preferable; if not so, the cultivator has to be used. After this work is done comes the thinning. The seed of the beet presents a glomerate containing five to six seeds; of those two or three are capable of germination and produce plants; but as every plant wants a certain space for its development, it is necessary to take out so many plants that only one remains every 6 to 12 inches. By planting with the drill a great deal of work will be saved by cultivating across the rows; the distance of the shares is usually six inches. An old rule among the farmers is that beets ought to be thinned if they have three leaves, because it doesn't take so much time as when they are smaller.

During the season a second or third cultivation is given, according to the weeds, and at last the beets will be ridged up to cover the heads.

Harvesting

Is done in two methods: First, by hand with a fork or a spade, and second, by the beet plow. Care has to be taken that the beets are not injured, as it would cause rotting if the beets are to be stored.

As a rule, harvesting commences if the leaves of the beets are discoloring. In Austria, this is from September to November. The beets are cleaned from the earth with a knife, and the green head with the leaves cut off.

The beets are either carried immediately to the factory or piled up on the field covered with the leaves or with earth.

Profits and Contracts.

The crop per acre is from 10 to 20 tons. The price per ton in 1885 and 1886 was \$3.85 to \$4.50.

The small farmer does all the work on the beet-field alone with his family. On large ranches there are different ways to have the work done.

1. By contract. In fall usually the contracts are made with the following conditions: The proprietor puts his seed in the ground; the contractor cultivates and harvests. Price per acre, \$7 to \$8 30.
2. Only the harvesting is given to contractors. The price per acre is \$2.60 to \$3 50, or per ton, 32 to 48 cents.

The work is done by laborers, men, women, children, hired from the next village. Price for day work (12 hours) is from 16 to 30 cents, without any board.

A laborer can in one day cultivate one-tenth to three-tenths of an acre, or he can thin out one-tenth to one-eighth of an acre, or he can ridge up one-tenth to three-tenths of an acre, or he can harvest an eighth to a sixth of an acre.

ANTON J. VEITH.

Eisen Vineyard, Fresno.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Anti-Debris Gains.

On the authority of a gentleman just returned from the mountains, the Marysville Appeal of 6th inst. states that the Eureka Lake Hydraulic Mining Company has abandoned its unlawful operations. No hydraulicking is going on in the mine, and a portion of the pipe is being removed. This company had been a persistent offender, and had an elaborately organized system of law-breaking. The workings were guarded by sentinels, and the telephone was used to warn the men in the mine of the approach of agents of the Anti-Debris Association. Operations were carried on from the bottom of a deep cut, in such a way that the miners were invisible from above.

It is noticed, also, that since the recent freshet the Yuba river has subsided to the four-foot mark, and the water is almost clear. Such water has not been seen in the Yuba for 25 years. It is evidence of the stoppage of hydraulic mining, and also shows that the river has scoured its channel, to a greater extent, of accumulated slinkens. Water dipped from the Yuba is now good for drinking purposes.

The Appeal concludes that there are no longer any large companies systematically engaged in violating anti-debris injunctions on the Yuba. There are still numerous offenders against the law, but these are mostly Chinese, who work in a small way. Most of them desist when warned of the punishment there is in store for them should they continue their unlawful work. While it remains necessary to maintain a thorough watch in the hydraulic mining region, to prevent any resumption of serious mischief, it is not likely that any very formidable violation of injunction will be attempted this winter.

At the same time, in view of Mr. Biggs introducing in the U. S. House of Representatives his threatened bill "to investigate the mining debris question in California," the Record-Union remarks: "The bill ought to be knocked in the head, just as the courts have brained the debris question itself. What do the friends of the measure want investigated? Facts that have been established and put on record in State and Federal Courts, and that admit no longer of any manner of dispute? Do they want the law investigated, which the courts have unanimously agreed upon and declared? Do they wish the decision of the War Department reversed, that hydraulic mining is so destructive of river navigation that the Government ought to make no attempt to improve it upon rivers on or near which hydraulic mining is prosecuted until the process has wholly ceased? Do they wish a commission appointed to ascertain that which every one knows, that low lands have been destroyed by reason of hydraulic mining, agricultural development checked, homesteads buried beneath slinkens, and rivers absolutely lifted up and carried over into strange places to flow in aimless courses?"

"Mr. Biggs could far better labor to push through Congress a bill to improve our river navigation, to clear the channels of some of the deposits of 20 years and more, placed in the streams under the eye and by the silent consent of the Government.

"We do not question Mr. Biggs' motive, he is too sincere a man to justify that; he probably hopes that engineering science may find a way to compass the impossible; he is probably urged by his mining constituents to present this bill in the hope that something can be done to save hydraulic mining from its fate. But we believe it is an ill-advised bill, and it should not pass. Unfortunately it is in danger of becoming a law, because it is a bill of inquiry, and the plea will be made that it can only serve to throw light upon the question. But if it passes it means postponement of the question of river improvement for another series of years."

A Mistake Corrected.

In the list of officers of State Granges, appended to the Journal of Proceedings of the 21st Session of the National Grange, P. of H., page 231, the address of the Secretary of the State Grange of California is erroneously given "Sacramento." It should read "A. T. Dawey, 220 Market St., San Francisco."

Dr. John Trimble, Worthy Secretary National Grange, in a personal letter says: "I deeply regret the grave error in your address, and do not understand how it occurred. My clerk took the Directory to each and every Master, and every one was examined by them and pronounced correct. I follow that rule every year."

Every person having a copy of the proceedings, and all Grange papers publishing the list, are requested to note this correction.

SACRAMENTO POMONA GRANGE, at its meeting for election of officers the last day of '87, enjoyed some fine remarks by W. P. M. Johnston on the working and outlook of the Order, and W. S. L. Flint's account of his recent tour in Southern California, besides a forcible Grange address from Bro. G. W. Hack.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

The National Grange, at its annual session in Lansing, Michigan, in November last, unanimously placed itself on record against a repeal of the Oleomargarine law, or any amendment of the same that would in anywise curtail its usefulness to the producers and consumers of dairy products in the Northern States. The State Granges that have held their annual meetings since that time, 22 in all, have indorsed and emphasized the action of the National Grange. It is well known that interested parties have for several months past been organizing and perfecting their plans for a combined effort before Congress this winter to have the law either entirely repealed or so amended as to make it inoperative. Now it becomes the plain duty of all members of the Grange, and of farmers not members, but who are equally interested in sustaining this law, to write personal letters at once to their members of Congress and their U. S. Senators, asking them to sustain the present law. Let each Grange at its next meeting prepare its memorial, have it signed by the Master and Secretary, and send it, with the seal of the Grange attached, to the Member of Congress who represents that district, and also send duplicate copies to both the U. S. Senators for that State. It is organization that has given us this and other good laws. Let organized work be done to save the law, and the sooner the better.

The dairy interests of the United States represent an investment of more than \$3,000,000,000, nearly five times as much as the entire bank capital of the country, which is \$671,000,000. The number of milch cows is estimated at 21,000,000. This is the great industry that is again threatened by the repeal of the Oleomargarine law, to say nothing about the interest of millions of consumers in being protected from a fraud.

The Committee on Agriculture of the Kentucky State Grange, at its annual session in December, presented the following, which was adopted:

Your committee is fully persuaded that the chief causes of the great depression of the agricultural interests of the country are due—

First—To the indifference and utter disregard of the National Government to this, the leading industry of the country. This is evident in the absence of any effort to open, on equal terms, the markets of the world to our constantly increasing surplus.

In Great Britain our cattle are slaughtered in quarantine on the seaboard, depreciating their value one per cent per pound gross on the flimsy pretext of pleuro-pneumonia. Our pork products are entirely excluded from the markets of Germany and France on the equally fallacious charge of trichinae, while the same products are admitted when shipped from Great Britain. Our wheat is met in the same countries by an import duty, yet no effort has been made to remedy these evils. On the other hand, the Government has made or attempted treaties with every South and Central American country in trying to build up a market for our manufactures, sacrificing as much as \$40,000,000 of duty on sugar from the Hawaiian Islands for the poor privilege of selling \$40,000 worth of manufactures. The only remedy for this evil would seem to be the constant demand of the farmers for recognition, emphasized by their votes and the agitation of the question by the press in the West and South.

Some 20 years ago an Order was devised and systematized for the purpose of aiding the farmer to aid himself. It was to do this by educating him in business and general information, by promoting his social welfare and assisting him in the necessary purchases and sales incidental to his condition. Its projectors named it the Grange, or, in other words, the farm. In the short period of its history it has proved itself to be the most practical of the beneficial Orders in existence.—Dr. George A. Bowen, Connecticut.

PROGRESS.—John Trimble, Secretary of the National Grange, reports the organization of forty-seven new Granges in the United States from October 1st to December 15th.

THE GRANGERS' BANK.—The annual meeting of the Grangers' bank of California was held Tuesday, the 10th inst., and the usual cash dividend of \$4 per share, equal to seven per cent free from tax, was declared. The balance of the earnings, amounting to \$9000 above the dividend for the year, was carried to the reserve fund. Next April the bank will have been in existence 14 years. Its capital paid up now is \$600,000, and during that time it has paid over half a million dollars in dividends to its stockholders. This result ought to be satisfactory to the many stockholders, and shows good management and a most prosperous and healthy condition of the institution. The old Board of Directors was unanimously re-elected to serve for the ensuing year, viz.: A. D. Logan, I. C. Steele, C. J. Cressey, Seneca Ewer, Uriah Wood, Thomas McConnell, J. H. Gardiner, Daniel Meyer, H. M. Larue, H. J. Lewelling and T. E. Tynan; President, A. D. Logan; vice-president, I. C. Steele; secretary, Frank McMullen; cashier and manager, A. Montpellier.

BRO. J. W. MACKIE of Tulare was thrown from a buggy, Dec. 20th, and had two of his ribs broken; but we are glad to learn that he was able to be out again in a fortnight, and hope to hear of his rapid progress in recovery. By the way, he has an original article on Socialism in the Patron for Jan. 11th, which sets the subject in a light new to many readers and will well repay perusal.

The Farmers' Union of San Jose.

In a communication to the Patron on Grange influence in San Jose, Bro. I. C. Steele speaks of the Farmers' Union of that city as follows:

It owes its existence to the Grange movement, and its success to the practice of Grange principles. It has a paid-up capital of \$150,000, a reserve fund of \$14,000, and a surplus of \$10,728. Its officers are: C. T. Settle, president; W. O. Andrews, manager. Directors—L. F. Chipman, Horace Little, Thos. E. Snell, C. T. Settle, J. Q. A. Ballou, W. L. Manly, J. A. Buck, J. M. Battee, C. W. Breyfogle. Its business, importers, wholesale and retail dealers in groceries, hardware, crockery, agricultural implements, etc. The company own the land and building they occupy, centrally located in the city of San Jose. The main building is a substantial brick structure 150x60 feet, with a cellar under the whole. Agricultural implement department, 16x40; mill and storage, 60x70; oil-house, 20x30; stables and stairs, 36x40; storage capacity of warehouse, 5000 bags of grain; oil-house, 3 carloads; capacity of mill, 300 bags per day, besides running elevator, coffee-mill and heating store. They have a large yard for hitching teams of patrons. Net profits of business, 8 per cent per annum. The stock of company, \$100 per share, worth \$135, with none for sale.

When this institution started in business the merchants of San Jose gave it just six months to close up its affairs, but it has gained and retains public confidence, with a steady increase of business. It now employs 22 men, and its sales amount to \$400,000 per annum. That it has done much to secure a fair proportion of the proceeds derived from the fruits of the soil to the producers there can be no doubt.

Grange Elections.

ROSEVILLE.—Dec. 17.—Walter Fiddymont, M.; J. Harris, O.; S. J. Crois, L.; Ed. Bedell, S.; Willie Murry, A. S.; E. J. Atkinson, C.; Geo. Williams, T.; Mattie F. Leavell, Sec.; Lee D. Thomas, G. K.; Jennie Harris, L. A. S.

SACRAMENTO.—Dec. 10.—Joseph Holmes, M.; Joseph Sims, O.; Sister Slauson, L.; Harry Foster, S.; Robert E. Greer, A. S.; John Reith, T.; Bro. Davenport, C.; Wm. Sims, Sec.; L. R. Davis, G. K.; Sister L. R. Davis, P.; Hattie M. Sims, F.; Ruth Merwin, Ceres; Lizzie B. Aiken, L. A. S.; Frankie M. Greer, Organist.

SACRAMENTO COUNTY POMONA.—Joseph Sims, M.; Morris Toomey, O.; Wm. Johnston, L.; A. M. Plummer, S.; L. H. Fassett, A. S.; E. M. Johnston, C.; W. C. Smith, T.; W. W. Greer, Sec.; Sister Krull, P.; Sister C. Hack, Ceres; Sister Frankie Greer, F.; Sister Crestwell, L. A. S.

SANTA CRUZ.—G. C. Wardwell, M.; E. B. Cahoon, O.; John Morgan, L.; C. T. Kirkpatrick, S.; E. Francis, A. S.; V. Humphrey, C.; J. Francis, T.; B. Pilkington, Sec.; Thos. Crooks, G. K.; Sister Wardwell, Ceres; Sister Cahoon, Flora; Sister Humphrey, P.; Sister Stikman, L. A. S.

WATSONVILLE.—N. A. Uren, M.; Mrs. E. Z. Roache, O.; Mrs. M. E. Tuttle, L.; A. Cox, S.; D. Tuttle, A. S.; Mrs. P. Haver, C.; G. W. Kidder, T.; Mrs. S. J. Kidder, Sec.; Mrs. R. W. Cox, G. K.; Miss Josie Roache, P.; Mrs. J. M. Rodgers, F.; Mrs. N. A. Uren, Ceres; Mrs. G. D. Rodgers, L. A. S.; J. M. Rodgers, Trustee.

YUBA CITY.—[Corrected List.]—M. J. Hardy, M.; Geo. Ohleyer, Jr., O.; Pauline Newkom, L.; Louis Woodworth, S.; W. E. Sammis, A. S.; Mrs. C. Woodworth, C.; F. Cooper, T.; Mrs. E. Wilkie, Sec.; C. E. Williams, G. K.; Sadie Walton, P.; Lella Walton, F.; Adella Fortna, Ceres; Mrs. Z. Sammis, L. A. S.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

Valley—January 23.

SISTER M. B. LANDER, Secretary of Alhambra Grange, Martinez, has been threatened with a severe attack of typhoid fever. We are happy to say she was decidedly better at last accounts.

SISTER HETTY DEMING of Vallejo has recently been seriously ill with pneumonia. Her many friends will be pleased to learn that she is now recovering.

An Outspoken Admirer.

A surveyor in San Luis Obispo county, inclosing a postal order to pay for the RURAL PRESS another twelvemonth, adds:

"I have now been taking your paper for four years. Not being an agriculturist, strictly speaking, I at first subscribed for six months, merely to get rid of the importunities of your traveling agent; but, after glancing through a few numbers, I gradually became interested in its contents, until now I look forward to the weekly arrival of the PRESS with as much interest as to that of my daily."

Such words of sincere approval are always gratifying to editors and publishers, and we thank our friend for his kindly message.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

MEAT-PACKING.—Oakland Enquirer, Jan. 5: The Chicago Packing Co., incorporated some months ago with \$500,000 capital, in which Wm. Selover, Gov. Salomon, J. S. Emery and other large capitalists are interested, has purchased 10 acres of land from Geo. W. Grayson near the station of Posen, between the stockyards and West Berkeley, for a site for the establishment. The land purchased lies along both sides of the S. P. R. R., and is at an elevation of 25 feet above the bay, affording excellent drainage. The company will proceed at once to erect a building 60 by 275 feet and four stories high, to cost, with the plant, \$100,000. A large quantity of the most approved machinery will be brought from the East. It is expected that the establishment will be in operation in about three months, when over 100 men will be employed.

Butte.

NEAR NELSON.—Oroville Register, Jan. 5: W. A. Shippee, whose home is near Nelson, tells us that from one-half to three-fourths of the grain is sown in that locality. Of this nearly all is wheat, as but little barley is grown. Most of the land-owners have become interested in fruit-raising, and this year a large number of peach, apple, pear, plum and cherry trees and grapevines will be planted. Several will also test the orange and lemon.

AN UNCOMMON FRUIT, known as the Florida grape-fruit, grows here. It is rather larger than a lemon, which it resembles in general appearance and flavor, but it lacks the keeping qualities of the lemon, though while fresh it can be used for all the purposes that a lemon can. There is but one tree in the county and that stands in the yard of Mrs. Rollins in Oroville.

Fresno.

EDITORS PRESS:—It has come at last—a good hard rain—just what every one has been wishing for. We now have the best assurances for a good season and heavy crops. A great deal of farming will be done around Madera and in the foothills near by this year. There is water in the Fresno Dam and Irrigation Company's canal, and irrigation will soon begin. There is a much heavier fall of snow in the mountains than is usual for this time of the year. The snow is quite low down in the hills and gives promise of abundance of water for irrigation this season. It was quite cold here before the storm, with heavy frosts. The thermometer at 7 A. M. Dec. 24th marked 26°, and at 7 A. M. Dec. 25th 52°. The Shepherds' Home, owned by Mr. H. C. Daulton, was sold not long ago for \$175,000, David S. Terry being one of the purchasers. This is the second large ranch in this vicinity that has been sold to outside parties. Christmas was celebrated here, horse-racing, balls and parties being the principal features.—JUNIOR, Madera, Jan. 3, 1888.

ITALIAN MULBERRY TREES.—Fresno Republican, Jan. 6: G. W. T. Carter, a member of the State Board of Silk Culture, has been furnished by that board with a number of well-rooted Italian mulberry trees, which are known as the best trees for the silkworm that grow. These trees will be distributed by Mr. Carter among our farmers, and any one desiring to plant them will be furnished with a limited number free of charge upon application to him. The trees were imported direct from Italy, and are in fine condition; they make a heavy shade and bear delicious fruit, in addition to furnishing food for the silkworm.

Humboldt.

A PROSPEROUS SHEEPMAN.—Blockburg Cor. Standard: Six years ago L. C. Tuttle was several thousand dollars in debt. To-day he does not owe anything, and has money at interest. But himself and family have worked hard, and by giving the business their personal attention and improving their stock they are now the most prosperous family in this section. Mr. Tuttle has several head of thoroughbred Durham cattle, besides several thoroughbred horses. He says that it is just as easy to raise fine stock as poor, and that they pay double in the end. He always has something to sell in the way of stock, and does not depend on wool alone for his income. He has sold over \$3000 worth of cattle and \$700 worth of horses, mules and mutton sheep this year. I noticed that his ranch was all inclosed, and then divided into five or six different pastures by good substantial fences, so that it is comparatively easy for him to control his stock. He intends to build a fine barn and woolhouse the coming spring. Scab is about the only thing that bothers sheep here, and stockmen have got so they can manage that with comparative ease. I saw Mr. Tuttle's band of sheep. They had just been separating the ewes from the rest of the band, and out of over 2000 he had in the corrals the day I was there, there were not more than a dozen that were affected, and that but slightly. But he caught and handled every one, and when he found the slightest indication of rubbing, he doctored it. If all sheepmen would be as careful, they would soon have that drawback entirely obliterated.

Mono.

RESULT OF THE SHEEP-LICENSE ORDINANCE.—Bodie Miner: Sheriff Wat Morgan, ex-officio tax-collector, has collected to date, under the Mono county sheep-license ordinance, the sum

of \$4275, and to this may be added \$750 in penalties, aggregating \$5025. The cost of these collections will be about \$300, thus leaving the county a clear gainer by about \$4725 of taxes on a class of property which has heretofore paid no tribute into the county for benefits received and liberties enjoyed. While we do not believe that \$5000 a year will repay the damage done to Mono county pastures, it shows the wisdom of our Board of Supervisors in passing the sheep-license ordinance.

Placer.

NEW YEAR'S STRAWBERRIES.—Auburn Republican, Jan. 4: W. M. Crutcher brought up from Newcastle Saturday a box of large, ripe strawberries just picked from a ranch below that town on the Penryn road. Ripe strawberries, grown in the open air for New Year's, are a very good testimonial for Placer county climate.

Sacramento.

RECLAMATION.—Dixon Tribune, Jan. 7: We paid a visit last Saturday to the new dredger, Ajax, now at work on the lower end of Andrus island. It is a powerful machine, strongly and ingeniously constructed, and works like a charm. In size, convenience of structure and strength, it seems to be a great improvement on the one lately in use there. It is in the hands of the same engineers, Joe Miller and Jack Dennis, with about the same crew—only six men in all. They think they throw up, under favorable conditions, in the 20 hours' run about 1000 cubic yards of sediment. When in operation it seems to possess the strength of a regiment of giants, and it is handled with the precision of the simplest machine. We were informed that it cost the district \$17,500. The work of reclamation is progressing satisfactorily. Mr. Poage is doing effective work, with a small force of Chinamen, in strengthening the weak parts of the levee, to prevent its being carried away by wind and tide. He will be needed through the winter for this work, or a good deal of work may be lost by a break in the new, unsettled dikes. More than half of the land is now out of water, and we may reasonably hope that all of it will be ready for the plow next season.

San Benito.

MONTHLY HORSE FAIR.—Free Lance: A horse market has long been needed in Hollister. Horse-buyers come here and then know not where to look for what they want. Horse-raisers drive droves of from 5 to 25 horses into town, and then are obliged to wait perhaps a week or more before they are disposed of. To obviate this difficulty and to bring buyers and sellers together, the Hollister Board of Trade on Monday last resolved to establish a horse market in Hollister. The first Saturday in February was appointed as the day when the first mart was to be held. Circulars are to be sent to all prominent horse-dealers of California notifying them of the establishment of the horse market. All those having horses to sell should bring them in on that day. In three months' time, and after three markets have been held, the plan will have become well established, and the day of the horse mart will be regarded in Hollister as one of the liveliest of the month.

San Bernardino.

BEES AND HONEY.—Southern Californian, Dec. 24: F. H. Hunt, who has about 600 colonies of bees, gives us some interesting items about bee-culture. The ordinary life of worker-bees is from 30 to 60 days. Queen-bees hatch in 16 days, workers in 21 and drones in 24. Queen-bees live four or five years, but their usefulness does not generally extend to a period of over three years. Queen-bees raised in America cost \$2.50; Italian queens, from \$15 to \$20. The bees have guards at the entrance to the hives, which promptly exclude intruders. Queen-bees lay from 1000 to 2000 eggs per day. While sage makes the best honey, and the bees in this vicinity feed on that, Yerba Santa, wild buckwheat, alfalfa and eucalyptus. The honey is removed once a week, from May 15th to the first of September. The usual amount obtained from each hive in the East is about 60 pounds. About 150 pounds is a good average in California, while as much as 307 pounds has been secured. The price for extracted honey ranges from 3½ to 5½ cents per pound.

IMPORTING JERSEYS.—San Bernardino Index, Jan. 7: Last week a carload of very fine Jersey cows arrived in this city from the East, consigned to R. N. C. Wilson, of the Ivanhoe farm, about 12 miles northeast of this city. The cattle are all thoroughbreds and will be used for dairy purposes on that gentleman's place.

Santa Cruz.

FAIR ASSOCIATION DIRECTORS.—Pajaronian, Jan. 5: The Pajaro Valley Agricultural and Horticultural Fair Association met in the Town hall on Tuesday last, as per call of the secretary, and elected, by ballot, the following persons as a Board of Directors to serve for one year: James Waters, A. P. Roache, A. N. Judd, N. A. Uren, H. S. Stipp, Mesdames M. E. Tuttle, G. B. Card, J. L. Libbey, B. A. Osborn and C. W. Stipp.

JANUARY GRAPES.—Courier-Item, Jan. 7: Twenty-seven boxes of grapes fresh from Buena Vista vineyard were brought to town Thursday, looking just as if they did not know the difference between January and October. These midwinter grapes sell for \$4.50 per box in San Francisco. Who says there isn't profit in fruit-growing in the Santa Cruz mountains?

MORE STRAWBERRIES.—Pajaronian: Many of the berry-growers are preparing to increase

their acreage of strawberries next season. R. W. Eaton will have all of his place in strawberries, the Lake farm will set out another field, Waters & Brewington will increase the size of their strawberry tracts, and the smaller growers will follow in the same direction. The past season was a prosperous one for the strawberry-growers, and as the S. F. market is mainly dependent upon the Pajaro valley crop of berries—and the demand is increasing each year—the berry farmers propose to keep up with the times.

Santa Clara.

CITRUS SUCCESSES.—Los Gatos News, Jan. 6: A two-year-old orange tree in the yard of W. A. Stidston is certainly a sight to behold, especially to the visitor coming here from the frozen climes of the East. The tree has borne 32 oranges this winter. They are of the Navel variety, and exceedingly large and fine. . . . Mr. J. J. Groom brought to this office this week some very fine Navel oranges and Eureka lemons. They were finely flavored, large, and thin-skinned. They were grown on his fine place on the hill, on trees set two years ago last April, and from the lemon tree that these were picked from he gathered nearly three dozen ripe lemons in one day, and the tree contains hundreds of others all the way from the bloom to full-grown fruit. His trees are all healthy and clean.

Solano.

EDITORS PRESS:—We have had some unusually cold weather. The mercury stood this morning at 29° and the ground has been frozen all day on the north hillside. We had quite a snow-storm Wednesday; the snow did not lie long in the valley, but it still shows on the hills. Four inches of rain fell in the last storm, and ten inches for the season. Robins are very plentiful; orchards and vineyards are alive with them, and all seem to be very busy hunting something. . . . Fruit trees are very hard to get, especially peaches. D. B. Derby, agent for the Niles nursery, will not take any more orders for trees; says they have about sold out. —G., Vacaville, Jan. 8th.

Sutter.

WARRING ON THE BUGS.—Sutter Farmer, Jan. 6: The fruit-growers in and near Yuba City are now busy spraying their trees for the purpose of killing the San Jose scale. The remedy that is being generally used is the whale oil and sal-soda remedy, recommended by W. G. Klee, State Inspector of Fruit Pests. Mr. Klee was here a week ago, and expressed himself as well pleased with the activity of the fruit-growers in their fight with this pest.

Tulare.

THE CASABA MELON.—Visalia Times: On the 17th day of last October, W. R. McQuiddy bought at Boice Bros' store, Hanford, a muskmelon of the Casaba variety. It was at that time a little streaked with yellow, but not ripe enough to eat. Taking it home, he laid it away in a cool place, expecting that it would be fit to eat in a week or more. Being where it could be seen every day, it was watched to see that it did not spoil, and left to see how long it would keep. Although no attempt was made to protect it from freezing during the cold weather in December, it was sound at Christmas. Two days before New Year's it was cut and found to be sound and sweet, and, although it stood on one end all the time, it was as good at one end as at the other. A part of it was set away for New Year's day. Being forgotten that day, it was eaten on Monday, and was sweeter and better than most muskmelons when first from the vine.

FEEDING BETTER THAN SELLING.—A farmer residing near this city was heard to remark yesterday that he would raise no more alfalfa hay to sell at \$5 and \$6 per ton, as he had found it paid better to feed it to stock at that price. The gentleman's judgment is sound on that matter; there is not near as much to be made in raising either alfalfa or corn for market as there is in feeding it to cattle and hogs. Fat cattle are scarce all over the State during the months of January, February and March, and at that time command the top figure, but the farmer converts his hay into money and takes his chances with his stock until spring grass grows, when the price of beef also falls to a low figure. Grain-fed hogs are always in demand at top prices, yet it is safe to say that a half-dozen such hogs could not be procured in this market, though our ranchers raise thousands of tons of good corn.

Yuba.

PAVILION MATTERS.—Appeal, Jan. 6: The annual meeting of the Marysville Pavilion Co. was held at the new pavilion last evening, nearly all the stockholders present. W. T. Ellis, N. D. Rideout, D. E. Knight, Justice Greely and Peter Decker were elected directors for the ensuing year. J. C. White and P. C. Slattery each made an oral report relative to the new Park and Pavilion Co., stating that about \$10,800 had thus far been subscribed of the capital stock. On motion of N. D. Rideout, the directors were authorized to sell the pavilion to the new company at such time as they may be ready to purchase, at \$8500, and it was further agreed that the stockholders of the present company will subscribe the full amount owned in the present Pavilion Company to stock of the new company, if the balance is taken by other parties to the amount of \$16,500. The newly-elected directors organized by electing D. E. Knight, Pres.; W. T. Ellis, V. P.; T. J. Sherwood, Sec., and P. Decker, Treas.

PACIFIC COAST WEATHER FOR THE WEEK.

EXPLANATION.—Cl. for clear; Cy, cloudy; Fr, fair; Fy, foggy; — indicates too small to measure. Temperature. Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

Overland Freight Rates.

It will interest many of our readers to know that the Transcontinental Association, which includes all the overland lines, has issued a new tariff sheet on overland freights which will go into effect on Monday next, January 16th. It does not make any great changes, perhaps, in rates, but is in the line of an advance. The following items are of especial importance to our readers:

The rate on cattle by carloads to Missouri river points from Pacific Coast common points will be \$1.50 per 100 pounds; to Mississippi river points, Dubuque, New Orleans, etc., \$1.70 per 100 pounds; to Chicago, etc., \$1.77½ per 100 pounds. The rate on horses or horses and cattle will be greater, and on hogs less than the cattle rate. Live-stock, per passenger train, not to exceed 12 head per car, will go as follows: To Missouri river common points, \$525; to Mississippi river points, \$575; to Chicago and common points, \$600.

Following are some of the charges on special commodities: Baled wool for New York from this coast will be charged \$1.50, as against \$1 at present; scoured wool, \$2. Canned goods for the same destination will be \$1 per 100 pounds, and 75 cents to Missouri river points. Brandy or cherry juice to New York, \$1.25. Oranges and lemons for Missouri river points, St. Louis and Chicago, per passenger train, will be rated \$1.90, \$2.05 and \$2.15 respectively; per freight train, \$1, \$1.10 and \$1.15 respectively. Potatoes, straight, by carload to above three points, each 80 cents. It is to be noted that Chicago rates will apply on oranges and lemons to St. Paul and Minneapolis, otherwise Missouri river points will govern to St. Paul and Minneapolis.

Central California Citrus Fair.

EDITORS PRESS:—We wish to say to all that are intending to make exhibits at the "Central California Citrus Fair," to be held at San Jose, to be sure and have their citrus and other fruits on hand in San Jose by the 20th inst., in order that it may be placed in proper shape on the opening day, Jan. 24, the time that the American Horticultural Society meets, and it will save much confusion. We have every encouragement that there will be a very large exhibit of citrus fruit, and also a very large number of people present from all sections of the country. Therefore, we wish to have no delay in our preparations in making this the grandest Fair ever held in the State.

CYRUS JONES, Pres.

FRANK DUNN, Sec.
San Jose, Jan. 7, 1888.

AGEING WINES.—A dispatch from Washington states that a decision was rendered Jan. 9th in the Supreme Court in the patent case of Benjamin Dreyfus vs. Sophia S. Earle, executrix, on appeal from the U. S. Circuit Court for the district of California. This was a suit for an alleged infringement of a patent granted on July 11, 1865, to John S. Earle for an improved process of imparting age to wines by means of steam-heating. This court holds that the application of artificial heat for the purpose of imparting age to wines is old, and that there was no novelty in the process. The decree of the Circuit Court is reversed, and the case remanded with directions to dismiss the bill.

FRUIT UNION MEETING.—The annual meeting of the stockholders of the California Fruit Union for the election of a board of nine trustees for the ensuing year, and for the transaction of such other business as may come before the meeting, will be held on Wednesday, January 18, 1888, at 1 P. M., in Irving hall, Post St., S. F. Every stockholder is urgently requested to attend the meeting in person, as questions of importance will be brought before the meeting, and the policy for another year's business outlined.

The public debt decreased \$14,583,650 during December.

The Visiting Horticulturists.

As we go to press on Wednesday the excursion of the American Horticultural Society may be pictured as starting westward from St. Louis, for such is their intention according to program. They will come by the Southern route, and are expected to come through direct to San Jose or San Francisco. On Tuesday, January 24th, the formal reception and the opening of the three days' session will occur at San Jose. Preparations therefor are proceeding promisingly.

Riverside has begun active work for the citrus fair and meeting to be held in that city beginning Feb. 7th. A meeting of the Board of Trade was held last week; the management of the affair was entrusted to L. M. Holt, and he, with C. J. Gill, M. Gage, W. N. Mann and H. J. Rudisill, were appointed Executive Committee. P. D. Cover, E. Rosenthal and W. A. Hayt were appointed Finance Committee. A. S. White was chosen as chairman of the Reception Committee, with power to select his associates. Since the affair was finally begun there seems to be much interest and enthusiasm, and there will be no lack of welcome at Riverside, and a magnificent display of products is the sure result of an effort on the part of the Riverside people.

There seems to have been some little feeling, it is true, that Riverside was slighted by having an official announcement of the meeting made at their place and then the program changed to give another place priority, but it should be remembered that the plans were drawn 2000 miles away, and probably it was owing to some necessity appearing there that the northern part of the State was visited first. We cannot see what real ground there was for dissatisfaction, and the Riverside Press in its issue of Jan. 7th shows the right spirit when, speaking of the excursionists, it says:

They will have spent three weeks in California viewing its horticultural productions before reaching Riverside. After a careful consideration of this question, it is safe to conclude that this program is much better for Riverside than for them to come here first and then go elsewhere. The members of that excursion will have pretty much made up their minds about California before reaching Riverside, and when they get here and view our exhibit of citrus fruits, test the quality of the same and examine the appearance of the finest oranges grown in the world, and then take a drive down the valley that cannot be duplicated on the American continent, their enthusiasm will know no bounds, and they will declare Riverside to be the great citrus country of the world.

That is all right, of course. The last place on the floor in debate is the point of vantage, and when we used to play marbles the lingo was: "First, the worst; second, the same; last, the best of all the game." We are glad our Riverside friends have come to this conclusion, for it insures success on both ends of the line. San Jose is ready to eclipse all her former deeds in display in hospitality and otherwise. Let the people now come forward and aid in the environment of the meetings, and the work will be an honor to the State.

The air is full of these events. The State Board of Horticulture has issued a circular reproducing the program for the meetings and otherwise calling attention to them, and the officers of the State Horticultural Society also issue a special to their membership to participate in the fairs and in the cordial greeting to the coming hundreds who are linked with them in the sympathy engendered of pursuit of the same noble occupation. The whole affair looks very well, and we look forward to the meetings with much pleasure.

A GENERAL CITRUS FAIR.—The results of holding the Placer county exhibit at Los Angeles seem to have been so satisfactory that now J. Parker Whitney of Rocklin writes to the Record-Union recommending a united Central California citrus exhibit for 1888, to be made by the united efforts of the principal Central California counties; the display to be made at Los Angeles in preference to any other place.

The population of Los Angeles and its ratio of increase are thus stated: 1861, 6500; 1870, 8000; 1880, 11,183; 1885, 35,000; 1887, 60,000. The last two numbers are estimates.

The River Time.

Oh! a wonderful stream is the river Time,
As it runs through the realm of tears,
With a faultless rhythm and a musical rhyme
And a broader sweep and a surge sublime,
As it blends in the ocean of years!

How the winters are drifting like flakes of snow,
And the summers like birds between,
And the years in the sheaf, how they come and
they go
On the river's breast with its ebb and its flow,
As it glides in the shadow and sheen!

There's a magical isle up the river Time,
Where the softest of airs are playing,
There's a cloudless sky and a tropical clime,
And a song as sweet as a vesper chime,
And the junes with the roses are straying.

And the name of this isle is the "Long Ago."
And we bury our treasures there;
There are brows of beauty and bosoms of snow,
There are heaps of dust—oh! we loved them so—
There are trinkets and tresses of hair.

There are fragments of songs that nobody sings,
There are parts of an infant's prayer,
There's a lute unswept and a harp without strings,
There are broken vows and pieces of rings,
And the garments our loved used to wear.

There are hands that are waved when the fairy
shore
By the fitful mirage is lifted in air,
And we sometimes hear through the turbulent roar
Sweet voices we heard in the days gone before,
When the wind down the river was fair.

Oh! remembered for aye be that blessed isle,
All the day of our life until night,
And when evening glows with its beautiful smile,
And our eyes are closing in slumbers awhile,
May the greenwood of soul be in sight.
—Benj. F. Taylor.

Submission.

[Written for the RURAL PRESS by AUNT SUSIE.]

Father! I know thy ways are just
And full of kindness now;
Forever to Thy will I must
In meek submission bow.

And gladly I my cross must bear,
Breathing no bitter word;
O Father! Thou my heart prepare,
And let my prayer be heard!

And I with eagerness must press
Forever on my way.
O Father! heal Thy child's distress,
Oh, bless me through this day!

I long the path of peace to find
And lay my burden down;
The cross I bear, O Father kind!
When wilt Thou give the crown?

Home Education.

[Written for the RURAL PRESS by MARY P. AMES.]

Herbert Spencer has wisely said, "Always remember that to educate rightly is not a simple and easy thing, but a complex and extremely difficult thing; the hardest task which devolves upon adult life." That so much neglect exists in the home education of the young is a subject for serious consideration. Many parents, it is true, are anxious to secure for their children the advantages of the best schools within their reach, and having done this look well to their advancement. There are to be found young people all over our land being taught in those principles which shall make them grow up into Christian manhood and womanhood, while others, not religiously trained, are instructed in those things which go to make uprightness and integrity of character.

Many parents, too, give careful attention to the home education of their children in all the little courtesies of life. But while all these things ought we to do, are we not leaving many others undone?

Take the subject of the unequal distribution of wealth, for example. Though without charity for the idle and dissolute habits which keep so many in a state of poverty, and utterly condemning the spirit of communism which would give to the profligate and the vicious a share of the hard-earned proceeds of others' labor, yet, is it not a subject we may look well to that the wealth of the land is so unequally distributed among good men?

When we look at the Leland Stanford University, the Lick Observatory, Dr. Lane's generous gift of the Cooper Institute, and the magnificent donations of Dr. Cogswell, Mrs. Margaret Crocker and a host of others, which stand up like monuments in many places—not of the benefactions of men and women who, having done with life, can no longer use their wealth, but as the generous expression of living hearts beating with kindly human sympathy—we are glad that great fortunes have come to

these large-hearted people. But there are men of good intellects and educations, with just ideas and right views of things, who make most mortifying failures in earning a livelihood, always hampered with debt, and having their self-respect well-nigh crushed out of them under a weight of mortgages, promissory notes, etc.

Christian men having themselves a competence, sometimes give their sons fine educations and train them well in the broad principles of the Christian religion, as well as in the narrower lines of sect, but fail utterly to teach them the rules which govern business successes. A fear of producing worldliness sometimes causes fathers to fail to instruct their sons in the art of getting and spending money, and when such sons go out into the world, their lives repeat the same sad story of the neglect of home education in a matter we have no right to think lightly of, for the experiences of our lives do not teach us to agree with the poet that "Man wants but little here below." Should these young men, untaught in a matter of so much importance, blundering come into a position for acquiring rapid wealth, they often spend it so lavishly as they would not had their home education taught them its value, and, having spent their all, find themselves troubled, and that continually with questions of ways and means; and the problem of the bread and butter of life seems entirely beyond their solution.

The large development in the organ of destructiveness with which we often meet, shows serious lack of home education. Occasionally we see whole families in whose minds there seems to be no distinguishing line between using and abusing. Where everything is destroyed from the new toy of the baby, bought with the self-denial of some older member of the family, to the large armchair of the father, worn by children's feet, or, if that father be a farmer, the destructiveness extends to his mowing machine and farm wagon for which provident care has failed to provide shelter against summer's sun and winter's storms. The wear and tear of clothing which takes place in families of this character is something alarming to one of economic habits. We can easily look back beyond such homes to the ones in which that father and mother were little children, and understand that their toys were not "laid over their heads on the shelf, till the room should be stiller from noise, and the children more lit for such joys." In the matter of constructiveness, a great lack of home education manifests itself. The sons of parents in moderate circumstances are so brought up that when they become the heads of families, how often are they unable to mend a broken chair, put in a pane of window glass properly, fix a refractory door-knob, or, in short, take any of the "stitches in time to save the nine," in the wear and tear of house and furnishings. How often wives with many needs have never been taught in the home of their parents all those little arts of constructiveness which shall make little serve the purpose of much, and which shall mend and make over in wise ways. I once knew a lady whose circumstances did not remove the question of bread-winning from her, but who was entirely ignorant in the art of dressmaking. "Just think," she said, "of the amount of good reading I could do while making a dress." I did think, and have thought at times ever since, but it seems to me plain she might have gained more than she lost by an occasional experience dressmaking, though she found herself confused by a labyrinth of ruffles and pleatings and drapery. What she would have gained in constructiveness and in overcoming a difficult task might have taught her things more beautiful than those learned from books. The capable wife of a successful business man once remarked she had no patience with the busy women who would piece quilts. Being one of the number, I have thought much of the matter. Though quilt-piecing may not find a proper place in the full days of the housewife, it seems to contain lessons which extend somewhat to the root of the matter in home education. That a young child may construct something should increase her self-respect. That the small pieces remaining from her dresses and aprons may be made into something both pretty and useful carries with it a lesson in utility and respect for small things.

While the knowledge of sewing, the exactness required, the proper blending of colors, and the bit of kindergarten instruction which may so aptly fit in, as regards shapes and angles, all contain valuable lessons. Of all the neglects in home education none is more observable than in farmers failing to instruct their sons in the principles of agriculture. There is much wise talk in these days in regard to allowing boys to follow their natural bent in regard to their avocation in life. But what if the farmers' son shows no leaning toward anything? Why fail to teach him all those rules which govern successful farming for fear he will conclude to be a merchant or a mechanic?

Should he ever choose some very different calling from his father's, the lessons inculcated on the farm, teaching the boys to pick up a hammer or a hoe, a shovel or a saw, and put them in their proper places; teaching the best depth for plowing, and the number of pounds of grain which should be sowed per acre; the number of pounds of butter a good dairy cow should give, and the necessary feeding to produce such a yield; the weight to which a well-fed calf should attain in one year, and all the rules which govern successful farming, the con-

tinual looking out for farm leakage, and finding ways and means to stop it. All this knowledge given to the farmers' sons will not detract from the business man's success. A nephew of the writer, a successful book-keeper in Boston, was learning stenography, although he had no apparent need of the same, but gave, as a reason, that it was one more thing to know. So let us who are raising sons on the farm attend well to their home education, and when they go out into the busy world of workers, they may find most useful these home lessons we have taught them.
Beckworth, Plumas Co., Cal.

Horses Versus Hogs.

Von Osgood, the Duncan's Mills correspondent of the *Petaluma Argus*, is responsible for the yarn ensuing, which he offers as pertinent to the controversy whether the actions of the lower order of animals are controlled by instinct or reason:

Once upon a time a Sonoma county farmer had a number of horses of various ages, which he kept in a pasture near his barn. As the grass in the pasture was a trifle short, the farmer was in the habit of throwing some hay over the fence every day for the horses.

The farmer had also a great many hogs. A large number of the hogs had found their way into the pasture where the horses were, and, hog-like, were always on hand rooting and tramping around in the hay while the horses were eating, greatly to the annoyance of the horses. This thing continuing as it did, from day to day, was becoming monotonous. The horses as yet knew no way to get rid of the hogs and their everlasting rooting and tramping in the hay, and they were sorely vexed. They would bite the hogs and paw them and kick them, but it was of no use. The hogs would grunt and squeal and stay right there. Hogs in general are stayers from "way back," and these, being of the self-sharpener variety, were no exception. The horses were discouraged and tired. They could devise no means of disposing of the hogs. One silly young horse went away and wouldn't eat. Some of the older horses reasoned (yes, reasoned) with him, telling him that to give up now and sneak off was to acknowledge defeat, and furthermore, it would have a tendency to embolden the hogs and cause them to outthug any hoggishness they had yet attempted. This eloquent appeal (yes, horses can be eloquent) convinced the young horse and he came back.

One day, while the horses were eating their hay, the hogs, as usual, being there in full force, an idea struck one of the horses and he grabbed a hog in his teeth and hurled it up into space. The hog described a curve in the form of a parabola, clawing the air and squealing meantime, and struck the earth—with a sickening thud—on the other side of the fence. When the hog picked itself up and looked around, it was astonished upon beholding a great multitude of hogs in the air, curving and squealing gracefully (yes, squealing gracefully) beneath the cerulean vault and landing, invariably, outside the pasture. The other horses had "caught on," you know, and were making it exceedingly torrid for the hogs.

The hog that had just "picked himself up" (right here, by the way, a change in the personal pronoun seems imperative) wasn't a large hog nor a very old hog, but in the last few seconds he had lived years, and the spectacle upon which he now gazed completely unhogged him. The horses made a clean sweep, and the hogs, in a more or less damaged condition, marched off in a body to seek pastures new and company more congenial.

A Sensible Movement.

The Funeral Reform Association, just organized in N. Y. by leading Episcopalians, lay and clerical, aims to abolish ostentatious display and secure a simple and impressive observance of funeral rites. To this end the following reforms are advocated: The adoption of perishable coffins and plain hearse; the disuse of crape, scarfs, feathers and other conventional trapping; the avoiding of all Christian and heathen emblems, and the use of any floral decoration beyond a few cut flowers. The custom of following the body to the grave is also condemned, except in case of immediate relatives, as necessitating a great outlay on carriages.

The object of the organization is also sanitary. It seeks the abolition of burial plots in cities and the abandonment of family vaults. We do not know, as yet, whether it has expressed itself in favor of cremation.

The reforms proposed are certainly much needed, and the movement is likely to meet with warm approval and find strong support outside the limits of the Empire State and the Episcopal denomination.

A POINTER FOR LOTTERY-FOLLOWERS.—One of Beauregard's old soldiers sent him a dollar and requested him to send him a lottery ticket which would win a big prize. He said: "I was always at my post and obeyed orders. I came out of the war without clothes enough to wad a shotgun." The general answered: "My dear comrade, I send you a ticket that I hope will draw a prize. I beg leave to give the following pointer: If you stick to the Louisiana lottery for four years as faithfully as you did to the Southern Confederacy, you will not have clothes enough to wad a popgun."—*Ex.*

Hobbs' Experiences.

[Written for the RURAL PRESS by MRS. J. HILTON.]

Nearly every town has some one who is considered an oddity. While visiting at a neighboring town, a little old man came into the house where I was stopping, whose appearance made one smile. He opened the conversation by saying:

"My mule is dead."

"Why, how is that? I thought he was out to pasture."

"Yes, so he was; but Jones brought me word that my mule had got down and his feet were under the fence so that he could not get up, and he was starving. So I got a horse and went down there. Sure enough there lay the old fellow, and as I went up to him he rolled his head over on his side and looked at me, as much as to say, 'Come, old comrade, can't you get me out of this?' Of course I told him I would if possible. So I tore down the fence and tried to help him up, but it was no go; the poor old fellow was too weak. I got him some food, but he could not eat. And so I felt that he must be put out of his misery. As I never could kill anything, I went to a neighbor's and tried to get some one to do it for me, but the men folks were not at home. Well, I thought I would dig his grave ready. While I was there I borrowed a spade and went to work close to the mule's back. I had got it about six feet deep when I looked up and there was Mr. Mule kicking and trying to get up. Well, Hobbs, says I to myself, if you don't get out of this hole pretty quick, there will be two mules down here."

"How did you dispose of him?"

"Oh, I went back to the man's house, and as he was at home he came and —"

The old man looked kind of solemn, and then with a sigh he remarked:

"I don't see how it is every horse or mule folks gives me goes and dies. Now that old black mare Mr. W. gave me I fed her the best in the land, but one night she got down, and when I tried to help her up she kicked me on top of the head. It didn't hurt me a bit, but it made her lame, and the next day she couldn't walk, and then she died."

The truth was that the old man was so soft-hearted that every one who had an old or worthless animal gave it to Hobbs, knowing it would have good treatment. He is a good mimic, and tells a story pretty well. We were talking of slow horses. One said that if he had to go to the tribunal on the day of judgment behind a horse, he would like to go behind our old Polly. That reminded him of the livery-stable-man who always cautioned people who hired a horse of him not to drive fast. One day a man came along who hired a horse and carriage. As usual, he was cautioned not to drive fast. "Well, stranger," he drawled out, "I am going to a funeral, and I shall keep with the procession if it kills the horse."

Fancy Work.

[Written for the RURAL PRESS by POLLY PRINGLE.]

A very pretty and convenient addition to the work-basket of those who are old-fashioned enough to save the basting long threads taken out of finished work is a thread-holder. This is made by cutting six pieces of very stiff paper or thin pasteboard, like the following:

Cover three for the inside with bright-colored silk or woolen, the other three for the outside being of a darker or contrasting color. Lay each of the three lining pieces on those intended for the outside, matching, and evenly whipping the edges. Now having the three sides ready, sew them together with neat stitches over and over, leaving the third side open to admit of putting in the threads. You now have a three-sided little receptacle which will open by a slight pressure of the fingers and keeps your threads always handy and untangled. Finish the two ends by bows of ribbon.

To Make a Pretty Emery.

Another useful little thing and invaluable when sewing on goods with much dressing in them is an emery.

Take a little piece of strong, soft cotton cloth; fold it over or cut into the shape of a slightly elongated triangle. Sew up the side corresponding to the creased side (when the cloth was folded); fill with fine emery and gather up and fasten the top securely. If the pattern is rightly cut it should be a perfect strawberry in shape.

Now take some scarlet flannel or cloth of any kind and cover it by cutting the same shape as at first. For the hull use a tiny piece of green velvet or cloth (velvet is prettiest) round in shape and deeply cut into points.

Having made a strong loop one-half inch long for the stem, of double twisted green silk twist and attached it to the top of the berry, punch a hole in the center of the velvet hull, drawing the loop through and fastening every point of the velvet securely to the strawberry. After all else is done take a needleful of yellow sewing silk and, going over the whole berry, put in tiny, loose stitches at irregular distances to represent seeds. If still greater perfection is desired, pale, yellowish green silk may be used around the point of the berry and the stitches may be made closer together to represent the unripe seeds.

YOUNG FOLKS' COLUMN.

Spreading Fruit to Dry.

(Written for the RURAL PRESS by ADAH BATELLE.)

Upon a rambing farmhouse roof,
One day, as I rode by,
I saw a little barefoot maid
Spreading some fruit to dry
Within a sun-bonnet half hid,
But still I could descry
A smiling face, and sweet she sang
As she spread fruit to dry.

Applaud milkmaid or shepherdess,
Yet neither can come nigh
In rustic grace to the blithe lass
Who spreads the fruit to dry.

Marysville.

A Story for Boys.

(Written for the RURAL PRESS by AUNT SUSIE.)

Long, long ago Janet, the grown up sister of a family of boys, called out one morning: "Walter, Walter, come right in to breakfast." She listened, but no answering call came back to her.

The family breakfast was waiting on the table in the neat kitchen of a comfortable farmhouse, and as she had left the cornbread in the oven when she went to the gate, she could not wait long, so hastened back, and as the rest of the family sat down to the table she put on a plate of steaming cornbread "browned to a turn." It smelled so good and looked so nice, one of the boys exclaimed:

"I declare, Janet, nobody can make such cornbread as you do. I don't know what will become of us when Mr. Smith carries you off."

Janet was pleased with the boy's praise, but her cheeks got red nevertheless.

"What makes you blush so, Janet?" called out another brother. "I know one thing certain—Mr. Smith will always have awful good corn bread, and I mean to tell him so next time he comes."

And so the good natured conversation went on, and Janet forgot about Walter till the meal was nearly over. When all were finished she cleared off the table, then went to the "best room," as the parlor was called in the good old days of the past, and began setting a small table with a fresh cloth, best china, etc.

"Janet, what in the world are you doing?" called out her mother.

"Wait a few moments, mother, and you will see. I'm going to play a joke on Walter that I think will make him more punctual to his meals."

So she finished setting the table, then returned to the kitchen, and with great care prepared an extra nice breakfast.

At last she heard Walter go into the shed where the boys washed and brushed up before going to their meals. She hurried the breakfast on to the table in the "best room," and was back in the kitchen when Walter came in. He looked around and saw the breakfast-table all cleared away and was very much surprised and said:

"Janet, can't I have some breakfast? I didn't mean to be so late."

"Oh, yes; come right here."

He followed her, too much surprised to ask any questions, and when he saw the neat little table and dainty breakfast waiting for him, he felt so ashamed he could only sit down and eat in silence. Janet passed him the different dishes and served him most carefully. All she said was: "When a farm man has to work so hard he can't stop to eat when the regular meal time comes, when he does stop he needs an extra nice breakfast in a cool room this warm weather, and is too tired to serve himself." Simple words in themselves, but her tone and manner made them cut deep into the little boy's heart. He knew he had been so busy playing down to the creek trying to make a water-wheel that he had not heeded her call. She had often reproved him when late, but never had he received such a lesson as this; to eat all alone in the best room, and his tall, womanly sister waiting on him, was rather too much, but he was too proud not to eat, and, although he was hungry enough when he came in, he had to force down the nice food before him, and when he couldn't possibly make another mouthful go down he meekly asked, "Shall I go now, Janet?"

"Oh, yes, certainly; a very man must never be detained in the house. I'll fill the wood-box."

So out Walter went, but somehow his water-wheel had lost its fascination, and the water in the creek did not seem to sparkle half so much, and the stones in the bottom didn't look as pretty as they had when playing before breakfast. At last he said to himself:

"I declare, I wouldn't go through that again for all the play in the world. Catch me being late again very soon. I can't do anything more with this water-wheel. Wish I hadn't begun it till after breakfast." Then with a long-drawn sigh he ran back to the house, opened the kitchen-door, and called out:

"Say, Janet, please let me fill the wood-box? I don't want to play any more, and I'm sorry I made you so much trouble. I won't be late again if you will be good to me now."

"Wasn't I good to you? And didn't I give you a nice breakfast?" asked Janet.

"Oh, yes, you were too good, and gave me

too nice a breakfast; it made a feller feel awful mean."

"Well, you can fill the wood-box, and do your other morning duties, if you have time," said Janet—she couldn't resist a parting shot, as he eagerly ran out for wood.

Never was a big box filled quicker and yet with more care. He felt as if a load had been lifted from his shoulders, and ran here and there, merrily whistling as he went. His sister's way of giving him a lesson had worked like a charm, though it was "hard on a feller." And after that long-remembered morning he was the first one to obey the call to meals.

One day Walter was going down the road to school, when he met one of his playmates crying most bitterly.

"Why, Tom, what is the matter?" called Walter.

Tom replied, with much sobbing, "My—my—bro—brother is—is—dead."

"Oh, I'm so sorry," said Walter, "but don't cry any more now."

"Oh," said Tom, "fa—father—cri—cried and mo—mother—cried, and—and—we—all cried, but—I—I—I've cried—mor—more'n—any—body."

"Is that so? What makes you cry more than the others?" asked Walter.

"Cause—cause—cause—his—clo—clothes—are—too—too—small—for—for—me," sobbed out poor little Tom.

Walter wanted to laugh. It did seem so funny to cry about such a thing as that, but Tom was only a little boy, and Walter knew he really did feel bad about his brother's death, so he just said:

"Never mind, Tom, I wouldn't cry about that. There are lots of poor boys you can give his clothes to." Then, with a few more words of comfort, Walter went on his way. Somehow the thought of his breakfast in the "best room" always came before him if he dallied on the way to school or when sent on any errand.

When Walter was only nine years old his father died, and, although only a child, a good many cares and duties fell on him. One day his mother said:

"Now, Walter, you will have to take the bay horse to Ryegate and sell him to your uncle. He promised me \$50 for him, and I need the money now." So he started off on his journey. Fifteen miles over a strange road seemed rather a long horseback ride for a boy of ten, but in those days even children had to help with the family work and income. He had some lunch, and at noon stopped to rest and eat under a big tree, where it was nice and shady. After about an hour's rest, he mounted his horse and started off again. When he reached his uncle's he was a very tired little boy, but a good supper and sound night's sleep made him all fresh again, and the next morning he started to walk back the 15 miles, and he found that even harder than going over them horseback, but he trudged on, happy in the thought that he was "helping mother."

It took him all day to make the journey, as he had to stop a good many times to rest. His mother was at the gate watching for him; she felt it was a good deal to ask of a boy so young, and anxiously waited his return. When he reached the gate she said:

"Well, my brave boy, I am glad to see you back. I don't know what I should do without you, now the other boys are away from home."

These words of cheer were very pleasant to the tired boy; he followed her in and found a nice supper all hot and ready for him. He ate a hearty meal and soon went to bed very tired, but happy in the thought that he was a help to his mother.

The next morning after doing his "chores" about the house, he started off to school, but not to a large, handsome, comfortable building such as boys go to nowadays. The school-house he went to was an old cider-mill and corner combined, with a lot of corn piled up at one end, held in place by slats. The children sat on rough benches made of slabs—that is, rough pieces of wood not as good as boards. These benches had no backs to them and no desks in front. You boys who get tired in your comfortable seats at school, think of these boys and groan for them, instead of for yourselves!

One day the teacher sent two boys out for switches to be whipped with; they returned, bringing two heavy posts.

She said: "You naughty boys, what did you bring these for? Take them right out and bring some switches."

So off they went and returned with the "instruments of torture," and they each got the well-deserved switching.

Walter often worked at water-wheels, and when a man he made a very fine one that was used to run a sawmill, and, although he was late to breakfast sometimes then, he never had to eat alone in the "best room" again.

A PARROT belonging to a Portuguese gentleman, who had an English wife, would talk both Portuguese and English, but would never confuse the two. If addressed in either language, it would always reply in the same. Toward dinner-time, it would become very much excited, and cry very loud: "Sarah, lay the cloth. Want my dinner!" Its master used to punish it for talking so loud. So, when his step was heard, Polly would get down on the bottom of its cage very humbly, and, laying its head to the floor, whisper in its low tones: "Want my dinner! Sarah, make haste. Want my dinner!"

GOOD HEALTH.

For Smallpox or Scarlet Fever.

One who was connected with the medical and surgical departments during the late war says: "Between the battles of Stone River and Missionary Ridge a smallpox epidemic scared more than it killed. A large hospital was established at Bridgeport, Ala., and the average number of inmates was represented by more than three figures. But the deaths were very few and the treatment quite simple. We only gave the patients plenty of ventilation by raising the sides of the large hospital tents, kept their bowels freely open, and gave them good rations of English ale, a commodity that was generously supplied by the Christian Commission of the North and Uncle Sam's Commissary Department."

"I have here also in my pocketbook a distinguished physician's recipe for the smallpox, and I know it is good, but I will give it to you with his own comments."

"This recipe has been used to my knowledge in hundreds of cases, and I know it will prevent or cure smallpox, though the pittings are filling. When Jenner discovered the cowpox in England, the world of science hurled an avalanche of fame upon his head, but when the most scientific school of medicine in the world—that of Paris—published this recipe as a panacea for smallpox, it passed unheeded. It is unfailing as fate, and conquers in every instance. It is harmless when taken by a well person. It will also cure scarlet fever. Here is the recipe as I have used it and cured my children of scarlet fever; here it is as I have used it to cure smallpox:

"Sulphate of zinc, one grain; foxglove (digitalis), one grain; half a teaspoonful of sugar; mix with two teaspoonfuls of water. When thoroughly mixed, add four ounces of water. Take a spoonful every hour. Either disease will disappear in 12 hours. For a child, smaller doses, according to age. If counties would counsel their physicians to use this, there would be no need of pesthouses. If you value advice and experience, use this for that terrible disease."

Infants and Nicotine.

The Santa Rosa City Council, at its regular meeting January 3d, instructed the city attorney to draft an ordinance making it a misdemeanor to sell cigarettes to boys under 16 years of age, and also for boys under that age to smoke cigarettes. But such an ordinance, to be of any practical worth, should include cigars and tobacco in any form.

In reference to this matter the *S. F. Chronicle* observes: It is no uncommon thing nowadays to see children scarcely out of dresses puffing at a cigarette with all the nonchalance imaginable; and such cigarettes, too, as they generally are. The babies' means are so limited that they can buy nothing but the cheapest and vilest kinds of cigarettes, such as no man who knows anything about tobacco would look at, much less smoke; and with these indescribably nasty concoctions these youngsters proceed to poison themselves. The example of Santa Rosa is one that might be followed to advantage by other cities, San Francisco included. We make all sorts of health regulations; we enforce vaccination and prescribe how much air sleeping-rooms shall contain; we take care of the children's work-time, lest they be stunted and crushed before they have grown strong; we get up societies with long names to see that tiny acrobats do not turn one hand-spring too many, while at the same time we permit those same children to buy poison on every corner and to kill themselves by inches, and no one interferes. San Francisco should adopt an ordinance similar to that of Santa Rosa, and then see that it is enforced.

LITTLE THINGS THAT KILL.—At various times the newspapers have warned the public against swallowing the seeds of grapes, oranges, etc., because of the danger of such substances getting into a small intestinal bag, or cul-de-sac, called by doctors the *appendix vermiciformis*. This is a receptacle formed at the junction of the large and small intestines, but its use or object no physician knows. It has been thought to be a rudimentary or incomplete formation—or possibly some meaningless survival of a lost anterior type. At any rate, its existence, while presenting no apparent "reason for being," as the French say, is, on the other hand, a positive and constant source of danger, because of the liability of its becoming the receptacle of some undigested seed or other indigestible substance. In that case it produces a state of inflammation, which, in nearly all cases, proves fatal. Fortunately, but few seeds among the great number so heedlessly swallowed seem to get into this little death-trap—although any one seems likely to lodge there. Perhaps more cases of inflammation of the bowels than the doctors suspect may be, in reality, due to this obscure and disregarded cause. One sad case which to-day produces a feeling of deep regret among thousands, and which plunges a family into overwhelming grief, occurred in this city on Saturday evening, in the lamented death of J. Robert Dwyer, the much-esteemed adjutant of the Governor's foot-guard—a man whose place that corps cannot make good. His case so baffled the physicians that an autopsy was had, and that revealed a piece of peanut shell in the *appendix vermiciformis*.—*Hartford Times*.

DOMESTIC ECONOMY.

Unfermented Wine.

Pick the grapes from the stems and wash. Cook with as little water as for jelly till soft. Strain through a flannel bag. To one quart of juice add three-fourths of a pound of granulated sugar. Let the juice boil, and skim it; then put in the sugar and cook till dissolved. Put boiling hot in self-sealing jars or bottles corked and sealed.—*Union Signal*.

[A good, if not better way is simply to heat perfectly sweet wine, and seal in bottles or jars at once, as you would can fruit. We have tried it.—*Eds. Press*.]

TO TAN SMALL SKINS.—From a recent number of the *Prairie Farmer* we clip the following recipe for tanning: Small skins, such as those of the wolf, dog, badger, woodchuck or squirrel, are excellent for strings, whips, patching gloves, mittens and even shoes, repairing harness, etc., and can easily be tanned as follows: Put a layer of wood ashes two or three inches thick in some old vessel of convenient size, spread the skin out on this, put on two or three inches more of ashes; then pour on a little more water than the ashes will soak up. Let it stand until the hair can be easily scraped off with a chip, which will be from 24 to 48 hours; then scrape off and wash thoroughly in several changes of water, or better in running water. Hang up, and when the skin begins to get dry around the edges take down and pull and work until it is thoroughly dry and pliable, which will take perhaps two hours. As it dries it will turn to a beautiful white kid color.

CREAM PUFFS.—One cup of hot water, one-half cup of butter, boil together, stirring in a cupful of dry flour while boiling. When cold, add three eggs not beaten. Drop by tablespoonfuls on a buttered tin and bake in a quick oven 25 minutes, being careful not to open the oven-door more than is necessary. This makes 15 puffs. Take care that they do not touch each other. For filling, take a pint of cream, a cup of powdered sugar and whites of two eggs, with flavoring of any sort preferred. When the puffs are cold, cut a round piece out of the bottom of each, scrape out the inside; fill the cavity with whipped cream, fit back the piece taken from the bottom, set on a dish and ice.

STUFFED POTATOES.—Wash and peel eight large potatoes; divide them lengthwise through the middle; hollow them out neatly with a knife or spoon till they are reduced to the thickness of a dollar piece. Take the insides of two or three baked potatoes, two shallots chopped finely, a piece of butter the size of an egg, a small piece of fat bacon cut into dice, a pinch of chopped parsley and chives, and beat the whole to a paste, with pepper and salt; butter the inside of the potatoes and fill them up with this paste, except just at the upper part; then put the potatoes upon a buttered tin and bake in the oven; in half an hour, if both sides be browned, serve.

JENNY LIND CAKE.—Two and one-half cups of sugar, one cup of butter, one cup of sweet milk, four cups of flour, four eggs, two teaspoonfuls of baking powder; bake in three sheets (two of white). After taking out the quantity for the two of white, leaving less than a third, add two tablespoonfuls of molasses, one teaspoonful of cloves, one teaspoonful of cinnamon, one grated nutmeg; add a little more flour to the dark; put together with thin frosting.

BUTTERMILK MUFFINS.—These have but to be tried to become a standing breakfast dish. Beat hard two eggs into a quart of buttermilk, and stir in flour to make a thick batter, about a quart when it is mixed, and, lastly, a teaspoonful of salt and the same of soda. Bake in a hot oven in well-greased tins. Muffins of all kinds should only be cut just around the edge, then pulled open with the fingers.

FRITTERS.—Put into a stew-pan one pint of water, one tablespoonful of butter, one tablespoonful of white sugar. When it boils, stir in rapidly one pint of flour. Let it cool a little; while warm beat into it six eggs, each one broken by itself and well beaten in before another is added. Have boiling lard and drop the dough, which will be stiff, in lumps like a small hickory-nut, into it. Eat with syrup or melted butter and sugar, flavored with vanilla or nutmeg.

OATMEAL PORRIDGE.—Take two ounces of oatmeal and one and one-half pints of water. Rub the meal in a basin with the back of a spoon in a small quantity of water, pouring off the fluid after the coarser particles are settled, but while the milkiness continues repeat the operation until the milkiness disappears. Put the washings into a small pan; stir until they boil, adding a pinch of salt, and boil until a soft, thick mucilage is formed. Sweeten to taste.

FRIED PARSNIPS.—Scrape and leave in cold water for an hour, then cook half an hour in hot, salted water, wipe, slice lengthwise, dip in melted butter, then in flour, seasoned with salt and pepper, and fry in boiling dripping. Drain free of fat, and dish.

SMALL POTATOES.—Take potatoes about the size of a marble, put them into a stewpan with plenty of butter and a good sprinkling of salt, cover, and shake occasionally until they are quite done, about an hour.

The Week.

As last week's topic was rain, this week's is cold. The thermometer has been given a chance to brush the dust out of its lower chambers and people have shivered as only Californians can when the temperature plays about the freezing point, while the abundant tourist who remembers blizzards and more degrees below zero than we have had above, smiles at the California idea of what the term "cold" means. But seriously we have had a spell of weather of unusual severity and the like of which we have not known for years, and our lack of effective house-heating devices has given occasion for our shivers. Snow has nestled here and there on the hills in all parts of the State and ice has enfilmed standing water over a great area of the State where the crystal covering is seldom seen.

We do not hear as yet of much injury to vegetation except to such tender plants as the callas, heliotropes and geraniums of our gardens. Possibly in some places the orange has been pruned of part of its newest wood, but anything more serious is not yet reported. The cold snap seems over, and the indicator is set again for rain which is the usual sequence of low temperature and north winds at this season of the year.

Pure Food and Medicine.

Since the days of the elders when the debasing of foods consisted chiefly of sanding the sugar and watering the vinegar in the back-room of the retail grocery, there has been most alarming progress made in adulterating and debasing nearly all materials which enter into the food of man or minister as medicine to the cure of the ills to which flesh is heir. So vast has been the extent of this evil work and so far-reaching the application of the nefarious art, that large volumes are published setting forth adulterations as fast as discovered, and still ingenuity begotten of greed is constantly devising new abominations more apt to deceive the consumer and more difficult of detection by the expert. As an indication of vastness one need only recall the mines of white earth which are worked to supply the candy-makers and the mills for grinding soft wood and other refuse for the use of the spice-makers, and these are only items of the great debasing industry.

The problem of checking this evil has been energetically taken up in some States, Massachusetts perhaps having done most to make hard the path of greedy evil-doers. As we recently stated in the RURAL, so strict is the surveillance kept of the retail stores of foods and drugs in the old Commonwealth that the Yankee skill in adulteration has to expend itself on articles for shipment to other States, as the danger is too great on home sales. The result is that the evil goods are shipped to other States where no particular attention is paid to the matter, and we have no doubt the Pacific Coast has its full share of these bad things to eat, drink and pay for.

Judging from the experience of Massachusetts and some other States, the true way to cope with the evil is for each State to equip itself not only with good laws on the subject, but with effective penalties and rewards and other executive machinery which shall carry the laws into effect. This each State must do for itself to meet the adulteration originating within its own borders. This State work should be supplemented by effort on the part of the General Government, and this will come before the present session of Congress, urged by organized support which will be rallied at a meeting to be held at Washington on Wednesday of next week. This meeting will call the attention of Congress to the great evil, and submit for its action a national anti-adulteration bill. The bill was drafted by the Commission, approved by the National Board of Trade, and was introduced in the last Congress, but owing to departmental jealousies, it did not become a law. Public opinion has again become so strong in favor of such a law that the convention will again recommend the measure, together with whatsoever amendments may seem judicious, and will urge its passage by the Fiftyeth Congress. The proposed Act, entitled "A Bill to Prevent Adulteration of Food and Drugs," is the result of much patient research by men of talent, who undertook their work for the National Board of Trade. Although the national Act has not yet become a law, another Act, drafted by the Commission on the same lines for enactment for the several States, has become a law in New York, New Jersey, Massachusetts, and substantially in Illinois and Michigan. It is evident that an Act applying to interstate transactions and commerce with foreign countries is needed. All States are, therefore, called upon to assist in this matter, and each State, other than the above, is petitioned to pass a State law in harmony therewith.

We have received a copy of the bill which will be reported and urged at the Washington meeting next week. It provides first for the establishment of a Governmental bureau to be attached to such department of the Government as Congress may see fit and to be called the "Bureau of Adulteration." It shall have a chief officer and a corps of assistants, analysts, etc., to carry out its work, which shall be in the main to furnish incontestible proof of the quality of articles of food or medicine which may be submitted to it or which it may obtain itself for examination. This bureau will thus furnish the evidence upon which all measures of prosecution, etc., must depend. The work of the United States in prosecuting evil-doers in this line must, of course, lie within the constitutional scope of

the Government, and the prevention of adulteration, as proposed by the bill, is a somewhat roundabout proceeding. Thus, we find that outside the District of Columbia and the Territories, over which, of course, the General Government has direct control, the penalties are fixed against any person or corporation which moves adulterated articles from one State to another, because interstate commerce is open to Government regulation, or imports from foreign ports to any State, because all imports are regulated by the General Government. The bill provides that any party convicted of transgression in these ways shall be fined not more than \$100 for the first offense and not more than \$500, and be imprisoned not more than one year or both, for each subsequent offense.

Other sections of the bill provide for the examination of suspected articles, and arrange for re-examination of the material at expense of the suspect, providing he is not satisfied with the first examination of the article. The selection of local analysts whose testimony can be accepted, is also provided for. The district attorneys of the United States are ordered to prosecute offenders of this class, and are paid for their services by the United States Government.

The definition of food is held to be anything which is eaten or drank, and adulteration thereof means (a) reducing its strength, (b), debasing it by introducing inferior material, (c), debasing it by extracting any valuable part, (d), introducing any unwholesome material, (e), coloring, coating or polishing so that a base article is made to appear like the genuine. These items are all described in detail in the Act. In the case of drugs, the offense lies in selling an inferior material under the name fixed by the U. S. Pharmacopoeia for any other standard work on *materia medica*, or if, when sold under another name, it differs from the standard of strength, purity, or quality therein; also, if, in these reports, it falls below the professional standard for such drugs.

Provision is made for frequent publications from the Bureau of Adulteration of the results of its examinations, and these will probably be quite as useful as the prosecutions in informing the people and in making the adulterators' business unprofitable.

There are a host of ways in which such a law will be of immense value to Californians, besides protecting us as consumers. It would force bogus wine-makers out of their arts, it would reach the horde of olive oil adulterators, who, even in our own city, we are told, are traitors to the prosperity of our State by putting up false brands of olive oil, hoping to profit by their wretched dishonesty because California is becoming known as an olive country. The Act would also supplement effectively the arrangements for pure dairy products and do good in ways innumerable. We trust the matter will commend itself to immediate action by Congress.

Silk Culture.

The Ladies' Silk Culture Society held a meeting on the afternoon of January 5th at the rooms of the State Board of Horticulture, 220 Sutter street, S. F. Present: Dr. Gibbons, president; Mrs. Pratt, secretary, Mrs. Washburn, Mrs. Kirk, Mrs. W. B. Ewer, Mrs. T. H. Hittell and Mr. Ewer. The society's bills for the past year showed expenditures amounting to \$1853. The president stated that as no meeting had been held in December, the bills for that month had not been audited, but as he had had some money to go on with, these accounts had been paid. The total amount of last month's expenditure had been \$334.50, leaving a balance in the Union Bank for Savings of \$376.94. These accounts were audited and passed. The proposed appropriation for the coming month was estimated by the president at \$350; an additional \$50 standing over from the last month's credit was also thrown in. On motion, resolutions to that effect were passed.

The next meeting is to be held Thursday, January 19th, when the new officers are to be chosen.

The State Board expects to receive during the current week the long-looked-for invoice of Italian mulberry trees for distribution to those who are desirous of propagating them with a view to silk culture. Applications must be

forwarded to the State Board of Silk Culture, 21 Montgomery avenue, stating how much land will be devoted to the enterprise, and as full particulars as possible with reference to the quality of the land, location, and other matters of interest, so that a judicious distribution may be made. As the number of trees is limited, applications should be sent in immediately.

Disposing of Indian Lands.

We are glad to see that President Cleveland has arrived at a conclusion concerning Indian reservations, which has been urged in the columns of the RURAL. We have protested against Indian wrongs which have been too frequent, but at the same time we have claimed that holding bodies of good land in excess of needs of Indians and for the purpose of herding them upon a large area so that they might follow a sort of ridiculous condensation of their old wild life is a bad thing for the Indians, and, at the same time, keeps much good land from actual settlement. The Indians are valuable as laborers, but to labor to advantage there should be considerable cultivated areas near by. We would, therefore, give each Indian family a decent area of land upon which it could live in civilized style, and dispose of all the balance of the land to actual settlers who would improve it and make a demand for the labor of the Indians.

Something like this seems to be President Cleveland's idea, for it is telegraphed that he has transmitted to Congress a special message and documents relating to the Round Valley reservation in California. The President also submitted a bill which he asks Congress to pass, to provide for the reduction of the Round Valley Indian reservation. The bill provides that the President be authorized and directed to cause the agricultural lands in the Round Valley Indian reservation, in the State of California, to be surveyed in ten-acre tracts and to allot the same in severalty to the Indians belonging thereon; provided, that he may cause such agricultural lands to be allotted in such quantities and to such classes as he may deem expedient for the best interest of the Indians. In addition to the agricultural lands there shall be reserved a sufficient amount of grazing and timber lands for their use. A commission shall appraise the value of the remaining lands, which shall be sold.

Of course there is another question perhaps included in the above which we do not intend to pass upon in these remarks. It is possible that, owing to representations by the Government, certain parties have acquired settlers' rights in the area and that the President's plan may mean to dispossess these and divide their holdings among the Indians. Of course we do not approve a plan which would transgress certain equities which may exist, nor do we desire to defend any claim that may be based upon illegal encroachment. All these matters should be investigated by an unbiased commission to determine what equities really exist. At the same time we approve the general idea of settling the Indians upon individual pieces of land of decent size and of breaking up the national menageries in which the aborigines are now herded and from which they go forth from time to time on their destructive errands. We have had enough experience of this kind.

STATE BOARD OF AGRICULTURE.—Some time since President Shippee of the State Board of Agriculture appointed J. M. Larue and Arthur W. Bell to expert the books of Secretary Edwin F. Smith. Having finished their work, the experts report the accounts correct and the books in excellent condition. In going over the secretary's work for seven years they found but one mistake, which amounted to 40 cents, and they compliment him as a model officer. The Governor last week appointed the following members: H. M. Larue, vice self; C. M. Chase, S. F.; Jesse D. Carr, Monterey; John Boggs, Colusa; D. Perkins, Rocklin, vice P. A. Finigan of S. F., who failed to qualify.

NEVADA LANDS.—Our sister State seems to have done a fair business during the past year in disposing of her public lands. According to the report of the Surveyor-General, there were 1306 applications to purchase State lands filed, covering 428,783.03 acres, applied for in the several counties of the State. The net cash paid into the State Treasury for 1887 was \$139,184.40.

Fly-Infested Grain.

Prof. F. M. Webster of Purdue University, La Fayette, Indiana, is special agent of the Division of Entomology of the United States Department of Agriculture, and has been giving much time to a study of insects affecting cereal crops. The Hessian fly has, therefore, naturally claimed his attention, and he has made some observations concerning the effect of the fly upon the growth of the plant, which is very interesting and may prove of considerable practical advantage to growers. As we have a small area in this State badly infested with the fly, we thought it would interest our

As they show early in the fall at the East, and get quite a growth before snowfall, they also have a visitation of the fly in the fall and badly infested grain dies during the winter. In California, as we do not get much growth until the winter rains come, the period at which the fly is at work here is later than at the East. The bunchy appearance of the plant, the absence of central stems, are, however, just what we have noticed here, and the plant holds its green, bunchy appearance until well along in the season, when, probably, being unhealthy and shallow-rooted, it early succumbs to the surface drouth and dies out.

At the East, if Prof. Webster's position be

AN EXPENSIVE SEWAGE SYSTEM FOR SAN DIEGO.—The rapidly increasing population of San Diego calls for a thorough and extensive system of sewage. Accordingly a plan has been devised, somewhat novel in character and which will cost about \$400,000. The contract has been awarded to Col. Waring. The main sewer runs a quarter of a mile into the harbor to an outlet reservoir constructed alongside the deep-ship channels. The reservoir will have an area of one acre, and cost some \$50,000. The collected sewage will fill this reservoir not more than 1½ foot deep. High tide will add 3½ feet of sea-water to the mass. The contents thus diluted will be discharged into the outgo-

Gilroy and Vicinity.

[Written for the RURAL PRESS by F. B. L.]

The city of Gilroy is situated in the southeastern and most picturesque portion of the Santa Clara valley, "the garden valley of the Pacific Coast," so famous for its beauty, health, wealth, productiveness and varied advantages as a place of residence. The engraving on this page is a faithful representation of the place. It is incorporated, has an excellent city government, about 2000 inhabitants, and all the appliances for trade, manufactures, education and social life usual to much older towns. It is connected with the metropolis of the State by

Fig. 1.—HEALTHY WHEAT PLANT.

Fig. 2.—WHEAT PLANT INFESTED BY HESSIAN FLY.

readers, especially those within that area, to be informed of Prof. Webster's observations, and, possibly, they can furnish notes from their own experience which may be of value to him.

The point of especial moment is the way in which the growth of the young plant is affected by the insect, and in this matter Prof. Webster holds different views from earlier writers on the Hessian fly, and he desires to test his observation by that of others wherever the fly works in the grain. The illustrations on this page serve to make the point clear.

Fig. 1 represents a healthy wheat plant. The leaves are of natural color, the plant is well tillered, and these tillers show a decided tendency to spread out from the center. The young, spindle-shaped leaf, not yet entirely unfolded, is always conspicuous in the center of each of the tillers. The outer, older leaves may or may not have turned yellow.

Fig. 2 represents a wheat plant affected by Hessian fly, the flaxseed or pupa being shown at *a*, where the insect is now to be found, just under the sheath of the plant. If the insect has not advanced to this stage of development, they will be of the same form, but of a whitish color.

The plant itself has not tillered, the leaves are of a darker color than those of a healthy plant, and proportionally broader. The central spindle-shaped leaf is missing and the whole plant is only a bunch of rank-growing leaves. If only a part of the plant is injured, the tiller upon which the insect is located will be like the one figured here, and the others will be as shown in the preceding illustration. In any case, the darker color of the leaf, and the absence of the central leaf, together with the bunchy appearance of the part affected, will readily distinguish a fly-infested plant from one not injured. The yellow color of some leaves is seldom observed, at this season of the year, on fly-infested plants.

The appearance described by Prof. Webster agrees with that which we have observed on fly-infested grain plants during the progress of the experiments at the State University in Berkeley, of which we have given accounts in the RURAL. The time at which this is seen at the East is different from the California period.

true, the farmer can tell in the fall whether his wheat is going to succumb to the fly as well as to wait to see it die in the winter, and can therefore earlier arrange for resowing or other use for the ground. It is possible that the same observation may be of value here as indicating that the field had better be plowed up for a summer crop. It is impossible, however, to foresee all the benefits of the observation. It is desired first to test the truth of it under all conditions.

We should like to hear from our readers who have studied the appearance of infested plants, and will transmit any observations our readers may give us to Prof. Webster that he

ing tide by automatic gates opening an hour after high tide, and closing an hour before low tide. Col. Waring will also be employed to construct similar works for Stockton and Sacramento, where the conditions are nearly identical with those at San Diego. Col. Waring will make wells in various flat parts of those cities, connecting with a deep outlet well by large siphons. It is stated that Col. Waring has employed this plan for two years successfully at Norfolk, Virginia.

CROP REPORTS.—The Statistician of the Department of Agriculture estimates the area of corn harvested at 72,000,000 acres; the prod-

the Southern Pacific railroad, and with the world at large by two lines of telegraph.

The Uvas valley, a few miles northwest of Gilroy, is becoming justly famous for its vineyards and orchards. It is well sheltered by hills, and otherwise specially adapted to this important industry. To the south and eastward adjoining the townsite lies an immense tract of the most fertile land in the State owned for the most part by Henry Miller, Esq., of the well-known firm of Miller & Lux, and devoted to stock-raising and dairying purposes.

With the varied advantages of location, soil, climate and productions which Gilroy may justly claim, the stranger is struck with surprise that a greater development has not been wrought, and that more has not been heard concerning its claims for the home-seeker.

The explanation, however, is that until recently no valid titles could be obtained. The Las Animas rancho, a Spanish grant confirmed by U. S. patent and covering 21,377 acres, has been partitioned as the law provides in such cases, and every owner is now secure in his individual allotment. Large and small tracts are advertised for sale, and good opportunities to secure choice tracts are open to purchase. The titles of other settled grants, and of the public lands, are free from cloud, and buyers can feel secure in all their investments.

The foothills west of the city have been tested and are proving to be specially adapted to fruit culture, and will doubtless in a few years be covered with vines, fruit trees and lovely homes.

Ten miles in an easterly direction is situated the settlement of San Felipe. It is a veritable garden. The farms are usually from 40 to 160 acres in size and bear unmistakable evidences of the thrift and taste of their owners. At this place is located J. D. Culp's cigar factory, from which millions of cigars have been shipped within the past few years, the tobacco having been produced in the vicinity. At this place is also located the San Felipe cheese factory, owned and managed by Mr. C. S. Putnam, who has succeeded in placing a superior brand upon the market. The yearly product of this factory is 120,000 pounds.

As to pleasure resorts, the country is abundantly supplied. Six miles south is Camp Sargent, the name by which the clubhouse and picnic-grounds connected therewith will be hereafter known. It is becoming popular as a quiet retreat. Twelve miles west are the Gilroy Hot Springs, celebrated for the curative properties

BIRD'S-EYE VIEW OF GILROY, SANTA CLARA COUNTY.

may have the benefit of them in his work.

VENUS NOT THE "STAR OF BETHLEHEM."—The planet Venus, which is now near its greatest western elongation from the sun, shines brightly every morning in the southeast for two or three hours before sunrise. It is well worth getting up in time to look at, but some people, at once ignorant and sentimental, have made themselves ridiculous by rushing into print with crude prattle about its being the "Star of Bethlehem." The like brilliant phenomenon may be witnessed regularly at intervals of between eight and nine months, although the longer night-hours near the winter solstice favor the observer more than the early dawns of the summer-time.

uct, 1,456,000,000 bushels; value, \$646,000,000. The area of wheat harvested is estimated at 37,400,000 acres; product, 456,000,000 bushels; value, \$309,000,000. The area of oats harvested was 26,000,000 acres; product, 659,000,000 bushels; value, \$200,000,000. The reports of winter wheat do not show much decrease of area. The average decline appears to be between one and two per cent. The condition is affected somewhat by the dryness of the seedbed in the districts that suffered from drought, delaying seeding, germination and growth. The average condition is .95. The condition of winter rye corresponds very closely to that of wheat.

PHILADELPHIA fears a coal famine.

which the waters possess. Within easy distance are the Madrona Soda Springs, which have also just claims on the health-seekers, while a little further to the north is the sanitarium known as Glenwillis, which is undergoing much improvement by its energetic proprietor.

Among those whom the writer was placed under special obligations during his short stay at Gilroy was F. W. Blake, Esq., editor and proprietor of the *Gilroy Advocate*, a gentleman who has labored untiringly to bring to the notice of the outside world the vast undeveloped resources of this fertile section of country.

Echoes From Oroville Fair.

[Written for the RURAL PRESS by M. C. B.]

The idea of a canvas tent for a citrus fair in the midst of winter tells its own tale in behalf of the mild and uniform climate enjoyed by the people of Butte county, and no better plan could have been adopted to dispel the erroneous notion that Oroville and its people are exposed to frost and snows. Such belief is incompatible with the products of the county, and many Eastern people who had the privilege of visiting the fair gave full vent to their agreeable disappointment, and, without further proofs, immediately made large investments in property. The oldest inhabitant of this district sees snow only on the mountains in the winter season, but he sees all along the foothills the finest specimens of oranges and other citrus fruits growing in profusion. It is to us an agreeable duty to state facts, and we should not be discharging that duty if we allowed to go uncorrected such erroneous opinions respecting the climate of Butte county.

It is too true that the people have for a long time neglected their opportunities and trifled with the advantages which nature has so freely bestowed on them, and if Mr. E. W. Fogg, the popular and energetic manager of the bank in Oroville, had not had the pluck and vigor to push the Citrus Fair onward, the lethargy in which Butte county has for years been lying would still have been unbroken. He has worked hard to accomplish the first step leading to a successful issue, and judging from the results accruing from the fair, a great future awaits this locality. Mr. Fogg has had the untiring efforts of D. K. Perkins, the farmers' friend, and with the united efforts of Messrs. Bell, Frieslebein, J. C. Gray, Major McLaughlin, J. M. Green and Major Jones, the indefatigable manager of Thermalito, the Citrus Fair has far exceeded the most sanguine expectations and won laurels for the soil and climate of Butte county.

[In the list of awards at the Citrus Fair, printed in the PRESS last week, the first paragraph came to us defective. We are now enabled to give it corrected, as follows:—EDS. PRESS.]

ORANGES.—Best individual exhibits:—1st, C. H. Wilcox; 2d, Joe Gardella; 3d, T. B. Hutchins, Central house; 4th, H. C. Bell; 5th, H. W. Skinner; 6th, Butte County Infirmary, Thermalito; 7th, Watt M. Pence, Mesilla Valley; 8th, Jas. Wheeler, Wyman's ravine; 9th, Mrs. S. S. Boynton; 10th, C. F. Lott.

The Hay-Fork Swindle.

The *Suisun Republican* publishes a reminder of the "Hay-fork Swindle," the working of which was described in the RURAL PRESS of Feb. 12, 1887. It says: About a year ago Coulter & Jones passed through our State, appointing agents to sell some patent hay-forks. Part of their plan was to have a farmer take an agency and have him sign his name twice upon some paper which the farmer supposed was an agreement to sell hay-forks, but which in a short time turns up in a third man's hands in the shape of a note for \$500.

Four men in our county were caught in the trap so skillfully laid by Coulter & Co., namely: Mr. Blair of Maine Prairie, Mr. Roberts of Elmira, Mr. Eibe of Dixon, and Mr. McDermott of Suisun. The note of Blair soon after turned up in the hands of one Bidell, whom we are told represented himself as an innocent third party and cashier of the Colusa bank. By him Mr. Blair was induced to take up the original document and execute a note in the name of Bidell for \$450, which he paid this fall. Mr. Eibe, we are told, has also settled his, while Roberts and McDermott, whose so-called notes are held by Bidell, are going to contest their payment. Already has McDermott been notified to answer to a complaint filed against him by the holder of the paper he signed for Coulter & Jones.

Yolo county was caught the same way, but the Woodland people caught Coulter & Jones and made them disgorge to save a trip to State prison. They very willingly paid up the court expenses, the lawyers' expenses, and settled with the holders of their so-called notes, after which they skipped by the light of the moon, and are now working their hay-fork business in Canada, while their paper remains here to be collected by third parties.

We hope our readers will bear in mind the injunction: Never sign any paper without reading it through and through; and never sign any paper whatever for a stranger.

THE RURAL.—A Placer county reader writes: "We all like the PACIFIC RURAL PRESS, and consider it the best agricultural paper published."

FORESTRY.

Protect the Forests!

EDITORS PRESS:—In taking a trip to Lake Tahoe and wandering day after day over land that on account of its altitude is entirely unfit for agriculture and will always be devoted to forests, the naturalist cannot help feeling sad when he sees on one side the boundless prolificacy of nature everywhere where a chance is left to her, and feels the warm sun and the balmy air, and on the other sees that man does everything to check nature in her beneficent creation.

On the long road from Rocklin, to Auburn, to Summit, to Truckee, and around the whole lake with the only exceptions of Tallac and Idlewild, is not one single acre of land which would deserve the name of forest; nothing but pasture on which a few small pines cover at the utmost a third of the ground, and perhaps valueless underbrush, chaparral and sagebrush. Almost everywhere we see that sprouting young trees have been killed by destroying fire or voracious cattle. Often for miles, as for instance between Towle's Station and Emigrant Gap, we rode over land where not only all the tender plants but even trees 50 feet high had been destroyed by a recent fire, and on the whole track not a single green leaf was left. When we travel further away from the frequented roads, high up in the Sierras, where the covetous lumberman has not come yet, we nevertheless will distinctly remark man's destructiveness. Along the recently built road from Priest's down into Yosemite valley almost every tree is burnt out. The men working at the road evidently thought it a fine joke and splendid spectacle to have such giant torches in the evening. Not seldom we saw the foot of trees five and six feet in diameter bereft of the bark, that the tree might get dry and rotten, and thus its shade not prevent the grass from growing. Trees over 200 feet long were cut down and only a very little piece of the top was used for a few shakes.

In the view of such a senseless destruction we must call out: Will then never one nation learn by the disasters of the others? If this be said of nations, what is to be said of single men? One will never miss the water until the well goes dry. Shall this most beautiful country of the earth—that is, at least, of the four parts in which I have traveled—succumb to the same sad fate as the most beautiful countries of old? Will its quick development only precede its quicker ruin?

Let us look for a moment on some of those ancient countries. The Garden of Eden, the cradle of manhood, is by a good many authors believed to have been in that most productive region between Euphrates and Tigris, where, also, the largest cities have been. Babylon and Nineveh which according to the Holy Scripture (Jonah iii: 3), were 12 miles in diameter, to-day there is one immense desert; nothing as far as eye can see but rock and sand, where in former times have been the vast forests in which Nimrod used to go hunting and Semiramis gathered the flowers for her hanging gardens.

The ancient Greeks thought the island of Cyprus the most beautiful country. There they located the birthplace of Venus; to-day a great part of the island is entirely barren; the women are prominent by their ugliness; the forests are extirpated except on the tops of the mountains. When we heard there that carob and olive groves were cut down because the Turkish Government laid taxes on these trees, we thought the Turks the grandest vandals on earth; but seeing the wanton devastation near Yosemite, we became doubtful.

Palastine was the promised land where milk and honey flowed. To-day for miles and miles there is not a tree, not a green spot, not a blade of grass. Quite natural; the cedars of Lebanon and the balsams of Gilead (a species of spruce) have disappeared; both mountain ranges are devastated. On the former we found only seven big sickly trees which since that time, probably, have fallen victims to the desire of relics by Anglo-Saxons and others.

Where in Italy was the voluptuous Capua, there are now the Pontine swamps; where the three temples of Pestum are a proof that a dense population was living around them, now only a few fever-sick buffalo-herders are to be seen. No man can stand there over night without getting the malaria, which is by far more dangerous than the Californian disease of the same name. But the wooded mountains of which we read in Livy are to-day bare of every vegetation.

Spain dates her descent from the time when Philip II had cut down the vast forests of Andalusia and Catalonia to build the grand Armada, which other fleets followed for the discovering of the new countries. But after the forests had gone, all the riches of her American colonies could not stop the decline of Spain.

We could enumerate a hundred other samples. There is, indeed, no land in the Old World which would not give proof to our theory that the prosperity of a country depends on its forests, and such proofs are not missing in America. In Mexico great villages are desolated, canals, springs and rivers are dried up. The Tarigua lake is receding every year. The Croton river does not supply as much drinking water for New York as in former years. The Hudson is less navigable than

before the Adirondacks were cut down. The freshets of the Ohio and other rivers are increasing. The droughts in the interior become longer.

That the destruction of forests is the cause of this change of climate we will prove now by natural laws. An area covered with plants will evaporate by far more than a barren area. No land is covered more, and therefore will evaporate more, than a forest. This evaporation causes the air to become cold. When now a wind from the surrounding air strikes this layer of cold air, it cannot hold as much water as before, when it was warmer, and rain must fall. These are natural laws which every one will understand who has a small idea of natural philosophy or meteorology. Thus it is proven that forests will attract rain. The rain in coming down strikes first the leaves and limbs and drops by and by to the ground; it does not come down at once in a rush, and therefore will not cause any freshets. The ground itself is covered with a layer of leaves, rotten limbs, mosses, etc., humus which will detain the water like a sponge and gradually let it sink into the ground from where it nourishes the springs which never will run dry, but always yield the moisture necessary to every growth.

Where the land to a reasonable degree is covered with forests, the conditions necessary to every growth, necessary to every life, will be fulfilled; while in a country entirely without forests no rain whatever will fall, as this is the case in the deserts of Sahara and Gobi, and in the interior of Peru, and no living being can exist for a long time. In the above-named countries, beautiful in olden times, and deserted to-day, rain now seldom falls, and it will then pour down to cause freshets, to do more harm than good.

If the Californians wish that their country shall stay as beautiful as it is, that not only they themselves but their children and children's children may enjoy this most blessed country of the earth, they must protect their forests. And so very easily this could be done, as we see on the few places where neither fire nor cattle have tampered in the last years. In Donner Lake park is a splendid grove of young pines which would delight the eye of every European forester, and in the Big Trees Grove of Calaveras innumerable young trees cover the ground, while hardly one tree can be found of the age between 20 and 200 years. For about 20 years the grove has been a national park.

With little care and a trifle of knowledge, the forests could be managed in such a way that when they are cut down there would be already by natural way a perfect forest of young trees, just as it is done in the Black Forests, where besides on account of this management, one acre will yield per annum for all time to come, more than half as much (\$1.50) as here can be realized by the sale of the land.

There is now a bill for the Protection of Forest Lands belonging to the United States, laid before Congress, according to which all Government lands not suited to agriculture shall be withdrawn from sale and entry. The Forest Commissioners shall have power to appoint forest police and guardians to mark out such timber as should properly be cut, and sell the same, and to regulate pasturage.

This is a very great and important step toward the preservation of the forests, toward the preservation of California; and every newspaper, every intelligent man should do all in their power that this bill may become a law.

Auburn, Cal.

F. CLOSS.

PUBLIC AFFAIRS.

Protective Tariff.

EDITORS PRESS:—The importance of the tariff question, as indicated in your editorial of Dec. 31, 1887, has led me to write briefly upon the industrial interests of this country as affected by the tariff on imports.

The policy of protection to American industry has been steadily maintained since 1861, and a change in that policy, which is now threatened, means a large and permanent reduction in the wages of American labor and loss of capital invested in manufacturing. The value of a protective policy to this country can be clearly demonstrated.

The census of 1860 showed the value of all property in the United States to be \$14,000,000,000, the net result of the labor and savings of our people since the settlement of the country.

The census of 1880 returned \$44,000,000,000 as the value of all the property of the nation, an increase of about 300 per cent in 20 years, during which time the business of the country was encouraged and protected by a tariff.

It is charged that the foreign commerce of the United States has declined under the influence of the tariff. This is not so. Foreign commerce, representing the exports and imports of the country, has since 1800 reached in value something like \$30,000,000,000.

The magnitude of our exports is shown by the official statement that they amounted to \$9,000,000,000 up to 1860, and since that date to the present, the sum of \$20,000,000,000, as nearly as can be obtained. All these exports were the products of American labor—evidence that the tariff does not injure our export trade.

The agricultural interests of the country have

been greatly benefited and enriched by protection. The wealth of many of the agricultural States has more than doubled since 1860, and in this respect has surpassed many manufacturing States; instance Iowa and Massachusetts.

The farmers have realized the benefits of a good home market for their products; as they have since 1860 sold five bushels of wheat at home to one exported, and 100 bushels of corn to one peck exported. This I think they will bear me testimony is a fair estimate.

As the margin of profit in foreign markets becomes less and less each year, owing to close competition, we value more and more our home market, which has grown to such vast proportions under the inspiration of a fostering government.

The growth and consumption of food products and manufactures at home give us some conception of the value and extent of the internal commerce of the United States.

These internal exchanges are estimated by the Treasury Department to be annually 20 times as great in amount as our foreign commerce.

It is into this vast and rich field of home trade, the creation and heritage of the American people, that foreign nations are making every effort to enter.

Yes! it is into this domain of internal commerce that the enemies of protection would admit without price the countries of Europe and Asia with their hoards of impoverished and cheap laborers—countries to which we would be surrendering every advantage and receiving no adequate return.

What is this but a gigantic communism placing the fortunes and lives of our people at the mercy of a foreign power, the basis of whose system is found in the cheapening of materials of manufacture and of labor?

The Congress of these United States forbid! Let the great and noble dead speak out their living and burning words in our great need of counsel and direction, as a people, in this emergency.

What have they said and written on this subject of protection? The following extracts made from their writings answer this question and form instructive reading at this time:

"I have always promoted agriculture, industry and foreign trade. Though an empire were made of adamant, free trade would grind it to powder."—NAPOLÉON BONAPARTE.

"Agriculture without a market, industry without protection, languish and decline."—ALEXANDER 2D, Emperor of Russia.

"England produces ten times as much as her consumption and her existence depends upon consumers which she seeks everywhere without herself embracing the world, but vulnerable everywhere. France has her consumers within herself and is more solid than England."—M. THIERS.

"The operation of free trade in France would ruin our fabrics and build up England's. France declines to adopt the system."—M. DE ST. CRICQ, French Minister of Commerce.

"Laws that prevent the importation of foreign luxuries and needless manufactures strengthen a nation doubly by increasing its own people and diminishing its neighbors."—BENJAMIN FRANKLIN.

"It is the interest of a community, with a view to eventual and permanent economy, to encourage the growth of manufactures; the temporary enhancement of price must always be well compensated by a permanent reduction of it to the minimum of a reasonable profit on the capital employed, which does away with everything like monopoly."—ALEXANDER HAMILTON.

"Congress has repeatedly, and not without success, directed their attention to manufactures. The object is of too much consequence not to insure a continuance of their efforts in every way which shall appear eligible. Against the insidious wiles of foreign influence, one of the most baneful foes of Republican Government, the jealousy of a free people ought to be constantly awake."—GEORGE WASHINGTON.

"The present Constitution was dictated by commercial necessity more than any other cause. The want of an efficient Government to secure the manufacturing interest and to advance our commerce was long seen by men of judgment, and pointed out by patriots, solicitous to promote our general welfare."—FISHER AMES.

"Congress should make such further alterations in the laws as will more especially protect and foster the several branches of manufacture which have been recently instituted or extended by the laudable exertions of our citizens."—JAMES MADISON.

"Our manufactures will require the systematic and fostering care of the Government; possessing as we do all the raw material, the fruit of our soil and industry, we ought not to depend in the degree we have done on supplies from other countries.

"The capital which nourishes our manufactures should be domestic, as its influence would be advantageously felt on agriculture and every branch of industry."—JAMES MONROE.

"Upon the success of our manufactures as the handmaid of agriculture and commerce depends in a great measure the independence of our country, and none can feel more sensibly than I do the necessity of encouraging them.

"Providence has filled our mountains and plains with minerals, with lead, iron and copper, and given us a climate and soil for the growing of hemp and wool; these being the great material of our national defense, ought to have extended to them adequate and fair protection, that our manufactures and laborers may be placed in a fair competition with those of Europe."—ANDREW JACKSON.

"Is the self-protecting energy of this nation so helpless and the Congress of the Union so impotent to restore the balance in favor of native industry, that all our people shall pay tribute to foreign industry and be clad in a foreign garb?

"The tariff of 1842 has wrought wonders for the purposes for which it was enacted—the procurement of an adequate revenue and of protection for the na-

tive industry and free labor of the land."—JOHN QUINCY ADAMS.

"During the war of 1812 the Government and the people had to pay extravagant prices for manufactured articles, because our own manufactures had not before that period been encouraged by proper protecting duties.

"It is a just comment upon the policy of that country which will not afford a reasonable protection to its own domestic industry and thereby gives to foreigners a decided preference in its markets."—JAMES BUCHANAN.

"Shall we make our own comforts or go without them at the will of a foreign nation?

"To be independent for the comforts of life, we must fabricate them ourselves. Manufactures are now as necessary to our independence as to our comfort."—THOMAS JEFFERSON.

"When our manufactures are grown to a certain perfection, as soon they will under the fostering care of the Government, we will no longer experience these evils, resulting from a drain of specie under a free-trade system. The farmer will find a ready market for his surplus produce, and a certain and cheap supply of all his wants."—JOHN C. CALHOUN.

"The proposition to be maintained by our adversaries is, that manufactures without protection will, in due time, spring up in the country, and sustain themselves in competition with foreign fabrics. Now I contend that this proposition is refuted by all experience, ancient and modern, in every country."—HENRY CLAY.

"The protection of American labor against the injurious competition of foreign labor, so far, at least, as respects general handicraft productions, is known historically to have been one end designed to be obtained by establishing the Constitution; and this object and the Constitutional power to accomplish it ought never to be surrendered or compromised in any degree."—DANIEL WEBSTER.

Without further argument I submit the question, confident of a just judgment.
Wrights, Santa Clara Co. W. H. AIKEN.

HORTICULTURE.

The Orange Crop of 1888.

The *Rural Californian* has been looking up the orange prospects for the coming year, and gives the following as the result of its investigations:

Orange prospects are exceedingly good this season in all parts of Southern California, and indications now point to a total shipment of from 2200 to 2500 carloads, as against 1600 carloads last season. The Mediterranean Sweets and Seedlings were both a little "off" last winter, but are making up for it in fine shape now. The Washington Navel crop will be considerably heavier than one year ago, the increase being due almost entirely to the large number of young trees just coming into bearing. Three and four years ago the planting of new groves was largely of this variety, and in the season of 1885 we planted 80,000 Washington Navel orange trees in California out of a total planting of 95,000 trees. In view of this heavy planting of a single variety it is safe to estimate that within three years more than one-half the entire crop of California oranges will be Washington Navels. It is a serious question, however, whether or not this orange can hold its present place at the head of the list. As it grows older the Washington Navel shows a decided shyness in bearing, and, after late irrigations, the sap flows so freely that the fruit in some localities splits quite badly.

A. J. Twogood of Riverside, one of the oldest and most successful orange-growers in California, was recently asked by the writer what he would plant if he owned 20 acres of improved land. His reply was: "If the land was suitable I would plant it solid to oranges. Of varieties I would plant one-half Seedlings, one-fourth Mediterranean Sweets and one-fourth Washington Navels. Were I a younger man and able to wait for the returns, I would plant the entire 20 acres to Seedling oranges." This reply is significant, coming from such authority. It may be proper to say also that Mr. Twogood's partiality for the Seedling orange is backed up by the fact that he was until recently the owner of six acres of Seedling oranges, which last spring yielded fruit worth \$7200, an average of \$1200 an acre.

Throughout the Santa Ana valley the red scale, which one year ago threatened to destroy all the orange groves, has largely disappeared and the crop will be much better than it was one year ago. The recent appearance of an unknown disease among the raisin grapevines of that valley will cause increased attention to be given to the orange culture.

In the San Gabriel valley Mr. A. V. Chapman, Col. J. R. Dobbins, Mr. L. H. Titus, and other large growers, report very fine prospects for the orange output of 1888. The trees are well loaded and the fruit is large and fine looking for this season of the year.

Ontario, Pomona and Cucamonga, all new settlements, are largely planted to budded fruit, and will make some shipments of choice oranges. The young trees in these settlements, mainly in the hands of thrifty Eastern people, have received especially good care and will reward their owners with a handsome return this season.

At Riverside, so far as we can learn from personal observations and interviews with leading growers, the crop will be the largest yet marketed. The new planting in this almost exclusive orange settlement has been very light for several years past, as compared with other colonies, principally because nearly all the available

land was planted some years ago. There are occasional new orchards put in where apricots or other deciduous fruits are being taken out, but the bulk of the increased crop will come from the advanced age of the trees planted from 5 to 10 years ago. Many thousand seedling trees were planted in Riverside along in 1879 and 1880, and these trees are just beginning to show some return, and in a few years more will yield very heavily. The Washington (Riverside) Navel crop will not much exceed that of last year. The fruit is splitting a little all over the valley. The Mediterranean Sweet crop will generally be much larger than it was one year ago. The shipments from Riverside in 1886 were a little over 500 carloads, in 1887 about 350 carloads, and for 1888 the prospect is good for about 700 carloads, though conservative men place the estimate 100 carloads lower.

The chief shipping points for oranges from Southern California are the San Gabriel valley (including the Duarte and Azusa), Riverside, and the Santa Ana valley. The orange orchards in and around Los Angeles have been mainly cut up into town lots, and the white scale is making serious inroads upon the orchards not yet subdivided. Inside of three years more there will also be very heavy shipments from Pomona, Ontario, Cucamonga, Redlands and other foothill settlements.

American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Another Dose for Cows.

EDITORS PRESS:—One of your correspondents wishes to know what to give cows when they calve. Whenever I have a cow that seems not to clean well, or that I think will not, I give half a teaspoonful of gunpowder in a bucket of bran mixed up with warm water. Sometimes I have to repeat the dose, but not often. I do not know how the gunpowder affects the cow, but never have had any trouble with a cow that I have given it to.—G., Vacaville, Jan. 8th.

Other prescriptions for the same trouble may be found on a preceding page of this issue.

CLEVELAND BAYS.—We have received a copy of an interesting catalogue of imported Cleveland Bay horses owned jointly by Seth Cook of Danville and Sherick Bros. of Springfield, Ill. The list includes eight stallions and colts and one mare, and are described to us as a fine lot of this breed, which is rather new on this coast, but is destined to be popular. The animals now under consideration may be seen at the Bay District track in this city, and should receive the attention of horse fanciers. Information concerning them may be had from Killip & Co., 24 Montgomery street, or Sam Gamble, 1307 Dolores street (at the track), or of George A. Wiley, who is the superintendent of the famous Cook stock-farm at Danville, Contra Costa county, where other fine animals, both of the horse and cattle persuasion, can be seen.

WE regret to hear of the death of Mr. George O. Wallace, a member of the firm of N. W. Ayer & Son of Philadelphia, the largest firm of advertising agents in the country. Mr. Wallace was noted among his business acquaintances for his integrity, diligence and courtesy, and his sudden death will be a loss to very many friends.

THE Salinas Index, one of our valued exchanges, has issued an extra, which contains a very full and elaborate article on Monterey county. There is a full description of the Buena Vista and Gabilan ranches which have been subdivided into small tracts, and are now offered for sale.

A CONSIDERABLE ADDITION.—The railway passenger officials are still figuring up the arrival of passengers by overland lines during the last year. The latest footing is a total of about 150,000 for the year 1887. Even larger figures are promised for the present year.

PERSONAL.—William Niles, the well-known stockman of Los Angeles, has just returned from an Eastern visit of five months' duration. He writes us that he finds on returning that he has a superior lot of young stock on hand, to which his advertisement in this issue relates.

"A MODEL NURSERY" was the fitting title of a Butte county note in the PRESS of Dec. 10th. Any one who would learn more of the fine establishment therein briefly described, can find a way to gratify his wish by turning to the advertisement of Rancho Chico nursery.

BEEHIVES IN COUNCIL.—The National Bee-Cultivators' Association is to hold its annual convention in Utica, N. Y., during the current month. New York State makes a large proportion of the honey product of the Union.

Correction.

EDITORS PRESS:—Please make the following correction in the article, "A Turkey Transaction," in the PRESS of Dec. 31st:

"There is that withholdeth more than is meet, but it tendeth to poverty," in place of "There is that which holdeth more than is sweet," etc.

A word or two of one's own writing matters little, but one dislikes to misquote Scripture. THE WRITER.

Palermo Citrus Tract.

The latest announcement of citrus-fruit property which comes to our notice lies in the famous Oroville district and is named the Palermo Citrus Tract. The location is five miles south of Oroville, and is on the Northern California railroad. There is a town-site—Palermo—in the center of the tract. The enterprise is in charge of McAfee Brothers of 10 Montgomery street and T. B. Ludlum & Co. of Oroville. An interesting descriptive circular has been issued which gives account of soils, water, etc., and price-list of town lots and fruit tracts. Those interested in such property should send for a circular.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

F. B. LOGAN—Santa Clara Co.
 JOHN G. H. LAMPADUS—San Benito Co.
 G. W. INGALLS—Arizona Territory.
 WILLIAM POOL—Fresno Co.
 WM. WILKINSON—San Joaquin and Stanislaus Co.'s.
 A. F. JEWETT—Tulare Co.
 E. H. SCHAEFFLE—Placer, Sacramento, El Dorado Co.'s.
 C. E. WILLIAMS—Yuba and Sutter Co.'s.
 R. G. HUSTON—Montana Territory.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

BISULPHIDE FOR SQUIRRELS.—Mr. Wheeler informs us that he is again in the market with his preparation. The stock prepared for last year's trade proved insufficient to fill the increasing demand, and the public were deprived of this remedy for a good part of the season. The factory is now again running night and day, and it is hoped there will be enough to go around. Be it known that this preparation is a liquid made expressly for destroying rodents and other vermin. It is of unvarying strength, and evaporates rapidly when exposed. When applied, it fills the burrow with its vapor and thereby kills every occupant of the hole without injuring anything outside. The animal cannot get away, but dies in the hole and never becomes offensive. It is safe to handle or have about, and simple to apply. It has no effect on the operator, and is not poisonous nor injurious to the skin or clothes. These qualities, together with the improved methods of keeping and applying the same, make it particularly valuable at this season of the year.

Cottony Cushion Scale.

At last the remedy for this pest has been found. About five weeks ago the orange orchard of Mr. Frank M. Pixley at Corte Madera (badly infested with cottony cushion scale) was treated with Ongerth's Liquid Tree Protector according to direction. The insects and all eggs are killed, the trees are now free from this pest and also from black smut, and show increased healthy growth. As Ongerth's Liquid Tree Protector does not contain any poisonous, caustic, or corrosive substance it can be handled without any danger.—From Argonaut, Dec. 31, 1887. For sale by Woodin & Little, 509 and 511 Market street, San Francisco.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and liberal terms. Address, J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
 T. A. SLOCUM, M. C., 181 Pearl St., New York.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3.

PLOWING is now in order, and the farmer who needs a gang-plow will be interested in what the Bull & Grant F. I. Co. have to say in their advertisement on another page of this paper.

PENNSYLVANIA OIL THE BEST.—Analysis and practical use have proven that all the American petroleum oils are much superior to any that are found in either Europe or Asia.

Jackson Centrifugal Pumps.

JACKSON

Automatic Expansion SELF-OILING ENGINES.

Made in ten sizes, from two to sixty-horse power, and carried in stock for prompt delivery

"ECONOMY" PORTABLE BOILERS.

MOUNTED ON SKIDS.
2½ to 20 H. P.

BYRON JACKSON,

625 Sixth St., San Francisco, Cal.

For quantities of water not less than 100 gallons per minute, and for lifts not exceeding 100 feet, there is no better pump than that illustrated in the annexed engraving. It is very simple, durable, and economical. I make them in sizes from 2-inch, 100 gallons per minute, to 24-inch, with a capacity of 14,000 gallons per minute, and am prepared to build larger sizes to order. They must be set within 20 feet of the water; will draw it that far and force it up 90 feet. They are very satisfactory in wells not over 100 feet deep.

COMPLETE Power and Pumping PLANTS

A SPECIALTY.

ADDRESS:

BYRON JACKSON, 625 SIXTH ST., San Francisco.

Now is the Time to Apply WHEELER'S CARBON BISULPHIDE.

REDUCED PRICES CONTINUE.

READ WHAT YOUR NEIGHBOR SAYS ABOUT IT.

It is thorough in its work and is not dangerous to anything but the vermin it is intended to destroy, and it will do all you claim for it as a rodent poison.

L. L. ROBINSON,
 Los Medanos, Contra Costa Co.

Your Carbon Bisulphide has been a perfect success, and it is the only poison I have ever used that was.

GEORGE WEST, Stockton.

I have used it with unflinching success, the holes do fored have never since been reopened.

JOHN T. DOYLE, Menlo Park.

It is a dead sure thing, and any one who will give it a trial, will never again fool away his time with common preparations of strychnine, phosphorus, etc.

H. W. CRABB, Oakville, Napa Co.

It is the most economical and efficient agent yet offered to the public.

H. G. ELLSWORTH,
 Niles, Alameda Co.

I used it and not a squirrel escaped.

R. T. WALKER,
 Paso Robles, S. L. Obispo Co.

Sold by the Trade and by the manufacturer,

J. H. WHEELER, 204 Montgomery St., S. F.

As a means of killing squirrels, gophers, etc., it is unquestionably the best now in use, and I believe will be universally adopted.

J. DE BARTH SHORB,
 San Gabriel, Los Angeles Co.

I find it certain death and never had occasion to apply it a second time.

JAMES K. VERNON,
 San Luis Obispo.

It is the cheapest and most effective agent that I have ever used in the destruction of squirrels and gophers.

W. S. MANLOVE,
 Brighton, Sac'to Co.

I know of nothing equal to it.

D. C. TWOGOOD, Riverside.

Not one hole has been reopened, and I feel disposed to bless Prof. Higard and Mr. Wheeler.

EDW. BERWICK,
 in PACIFIC RURAL PRESS.

Nothing so cheap and effective as Bisulphide.

CHARLES S. COUSIN,
 Pinole, Contra Costa Co.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE! FERTILIZE! NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.
Dr. J. Koebe—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Potash.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. Koebe, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the **MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or**

CHAS. DUSENBERG & CO., Sole Agents,
No. 314 Sacramento St., San Francisco.

SAN FRANCISCO, Jan. 11, 1888.

WHEAT—More vessels were taken the past week than any one week this season, and at rates showing a lower range. Buyers combining have the advantage of holders forced to sell. At the close, holders are firmer. Liverpool quotations were lower on Monday and yesterday, but the decline in price was not equal to the decline in charters for vessels; however, buyers used it so as to get holders to

Market Information.

Corn is very strong, with choice grades stronger, under a fair demand and limited offerings. The

In wools the market is very dull for the coarser grades and defective clips, but fine, lively and strong stapled wools are wanted at good prices. The change in woolen goods fashion has depressed some kinds and advanced others, particularly the fine grades.

San Francisco, Jan. 11, 1888.

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

H.H.H. HORSE LINIMENT.
THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale by all druggists.
To Dairymen, Fruit-Growers and Farmers!
SITUATION WANTED.

An experienced man, with wife, wants a situation. Understands Dairying, Irrigating, and General Farming. Can give the best of references. Address, H. B., Box 361, San Francisco.

I CURE FITS!
When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office.

GOULD'S SPRAY PUMP

(Copyrighted by the Gould's Mfg. Co.)

With Bamboo Extension all fitted up, COMPLETE WITH HOSE, BARREL and SPRAY NOZZLE.

This cut shows in faithful operation our Gould's Spray Pump; they are utilized for spraying Fruit Trees, Orange Groves, Vines, and in fact, all Trees or Shrubbery infested with the destructive insects which infest and do so much injury in Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and handle, and are strong and heavy; the valves, being made entirely of metal, will not be affected by the corrosive solutions such as Caustic Soda, Acids, Lye, or any other solution that may be used to kill the destructive insect.

Our Bamboo Extension is an admirable invention; the operator of the Pump, by the use of this extension, can get to all parts of the tree while on the ground, also saving himself from getting his hands and face burnt from the solution. As a rule, the man who does the driving of the team does the pumping, and the party who has charge of the Bamboo Extension does the spraying. We can fit up these pumps so you are capable of running two Extensions or Sprays at one time, each man taking a separate row of trees. Our Spray Nozzles throw the Spray out on the tree in a very fine mist that allows the solution to settle on the upper and lower sides of the leaves and branches; by the use of a Spray Tip (in fact it is the only way to put on the solution) fully one-half or two-thirds of the solution is saved. The Imperial Nozzle seems to be the favorite. These pumps have been adopted and recommended by the State Horticultural Society. We have over 750 in use in California.

NOTICE.—ONGERTH'S LIQUID TREE PROTECTOR is the best Spray for killing Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect.

Send for Prices and Complete Circular of Spraying Outfit.

HAMMOND'S MUSIC STORE,

2513 MISSION ST., SAN FRANCISCO.
Dealers in Pianos and Organs, Musical Merchandise,
Roller Organs,

The musical marvels. Prices, \$7, \$12, \$15. They perform a choice selection of over 200 tunes by rollers similar to that of a music box. No paper used to produce this music, new tunes being constantly added.
They play the latest music in tones so full and sweet. For the rollers are all perfect and the parts are complete. For church or social meeting, for concert and for dances, Operettas, waltzes, jigs, hornpipes, gay life quadrille lancers. For dances and where musicians would have to be engaged, they will save their cost in one night. Circulars free on application.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Raising a large proportion of my seed enables me to warrant its freshness and purity, as see my Vegetable and Flower Seed Catalogue for 1888, FREE for every son and daughter of Adam. It is liberally illustrated with engravings made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.
JAMES J. H. GREGORY, Marblehead, Mass.

DIVIDEND NOTICE.

SPECIALTIES:

NUTS, PRUNES AND GRAPES.

The Finest Collection of "Nut-Bearing" Trees to be Found in the United States.

21 Varieties of Walnuts,

INCLUDING

CLUSTER WALNUT (*Juglans Racemosa*).

The newest, most prolific and valuable variety ever introduced into this country.

PRÆPARTURIENS,

Or FERTILE WALNUT, introduced into California in 1871 by Felix Gillet.

"Second" Generation Præparturiens,
(California Grown).

"Second Generation" trees, grown from nuts borne on the original tree; 80 to 90 per cent guaranteed to be "pure," or having retained the characteristics of the original Præparturiens, chief among them the surprising fertility of that type.

Third Generation Præparturiens or common French walnut (*Juglans Regia*), grown from nuts borne on Second Generation trees, all California grown. Vigorous and fertile variety, but the nuts smaller than those of the second generation.

GRAFTED WALNUTS.

Franquette, Parisienne, Mayette, Chaberte, Meylan, Vourey and "Weeping" Walnuts, the leading varieties of Europe, highly recommended for the size, beauty and quality of the nuts, fertility, and above all, "hardness" of the kinds.

We offer this season imported trees of the seven above sorts, expressly grafted for us, regardless of cost. The difficulty in grafting the walnut is such, and grafted walnuts are so scarce, that we are compelled to decline orders for such trees in quantities over a dozen. Only a limited number of trees of each kind from four to six feet.

"MARRONS," or French Chestnuts.

(Solely propagated from grafting.)

MARRON COMBALE (California grown).

10 Varieties of the finest kinds of Marron-Chestnuts to be found anywhere; at the head of the 1st "Marron Comble," which we have been fruiting upon our place the last 13 years; very large and sweet nut, prolific; one of the very best for market.

7 Varieties of Filberts.

4 Varieties of Almonds.

4 Varieties of April Cherries, the earliest and most prolific in California.

245 Varieties of Grapes, from all parts of the world, including the earliest Table Varieties known, some of them 25 days earlier than Sweet Water.

61 Varieties of English Gooseberries, all shapes and colors, some large as walnuts; all "true to name."

CORK OAK, 2-year-old Trees, from Spain.

Prunes! Prunes!

Lot D'Ente, or D'Ente "true from the root," one of the best and finest types of the "French Prune" and the kind so extensively cultivated in the prune district of France. This type is not propagated from grafting, which would do away with its chief qualities of being more vigorous, more long-lived than grafted trees, and a "gum-resistant" stock.

Also, the finest grafted types from the home of the Prune D'Ente or D'Agen, on Myrobian, St. Julien and Almond stock.

Saint Catherine (true from the root), one of the finest dessert Plums, and one of the best for preserving and drying.

Puymirol D'Ente, Blue and Red Ferdigron, German and Italian Quetsche, Alsace Quetsche, Knight's Green Drying, etc.

Apricots, Peaches, Pears,

Quinces, Plums, Mulberries,

Figs, Fancy Fruits, Etc.

FRENCH, ENGLISH, GERMAN AND AMERICAN

STRAWBERRIES.

Send for General Descriptive Catalogue, illustrated with forty-one cuts, representing Walnuts, Chestnuts, Filberts, Prunes, Medlar and Sorbus.

GEM SEED SOWERS.

No. 1, Weight, 130 lbs. \$20.

This Machine is run with a Chain and Bevel Gear. It is the one we have sold for years, and has given the best satisfaction of any broadcast seeder yet invented.

No. 2, Weight, 154 lbs. \$22.50.

Runs with Chain and Belt Gear. The advantages gained on the bevel gear are smoothness of movement, noiseless while running, durability of the fast running parts, and the evenness with which it sows the grain.

No. 3, Weight, 164 lbs. \$25.

Runs with all Gears. This machine is preferred by many to the others which run by Chain. The feed valves and distributor are the same as in the others.

We have manufactured the GEM SEEDERS for a number of years, and they have given better satisfaction than any other Broadcast Seeder in the market. They throw the seed horizontally instead of vertically (as in all old-style Seeders), and thus save a large portion of the grain. Where sold they have never failed to give satisfaction. ARMSTRONG'S PATENT FORCE FEED is attached again this year, and is considered by those who have used it, a great improvement.

THE GENUINE GEM SEEDERS are manufactured exclusively for us at Benicia. SEE THAT OUR NAME IS ON THEM.

Vineyardists, Orchardists & Farmers! TAKE NOTICE!

—OF THE—

J.A. BILZ 2-Horse Gang & 1-Horse Plow

Which the Cuts Represent. Patented October 19, 1886.

These Plows have been in market for the past two seasons, and those that use them would not do without them at any price. All claim to save from \$2 to \$2.50 per day over any other plow. Not only for orchards and vineyards, but also for field plowing, where a two-horse single plow is used.

The Plow is 18 inches, weighs 160 pounds, and two horses will pull it as easily as a 12-inch plow, and does better work than a single plow. No trees are barked and sticks in vineyards pulled over where my Patent Double-trees and Single-trees are used.

I ALSO MANUFACTURE ALL STYLES OF
CARTS, BUGGIES, SPRING WAGONS, CARRIAGES
AND ALL KINDS OF
VINEYARD AND AGRICULTURAL IMPLEMENTS.

Send for Testimonials and Circulars. Address

The Golden Gate Conservatory.

An object of especial interest, no doubt, to visiting horticulturists will be the conservatory in Golden Gate park, the great recreation resort of San Francisco. The park in all its ap-

of the wings of the conservatory, and is but an exponent of the contents of the building. The structure in itself is interesting. It is favorably situated on a commanding site between the main drive and the north ridge road. The building is about 250 feet in length, covering

fountain set in the center of all. On the right of the rotunda is the orchid-house, an arched room 35x50 feet. There are many rare and beautiful varieties of this strange family to be found here. The space not being entirely taken up by the orchids, an infinite variety of

potting-room, 30 by 30 feet. A heating apparatus supplies the requisite warmth to all the chambers, and an admirable system of ventilation enables the keeper in charge to preserve at all times an equable temperature. Thirty-five tons of glass and over three tons of

A VIEW IN THE CONSERVATORY AT GOLDEN GATE PARK, SAN FRANCISCO—A TROPICAL CORNER.

pointments is very creditable to far Western enterprise and public spirit, and its growths will afford the visiting experts good opportunity for study of tree, shrub and flower, many of which may be new to them, for, in our planting, we draw much from Australia and the Orient, and can show open-air growths which are not at all possible at the East. The general landscape features of the park, the bedding, the drives, the children's playground and many other features, may interest and please the visitor, and afford open-air scenes in January quite unwonted to their eyes.

Our engraving gives a glimpse at one corner

an area of about 15,000 square feet, and a few years ago, at least, was exceeded in size only by the Government conservatory at Washington. It is oriental in style, graceful in outline, and highly ornamental. The main entrance, or reception-room, is 23 feet square, substantially furnished, and ornamented with a fountain in the center. From this room the visitor enters the rotunda—a circular room, 56 feet in diameter and about the same number of feet in height. An octagonal space in the center of the rotunda is occupied by several varieties of rare tropical plants; and the dryness of the atmosphere is relieved by the spray from a

other fascinating flowers have been introduced. The arched room on the extreme right of the building is set apart for the cultivation of the larger and rarer aquatic plants. A circular pond, 28 feet in diameter, has been constructed here, with the necessary heating apparatus, for the Victoria Regia and other water lilies.

On the left of the rotunda is another arched room, 35x50 feet, and at the end another transverse room, giving a symmetrical balance to the design as seen from the front.

In the rear of the building are two propagating pits, 50 feet long by 12 feet wide; a growing-house, 75 feet long by 25 feet wide, and a

putty were used in the construction of the conservatory.

Although but young, the conservatory has a history. Just five years ago this month the building took fire in the center and the central erection, the palmhouse, was destroyed. It was restored through the liberality of Charles Crocker. Considerable interior improvements have been recently made, and the collections of desirable plants have grown by contribution from all parts of the world.

Scotch cattle were the finest presented in the recent Christmas market at London, England.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

A Visit to Phoenix, A. T.

EDITORS PRESS:—Within the last few weeks I have visited portions of Arizona, Phoenix and the Salt River Valley.

I had not been in Phoenix in ten months, and was amazed to see the advancement it had made. Commodious brick blocks for mercantile and business purposes, a large opera-house, many fine residences, and buildings now in progress for an elegant city hall, for the First Presbyterian church, a temperance temple and many other indications, are among the evidences of thrift seen in every direction. Street railroads are now in operation through the entire body of the city, about two and a half miles in length, and others will be running so as to enlarge the mileage to double its present extent within a few months.

The lands of the valley are rapidly passing into the hands of those who design to occupy and cultivate them. Planting is going on with great rapidity, and is accomplished with a facility I have not elsewhere seen. I carefully examined a quarter-section, a little distance from the city, which had been cleared and fitted for planting at an expense of only \$1 per acre. There is a descent from the north-east to the southwest, very slight, yet sufficient for water to flow to the west or south. The surface is so smooth and regular that not a spoonful of earth needs to be removed in order for water to follow a common plow over every part of it.

The soil is so light and friable that no preparation for planting vines is necessary, except to run a single furrow with a common plow where the row of plants is desired. The water is then let in at the head of the furrow, either on the north or east side, and as the cuttings are put into the bottom, the water follows the planting, packing the soil around the cuttings. No plowing, harrowing or cultivating is required until weeds appear. This quarter-section of land can be planted with raisin grape-cuttings, and all necessary care bestowed upon them for 12 months, at an expense not exceeding \$6 per acre, so a man of intelligence and experience in the business tells me. This is a fair sample of what is being done with many thousands of acres within a few miles of the city of Phoenix.

Schools, churches and associations for moral and social improvement are being organized and sustained with a degree of enterprise quite uncommon in a new town.

Another feature that strikes me with great interest is that the general characteristics of the people of Phoenix and vicinity, for probity and virtue and the higher orders of civilization and enlightened society, surpass in development those of any other frontier town of similar age and circumstances I have ever been acquainted with. I was especially impressed with the desirableness of the valley and town, as a home for those who, with small (or large) means, desire to secure the advantages of real estate appreciation (to be found in fullest extent only on the frontier) and as a home, in which to enjoy life and rear families. I found all classes of business prosperous, also specimens of the productions of the soil, during the last year, that were more than equal to my most sanguine expectations.

But as I am expecting to write something further in the early future, I will for the present cease.
O. C. WHEELER,
No. 1635 Grove St., Oakland.

In the Sonoma Redwoods.

EDITORS PRESS:—I have had the pleasure of reading your valuable paper for the past year, and I feel thankful to the RURAL PRESS for the active part it has taken in aiding and encouraging the fruit-growers and farmers. It is their friend and guide. And I am sure that every one who has read its columns the past year will agree with me that its labor has not been in vain. The fruit interests of California are indeed enormous, to say the least, and scattered over an extensive field, with every variety of soil and climate. And when we add to this the many blights and pests that infect it, what a problem the fruit-raiser has to work out to know just where to locate to obtain the best results. But when he has a paper printed right in the State, which gives the advice and experience of farmers in different localities, many of the things that seemed impossibilities melt away.

I have been located in the northern part of Sonoma county for the past eight years, in what is known as the great redwood belt. This locality is situated about eight miles from the coast. Its surface is broken or hilly, lying as it does in the Coast Range. The altitude is 1500 feet above the sea. The climate is mild during the entire year. Fruits of all kinds do exceedingly well here, and especially grapes and apples. The soil is rich and productive; having a subsoil of clay, it holds the moisture well. This locality, like many others in this vast State, has no railroad, and it is not likely its fruit interest will be developed to any great extent till it has.

The farmers here pay most of their attention to raising stock, principally sheep, and it is a

fine-paying business, as this mountain range is very healthy and the sheep produce an extra quality of wool. Taking all in all, the northern part of Sonoma county is one of the most inviting parts of the State, and its farmers are a thrifty, happy class of people. That legal document called a mortgage, that has made Christmas a blue day in many a household, is a thing very seldom met with in these parts.

If you are looking for health, you need not travel any farther. I have known two doctors who have left us because there is too much health to suit them. As for nature in all its loveliness, one never tires of it. The grand old redwoods with their evergreen boughs and towering heads; the living mountains of nature. Truly they are wonderful. Then the cool mountain streams with their sparkling waters, where glide the silvery trout, and, if you are a lover of this sport, you can pass a day now and then very pleasantly angling for these speckled beauties.

I might go on writing for pages of the many interests of the redwood country, but, like many writers for newspapers, I fear the waste-basket, *Fisherman's Bay.* G. S. F.

PUBLIC AFFAIRS.

The Tariff and Our Industries.

EDITORS PRESS:—In your issue of December 31st you call your readers' attention to the tariff question, not with a view to discussing on general or theoretical grounds, but simply how the principle of removing the duties from wool and fruit might affect those industries in California.

I agree with you that to enter upon a general discussion of the various questions involved in a revision of the tariff laws of the United States is foreign to the purview of the RURAL PRESS. Still, as the National Wool-Growers' Association seems to be up and doing all possible not only to have the present tariff on wool continued, but increased, I have a few queries to put to wool-growers.

The tariff of 1847, which continued without any essential change to 1867, rated wool at 30 per cent *ad valorem* as valued at the port of exportation. This tariff, be it remembered, was a so-called Democratic measure and framed for revenue, and was supposed to give protection only incidentally to domestic industries.

Under this tariff the wool-growers of the United States gradually increased the number of their sheep till in 1867 Ohio had 7,159,177; Michigan, 3,473,075; Pennsylvania, 3,230,440; New York, 5,117,148; Indiana, 2,783,367; Illinois, 2,446,481; Wisconsin, 1,260,000; Iowa, 1,950,752. The total number of sheep in all these States in 1866 was 26,829,815 head, and in 1867, 29,879,222 head.

In 1867 Congress enacted a new wool tariff increasing the duties on fine wools 30 per cent, or a total duty of 60 per cent.

This tariff rate continued to 1871, when it was reduced to 55 per cent, and so continued to 1883, when the tariff was further reduced to 50 per cent.

Yet under all these protective tariffs, how is it that in the above mentioned States the number of sheep has been reduced to less than half the number that existed in 1867 under the low wool tariff of 30 per cent? In 1878 these States had only 12,893,600 head; in 1879, 13,527,500 head; in 1880, 14,122,778 head; in 1882, 14,761,150 head. Texas in 1867 had 9,401,195 head; in 1882, 6,850,000.

From the above statistics it would seem the wool industry was never so prosperous as under the low 30 per cent tariff of 1847. Will the National Wool-Growers' Association rise and explain?

Again, let us look at the prices obtained under these several tariffs. Under the tariff of 1847, the lowest price for fine wool was in 1849, 39 cents per pound. The highest was in 1853, 59 cents per pound. Under the high protective tariff of 1867, the lowest price for wool was in 1868. The price was 42 cents per pound; the highest price was in 1871, namely, 58 cents per pound. From these statistics where is the corresponding relation between high and low tariffs and prices? Will the advocates of a protective tariff point it out?

It is claimed by the friends of wool protection that the free importation of wool will ruin the sheep industry in the United States, and those now engaged in the business must resort to other pursuits. If this should be so in fact, it would be only the large flock-masters in the Territories and in California, and their numbers are few. The small farmers of the Middle and Western States will continue to grow their small flocks as a necessary portion of their farm stock. But the woolen factories would continue to run all the same. If the home supply should fall short of the demand, they would import; and for raw wools they would swap cloths, and thus trade would be stimulated to the mutual benefit of all.

Now as regarding the fruit industries of California, you intimate in your article that free trade in these industries, in your opinion, would destroy them, now in their infancy. I hardly think so. Our fruits in various prepared forms are now seeking markets in the various parts of the world, but if we refuse to trade on equal terms, we cannot expect ever to get up much of a trade. Commerce is simply the exchange of the commodities of one country for those of another. Now if we as fruit-growers insist on maintaining and even building higher a wall of

exclusion, shutting out fruit importations, we will surely be met by similar walls of exclusion in those countries we may propose to trade with. Now I submit, is such a policy a sound one? The consumers of every country far exceed the producers. By restrictive imports we put the products of a country beyond the reach of many, and thereby lessen consumption, and, as I think, in the main to the injury of the producer himself. Suppose the United States should enact a general non-intercourse law, would such a law be beneficial to the fruit-growers of California as a whole? No sensible, intelligent man would say it would. Well, if total non-intercourse would be in the highest degree unwise, partial restriction is, I think, unwise in degree. As a California fruit-grower I have no fear of being driven out of the business by the so-called pauper-labor products of other countries.

Let the people of the United States adopt a liberal commercial policy toward the people of other powers and we will find a world's market for our fruits with profit to ourselves.

Haywards, Cal.

W. C. BLACKWOOD.

The Tariff Question.

EDITORS PRESS:—Under cover of a message to Congress the President has addressed an open letter to American farmers. He suggests to us the propriety of ruminating over the free-trade question. It's a mental cud that will bear much mastication before it can be thoroughly digested and receive its final solution. In its present state it is not very attractive intellectual diet. It is a mass of crude theories, dubious figures and knotty points, of which politicians seize such a handful as will suit their turn and dish them up with all possible party spice and seasoning to suit the palates of their audience.

I think a reversion to first principles always simplifies matters. The continuity of law is one of these first principles. Now we all concur in a belief that one of the best laws by which to regulate our private lives is what we call the "Golden Rule." Continuity of law demands that the Golden Rule be applied to national as well as individual affairs. Let us apply it! California is a producer of cheap food. Her superabundance annually increases. Her wheat and honey, her fruits and wine, cry out for consumers: "Liverpool to the rescue!" And to our comfort and gratification the swelling stream of gold rolls back to the Golden Gate. Almost free of import, England admits our produce and her toiling millions are fed. Naturally she asks in return that her products be similarly favored in our markets. Let the Golden Rule be applied! If not, say out boldly that national selfishness is a virtue and private selfishness is a vice.

There is a great deal too much affectation of mystery about politics; too much diplomacy and chicanery masquerading as statesmanship. Look at the antiquated nonsense being perpetuated in this new world of America? Here is an immense area peopled by a homogeneous race, mainly attached to identical laws, habits and customs! And how the gods must laugh to see them drawing an arbitrary imaginary line across their country, setting up custom-houses and marching regiments of revenue officers each side the boundary to prevent Canuck and Yankee from a free trade!

And it is all in the interest of our cherished laborers! How careful we are of their welfare! The world has got too small for such fictitious coddling of any class. Granting wages are higher here at present than elsewhere, what results? The depopulation of Ireland! Instead of feeding foreign populations in their own lands with Californian produce, they are fed here as American immigrants. Is this heavy immigration desirable? If so, continue the system of protection. "Where-so-ever the carcass is, there will the eagles be gathered together."

The President's open letter selects wool as its main illustration. Having watched the market for many years, I know that something besides tariff causes the greatest market fluctuations. Price for ordinary grades has ranged from 45 cents to 11 cents per pound. I should like to see this farmer's question fully discussed apart from its present political bearings. In fact, I hardly regard it as a fair party issue. Rouse up, RURAL readers! EDWD. BERWICK.
Carmel Valley, Jan. 5, 1888.

[With the tariff as a question of party politics, we have nothing to do; as a matter of general theory, on the lines of political economists and the universal brotherhood idea, we wish to have just as little as possible; as affecting the industries, and consequently the livelihood and prosperity of our readers on this coast, it is a topic appropriate for our columns.]

Wool-Growers' Meeting.

As announced by the newspapers of Ukiah, the wool-growers and farmers of Mendocino county met at the Court-house Saturday evening, 7th, to consider the policy of the Administration, as expressed in the message of the President to Congress. The meeting, says the Ukiah Press, was attended by a large number of those interested in the wool and other industries common to Mendocino county, and was unanimous in its denunciation of anything

looking toward a free-trade policy. Able speeches were made by the Hon. R. McGarvey and Hon. Whit Henley in support of the resolutions adopted, which are as follows:

WHEREAS, The production of wool is a large and important industry in California and throughout a large part of the United States, rendering productive and remunerative a vast area of land that would otherwise be almost worthless; and

Whereas, A removal of the tariff on imported wools would be destructive to this interest, and any reduction of the same would seriously cripple it; be it therefore

Resolved, That we enter our earnest protest against any reduction of the present tariff on imported wools.

Resolved, That the removal of the duty on the raw material, and the retention of the same on woolen manufactures, would in no way benefit consumers and would be but an unjust and unwarranted discrimination against the producers and in favor of the manufacturers of wool.

Resolved, That we appeal to Congress to neither remove nor reduce the present tariff on imported wools, and we hereby petition our Senators and advise our Representatives to use every lawful effort to this end.

Resolved, That we heartily indorse the views set forth by the National Wool-Growers' Association, and extend to them our hearty co-operation in protecting the wool industries.

Resolved, That we forward to our Senators and Representatives at Washington and to the National Wool-Growers' Association a copy each of these resolutions.

WM. FORD,

Chairman of Committee.

THE STOCK YARD.

Treatment for Cows at Calving.

EDITORS PRESS:—As you ask for information as to what is good to assist cows in getting rid of the afterbirth, I will give you my plan, which I never knew to fail. Take one-half pint (or more) of whole flaxseed, and boil it well in one-half gallon or more of water, according to quantity of seed, stirring all the while to prevent scorching. Then take a quantity of bran in a bucket and pour sufficient boiling water on it to scald it well, making a thick batter; then add the flaxseed and stir well, and while lukewarm give to the cow.

In the winter season this mash should be given once or twice a day for two or three days before calving; also a few times after, as it is very soothing. In case they retain the afterbirth a few hours after the calf is born, give the above mash with one-half teaspoonful Epsom salts dissolved in warm water added; mix well.

A cow not used to eating slop may refuse to eat it; if so, throw a little dry bran on top and a very little fine salt on that. The reason I say whole flaxseed is because I could never boil ground flaxseed sufficient to make a good mucilage.

E. E. K.

Tualumne Co.

The Dehorning Doctrine.

EDITORS PRESS:—The article on dehorning cattle in your issue of Dec. 31st gives, I should say, all the arguments that can be adduced in favor of the practice, and while some of them are good, others run contrary to my experience. The argument in favor of the saving in shed-room is probably correct, although perhaps not to the extent claimed. I cannot see where the saving of one-fourth the feed, especially in this climate, can be, neither the saving of manure. I will concede that where cows are stabled to be milked and fed they may be handled a little more easily, but if confined in stanchions or any other way they are more liable to get loose if the horns are off.

Your correspondent's description of the horn-capers in corral at milking-time is graphic; no doubt he has a lively lot of cows.

Now as to the effect of cutting off the horns. I have always practiced cutting the tips off the horns of cows that were quarrelsome, and I never thought that it made a difference in their dispositions. They make other cows stand aside all the same, but cannot do the same mischief as easily.

Your correspondent seems to indorse Mr. Haaf's work on dehorning, giving several extracts by way of argument. One is: Cut the horns off from cattle and you save nearly all loss of calves by abortion. Mr. Haaf's idea as to the cause of abortion, I think, be new to many. No doubt wounds or bruises are the cause in some cases, but I am at fault if they are the main cause. I have lost calves by abortion, but have generally found the cause to be something beside a bruise. Think I would have lost one this winter had I not used preventive measures.

Judging of Mr. Haaf's work by the extracts given, I should say that a strong vein of exaggeration runs through it. As I look at it, carelessness is the cause of nearly all the loss of cattle by horns, nor do I think the loss is as large as Mr. Haaf makes it or your correspondent seems to think it is, and for this reason, Mr. Steele says: Nearly every farmer loses cattle right along by horns. I have been engaged in raising cattle and horses nearly all my life and think I lose an average with other farmers from other causes but never lost one by horns. So it seems to me that mine might be a typical case.

I recollect of three bulls that did damage

with their horns, but in all cases the owners had warning enough of trouble to come and the bulls should have been taken care of. In those three cases horses were the victims. Dehorning those bulls would have saved the horses. Whether the bulls would have been safe at large is a question, for a bull that would gore a horse is liable to attack a man, and it is best to have him confined.

As a breeder of cattle I care not a pin for horns save as they are indicative of the breeding of the animal. If Mr. Haaf has a patent on his tools and can get them introduced so that they are generally used, he can perhaps make as large a fortune as those other men mentioned, even rival a Cæsus.

Whether dehorning will ever become popular enough to cause an indiscriminate mutilation of our cattle, time alone can tell. For the present I consider many of the positions taken not proven.

HORTICULTURE.

Cling Peaches vs. Free.

EDITORS PRESS:—In the planting of peaches, both for shipping and drying, many seem to lose sight of the great advantages the cling peach has over the freestone.

In the shipments East last year the cling peach brought the highest price in market, which, on account of its good keeping qualities, arrived at its destination in good condition. As a drying peach the cling, because of its keeping in good condition when ripe on the tree, gives time to handle, and, the flesh being firmer, does not lose so much in drying.

With the pitters now in use, the cling is as easily handled as the free, and holds better on the fork to pare. In paring the peach to dry there is not so much loss in weight as many suppose. It does not require so much drying as the unpared, and when so pared and evaporated brings double the price in market.

Many varieties of yellow clings are sold under the name of the Orange and Lemon Cling, both in the local and in the Eastern markets. A number of the California seedlings sold as such are superior to either and to many other of the old standard varieties, which are the following, viz: Edwards' Cling, called also the California Cling, Day's Yellow Cling, Tuscan Cling, Albright Cling, Sellers' Cling, French Cling, McDavit's Cling, all fine yellow peaches of first quality. Mr. McDavit of Placer county had in his crop of that name, in 1886, six peaches that weighed nine pounds. George's Late Cling and Winters Cling are both superior white peaches, ripening in September, and both good shippers. The Winters Cling is a favorite canning peach. I refer to nurserymen's catalogue for description of varieties named.

ISAAC BIRD.

Sacramento.

There are many others which might be mentioned. Who will write about them?

Cider-Making at the East.

[Written for the RURAL PRESS by M. A. S.]

The making of cider in the olden times was done at small cider-mills, usually a rough, cheap affair, owned by some well-to-do farmer who made cider for his neighbors at very low price per barrel, or else a certain share of the cider made. The farmers drew their apples and empty barrels to the cider-mill, very likely assisted in making the cider, and carried home their barrels of sweet cider, and it was often sold as low as \$1 per barrel where the purchaser furnished his own barrel.

The barrels of sweet cider were rolled into the cellar on to a low platform and fermentation was soon over, and the bungs fastened and a wooden faucet inserted in one end of the barrel.

Some put in a cupful of mustard seed into each barrel of cider before fermentation was fairly over, and other devices were used to prevent the cider from becoming what was called "hard cider," that if drank of freely was apt to affect locomotion, or loosen the tongue.

Cider-making in New York and some other States has been gaining in importance of late years, as wine-making has in California.

As good apples as are grown in the United States are raised in the lake counties of New York, although some other States claim to have as good. The soil is fertile, the cold north winds are modified and warmed by their passage over the great bodies of water, so that they do not chill or stunt the fruit.

Cider-making is now carried on in a different manner and on a larger scale. The grinding of the apples is done by steam-power, and the presses are operated by the same power.

Cider is no longer allowed to grow hard in barrels, but is a refined liquid which can be used at any time of the year and is bottled.

The apple juice is refined by filtering it through a peculiar sand which is found in Somerset county, Massachusetts. The sand is very fine and contains no iron, but has a considerable percentage of mica in its body. This seems to gather all the impurities of the apple juice, and allows the cider to pass out with the flavor and strength retained; and with the decomposing element so modified that the

juice is clear and sparkling without being insipid.

The largest cider-manufacturing and storage firm in the world is near this sand-bank.

Last year it turned out 40,000 barrels and this year 50,000 barrels will be made there.

There are other large manufactories in Massachusetts and New York. The main railway lines through the State are busy sending trainloads of apples to the several mills. The Interstate Commerce Act handicaps the manufacturers and refiners in Western New York, as it enhances by about 40 per cent the cost of the Somerset sand when transported to even that distance; but such is the demand for cider that all firms engaged in this industry are trying to increase their output.

The export trade to England is very large, and American cider is driving the English from the market wherever they come in competition.

About 35,000 barrels of cider were shipped from the Atlantic ports to Liverpool and London last year.

The cider is sold there the same as in this country, in bottles or drawn from the tap, and the trade has increased wonderfully within the last five years.

The cost of cider juice now in New York is ten cents per gallon; that of refined cider is four or five cents more. The quality of the cider this year will be superior to that of last year, for the apples, although a short crop, are of better quality.

New York has had the largest crop. In those counties that lie along the southern border of Lake Ontario the yield is the heaviest. The Chenango valley, which was formerly a great apple-bearing section, has not had a heavy yield for four seasons; but in the apple orchards of that locality little or no attention is paid to fighting insect pests, and during my last visit in Chenango county a perfect apple was a rarity. Few new trees were being planted; the old trees were mossy and limbs breaking off. Signs of decay and neglect were the rule rather than the exception. The orchards looked as if let to grow unpruned, year after year trusting to Providence to care for them.

Packing Citrus Fruits.

At a meeting of the Fruit-Packers of Southern California, held in Riverside on Dec. 28th, the following rules were adopted and the packers, whose names are attached, pledged themselves to abide by same for the present season.

The subject of prices was not touched upon:

1. In buying oranges or lemons delivered at our several packing-houses, we shall in all and every case insist on such fruit being stem-cut, stems to be cut close to the fruit. All oranges pulled from the trees without being clipped to be classed as culls and weighed back to the grower or sold for his account.

2. The weight of a box of loose Navel or Paper Rind St. Michael oranges to be 70 pounds net merchantable fruit. The weight of all other varieties of oranges to be 65 pounds net merchantable fruit.

The weight of a box of loose green or cured lemons to be 70 pounds net merchantable fruit.

3. The merchantable sizes in Navels to be 176 size to the standard box, and all larger oranges. The merchantable sizes in the Paper Rind St. Michaels to be 250 size and all larger oranges. The merchantable sizes of all other varieties of oranges to be 128 to 226, inclusive. The unmerchantable sizes of Navels or Paper Rind St. Michaels to be classed with Seedling oranges of same sizes, and bought at the same price as Seedlings of such sizes. The unmerchantable sizes of all other varieties of oranges except Navel or Paper Rind St. Michaels to be paid for at the rate of one-third less than the price paid for the merchantable sizes of such varieties.

The merchantable sizes in green lemons to be 200 to 250 to the standard box, and of cured lemons 250 to 350 to the box, all other sizes to be classed as unmerchantable and weighed back to the grower or sold for his account.

4. All windfalls, thorned or limb-scratched, bruised, frosted, pulled, buttoned or otherwise injured oranges to be classed in all cases as culls and weighed back to the grower or sold for his account.

Fruit-Growers' Memorial.

The following memorial, adopted by the California State Horticultural Society, has been transmitted to Congress:

WHEREAS, It is currently reported that Congress will be urged to remove the existing import duties from certain articles of foreign production and manufacture; and

Whereas, We fear that the list of such articles may include products which are at the basis of the new industrial life of California and upon which her future prosperity rests; therefore, be it

Resolved, That the State Horticultural Society of California humbly prays that the Congress of the United States will refuse to remove existing duties from foreign fruit and fruit products of all kinds, and in support of this petition begs leave to submit the following statement of facts, to wit:

First—Incited by hope of profit and with ambition

to retain within our own borders the millions of dollars annually paid to foreign producers of fruit and fruit products, the fruit-growers of California have invested millions in developing irrigation facilities, in planting orchards and vineyards and in devising and constructing appliances for presenting the products thereof in marketable form.

Second—Encouraged by the import duties which have long prevailed, our growers have labored for years in securing the most suitable varieties of fruits and in experiments to ascertain the modes of cultivation and methods of preservation which would yield success under the novel conditions of California soils and climates.

Third—This effort has attained such measure of success in spite of the vastly higher wages paid in this country that the products have reached an annual valuation of \$25,000,000, and have shown a quality which is pronounced by experts to be in many cases equal to the imported articles, and are supplanting the latter in the markets of the country.

Fourth—Though these be facts, the development of California, and probably some adjacent parts of the Pacific Coast, in the line of productions mentioned, is but just beginning, and should favoring conditions continue, the industries involved will give profitable employment for the surplus energy and capital of the older States, and at the same time add incalculably to the national wealth and the popular comfort and prosperity.

Fifth—It is beyond question that the admission, duty-free, of foreign competing products would not only arrest the growth now in progress, and preclude the development now anticipated, but would bring actual hardship to our whole local population, for these great industries afford livelihood not only to the thousands of small holders directly engaged in them, but to all arts, handicrafts, producing, manufacturing and mercantile interests which minister thereto.

Sixth—California and the Pacific Coast possess vast area upon which the raisin and other products of the grape, the prune, fig, date, olive, orange, lemon, almond, walnut and other products, which are not staple foods but luxuries, may be produced in quantities to supply the entire demand of the United States and adjacent countries, and, as a matter of fact, is so increasing in quantity and improving in quality, under the fostering influence of the low revenue duties now levied, that it will be able in a few years to supplant all foreign importations with better products and finally render them cheaper to consumers than they can be made with free goods and the extinction of our industries.

Resolved, That it is because of these most important considerations, and many more of equal weight which might be cited, that our organization, representing producers in these interests, humbly prays the Congress of the United States that naught be done to unsettle or endanger the success of these industries, and that the honorable Senators and Representatives in Congress from the Pacific Coast be individually informed of our action and earnestly besought to do all in their power to promote the views herein set forth.

Cabbage Lice.

EDITORS PRESS:—In a recent number of the PRESS Mr. Berwick asks for information about cabbage lice and the best methods to use for destroying them.

Here in Southern California but little cabbage is grown except by the Chinese market-gardens, and I have never known it to become very seriously infested with lice, doubtless owing to the attacks of internal parasites. Of these I have reared two different species, both of which are also known to attack it in the East. The most common of these is a slender-bodied ichneumon fly known as *Trionyx rapæ*; the other has a much thicker, almost spherical body, and is evidently the species described many years ago as *Allotria tritici* by Dr. Fitch, and more recently as *Allotria brassicae* by Mr. Ashmead of Florida, who also bred it from a cabbage louse.

The habits of these two parasites are interesting, although widely different. When the slender-bodied *Trionyx* wishes to deposit an egg in one of the lice she walks up to it, touches it several times with her antennæ, as if ascertaining whether or not he already contains a parasite, and after satisfying herself that he does not, she brings her abdomen beneath the rest of her body and thrusting it out in front of her, strikes the louse with her sharp, sting-like ovipositor, at the same time depositing an egg in the puncture thus made. All this requires but an instant of time, the motions of her abdomen being so rapid that the eye is scarcely able to follow it. The eggs are consigned alike to the smallest as well as to the largest lice, and the parasitized lice finally swell up to an unnatural size and become quite hard. When ready to escape, the adult *Trionyx* gnaws a circular hole through the back of the now dead louse.

The *Allotria* is much more sluggish in her movements; mounting upon the back of her victim, she leisurely pushes her ovipositor into his back and deposits an egg, the louse in the meantime moving uneasily about, as if desirous of getting rid of his unwelcome guest.

Among remedies, perhaps the most effective and easiest of application is a solution of tobacco soap and water, in the proportion of one pound of the soap to 10 or 12 gallons of water. This soap, which I have used with very good success against the cottony cushion scale, is manufactured by the Rose Manufacturing Co. of New York; it should first be dissolved in hot water and afterward diluted with cold water. Prof.

Riley's kerosene emulsion has also been used very successfully against these lice; it is made by dissolving half a pound of hard soap in one gallon of water and adding it very hot to two gallons of the best grade of kerosene oil, after which the mixture should be violently agitated by being forced through a spraying-pump back into the vessel again, continuing this until a thick, creamy emulsion is formed, which may be diluted with water to almost any extent. For cabbage lice, use one part of this emulsion to about 12 parts of water.

Los Angeles, Cal. D. W. COQUILLETT.

The Woolly Aphis.

EDITORS PRESS:—I wish to tell what I have learned about this pest. I am satisfied that the winged form flies into adjoining orchards; lays their eggs. When the young hatch and have grown to their full size, they leave their wool in their nest and commence crawling and continue so to do until their wings are full size. At this state they are brown. In five or six days they turn amber color, and then they are ready to deposit their eggs again. I think they deposit on twigs and roots as well as branches. I have seen them in February depositing their eggs where the limbs have been cut off. They work similar to the phylloxera on grapes.

They can be kept in check by spraying the trees with soap in May of each year. The way I do it is to use the "Petaluma Tree wash." I use one can of this soap, 45 pounds, to 250 gallons of water. Use it hot.

This wash is composed of caustic soda, concentrated lye, lime, sulphur, carbolic acid, tobacco and grease or oil of any kind. The sulphur is well dissolved so as not to leave a grain of it to be seen.

Some people think that they can make soap as well as a soapmaker. I for one prefer to have mine made by some one who can buy the material cheaper than I can, and one who has the conveniences and knowledge.

This wash forms a coating that covers the trees completely, and I will defy a bug of any kind to live after hatching out, or an egg laid on a tree coated with this wash to hatch, or live. It is true that they may be sheltered under the bark, so that they may live there. Besides its insecticide properties I consider that this wash is worth all it costs for a fertilizer. At any rate, it has proved a grand success with me.

As for the application of the wash, I will say that if water is handy to the orchard, three men can put on from eight to ten 60 gallon casks per day. It will go a long way in small trees, but large ones will take from two to three gallons per tree. If people would use this wash, or some other as good, and be thorough about it, there would be less fear of the bugs running us out of our orchards.

I would like to know why it is that I cannot see any beneficial results from lime or ashes put around the tree. I have some trees that I have put ashes round for five years and the fruit is no better than those adjoining that had nothing.

Petaluma, Cal. A. CADWELL.

Insects in Ventura County.

The following is the report from Ventura county to the State Board of Horticulture:

We have found so little to do in Ventura county the past year that we have almost fallen into desuetude. The county, so far as we know, is still free from the more injurious insects, having no white scale, red scale, San Jose scale nor codlin moth.

When the Ventura division of the S. P. railway was opened for travel, the train fruit-boy was found to be selling infected fruit, but upon the request to the railroad authorities that such danger to the county should be prevented, they at once kindly put a stop to it.

In a few instances during the past year oranges and lemons from Los Angeles, covered with the red scale, have been found offered for sale, but by action of the Commissioners they were returned or destroyed.

In one orchard the San Jose scale was found, but the owner made effective work by destroying the trees.

The fruit crop of the county has been a very large one this year. Many carloads of apricots were shipped out of the county for want of a canning establishment or more driers. There are few citrus orchards in the county, but the crop is larger than ever before and is looking well.

NATHAN W. BLANCHARD,
Sec. County Board of Hort. Com'rs.

THE coal famine in the Puget Sound district still continues. Only one company now sells to local customers, the others having orders to ship all that is mined to San Francisco. The people are, therefore, laying in stocks of cordwood and bark. Six dollars and fifty cents per ton is the price now asked in the local market, a figure never before reached.

THE San Bernardino Board of Trustees has accepted plans for a sewerage system for the entire city. The cost is nearly \$132,000. Waste land will be secured for a sewerage farm, in which the sewer system will empty, and the material be used as a fertilizer.

THE building for the Ramona Indian Girls' School at Santa Fe, N. M., commemorating Helen Hunt Jackson, will cost \$30,000.

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

When Women Vote.

When woman suffrage comes, no doubt 'Twill be a good deal talked about. But let us see what it will do, If 'tis approved, for me and you. And first, 'twill vote the "Rummies" down, And drive bad whisky out of town. Next, the tax-payers, each and all, Will vote the taxes, large or small. Once more—for I must needs be brief—'Twill be a very great relief On each election day to find Good order and fair play combined; Rudeness suppressed, profaneness checked, And "Roughs" restrained by self-respect; The day all used in lawful strife By everybody—and his wife.

—Rutland Herald.

Grange Installations.

Reports are coming in from various quarters of good times had at the installation of Grange officers for 1888.

Alhambra's officers were duly installed on the 7th by District Lecturer Loucks. Sister Lander, the Worthy Lecturer, though unable to be present, was reported on the hopeful way to recovery.

Eden and Temescal kept up their pleasant custom of having a joint installation, meeting at Haywards for that purpose on the 14th. Despite the bitter cold weather, a goodly number came from Oakland and four or five from Danville, while the members of Eden, especially the younger folk, were out in force, and entertained their guests right royally with Harvest Feast, music and literary exercises. W. P. M. Coulter was down from Santa Rosa to conduct the ceremonies, and also spoke on matters touching the Good of the Order, as did Bros. Baldwin, Renwick, Goodenough, Blackwood and Dewey. The occasion was greatly enjoyed by those who participated.

Franklin's old officers having been re-elected (excepting Sister Flaxman, the deceased Lecturer, whose place is as yet vacant), were installed on the 7th by Bro. C. A. Hull, Bro. H. W. Johnson assisting.

At Sacramento last Saturday the new officers of Pomona and Subordinate Granges were installed together, and after the ceremonies the banquet-hall was the scene of a fine spread provided by the sisters.

Sebastopol's installation took place on the 7th, Bro. E. W. Davis, W. O. S. G., officiating. Stockton's officers were duly inducted the same day by Bro. Elliott, assisted by Sister Cora Beecher.

Washington's installation also came off on the first Saturday of the new year, with enjoyable adjuncts, edible and audible.

Wheatland was forebanded in this pleasant work, which was publicly performed on the last day of '87 by W. P. M., Frank Kirshner, assisted by Bro. Anthony Huffaker.

The installation at Yuba City, Jan. 7th, was largely attended and marked by features of special interest. These have been touched upon by Bro. Flint and "W." in the pages of the *Patron*, from which most of the foregoing is condensed and to which we refer those desiring more extended information as to what the Order is doing in California, Oregon and other parts of the United States.

Installations to Come

Lodi—January 21.
Point of Timber—January 21.
Watsonville—January 21.
South Sutter—January 28.
Valley—January 28.

Postal Telegraphy.

The trumpet of the *Herald of Trade* gives no uncertain sound as to postal telegraphy. Hear it!

There is a growing demand for a postal telegraph—a system of telegraph lines owned and controlled by the Government. When the subject was first broached it met with decided opposition; but under discussion, more information was drawn out and a better understanding arrived at, and to-day it numbers with its advocates the ablest political economists of the country. They recognize the fact that this is the age of push, and that the country calls for cheaper and more rapid means of communication.

Again, the telegraph, as now conducted, is more in the interest of a limited few than of the many; in other words, there is a rank discrimination, greatly to the injury of the business community at large.

Aside from this, the very important and vital fact must not be lost sight of that the whole theory of the establishment and operation of the Postoffice Department has been that it should be an instrumentality for the enlightenment, as well as for the convenience of the general public. It is upon that theory that second-class matter (newspapers and periodicals) are transported any distance between the two oceans for the otherwise ridiculous price of one cent a pound. Intelligence is one of the great safeguards of a republican form of government,

and in order that intelligence may be disseminated generally and cheaply, the rates of postage have been reduced from time to time to the lowest possible points. It is in the line of this policy that the addition of the telegraph to the postal system is urged, and by none more earnestly than those who have given the subject deep thought and consideration.

Our country is growing too rapidly in population, wealth, and general trade, to allow what should be a branch of the General Government to be monopolized by a few and controlled by no other consideration than to make all the money possible out of the necessities of those compelled to give patronage.

Grange Elections.

EUREKA.—December 24.—J. C. Burns, M.; F. A. Duryea, O.; Mrs. H. F. Pillsbury, L.; J. O. Burns, S.; A. C. Pillsbury, A. S.; Mrs. Srite, C.; M. Srite, T.; R. S. Futhy, G. K.; Miss A. Futhy, Sec.; Miss D. Burns, P.; Miss L. Lewis, F.; Miss A. Burns, Ceres; Miss E. Hulbert, L. A. S.

FRANKLIN.—Wm. Johnston, M.; Lake Freeman, O.; W. A. Johnston, S.; P. B. Bradford, A. S.; Mrs. A. E. Freeman, C.; I. T. Freeman, T.; C. P. Freeman, Sec.; J. B. Bradford, G. K.; Mrs. W. A. Johnston, P.; Mrs. S. G. Bradford, F.; Mrs. E. S. Johnston, Ceres; Mrs. Annie Bradford, L. A. S.; Miss Matie Johnston, Org.

MERCED.—January 11.—W. E. Elliott, M.; M. D. Atwater, O.; H. J. Ostrander, L.; C. Healy, S.; J. A. Perry, A. S.; J. T. Lander, C.; Wm. Applegate, T.; Mrs. E. S. Elliott, Sec.; H. Halterman, G. K.; Mrs. J. A. Perry, Ceres; Mrs. J. T. Lander, P.; Mrs. M. Healy, F.; Mrs. L. A. Atwater, L. A. S.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

Suffrage and Tariff.

Merced Grange passed the following resolutions at a recent meeting:

Resolved, That Merced Grange most heartily approves of Senator Stanford's course in his effort to so amend the naturalization laws as to require a residence of 21 years to entitle any person to the right of suffrage.

Resolved, That Merced Grange is opposed to the reduction of the present tariff on wool, and that our Representatives in Congress be instructed to use all their influence to defeat any effort to lessen the duty on any grade of wool, also on raisins, wines, nuts, grapes and all kinds of semi-tropical fruits and hops.

WOMAN SUFFRAGE IN WASHINGTON TERRITORY.—An Associated Press dispatch from Olympia, 16th inst., says that a bill conferring the right of suffrage on the women of Washington Territory passed the Lower House of the Legislature that afternoon by a vote of 14 to 9. It passed the Upper House last week by a vote of 9 to 3. Petitions are pouring in from all quarters asking Gov. Semple to veto the bill. Those opposed to it think he will return the bill without his approval. Friends of the measure say it will pass over his veto. It is claimed by the anti-suffragists that the measure was carried through by a deal over the removal of the capital. Eastern Washington is pulling hard to have the capital removed to some point east of the Cascade mountains, and it is charged that members from the Eastern section have voted for woman suffrage under a promise of a return of the favor in the way of votes for the relocation of the capital. The Legislature, three years ago, gave women the right to vote, but the Supreme Court a year ago declared it unconstitutional, and has recently reaffirmed that decision. The present bill was framed so as to stand the test in the courts. Among the changes is a provision that women shall not be required to serve as jurors.

THE SALOON MUST GO.—The St. Louis *Globe-Democrat* is far from a temperance paper, but it says: "There are to-day 200,000 saloons in the United States, which is equivalent to saying that we have 200,000 places of business which are so many stumbling-blocks in the way of our national safety and welfare. After all possible arguments have been made as to the right of these institutions to exist, the fact remains that they are in no sense beneficial to the country, they are a positive and continuous detriment. They may be excused on one ground or another, but they cannot be justified. No man who cares anything for his reputation will undertake to defend the saloon as an agency of civilization, or to show that the liquor traffic is in any way conducive to material or moral progress. The enlightened judgment of mankind condemns the business as a business, and no amount of sophistry can hide the truth that if all the saloons on the planet should be suppressed it would be a great gain for human comfort and happiness."

THE young ladies of Danville Grange will give a leap-year social at the hall Feb. 23d. All gentlemen and their escorts are cordially invited. Should any young gentleman be so unfortunate as to have no best girl he may come alone, and trust the floor managers for a good time.—*Martinez Item*.

TEMESCAL GRANGE has the tariff up for discussion to-day, 21st. It is hoped there will be a large attendance.

EVEN Mexico for some distance beyond the Rio Grande, suffered some detriment to its cattle herds through the blizzard just before Christmas.

Smooth City Frauds.

It is no grateful task to undertake to make people suspicious of their fellow-men. We would rather teach mankind to trust one another, and it is with pain that we every now and then recognize the duty of teaching honest, confiding persons to question the word and motives of others who seem fair, honorable and trustworthy. But there are sleek sharpers about with pleasant, winning ways who are but cruel and deceitful beasts of prey, as cunning and as heartless as a coyote, who live only by outwitting and despoiling the guileless and trusting.

A few instances, drawn from San Francisco papers of 1888, will illustrate our meaning, and, we hope, convey sufficient warning.

Somewhat over a twelvemonth since, an industrious machinist, who had worked nine years for one of the large shoe-manufacturing firms in this city, and laid up nearly \$2000, was forced by failing health to give up his position. After a trip to the islands, which did him little good, he came home and began to look about for some business in which, with his small capital and broken strength, he might still make a comfortable living for himself and family.

He soon saw advertised for sale in a morning paper a half-interest in a well-established insolvent factory, which purported to be doing a good profitable business. Calling at the address named, he was most politely treated by the gentlemanly agent, and presently introduced to the plausible Neustadt, who explained that he was reluctantly compelled to withdraw from the prosperous firm of Neustadt & Hamberg, in order to give his whole attention to a growing real-estate and brokerage business in which also he was interested. The victim was taken to a bogus factory, where a dozen girls, directed by an "experienced and trusty" foreman, were busy running machines, became convinced that it was just the chance he was in search of, was talked out of all doubts and hesitation by the adroit, oily-tongued swindlers, and presently, without consulting his more prudent wife, closed the pretended bargain and paid down \$1200.

It is too long a story for us to detail, how he was led to make over the rest of his money to the specious robbers, and how at last his eyes were opened to the killing fact that he had been choused out of all his savings. In his already weakened state the loss nearly drove him frantic, and, impoverished and disheartened, he soon succumbed to the disease which was preying on him, leaving his widow and four orphan children destitute.

Another sad case is that of an old Oregon farmer, who owned a ranch in Jackson county worth \$8000, representing the toil and thrift of 20 years. He came down to San Francisco to look around, took the bait of a half-interest in a sham real-estate office, and was then fooled into giving not only his spare cash but also a deed to his home-ranch in exchange for a worthless deed for a piece of real estate on Fifth and Brannan streets, to which the thieves who pretended to execute the instrument had no title whatever.

The foolish old man cannot recover his farm, as the swindlers disposed of it in a hurry to a person who bought and paid for it in good faith, and is left poor and almost heart-broken.

That Hamberg, Neustadt and Pilcher, the partners in the fraud, are arrested and imprisoned does not make good the losses to their victims, but we hope the woful experiences of Tom Trenell, the S. F. machinist, and F. M. Parker, the Oregon rancher (among many others), will put other honest men upon their guard against falling into the teeth of such human hyenas.

ILLEGAL FENCING.—In the U. S. Circuit Court at Denver, on the 9th inst., Judge Brewer rendered a decision in favor of the Government in the case of the U. S. vs. the Cleveland Cattle Co., in which suit was brought to enjoin the company from fencing a tract containing nearly 4,000,000 acres lying in the southeastern part of the State. This case has been in the courts for a number of years. The final argument was made before Judge Brewer in St. Louis last September. The case will probably be carried to the U. S. Supreme Court.

RAILROAD AND CATTLEMEN.—Charles B. Hudson shipped 378 steers from Bennington, Kas., with orders to have them in the Kansas City stockyards next day in time for the markets. The Union Pacific railroad failed to do this, and the cattle were sold next day, when the market was dull, at a loss of \$756. Hudson sued and recovered the money, and on the 7th inst., in the U. S. Circuit Court at Kansas City, Judge Kregel refused to grant a motion for a new trial.

COLD STORAGE AT SAN DIEGO.—Articles of incorporation of the Occidental and Refrigerating Company of San Diego have been filed. The manufacture and sale of ice, the refrigerating of all articles or products requiring cold storage and dealing in such articles are among the objects of its organization. The capital stock is \$100,000, and among the incorporators are E. C. Reed, A. G. Nason, A. Hart, J. C. Kitton and H. A. Howard.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

PLANTING ALMONDS.—Livermore Herald, Jan. 12: The almond is the coming tree in Livermore valley; 80 acres were planted last season, and upward of 400 acres will be put out this winter—all to A. T. Hatch's varieties, the "I. X. L.," "Nonpareil," and "No Plus Ultra." The fact that Mr. Hatch himself is our leading planter confirms us in the belief that almond raising is to be one of the principal industries of Livermore valley. The tree bears at an early age, is a thrifty grower, and the varieties named always produce a good crop of large, white, soft-shelled nuts.

Contra Costa.

ARBOR SOCIETY.—Antioch Ledger, Jan. 14: A meeting of the Arbor Society was held at Union hall Tuesday afternoon, Mrs. E. L. Wemple presiding. The attendance was large and the members were evidently there with the intention of transacting business. The report of the committee on the variety of trees suitable to the climate was accepted and the recommendation made acted upon. Of the three varieties of trees selected by the committee (viz., walnut, mulberry, and pepper) the society evidently favored the mulberry, as that tree was decided upon when the vote was taken. Land owners on the east side of the road, who had been interviewed, had expressed themselves as perfectly willing to donate a strip of land eight feet in width to the purpose of the society. Two committees were appointed—Mrs. J. P. Abbott as chairman of a committee to further the object of the organization, with the privilege of selecting such assistants as she required, and a committee to investigate and report on the varieties of mulberry and that variety best adapted to the purpose; also to learn if the trees sent out by the last State Board of Sericulture cannot be obtained. To Mrs. Willis and Mrs. Carmau this duty was assigned.

Lassen.

WHAT THE COUNTY IS GOOD FOR.—Long Valley Cor. Record-Union: Lassen having been tucked away off by itself, remote from railroads and waterways, is comparatively unknown to the outside world. Of the harder fruits, such as apples, peaches, pears, blackberries, raspberries, strawberries and plums, she is prolific, and challenges not only any other part of California, but the world at large to produce better. Her cabbages, turnips, onions, beets, parsnips, carrots, potatoes, beans, peas, corn, for quantity and quality she will "size up" with any portion of this broad domain, acre for acre. Alfalfa, timothy, blue-joint, red-top or her native grasses are nutritious and abundant. Her wool commands the highest market rates; her beef and mutton are sought after by every slick butcher in the Bay City, while Sacramento is always bidding for a band of her fat steers. The soil will, if properly cultivated, produce from 30 to 40 bushels of wheat per acre, and a cash market is always found at Reno at from \$1.50 to \$2 per cental. Lassen is not ashamed to show her record on the production of wheat, barley, oats or rye with any of you. There are thousands of acres awaiting the grub-hoe that can be had for the taking. Industry and brains are all that are required to make of them beautiful, thrifty homes, and if you have among your influx of home-seekers any considerable number of good, honest, hard working, law-abiding American citizens without money enough to buy an orange grove, refer them to Lassen, where, with brave hearts, a pair of willing hands, a grub-hoe, plow and span of Norman horses they can make a home that any American could point to with pride. Improved lands can be bought for from \$10 to \$50 per acre. The Nevada & California railroad running north from Reno gives us the world for a market.

Los Angeles.

WALNUTS PAYING.—Santa Ana Blade: H. K. Snow has a walnut orchard at Tustin, 330x336 feet in dimensions—less than 2½ acres of land—and he has sold \$856 worth of nuts this year and has saved nearly 200 pounds for family use. This nets him over \$380 per acre, and the expense of cultivating and working of nuts will not exceed \$100 for the whole tract. This grove brings in an income of \$300 per acre clear of all expenses, and, mind you, most of the trees were set out nine years ago last spring.

Marin.

VACCINE FARM.—Journal, Jan. 12: San Rafael has a vaccine farm, said to be the only one west of the Mississippi, and the present epidemic or scare of smallpox has caused a run on its product and brought it into fame. The proprietors are Dr. Dubois and J. G. Sheppard. Some 40 or 50 calves are now at the farm, and more are being added. Some are bought and some are rented or loaned—in fact, anything to get calves except stealing. The process of producing and obtaining the virus is peculiar, and those who know it keep it secret. Dr. Dubois has been working at it for years, and is a proficient. His labors are now being rewarded, as the demand for points is greater than he can meet, and his produce is also a great boon to the coast, as hitherto we were dependent on the East, and only a small proportion of the points sold here were effective.

San Bernardino.

ONE ORANGE ORCHARD.—Citrograph: Wm. Curtis, who has lived at Old San Bernardino

for many years, is the owner of one of the finest orange groves in this section. He estimates his crop this year at about three boxes to the tree, taking old and young, big and little. His oldest trees—18 years—are good for an average of 12 boxes each. His trees are 22 feet apart, which gives 90 to the acre. If his orchard would all do as well as the oldest ones are doing, he would get 1080 boxes to the acre. The selling price is \$2 per box; \$2160 per acre is a pretty good income. Cut it down one-half and it would not take many acres to support a family. Yet what Mr. Curtis has done any one else can do, given the soil, climate, water, attention and time. So far from the orange business of California being overdone, it looks as if orange planting was just commencing.

ORCHARD-ROBBERING TOURISTS.—*Riverside Press*, Jan. 14: Complaints of thieving in orange groves come in thick and fast. A gentleman and two ladies were caught by the owner of an orchard filling a wagon and given a lesson they will not be apt to forget this trip. The thieves all claim that they get permission from the hotel proprietors and liverymen and drivers of carriages to help themselves to everything in sight. It would be a good idea, in addition to the mounted police force, for the growers to place large placards in all hotels and livery-stables warning tourists of the penalties attached to a violation of our laws in taking fruit without permission. The penalty is severe and should be enforced.

FROST BELL AND FIRES.—*Valley Echo*, Jan. 12: Thos. Bakewell and sons turned out last Saturday night at one o'clock, when the danger-bell rang, and lit fires in their orchard in Arlington. They had the signal set at 28°. The temperature was raised by the "smudge" at least three degrees. The smoke hung thick through the grove. The signal is made by a peculiarly constructed indicator—a bar of steel and gutta percha, which changes its length with change of temperature and starts an alarm.

San Diego.

A PREHISTORIC DITCH.—*Press and Horticulturist*: H. J. Stevenson, surveyor for the Palm Valley Water Co., came to Riverside on Tuesday, to report progress and get instructions for further work. He reports making a singular discovery while surveying the canal line running south and easterly from the old Agua Caliente springs. He had run one line on a grade of four feet to the mile, from the present terminus of the stone canal to the new townsite, but in crossing a depression near the mountains, it became necessary to build a quarter of a mile of flume. In order to obviate this expense he was instructed to make a new survey on a grade of eight feet to the mile, so as to strike the townsite at a lower level, and cross the depression without a flume. On this last survey he struck an old canal that must have been used centuries ago, for large trees had grown up in the very bottom of the canal, and the indications were that when used it carried a very large volume of water. The most singular thing about it was that the surveyors found it just where they wanted to construct the new canal, and on following it up for about a mile, it was found to have a regular grade of about eight feet to the mile.

A FAIR TO BE HELD.—*National City Record*, Jan. 12: The San Diego County Horticultural Society met at Elsinore last week and decided to hold a fair at San Diego some time during the fall, the date being left to a subsequent meeting. All persons interested in the fair and in advancing the interest of the county are invited to place themselves in communication with G. H. Bower, the secretary at El Cajon.

HEROIC TREATMENT FOR CODLIN MOTH.—Under date of December 18th Chester Gunn of Julian, *Quarantine Guardian*, wrote to G. W. Parnell, secretary of the County Horticultural Society, as follows: I have to report that yesterday a man named J. W. Bailey, from San Bernardino, brought to Julian four barrels of apples which were badly infected with codlin moth. I examined his fruit soon after he got here. I then notified him to sell no more till I could come home and find out what to do. I returned with a copy of Ordinance No. 17, which I gave him to read. I then gave him his choice between giving me the fruit and barrels to destroy or being prosecuted. He gave me the fruit, and we had a big bonfire in the street. All the apples which had been sold in Julian were put in the fire, except what had been eaten, and we hope the hogs found all of the cores which were thrown out. Mr. Bailey sold one barrel between here and San Bernardino, so he has probably scattered the seed along the road.

San Joaquin.

STOCKTON ORANGES.—*Independent*, Jan. 10: Yesterday morning Louis Hansel plucked two fine oranges from a tree in his yard. The fruit is not very large, but it has an excellent flavor. Mr. Hansel's trees are heavily laden with oranges and they do not appear to have suffered any from the heavy frosts.

SHIPMENT OF WHEAT.—*Independent*, Jan. 13: Yesterday the firm of Smith & Wright, grain dealers, shipped 815 tons of wheat by the barge Atlas, to San Francisco. This is the first shipment of wheat by barge from Stockton since last September.

CABBAGE FOR TEXAS.—Several carloads of cabbages grown on Roberts island have been shipped to Texas during the past few days. The supply of cabbages raised on the island

this year far exceeds the demand required for home consumption.

Santa Clara.

RAISINS.—*San Jose Herald*: John Phelps, an old resident of San Jose, reports very encouraging prospects in the raisin business. His six-year-old vineyard averaged a ton of fine raisins per acre, and when it is in full bearing he hopes to get double that amount. If, as Mr. Phelps says, raisins can be made for 60 cents a box and sold at \$1.25, there is money in the business.

Santa Cruz.

EXPERIMENTING WITH FLAX.—*Pajaronian*, Jan. 12: Geo. A. Trafton has received 120 pounds of flaxseed from Mr. Hatfield of the Menlo Park Flax-Mill, and he will distribute the same among farmers who are desirous of experimenting with the cultivation of flax. Mr. Hatfield visited this valley last October with a view of moving his mill to this town, but he has concluded to defer the removal until the result of the experiments with the trial seed is known.

Sonoma.

AGRICULTURAL PARK.—*Santa Rosa Republican*, Jan. 12: There was a meeting of the Agricultural Park Association Wednesday, at which the following officers were elected: J. N. Bailhache, Pres.; S. I. Allen, V. P.; G. A. Tupper, Sec.; E. W. Davis, Treas. According to the reports of the secretary and treasurer the affairs of the association are in a more prosperous condition than ever before. The entire indebtedness has been reduced to \$600. Two years ago it was a little less than \$6000. The present Board of Directors was re-elected.

HYBRID DEPREDATORS.—I. Satori of Russian River brought to the Board of Supervisors Thursday the stuffed skin of a peculiar animal which was killed while committing depredations upon a band of sheep. It is somewhat larger than a coyote, with ears shaped like a coyote's, but longer, of a dark brown color mottled with white and gray. Its feet and legs are exactly like a dog's, and those who are acquainted with its habits and know something of its origin say that it is the offspring of coyotes and large wolf-dogs breeding. It was brought before the Board to determine whether the same bounty for them as for coyotes will be allowed. There was a band of six after the sheep when this one was killed and they are committing great depredations on the flocks of sheep and herds of calves. The board decided that no bounty should be allowed upon the hybrid animal. The dog features are more prominent than those of the coyote, and a bad precedent would be established if the coyote bounty of \$10 was laid upon them.

Tulare.

HERDING THE HARES.—*Visalia Times*, Jan. 12: The people residing between Tule river and Deer creek assembled at a point west of the lone sycamore, on Saturday last, for a rabbit-drive, a corral and fence having been erected there for use on such occasions. About 150 men and boys and 100 ladies were present. It was the most successful drive yet made in this county, 1800 rabbits having been corralled and killed. About 4000 rabbits were driven to the corral, but through a misunderstanding of the ways of entrance, they were driven up on the wrong side and were thus allowed to escape. Another drive will take place next Saturday over the same ground, to which everybody is invited. The corral is 40 feet square and has two wings extending three-quarters of a mile on each side.

TULARE PORK.—An idea of the hog product of this county may be formed when it is stated that one man, during the year 1887, purchased and shipped 37,000 head, for which he disbursed the sum of \$240,000. This is the business of one dealer, but there are eight or ten others engaged in the business of buying and shipping hogs. Probably there is \$1,000,000 paid out for hogs in this county every year.

STOCK SUFFERING.—The continued cold weather is having a deadly effect on the cattle feeding on the plains, as well as those in the hills. The snow that fell low down on the foothills, to a depth sufficient to cover the grass, has not thawed any since it fell, and consequently the cattle there have to browse on the shrubbery. Old cattle in that vicinity are dying in great numbers, as they were generally in poor condition previous to the snowfall, owing to the scarcity of dry feed. Probably one-half of the stock in the mountains will die. John Stokes has something over 600 head of cattle on the Kelsey ranch near Goshen, and it is stated that six or seven head die every day, and he has a force of men engaged in skinning them and saving the tallow. Those persons fortunate enough to own alfalfa hay are feeding liberally, and will lose none of their stock, though most of the cattle seen present a pinched appearance.

Yolo.

FROM ONE VINEYARD.—*Woodland Democrat*, Jan. 12: The foreman of J. G. Briggs' Glorieta vineyard says that 30 carloads of raisins have already been shipped from their place, and 30 more will be, before the season is over. The vineyard consists of three quarter-sections.

LICORICE.—Mr. B. B. Franklin, who lives about eight miles from Woodland, toward Madison, was in town to-day and showed us a sample root of licorice plant he has growing upon his place, which was five or six feet long, and green and fresh.

SPANISH MERINO SHEEP.—*Woodland Mail*: Frank Bullard has deposited with the Board of Trade a specimen fleece from his clip of this

year, to be placed with Yolo's collection at the rooms of the State Board in S. F. This single fleece fairly shows the quality Mr. Bullard clips from his celebrated band of over 1000 Spanish merino sheep. It weighs over 25 pounds, and in texture is as soft, fine and firm as silk. The growth measures fully five inches and is remarkably clean and snowy. Mr. Bullard finds a ready sale for all his young bucks at prices ranging from \$20 to \$100, the demand for them coming from all parts of the State and the Territories. He has given special attention to breeding the Spanish merino for the past 10 years. He does not breed in and in, but is importing new blood from the best Eastern and foreign breeders. Every sheep on his place is registered upon his books, and is identified by patent ear-tags which he uses with success. Thus he can trace the pedigree of every sheep on the place, and so is enabled to breed all his stock intelligently. Year after year Mr. Bullard captures the State Fair prize for the best exhibit of this class of wool. He cultivates about 100 acres of alfalfa irrigated from Moore's ditch, and by this means keeps his sheep in the finest condition. His clip this year will weigh 16,000 pounds, which will bring him \$2000.

NEVADA.

GLANDERS.—*Reno Gazette*, Jan. 9: Glanders has broken out in Lyon county, near Dayton, during the past few weeks, and over 20 horses have been taken with it. The disease was brought over here from California by a man who sold some infected stage horses to a rancher near Dayton. Thirteen horses have been shot and more will have to go. Some infected horses have been fed recently in one of the hay-yards of this city. The commissioners of this county should take immediate action or there will be a run of glanders in this county. Yesterday J. Nichol, the thoroughbred horseman of Mason valley, came before the Board of Commissioners and stated that the disease was on at least ten ranches of Mason valley, and it would become necessary for all counties adjoining to take immediate steps.

CONDITION OF CATTLE.—While the winter has been unusually severe in the western part of the State, stockmen do not anticipate much loss, although advices agree that many old cows have succumbed. From stockmen, who have lately come in from the East, the *Gazette* also learns that snow lies deep on the ranges and in the valleys; and should the storm continue, and a freeze-up result, a great many cattle will go under. The loss will be heavier on the smaller stockmen who are unable to prepare for winter feeding. In Squaw, Independence, Ruby, Clover and several other valleys, which are occupied by wealthy cattlemen, an ample supply of hay has been stacked, and it will have to be an unusually severe winter to cause loss.

The American Horticulturists.

Partial List of Excursionists.

As we go to press on Wednesday evening, the excursion train carrying the members of the American Horticultural Society is approaching San Francisco. They reached the borders of California on Monday, and were met on the desert by a delegation from the Riverside Board of Trade with greetings emphasized by gifts of oranges, raisins and other Riverside products. They arrived in Los Angeles on Tuesday, and on Wednesday started northward, to arrive San Francisco on Thursday afternoon. The meeting will open according to announcement in San Jose on Tuesday, Jan. 24th.

Just before leaving his home in Greencastle, Indiana, Prof. W. H. Ragan mailed us a list of those whom he had booked for the excursion up to that time, stating, however, that many others might afterward come aboard at points further west. Therefore the list we give below is not complete, but contains a large number of those who may be seen at San Jose and Riverside. Our design in publishing the list as early as possible is to give our readers an opportunity to learn if personal friends are included, meeting whom would be an additional inducement for them to attend the two meetings of the society in this State. Next week we shall try to complete the list so that it may serve as a full index to Eastern attendance at the Riverside meeting. Of course there will be hundreds of other Eastern people at both meetings and fairs, but we probably can note only those who come under the auspices of the visiting society.

Twilight in the Country.

[Written for the RURAL PRESS by ANA E. TAYLOR.]

The ruby sunset fades away,
And leaves a tinted sky;
The robins cease their tuneful lay,
As toward the south they fly.

The feathery clouds float idly past,
All flecked with red and gold;
Their radiance over all is cast,
Most beautiful to behold.

The meadow-lark while soaring high,
Trills forth his sweet good-night;
And answered by his mate close by,
They take their homeward flight.

The mavis whistles blithe and gay
To welcome evening's hours;
The cow-bells tinkle far away
Amid the fragrant flowers.

The canyon sloping toward the vale
Is filled with rosy light;
The best and rarest art would fail
To paint the shades so bright.

Beside the pearly, rippling stream,
The tangled blossoms grow;
And dainty silvery fern leaves gleam
When gentle breezes blow.

The cypress shadows fall to meet
The lovely changing shades;
And all the air is still and sweet,
Among the quiet glades.

Far in the woods the swallows dart,
And skim the shining stream;
Where creamy lilies love to part
The waters all agleam.

The restful hush that evening brings
Has fallen everywhere;
The bat flits past on silent wings,
In twilight's dewy air.

With loving tenderness the night
All sunset shades enfold;
And far above with netted light
Shines glistening stars of gold.

In pearly skies the pale young moon
Sheds forth its feeble light;
And scattering rays in deepest gloom
Bids all a sweet good-night.

Miss Rugget's Narrative.

Law! haint you never heard tell how Mis Peasley an' Mis Briggs come to be so dead sot agin each other? That beats me! I s'posed everybody in this place knowed all about it. 'Pears to me that folks in small towns don't seem to spend their time to no better advantage than a-mindin' of other folk's business, jest as if they didn't have none of their own to attend to. Wal, it do beat all creation the way some folks will run to get the last piece o' tattlin' thar is goin'. 'Twa'n't never so with me. I never could abide folks that gossips. An' as to what my neighbors is a-doin' or aint a-doin' 'a' long's they let me alone I'll let 'em mind their own business an' I'll tend to mine—say! d'ye hear that air pianny a-goin'? That's Mis Kingsley's pianny, an' that's one of her young ladies as is a-visitin' of her which is a-playin' of that pianny!

An' d'ye see Mis Fair's window-blinds has got their slats turned so's she can watch out through 'em? Land o' Goshen! Won't thar be some fun a-goin' on now? Ye see Mis Fair's powerful jealous of them two gals which is a-visitin' of Mis Kingsley, one of which is a-playin' of Mis Kingsley's pianny this blessed minute. Mr. Fair is one of them men that fond of music that there aint no gettin' round it. An' Mis Fair she don't care nothin' at all about it, an' never touches her pianny, so, bein's Mis Kingsley an' Mr. Fair's cousins onct off, why he will go over an' hear them gals play. One, she sings some, an' t'other jest plays, but law! she do scramble over them keys to beat all out doors. An' they're both good-lookin' inter the bargain, them gals is. I don't say but what Mis Kingsley is a-doin' more'n the law allows havin' of Mr. Fair there so much, an' them gals dressed up like all possessed, an' ready an' willin' to wall their eyes at any man, single or double, which they certainly do. But you jest oughter be here right along an' watch them slats of Mis Fair's fly open ker-slap whenever she hears that pianny a-tunin' up. An' they do say that patience is allers rewarded, he! he! an' if she sets there long enough she's bound to see Mr. Fair a-walkin' over, an' jest a-goin' right in, jest as if he was to home, an' then that pianny begins to thump. Sometimes I've seen Mis Fair that mad that she couldn't stand it no longer, an' jest come a-flouncin' out of her house an' go a-bouncin' inter Mis Kingsley's. Onct I went in arter her jest to see what she was a goin' to do. But law! she didn't do nothin'—she jest sot there an' coughed! But

maybe ye think her face wa'n't red! She's middlin' sandy complected, anyhow, one of them peppery kind with more temper than anythin' else, an' she was as red as a lobster from her collar up.

But let me see. What was it I started in to tell ye? Oh, yes! 'bout Mis Peasley'n' Mis Briggs. Ye see Mis Peasley had one of her apells—an' I s'pose nobody knows nothin' 'bout the way that air woman must have suffered in them spells of her'n—an' Brother Peasley he allers 'lowed she'd go off in one of 'em. There was some as did say, an' make no secret on't, that he'd a ben mighty glad to have seen her went. I aint nowise s'prised myself if that's so, fer Mis Peasley was twenty years older'n Mr. Peasley, an' when he sot out here to take the Zion church there was them among the elders as said they shouldn't never have hired him if they'd a-known Mis Peasley was that old an' peenky she couldn't be looked to far to help in the societies an' sich. Wal, as I was a-goin' to say, Mis Briggs was a-takin' care of Mis Peasley through this here spell I'm speakin' of; Brother Peasley he used to come in an'—there! what'd I tell ye! There goes Mr. Fair after that pianny music like a fish after the bait. My! but aint Mis Fair mad, now? You jest watch them slats!

Wal, as I was sayin', Brother Peasley used to come in an' look at her, an' fetch a big sigh, an' shake his head an' go away agin. An' Mis Briggs—she was a war widder—she'd shake her head an' sigh, too, an' between 'em both they kept the air a-movin' in that air room, now, I ken tell ye. Wal, one night Mis Peasley seemed to be lower'n usual, an' she jest lay there as if she was purty near gone under, 'n' bimeby in comes Brother Peasley, an' he heaves a big sigh, an' shakes his head, an' Mis Briggs she heaves another, an' wags her head drefful solemn-like. Mis Peasley she didn't seem to be conscious nor nothin'.

Mr. Peasley he heaved another sigh an' sot down an' looked fust at Mis Peasley 'n' then at Mis Briggs. Mis Briggs was a handsome woman allers; one of your fat and jolly kind everywhere but in a sick-room. There she was as fat as ever, but her face'd be longer'n yer arm allers.

"She's a-failin' purty fast, Sister Briggs," says Mr. Peasley.

"Yes, Brother Peasley, she do seem to be that low since sundown that the dear soul aint got much life left in her."

"Jes so, jes so," sez Mr. Peasley, an' I'll warrant ye he didn't feel near so down in the mouth as he tried to look.

"She never's been so low as this before," sez he, an' fetched another powerful sigh. Mis Briggs she heaved one too, but bein's she'd never been with Mis Peasley in any of her spells before she couldn't say no more.

"I shouldn't be surprised if she didn't last until mornin'" sez Brother Peasley, a-lookin' kinder longin'-like at Mis Briggs; "she's worse than I ever knowed her to be."

Mis Briggs didn't say nothin'.

"The hand of the Lord is laid heavy upon me," sez he purty soon. "Did you ever know anybody so low as she is to git up, Mis Briggs?"

"No, Brother Peasley, I never seen anybody so low as she is an' live," sez Mis Briggs, "but ye can't most allers tell; sometimes them as seems the worst off'll rally wonderful."

"Yes, I s'pose that is the way with some folks," sez he, "but it don't seem as if Arrerbeller could ever survive this spell." Ye see he was bound an' possessed to think so 'cause he didn't want her to.

They didn't say nothin' no more fer some time, but jest sot there a-heavin' of big sighs, an' Mis Briggs a-fannin' of Mis Peasley. Bimeby he sez, sez he:

"It's purty hard on a man to be left alone in this world."

Mis Briggs didn't say nothin'. Maybe she thought he'd better not count his chickens 'fore they was hatched.

"I s'pose," sez he, "it's harder on a man than it is on a woman."

"They do say sich is the case, Brother Peasley, but it's hard fur a woman, too."

"Jest so," sez he, an' they both fetched long breaths, "you've ben a widder woman an' knows what it is to be left alone, dear sister. You must get powerful lonesome sometimes."

Mis Briggs smiled kinder pensive-like, an' jest then they both seen Mis Peasley sorter straighten out an' fetch a long breath too.

Mis Briggs held up her finger solemn-like an' sez:

"She's a-goin' now."

Brother Peasley he t'wont flopped ont'er his knees by the bedside an' somehow nuther ketched holt Mis Briggs's hand instead of Mis Peasley's.

"Oh, dear sister," sez he, "help me to bear this heavy load; Arrerbeller is a goin'—"

An' jest then what d'ye s'pose happened? Wal, Miss Peasley she sot right up in bed, an' she sez, sez she:

"No, Arrerbeller aint a-goin'," sez she, "but I ken tell ye who is a-goin', an' that's Marier Ann Briggs, right out of this house, now, t'wont, without no further delay. Git right out o' this room, you hussy," sez she, powerful strong fur a dead woman. "Git right along an' don't stay fer nothin'. John Jacob Peasley, you leave go of her hand, an' don't you go a-holdin' of any widder woman's hand, widder er no widder, never no more, fer Arrerbeller aint dead yet." (Ye see they was both struck so dumb they didn't have sense enough to let go of hands.) "An' next time don't you

neither of ye marry a widder nor yet a widderer until his wife is dead an' buried, even though her husband is an' may be." With that Mis Briggs got up an' went right out, an' Mis Peasley sez to Mr. Peasley, "John Jacob," sez she, "give me that medicine an' keep this here fan a-goin'," an' John Jacob done it, you'd better jest believe. Since which time Mis Peasley an' Mis Briggs has ben dead set agin each other, fust an' last, fore and aft, hithermost an' hindermot, an' Mis Peasley's mighty spry fer her years yet—if there aint Mis Fair a-bouncin' over to Mis Kingsley's this blessed minute! An' ther she'll set an' cough as red as a turkey-cock until he's through with one kind o' music an' ready to catch another.—Marion Manville.

Punishing a Grandfather.

Down on the Cape in a time now well gone by, Benjamin C—— was a prominent man, wealthy, and foremost in a good many enterprises. Old Mr. C—— was thrifty, like most of the Cape people, with a high regard for the almighty dollar. He had a lively, freckle-faced, athletic grandson, as agile as a squirrel, who was named for him Benjamin C. D——, since a man of a good deal of prominence on his own account, and who lived with him. The old gentleman's barn, as a good many other old places have done, became terribly infested with rats. The old gentleman was so greatly annoyed that he offered the boy 50 cents apiece for all the rats he would catch and show to him alive on the premises—a precaution to prevent sharp practice on the part of the youth. After two or three days little Benjamin came to old Benjamin and asked him to step out into the barn. He did so, and was conducted to a big diased molasses barrel that stood in the middle of the barn floor, and asked to look in it. And there, on the bottom, was a wriggling mass of rats three or four feet deep, struggling vainly to get out of the barrel.

"My gorry!" exclaimed the old gentleman. "Where did you get all the rats?"

"Caught 'em here in the old barn, gran'sir."

"How many be they?"

"Eighty. That's just forty dollars, gran'sir."

"Forty dollars! Why, I aint goin' to pay you all that money."

"Aint you? Didn't you agree to, gran'sir?"

"Well, yes, but I hadn't no idee when I did that you'd catch such a tarnation lot."

The boy looked up. There was a rope dangling down from the beam above that was used to help in climbing up the hay-loft. Benny pulled himself up hand over hand on this rope until he hung suspended over the barrel.

"Aint you goin' to give me that forty dollars you agreed to, gran'sir?" said the boy.

"Never!" said the old man, looking over again into the barrel with its squirming mass of rats.

"Well, then, here goes!" said the boy.

With a lively kick of his foot he upset the barrel in the direction of his grandfather. The multitude of rats poured out around the old man's feet. He leaped wildly up and down in terror, and sprang through the mass to a ladder that stood near. Then he ran up the ladder with an agility that he had not equaled for 50 years. And the rats resumed possession of the premises.—Ex.

The Glorious Climate of Minnesota.

And this is the heartless and irreverent way in which the Chicago Tribune discourses about it:

"Yes," remarked the St. Paul man to a friend from Chicago as he stood arrayed in his blanket suit and adjusted a couple of buckskin chest-protectors; "yes, there is something about the air in this northwestern climate which causes a person not to notice the cold. Its extreme dryness," he continued, as he drew on a couple of extra woolen socks, a pair of Scandinavian sheepskin boots and some Alaska overshoes, "its extreme dryness makes a degree of cold, reckoned by the mercury, which would be unbearable in other latitudes, simply exhilarating here. I have suffered more with the cold in Michigan, for instance," he added, as he drew on a pair of goatskin leggings, adjusted a double fur cap and tied on some Esquimaux ear-muffs, "in Michigan or Illinois, we will say, with the thermometer at zero or above, than I have here with it at from 45 to 55 below. The dryness of our winter is certainly remarkable," he went on as he wound a couple of rods of red woolen scarf about his neck, wrapped a dozen newspapers about his body, drew on a fall-cloth overcoat, a winter-cloth overcoat, a light buffalo-skin overcoat, and a heavy polar bear-skin overcoat; "no, if you have never enjoyed our glorious Minnesota winter climate and its dry atmosphere, its bright sunshine and invigorating ozone, you would scarcely believe some things I could tell you about it. The air is so dry," he continued, as he adjusted his leather nose protector, drew on his reindeer in mittens, and carefully closed one eye-hole in the seal-skin mask he drew down from his cap—"it is so dry that actually it seems next to impossible to feel the cold at all. We can scarcely realize in the spring that we have had winter, owing to the extreme dryness of the atmosphere. By the way," he went on, turning to his wife, "just bring me a couple of blankets and those bedquilts to throw over my shoulders,

and hand me that muff with the soap-stone in it, and now I'll take a pull at this jug of brandy and whale-oil, and then if you'll have the girl bring my snowshoes and ice-berg scaling stick, I'll step over and see them pry the workmen off the top of the ice-palace who were frozen on yesterday. I tell you we wouldn't be going on this way 500 miles further south, where the air is damp and chilly. Nothing but our dry air makes it possible."

Abuse of the Toothpick.

The toothpick, when used with discretion and at proper times and in proper places, is an unobjectionable little instrument. Its occasional employment is, as a rule, necessary to cleanliness and the preservation of the teeth. So, also, is the use of the tooth-brush. This adjunct of the toilet is, however, never used in public. The person who, after partaking of a meal, should proceed to publicly use his tooth-brush would speedily find himself banished from decent society. Yet such action would be less objectionable to witness than the service to which some people who pretend to refinement and culture put the toothpick. There is but one place in which it may be rightly used—the dressing-room—and no person who has the slightest consideration for the feelings of others will handle it anywhere else.

It would seem to be almost unnecessary to make such statements as those in the foregoing paragraph. No one possessing any delicacy of feeling or squeamishness of digestion will dream of contravening them. And yet the public use of the toothpick is daily increasing, and has already reached proportions that strike the foreign visitor with astonishment and disgust, and make the lives of many of our citizens anything but agreeable.

The practice has doubtless grown owing to the large number of people who live or have lived in hotels and boarding-houses, where toothpicks were furnished with the idea that guests would take them to their rooms, and in some of the good hotels guests can even now only procure toothpicks at the doors by which they leave the dining-rooms. In other hotels and in many boarding-houses, and also, it is said to have to write, in some private houses, the toothpick-holder is a regular ornament (?) of the meal table, and its contents are assiduously worked.

In no other country that the writer has ever visited have toothpicks been publicly used in private houses or in the presence of women. An English woman or a French woman of the better class not only never dreams of using a toothpick before people, but she considers it something that it is more pleasant not even to mention. Here, however, it is no uncommon occurrence to hear a lady ask for the toothpicks, and select one that she thinks will fit her needs.—The Epoch.

Dandruff.

EDITORS PRESS:—I would like to ask a question through your paper. Can any of the readers of the PRESS tell me of a permanent cure for dandruff? If they will kindly do so it will greatly oblige—CONSTANT READER, Woodland, Cal.

THE STATUS OF SCHOOL-TEACHERS.—Judge Wallace of the Supreme Court has rendered a decision in favor of the plaintiff in the case of Miss Kate Kennedy, who applied for a writ of mandate to compel the Board of Education of this city and county to restore her to her position as principal of the North Cosmopolitan grammar school. The law quoted by Judge Wallace as governing the School Department in transferring teachers is as follows: Teachers in the public schools cannot be removed by the Board of Education at its mere will and pleasure, but only for one of the causes enumerated in the Political Code as grounds of removal; second, nor can such removal be accomplished by an order made ex parte; third, to effect such removal, charges must have been filed and notice and an opportunity to be heard given to the accused teacher; fourth, no transfer can be made so as to involve the loss of rank and pay upon the part of the teacher transferred.

TRYING TO GET POSTED UP.—A Nebraska man who talks of locating in California writes the Placerville Democrat asking where Government land can be had; how close to a railroad. Can you plant it in olive and orange trees without cutting off the trees or plowing the land? Can you raise any fruit the first year? Is there any prairie and hay land close to it? How much gold can a man dig in one day? The editor suggests that in his next letter he ask how much corn a pig can eat, and how many cast-iron boot-jacks will be required to shingle a lamp post.

HUMANE AND SELF POSSESSED.—The Semi-Tropic noticed a teamster of exemplary patience in the street at Colton the other morning. He was driving eight mules attached to an immense load of wood, when one of the number, with the contrariness usual to the race, suddenly concluded to go the other way. In his vain efforts to do so, the team became quite seriously disarranged. It took some time to get them back into proper working order. Yet during the whole time the man in charge did not administer a kick or a blow, but patiently pulled and persuaded them into place.

YOUNG FOLKS' COLUMN.

What the Frogs Sang.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

A musical toad had her home in a hole,
Croak! Croak! Croak!
Beneath a gray rock on a little green knoll,
Croak! Croak! Croak!
As mildly malicious as toad nature may be,
The neighbors all cried, "what an amiable lady!"
The beetle, the snail and the esthetic mole,
Croak! Croak! Croak!

The esthetic mole made a tragical stride,
Croak! Croak! Croak!
"Like the poets of old I am sightless," he cried,
Croak! Croak! Croak!
"I've a beautiful soul and a mind analytic;
These glasses, I'm told, are becoming a critic."
And he mounted his goggles with infinite pride,
Croak! Croak! Croak!

Sang the musical toad in a low minor key,
Croak! Croak! Croak!
"On some sweet summer marsh he is dreaming of me!"
Croak! Croak! Croak!
"O love!" cried the mole, all his soul in a quiver,
"I've an underground castle not far from the river;
O say dearest, say, that our wedding shall be!"
Croak! Croak! Croak!

Said the musical toad with a coquettish start,
Croak! Croak! Croak!
"Shall I give you my hand, when you've stolen my heart?"
Croak! Croak! Croak!
The wedding created a social sensation;
The beetle and all of the knoll population
Were bid to the union of Music and Art—
Croak! Croak! Croak!

My First Pet.

[Written for the RURAL PRESS by AUNT MARY.]

I am going to write a little story for those children who like truly true stories better than fairy tales. My story, even the names, is all true. I wonder if there are children nowadays who like live pets better than dolls and toys—I am sure I did.

When I was a little girl I lived away off in Minnesota, and saw more Indians every day than I did white folks. One day an Indian woman came in, and, taking a beautiful little animal off her back, laid it on the floor, asking mother to buy it. I was so excited I ran to the next room, where uncle and aunt were, saying: "Oh, oh! come and see—such a lovely thing, with such bright, black eyes."

"It must be a snake," said Uncle Jonas. "I don't know of anything with brighter eyes than a snake."

I had never been to a kindergarten school, as some of you have, or perhaps I would have said it was a quadruped. As it was, I only said no; not a bit like a snake—it has feet.

"Oh! a mouse, perhaps."

"No, ever so much bigger than a mouse."

"A buffalo, possibly," said this teasing uncle, while Aunt Fanny laughed. She hadn't been married very long, and I guess she thought almost everything Uncle Jonas said was funny.

I was rather vexed then, and went to ask mother what it was. She told me it was a fawn or young deer. The Indian woman was glad to leave it for a pan of potatoes and calico enough to make herself a short gown.

We untied its poor little feet and gave it some warm milk. In a few days it was as tame as a kitten and would run about after us and come whenever we called "Betty." It had beautiful white spots all over its sides. My little brother and I would stroke its hair and put our arms around its neck and thought it the dearest little creature in the world. But one evening when we called it did not come, and though we ran through the pasture and up the hill calling "Betty, Betty," we could not find it.

Next day we found it killed and half eaten up by Indian dogs. No need to tell of tears. It was a big trouble for a six-year-old, and although I had many pets afterward, I never forgot dear little Betty the fawn.

A Thrilling Romance.

DEAR EDITOR:—As this is the first of the year, I will send you my first effort of story writing. I wrote it and read at my school. Thus runs my story:

Maud.

On a small farm in the country lived a girl about 16 years old, who was tall and awkward looking. Her hair was very thick and the color of a carrot; she had gray eyes, and was altogether homely. The boys and girls of the small school she attended ridiculed her because she was not pretty. And one boy, Grant Warden, especially was the tease and torment of her life; but soon this trouble was ended, for he was sent to college, and all went well for some time. But alas! she was taken ill with the typhoid fever, and was sick unto death for many days. It was not until then that her friends and playmates ceased to ridicule her. As they stood around her supposed deathbed, they thought only of her good traits, and were very sorry for the way they treated her in the past.

When her life hung as if by a mere thread,

the crisis came and the doctor said she would live.

She slowly recovered, and when she was pronounced out of danger and was allowed to go about the house as of old, she found she was greatly changed during her illness. Her hair had fallen out, and now her head was covered with a profusion of beautiful auburn ringlets, and her once dull, gray eyes were darker, larger and lustrous, and she was proud as she glanced at her reflection in the mirror.

Her aunt and uncle with whom she lived concluded to send her to college. She was very much delighted at the idea of going to school again, and tried in all ways to please her guardians.

She was 18 years old, and was going to complete her education. The professor was very kind to her, and after a great deal of hard studying, she became one of the graduates.

They were to have some exercises, and many attended, most of them being friends and relatives of the members of the class. Among them was a very handsome young man, and he was none other than Grant Warden, Maud's old schoolmate.

There was one young lady that he was particularly impressed with her beauty, and on inquiring as to who she was, he could scarcely believe the truth of the informers when they told him it was Maud Manners. He thought, could it really be the little girl whom he used to make sport of in bygone days. But now he had quite changed his mind, and now he thought she was one of the most beautiful creatures ever beheld.

And after a year's pleading with her, he led her to the altar as his beautiful bride.

This is the end of my story.

I hope some of the readers will say how I have done.

I wish you all a happy New Year.

KITTEN'S MISTRESS.

Clover Creek, Shasta Co.

A Ghost Story.

[FOUNDED ON FACT.]

[Written for the RURAL PRESS by HELEN SWEIT, aged 12 years.]

Some years ago I was living with my parents in a roomy, well-finished, two-story cottage in the southern part of San Francisco. The street was neither large nor fashionable, but the society was good with the exception of the usual sprinkling of "undesirable neighbors."

We had not been there long before we began to be troubled with certain unearthly noises, which seemed to proceed from the basement. In vain we ransacked every portion of the house from top to bottom, and cudgeled our brains to find some clue to the mystery.

Our large family of cats precluded all possibility of rats, and as there was no cellar, and the house was built upon solid ground, we seemed, after a couple of weeks' anxious investigation, as far from the solution as ever.

Sometimes sounding suspiciously like a cough or sneeze, and oftener like a suppressed grumbling murmur, the sounds still continued baffling all our most strenuous efforts to find their source.

Spiritual friends suggested "sperrits," and advised us to engage the services of a medium, and hold communication with the supposed visitors from "lands unknown," and we felt half inclined to take their view of the case, for, in our fevered imagination, as soon as the lights were put out the whole house seemed filled with mysterious rappings, the stealthy tread of light feet, and similar performances usually attributed to spooks and other evil spirits.

One evening toward dark, sitting in the bay window in front, I saw a little Irish boy, son of a washerwoman on the next block, come running along in a rapid yet stealthy manner, and instead of coming in at our gate or at our neighbor's as I had supposed he would, he squeezed in between the two houses which were about a foot apart, and disappeared.

Here at last was a key to the mystery. We searched carefully but could find nothing to indicate the whereabouts of the boy; nobody in the back yard, nobody in the front yard, nobody under the stairs, nobody between the houses.

The next day we informed the police, and toward evening a watch was set. Pretty soon one little boy came along, squeezed in between the houses, and disappeared; then another repeated the action; then another, and still another, until at least 20 had done the same.

On removing the sidewalk we saw, through the dense clouds of tobacco smoke which filled the place, the objects of our search huddled closely together in a sort of subterranean cave of their own construction under our house, indulging in the "manly" pastimes of smoking and chewing tobacco.

We boarded up the space between the houses and the "sperrits" troubled us no more.

WILLOUGHBY mentions a parrot which, when he said to it, "Laugh, parrot!" immediately broke out laughing, and cried out an instant after, "Oh, the great fool who made me laugh!" A keeper of a glass shop possessed one that, when he accidentally broke anything or knocked over a vase, invariably exclaimed in tones of anger: "Awkward brute! He never does anything else!"

GOOD HEALTH.

Coffee—Its History and Use.

We give from the *Chronicle* the following report of a lecture recently given by Prof. Lane before the Cooper Medical Institute of this city on the origin, history, and use of the coffee plant:

"In searching for the origin of coffee," said Prof. Lane, "authors have agreed to assign its birthplace to Ethiopia. When it was carried to Arabia it soon became naturalized. In a search for the earliest mention of it, one writer, inspired with that reverence which has sought to find out all things in the sacred book, assures us that coffee is mentioned in the history of King David, where it is stated that this was the potion which was offered by the hands of fair Abigail to calm the excited monarch. The proof urged in favor of this biblical claim is that the drink offered was prepared from something roasted."

"While visiting Paris," continued the lecturer, "I was agreeably surprised to find in a museum a portion of the original coffee shrub which was brought to France. Probably no more precious sample of this berry exists in the world. Coffee, at the time of its introduction into use, was very expensive, selling for from \$20 to \$25 a pound. Such a price led to its general cultivation, and soon, instead of being the monopoly of Arabia, whence it was first derived, it was grown in the East and West Indies, Central and South America, and now large amounts of it are grown in Java, Ceylon, Mexico, Guatemala, Costa Rica and Brazil. The production of the latter country is the largest, being about 4,500,000 quintals annually, one sack generally holding about one quintal. While coffee can only be cultivated in a warm climate, yet it cannot bear great heat. The seed is first planted in a cool, shaded nursery, the infant plants being scrupulously screened from the rays of the sun. It is next transplanted to the fields destined for its growth, and there it is carefully cultivated for nearly five years before the product is sufficiently abundant to be remunerative. The shrub usually reaches a height of from 12 to 15 feet, and is well covered by leaves of a dark, glossy green. Small flowers of snow-white color spring from the stem at the foot of the leaf. When in full bloom the appearance is exceedingly charming. The flowers are soon transformed into round, green berries, which, ripening, present the appearance of red cherries. From two to three crops of mature berries may be gathered annually. The work of preparing the berries for the market is done partly by hand and partly by machinery. Each berry should have two grains on it, yet sometimes but one is found, and this one is especially prized and commands the highest price. The pulp of the berry is sweet to the taste."

"A chemical analysis of coffee, after being burned, shows that it contains 20 per cent of water and about 50 per cent of cellulose—a substance resembling starch—and grape sugar. The agents which especially distinguish it are caffeine and coffeine. The former belongs to that group of chemical agents named alkaloids. Coffeine is a volatile oil, the result of an essential change in coffee produced by roasting. To this subtle and fugitive principle the aroma of coffee is due, and in roasting this oil permeates the entire grain; but if the heat be too great, or continued too long, it is dissipated and lost. Experiments show that caffeine and coffeine have different effects on the animal body, the caffeine acting as a transient stimulant, while the coffeine is more prolonged in its effects and exercises a sedative or tranquilizing action. But in drinking an ordinary cup of coffee, these two actions are obtained, stimulation preceding for 15 minutes the stage of sedation or repose."

"Coffee lessens tissue waste. Physicians have found that, among other articles, coffee temporarily arrests and stays this change. Coffee has another action—that of stimulating the faculties. The soldiers of the French army fought better in Syria and Egypt because they received coffee among their rations, and to authors and scientists it has been an untold blessing. Certain evils, too, may arise from its overuse, such as insomnia and palpitation of the heart. Children should not be allowed to drink it freely, because, as Savarin says, it dries them up and converts them into dwarfed machines. Commercial cupidity and dishonesty of the dealers often prevent the article from coming pure on our tables. But there is cheating in all trades. Both ground and unground coffee are falsified."

"Coffee figures largely as a remedial agent and a disinfectant. For nervous headache, it is often a cure, and gives great help in cases of narcotic poisoning or great depression of strength from hemorrhage. As a disinfectant, it is less disagreeable than chloride of lime and more accessible."

At the conclusion of the lecture, loud applause ensued. Prof. Lane then announced that on the evening of January 20th Dr. Cushing would lecture in the same place on "Physical Exodus."

KEROSENE AND DIPHTHERIA.—A well-known doctor says that the fumes of kerosene when a lamp is turned low are likely to cause diphtheria. The New York Board of Health a few years ago decided that to this, more than any other cause, the prevalence of this disease was

to be attributed. This is given as accounting for the fact that diphtheria generally begins to spread with the advent of short days and long nights. Children dislike to go to bed in the dark, and the kind mother lets the lamp remain in the bedroom, usually turning down the flame, so that the light will not keep the child awake. Many bedrooms are thus semi-lighted all night, and the windows being closed or raised but slightly, the atmospheric condition is simply deadly. A turned-down kerosene lamp is a magazine of deadly gas that the healthiest lungs cannot be safely exposed to.

DOMESTIC ECONOMY.

Tested Recipes.

[Written for the RURAL PRESS by ADA E. TAYLOR.]

Foamy Sauce.—Yolks of two eggs, beaten light in a little water, mix one-half cup of sugar and one tablespoonful flour together, then add to the eggs, pour over the whole about two cups of boiling water; steam 10 or 15 minutes. Flavor to taste.

Chocolate Frosting.—Whites of 4 eggs, 1 cup sugar, 1 tablespoonful vanilla, 3 bars chocolate, grated. Beat whites stiff, add sugar and chocolate mixed together, then vanilla. Place over a kettle of boiling water until it is thoroughly steamed and has a shiny appearance; cool before putting on the cake.

Fruit Cake.—Work 1½ pounds of butter to a cream, add 1½ pounds of brown sugar, 1 small cup syrup, 14 eggs well beaten, glass of brandy; mace, nutmeg, cloves, allspice, and cinnamon; mix all together, then work in 3 cups of flour as light as possible; add fruit as follows: Four pounds of currants, 2 pounds citron, 5 pounds seeded raisins, all well floured and mixed before putting in the cake. Bake 3 or 4 hours in a moderate oven.

Snowflake Cake.—Whites of 12 eggs, 2 cups of sugar, 1 cup butter, 1 cup milk, 3 cups flour, 1 cup cornstarch, 2 heaping teaspoonfuls yeast powder, 3 tablespoonfuls lemon, 1 cup of very thinly shaved citron, dusted with flour. Beat the butter to a cream with the hands, then add sugar, then milk, then flour and cornstarch in which the yeast powder has been sifted, then the eggs beaten; last of all, gently stir in the citron.

Cocoanut Pudding.—Soak one cup of cocoanut in two pints of boiling milk for half an hour, then let boil again and add the yolks of three eggs, beaten in a little milk, one cup of sugar, two teaspoonfuls cornstarch, mix together, set in a pudding dish, and place on top the beaten whites of five eggs, in which has been added one-half cup sugar; sprinkle over the top a little cocoanut. Bake in a slow oven ten minutes.

Mince Meat.—Eight pounds of meat, 25 cts. worth of suet, 6 pounds of raisins chopped, 4 pounds of currants, 1 large pan of chopped apples (then stewed), 1 pound citron, one-half can cinnamon, 1 dozen nutmegs (ground), 2½ cans of cloves, one-half can of allspice. Mix them all dry, then add 4 pounds of brown sugar and one-half gallon syrup, and one-half gallon brandy. Put all in a boiler, mix well together, and put on the stove till it come to a boil.

Chinese Camp, Cal.

Tanning Skins With Fur On.

EDITORS PRESS:—Please will you inform me how to tan skins and keep the hair on?—M. E. C., *Healdsburg.*

Isaac H. Bailey, an authority in such matters, publishes the following formulas for accomplishing this in his *Shoe and Leather Reporter*: Take two parts each of alum and salt, and one of salt-peter, all well pulverized. Clear the flesh of fatty matter. Sprinkle it white with mixture. Fold in edges and roll up; remain four days, then wash with clean water, and then with soap and water. Pull the skin when drying, to make it soft. Another recipe is: Lay the wet skin on a smooth slab or a hard board; scrape with a dull knife until all loose flesh and film is removed; then wash off in soft water. Take a glass or stone jar, put in an ounce of oil of vitriol and a gallon of rain or river water. Let steep in this for about half an hour. Take it out, work it with the hands until dry, when it will be pliable and soft. The more worked the softer. Use no grease.

TO BANISH THE MOSQUITO.—The great annoyance that comes from the presence of mosquitoes is the Yolo *Democrat's* excuse for offering the following remedy, which is said to be effectual in clearing a sleeping-room: Roll a piece of paper around a lead pencil, so as to form a case; fill this with very dry pyrethrum powder, putting in a little at a time and pressing it down with the lead pencil. Set in a cup of dry sand or something to hold it erect, and an hour before going to bed close the room and burn one of these cartridges. A single one will be sufficient for a small room; a large one will require two. [The same result can be secured much more easily. Put a small teaspoonful of the powder on a crumpled piece of paper; place the paper on a fire-shovel and light one corner of the paper. The powder ignites, smokes like a small volcano for a few moments, and the mosquitoes are quiet for the night.—EDS. PRESS.]

The Week.

Still the temperature and chilly north wind remain the main topics of conversation. The spell has considerably overstepped the California limit of three to five days for anything disagreeable in the way of weather, and though the thermometer has been doing better for a day or two, we do not yet feel the winning south wind, nor do we see the gathering rain-clouds. The low temperature and the correspondingly high coal prices have wrought much discomfort, and we hope both are nearly over.

Agricultural matters have been almost at a standstill. The California calendar has no mark for "timely work" when the top of the ground is frozen, and so the farmer has coked his feet on the kitchen stove and lifted up his voice against the weather. The fruit-grower has his pruning to do, but he doesn't like the idea of bundling up with a shawl when he goes out in the orchard—it looks too much like an Eastern farmer going out to water his "critters"—so he, too, has had recourse to warm words. But there is an end to all things temporal, and there will be to this, and we shall soon have shooting grass blades and blooming trees and all that.

G. W. MEADE & Co. resumed business to-day, Jan. 18th.

The Pacific Railroads Again.

The telegraph on Wednesday morning brought a message transmitted to Congress by President Cleveland, the message being accompanied by the two reports of the Pacific Railway Commission, to which we alluded recently in these columns. The President does not incline toward Congressional action which will bring the properties into the hands of the Government. On this point he says:

Any proceeding or arrangement that would result now or at any other time in putting these roads or any portion of them in possession or control of the Government is, in my opinion, to be rejected. Certainly, as long as there is the least chance for indemnification through any other means, I suppose we are hardly justified in indulging in irritation and indignation naturally arising from contemplation of malfeasance to such an extent as to lead to the useless destruction of these roads or the loss of the advances made by the Government. I believe that our efforts should be in a more practical direction, and should tend with no condonation of wrongdoing to the collection by the Government on behalf of the people of the public money now in jeopardy.

This seems to be the ordinary business way of looking at the matter and is the view any mortgagee would take when he held a claim upon property which he did not want, and which would be of value only as a part of a business which is to be continued. In such cases the mortgagee usually makes the best terms he can to save at least a part of his investment, and in this hope may allow the continuation of persons whose conduct he cannot approve. Of course, it is a question whether this is the proper basis on which to settle a question of such public import, or whether the moral effect of a more summary method of procedure would not be worth more to the future of the country than in regaining the value, if any, which may yet be recovered from these corporations. This question is too broad for present discussion; besides, it is a question which one can well consider and settle in his own mind, or which may receive attention from various organizations given to discussion of public affairs.

There is, however, in the message of the President another matter of moral weight which is forcibly brought out and which can be best expressed in his language, as follows:

It is almost needless to state that the companies have availed themselves to the utmost extent of the permission given them to issue their bonds and to mortgage their property to secure the payment of the same by incumbrances having the preference over the Government's lien, and precisely equal to it in amount.

When the relations created between the Government and these companies by the legislation referred to is considered, it is astonishing that the claim should be made that the directors of these roads owed no duty except to themselves in their construction; that they need regard no interests but their own, and that they were justified in contracting with themselves, and making such bargains as resulted in conveying to their pockets all assets of the companies. As a lienor the Government was vitally interested in the amount of mortgage to which its security had been subordinated, and it had a right to insist that none of the bonds secured by this prior mortgage should be issued fraudulently or for the purpose of division among the stockholders without consideration.

This is a pretty sharp arraignment of the process which was followed of treating the Government aid as a contribution to private aggrandizement, and this is the conduct which President Cleveland rightly says should not be condoned, although he believes the Government, having been thus treated, should now make the best arrangement it can to recover what it can of the immense loan which it made to the companies. The whole matter is now before Congress, and we shall soon discern its attitude on the proposition.

CACTUS FODDER IN TEXAS.—It is said that something like 50,000 steers will be fed on cactus the coming season in the State of Texas. The process is reported to make solid and delicious beef, and as the fodder is easily procured it is likely to be largely adopted in other sections of the Southwest.

DEHORNING.—I. C. Steele of Pescadero dehorned 53 two-year-olds and one older cow Dec. 27th, and reports them all in tiptop condition, despite the surgery and the cold snap.

THE CALIFORNIA COTTON-MILLS of Oakland have received 223 bales of cotton from Valley Center, San Diego county.

The Terrible Weather.

California has undergone an exceptionally cold spell. Sergeant Barwick of Sacramento notes a registry on his minimum thermometer of 19° F. on Saturday and Sunday, January 14th and 15th. This record has the greater interest because it goes to verify a record of 19° made by Dr. Logan in 1854, and which has been thought possibly a mistake on his part. This fact is in itself significant because it shows how rare it is for the temperature to fall so low, and that it is a third of a century since such cold has been known. It is not a wonder, then, that we cry out "terrible weather" when we feel an atmosphere that only comes once in a generation. As to the effect of this experience beyond the shivers and oburgations of the people, it has so far been seen to seriously injure only plants known to be tender. Reports are that the orange is showing itself a hardy plant, when in proper condition, by age or matured wood, to stand the infliction. Both north and south, in some districts where oranges are grown, there has been ice formed on standing water and frozen ground, which did not thaw during the succeeding day, and yet old orange trees only suffer injury on their young shoots. Young trees, however, are seriously hurt in some localities; in others, where the temperature has not fallen so low, even these have not been materially injured. On the whole, it is shown that our semi-tropical fruits do not succumb to the coldest weather known here since the American occupation.

The cold weather coming on bare pastures has wrought some injury to our live-stock which have not been given extra food or shelter. It has killed some grain and will necessitate re-sowing such fields. It has made our flower-gardens rather sorry-looking areas, and by vote of all, once in a generation is often enough for such weather.

Such a complaint sounds rather childish, though, as we read the daily accounts of the fearful weather in other parts of the country. The account of Dakota winter given by the writer of our Christmas story in the issue of December 24th, is far within the truth as set forth from day to day by the dispatches from that region, and in fact from the whole West and Northwest region. Let us cite merely a few most heart-rending facts from a single day's dispatches:

Robert Kennedy frozen to death in his wagon while going for coal to the railway station in Sherman county, Kansas.

Two children frozen on their way home from school; a man and team frozen on the road; two men frozen while walking along the road; father and son frozen while driving cattle to feed on cornstalks; three children frozen on their way home from school, although their teacher tried to save them and escaped herself with frozen feet; a schoolteacher and eight children frozen; a man and boy frozen while returning from a funeral, and a mother lost both legs by freezing while returning from the funeral of a son who had perished in the snow previously—all these casualties occurred in Nebraska.

In a single county in Dakota 19 deaths are reported. Schoolteachers and groups of children, as high as eight in a group, have perished.

But we need not continue this distressing narrative. The thermometer has fallen 40° to 50° below zero, the wind and snow have blown blizzards, and life cannot withstand these conditions.

A dispatch from Omaha Jan. 18th is as follows: The latest reports from all quarters show that the loss of life during the recent blizzard foots up nearly 200. This includes Dakota, Montana, Minnesota, Iowa, Kansas and Nebraska. When the record of the loss of life is complete it will show the largest number of deaths ever known to have resulted from a similar occurrence. Unprotected cattle were frozen by the thousand, Nebraska suffering greatly in this respect.

With such things in mind, what reason have we to complain of our little discomfort which would indeed have been hailed as almost a return of summer by the poor people in these inhospitable parts of the country? Rather let us give thanks that our lines have been cast in pleasant places, and let us give a heartier welcome to the thousands who are now coming to California to escape the ills which human endurance is powerless to withstand. Happy are they who secure in California homes for themselves and a heritage for their children.

Forestry.

It is announced that the Forestry Commission will hold a meeting in their office in the Nevada block on January 24th. Messrs. Kinney and Bettner are expected to arrive from their southern homes, and John D. Spreckels, lately appointed as successor to Mr. Coleman, will take his seat in the board. Reports are expected from some of the large number of local forestry guardians which have been appointed, and other matters of importance are expected.

Word has been received from Senator Stanford that he will introduce a bill for the preservation of the forests somewhat different from that adopted by our board and submitted by them at the Santa Rosa convention. It has also been announced by telegraph that Senator Hale has introduced a bill, prepared by the American Foresters' Congress, to preserve the forests. It withdraws from entry as forest lands all public lands of the United States more valuable for their timber than for agricultural purposes. It institutes the office of Commissioner of Forests and authorizes the appointment of four assistant Commissioners. The Commissioner is instructed to form forest land into what are designated as forest reserves. He is given power to frame rules and regulations for the government of these reserves, and to appoint rangers to see that the rules are observed. No forest lands are to be sold, but the stumpage on them may be disposed of in the discretion of the Commissioner of Forests.

It is evident that more public attention is being drawn to forestry in all its branches than ever before in this country. The idea of preservation of forests from illegal and wasteful destruction is gaining force by public opinion and by the prosecutions which the Government is conducting against trespassers. It is certainly true, as has often been pointed out in our columns, that effective measures should be adopted to prevent our new country from following the hard experience which older countries have undergone and from which they are now putting forth such vigorous efforts to recover.

The Fruit Union.

The meeting of the stockholders of the Fruit Union is in progress as we go to press on Wednesday, and we are, therefore, unable to give a report this week. We will state, however, in advance of a full report, that the report of the secretary shows the Union in good condition financially. Stock subscriptions during the year have footed up \$5408, and from various agents \$17,017 has been received, making gross receipts \$22,425. There is now over \$8000 in the bank, and the total assets aggregate \$11,300.

Salaries amounted to \$7689.50. This amount includes expenses of an Eastern manager and some back salaries. A dividend of six per cent has been declared, and two per cent will go into a reserve fund. The shipments of last season aggregated 11,368,020 pounds. The gross charges, freight, cartage, etc., footed up \$356,289.59, making the net returns to the Union \$319,574.85, the gross receipts being \$675,864. The Union has gained during the year 269 members. Of stockholders, 486 have paid in full for stock subscribed, and 217 members are delinquent, holding 3415 shares. But we must defer other facts until our next issue.

NAILS LEFT STICKING OUT in barns and stables cause the death of horses every now and then. We notice in the Martinez Item that Mr. Donnelly sustained the loss of a valuable mare a few nights ago through one of these accidents. The animal had been sick and was moving around, when she struck a nail, which penetrated her head and killed her. This is not the first time we have made note of such casualties. Moral: Don't leave ragged or sharp nails sticking out where there is likelihood of horses, cattle, or human beings running against them.

CANNERS' SUPPLIES.—There is much talk among canners about the rise in price of tin solder and sugar which they claim will materially advance the cost of canned goods during this season's pack. Some even claim that the cost of canning will be 25 per cent higher than heretofore. This will certainly not be desirable, and we hope such forecasts may not be realized.

Agricultural Review.

Leading Articles of California Production in 1887.

[Written for the RURAL PRESS by J. R. F.]

The year 1887 was, in many respects, most remarkable. Opening auspiciously for leading farm products, prices stiffened for the first few months with the highest range of values in April extending into June. With the commencement of the last half of the year values for cereals began to weaken off, and ruled only fair to the close of the year. Wools, hops and one or two other articles also gradually shaded off. Outside of these, other products gained in strength, closing the year strong. Under appropriate headings below, this is given more at length. The State gained in population by large immigration of a desirable class. The increase is placed at 100,000, which, if correct, gives the State a population of 1,250,000. Some authorities place it some higher. While the State made large gains in population, the gain has been, if anything, larger proportionately in wealth. The banks have larger lines of deposits, carry larger reserve funds. Land has advanced in price. Many large tracts of land have been cut up and sold to actual farmers. Railroad building has been unexampled in the history of the State. Without further details it is safe to state that there has not been an industry, manufacturing or otherwise, but shows an increase; and as the year closed favorable it warrants the assertion that 1888 will show a still further gain, and if anything be larger proportionately over 1887 than that year was over 1886.

Wheat.

The year 1887 was most remarkable in two respects. First, the bold attempt of the syndicate formed in September, 1886, to control the world's market, entering the markets on this coast and in the East, and by manipulations made sharp turns up and down, catching friends and foes alike. This move met with strong opponents who fought to the bitter end, for as fast as one went to the wall another with stronger financial backing took his place. Those who fought the syndicate the more bitterly were in Great Britain and at the East. After sending prices for futures up from comparatively low prices to an advance of from 40 to 70 per cent and crushing many in so doing, they met final defeat. Whether the bull interests on this coast were connected with the corner run at Chicago is an open question. Many believe they at the first were, but after having sent that market to high figures the Californians unloaded on the others, causing financial wrecks and a collapse in prices, which also broke the markets abroad and caused those running a German wheat corner to go to the wall. When the Chicago corner broke the pool here stood under this market and succeeded in buying options aggregating over 100,000 tons from the bears, who had already sold quite heavily. Then began a systematic advance in both options and sample parcels. Prices were fluctuated up quite rapidly until \$2 17½ was reached for seller 1887, the last of July, against \$1.89 for the same option the fore part of the month. Spot wheat sold at \$2.09 per cental on July 29th, against \$1.85 on July 1st. There were such large quantities of seller 1887 offered on Call, and money having grown very tight, with large quantities of wheat already put to the pool, and still larger quantities near at hand for delivery, that the pool found themselves unable to carry the load and on August 3d there was a collapse. The directors of the Call Board Association thereupon announced that the sessions would be suspended until further notice. By their prompt action, and through the exertions of the conservative element on 'Change, a panic was averted, which might have been far-reaching in its results. No sessions of the Call Board were held between August 3d and 23d. On September 1st the president of the Call Board announced for sale, for the benefit of the creditors, 5600 tons No. 1 white wheat, more or less, which had been held by the bull syndicate. A total of 5800 tons was sold at an average of a little over \$1.24½ per cental, the whole making a total value of \$144,599. Other sales were also made. Wild statements were made as to the quantity of wheat involved in the failure of the syndicate, ranging all the way from 200,000 to 400,000 tons. The quantity was finally narrowed down to about 106,000 tons. A final settlement of the great wheat deal was made in December. It was generally reported that the pool and their financial backing lost very heavily, but all such reports are exaggerated. Many large moneyed men on this coast, at the East and in Europe who shorted the market were forced to compromise with the pool at heavy losses, and the enormous sum drawn in from this source will never be known, but it runs into the millions of dollars. There are those closely allied with the persons supposed to have been intimately connected with the pool managers who claim that the losses by the pool will prove very small after

the wheat now held is disposed of. But then so muddled is the entire affair that no one can form a correct idea how they will come out. During the month of September the local market was unsettled, ranging under light trading from \$1.20 to \$1.35 per cental. The market began to gather strength in October, and under freer trading and gradual strengthening markets abroad, values held strong at slowly advancing prices in November, with strong markets in December.

In this connection it is in place to note several important points that favored the bull interest. The Australasian wheat crop was very short, while Chili and the Argentine Republic had a light crop, as did India. The stocks in the consumption markets were exceedingly small on January 1, 1887, as were they in the supply markets. The average seeded in the United States showed a falling off in comparison with the preceding season. As the year 1887 advanced, running well into April, crop prospects in Great Britain and on the continent were unusually gloomy. So poor was the outlook that the very best-informed did not look for more than half a crop, which of course inspired confidence in higher values later on in the season. Suddenly the whole complexion changed, for the European weather turned for the better, and from that time until after harvest favored the farmers, which resulted in larger wheat crops in England, France, Germany, Austria and Hungary than harvested for several years before. Full particulars of this and other wheat information were given at the time in the RURAL PRESS. Large crops abroad, with the collapse of the wheat corners, contributed no little in keeping values down the remainder of the year, notwithstanding the large shortage in the crop in India, Italy and United States.

For references and for other purposes we give the following ranges of spot prices for wheat by months for the first half of the year, when the pool was in full sway:

January.....	\$1 52½ @ 1 60
February.....	1 47½ @ 1 57½
March.....	1 47½ @ 1 67½
April.....	1 67½ @ 1 80
May.....	1 70 @ 1 85
June.....	1 80 @ 2 10

The Liverpool market for California wheat ranged as follows by months in 1887:

Off Coast.		Just Shipped.		Nearly Due.

1887.....	June 11.....	1 86	to ..

The wheat crop on this coast last year was very large in both Oregon and Washington Territory, being fully 20 per cent more in Oregon, and 50 per cent more in Washington than was that of 1886. In this State the weather was decidedly against the crops. There was almost an entire absence of heavy dews and fogs in the sections; each act an important part, with long-continued absence of rains. Before rains did come many hundreds of fields were total failures in the San Joaquin and Sacramento valleys. The following is a fair estimate of the out-turn in cents by counties:

County.	Acres.	Yield.
Alameda.....	70,000	180,000
Butte.....	200,000	1,950,000
Calaveras.....	40,000	300,000
Colusa.....	400,000	2,500,000
Contra Costa.....	130,000	750,000
Fresno.....	220,000	910,000
Humboldt.....	8,000	60,000
Kern.....	15,000	150,000
Los Angeles.....	150,000	900,000
Mariposa.....	1,500	15,000
Mendocino.....	15,000	100,000
Merced.....	150,000	800,000
Monterey.....	120,000	570,000
Napa.....	15,000	100,000
Sacramento.....	85,000	700,000

County.	Acres.	Yield.

When it is remembered that California was at one time deemed incapable of producing wheat, the rapid growth of the industry on the coast is one of the most surprising evidences of our progress. The following table gives the crop for each year since 1853, that is, since the business passed beyond the experimental stage:

	Centals.	Centals.
1853.....	1,000,000	1871..... 4,500,000
1854.....	1,000,000	1872..... 16,000,000

Barley.

The year 1887 opened firm at \$1.05@\$1.10 per cental for good to choice feed and \$1.15@\$1.25 for fair to choice brewing. By the end of the month the market advanced 10 cts per cental for feed and 5 cts for brewing. The advance was due to dry weather and a good shipping demand. In February rains set in, causing the market to advance, which was followed by another decline of 10 cts the latter part of the month. These low prices brought in buyers chiefly for shipping, and a slight advance resulted, which was lost by a decline early in March, followed by a jump of 10 cts, owing to a large short interest trying to buy to fill, and also to free shipments overland, so as to take advantage of the cut in overland freights. This was followed by another advance early in April; this time it was 5 cts per cental. Continued dry weather, light stocks and a good demand made the strong market. With rains, the market for feed fell off from 3½@6½ cts, which was followed by an advance of from 7½ to 10 cts in feed and 2½@5 cts in brewing. From this time to the end of May the market settled until it was about 5 cts lower all around. June held to the same prices. From this time until the end of the year the variations in prices were very slight, but with a general downward tendency up to September, from which time to the close of the year there were few changes, with a fairly steady tone. Under heavy receipts, stocks in this city gradually accumulated from August to November. Since then they show a slight falling off. The home consumption was unusually large—larger than ever before—due to more active training in railroad building, opening up new farms, hauling lumber and all else that went to assist in the building boom in the State, but chiefly in the southern counties. Another thing also created a larger consumption: owing to the high cost of hay, more rolled and ground barley was fed to stock with out feed. The shipments out of the State, both by sea and rail, since the new crop season, were very much less than during the like time in 1886.

The crop of 1887 was the largest in the history of the State, due to the increased acreage. The dry weather continued so late in the season that wheat seeding in many sections was out of the question, so that barley was seeded as the safest crop. Besides this, the low stage of water in the rivers allowed of more land being seeded to barley. Taking all this as a whole, caused the better-informed to place last year's barley crop at fully 50 per cent over any former season.

The receipts at this point last year were in cents as follows:

	California.	Oregon.
January.....	60,232	84
February.....	46,308	3,366
March.....	76,773	266
April.....	77,642	200
May.....	140,634	809
June.....	91,011	122
July.....	223,599
August.....	379,948
September.....	393,292
October.....	269,912	80
November.....	172,378
December.....	142,746

Totals..... 2,071,475 4,927

Receipts by years from all sources compare as follows:

	Centals.
1876.....	1,907,058
1877.....	780,425
1878.....	1,571,954
1879.....	1,768,839
1880.....	1,907,058
1881.....	1,244,835
1882.....	1,548,162

November.....	113,952
December.....	65,740

Total..... 415,339
1886..... 723,648
1887..... 185,297

The overland shipments from the State to Eastern cities during the 12 months ending November 30, 1887, were 66,850 centals, against 249,372 centals for the 12 months ending with November, 1886.

The overland shipments during the past year were made as follows:

From	Centals.
San Francisco.....	1,321
Oakland.....	36,366
San Jose.....	24,478
Sacramento.....	4,685

Total..... 66,850

The shipments by sea in 1886 and 1887 compare as follows in cents:

To	1887.	1886.
New York.....	194,972	187,005
Great Britain.....	42,670	391,151
Australia.....	30,311
New Zealand.....	6,593
Chili.....	22,004	47,721
Hawaiian Islands.....	108,723	89,098
Elsewhere.....	10,066	8,673

Totals..... 415,339 723,648

The outlook for 1888 is far from discouraging. The stock, to be sure, on January 1st was nearly double that held on January 1, 1887, but then prices are lower now, the consumption fully 50 per cent greater than then, while there will be a decided falling off in the average seeded. Then again, the crop at the East was light and higher prices are expected to obtain there before the spring months are over.

Corn.

Corn does not play an important part in the cereal productions of this State, and consequently our main reliance is on the Western States where it is grown at the expense of other feed cereals. Last year the receipts at this port from all sources aggregated 196,043 cts. against 216,909 cts. in 1886. At the end of 1887 the stock in the State was about 12½ per cent less than reported at the end of 1886. The crop in this State last year was a full average, and of good quality, but the crop east of the Rocky mountains was short. Compared with 1886 it was about 25 per cent less, while the quality as a whole is poor, the bulk not being suitable for bread purposes. Aside from the short crop, large quantities of corn on the cob are reported to be burnt as fuel owing to the scarcity and consequent high price of coal.

Oats.

Receipts in cents last year were as follows: Californian and east, 172,802; Oregon, 223,534; total, 396,336. In 1886 they were as follows: Californian, 121,107; Oregon, 369,960; total, 491,067. The market ruled in buyer's favor the fore part of the year under free receipts from Nebraska, but when the high overland freight rates went into effect prices stiffened and remained strong throughout the season or up to July, owing to very light stocks, about nil in Oregon, to draw from. The crop in this State last year was quite light and generally of poor quality. Oregon and Washington Territory had very large crops, fully 50 per cent more than those of 1886. The quality of the grain, too, shows a higher grade, being fuller, brighter and generally heavier. Receipts from both Oregon and Washington continued light up to December, causing a strong market to rule, but owing to the known large supplies buyers did not anticipate their wants. Pursuing this conservative policy, as soon as receipts began to increase consigners had to make concessions so as to clean up consignments to save

expenses. These concessions caused a gradual weakening in values. The outlook is not of a very encouraging character, as the supply up North is low, and barley being cheap, oats will not be freely taken unless further concessions are obtainable.

Rye.

The receipts of rye in 1887 aggregated 27,804 cts. and in 1886, 24,511 cts., or which 95 cts. came from Oregon. Rye has never been in great favor in this State, consequently the production is light; but with increased immigration many have arrived who give rye flour the preference over all other kinds, consequently the demand was good last year, particularly the last three months of the year. This naturally caused a strong advancing market. The year closed with higher prices paid—\$2.50@2.75—than obtained for many years.

Buckwheat.

Receipts in 1887, 2293 sacks and in 1886, 6860 sacks. Buckwheat like rye is only used to a limited extent, and consequently very little goes a long way. The crop in 1887 was short, causing a stronger market to rule, with the year closing on a higher range of values.

Ground Feed.

The market for both bran and middlings fluctuated considerably during the year, prices varying with the demand and receipts to a greater extent than for years. Prices held up remarkably well, not dropping at any time to the average of 1886. The strength of the market was due to lessened production and a good demand. Receipts in 1887 aggregated bran 440,408 sacks, and middlings 101,004 sacks, and in 1886 they aggregated bran 464,263 sacks, and middlings 138,792 sacks. Oregon also sent in 1887, 35,101 sacks bran, and 8182 sacks middlings against, in 1886, 67,686 sacks bran and 29,617 sacks middlings. Ground and rolled barley was used more freely in 1887 than ever before, owing to its relative cheapness, and also to its being better for use with chopped feed. Prices were governed by the price of grain barley. Other ground feed moved in price in sympathy with the grain, but not being used heavily, does not cut much of a figure.

The Stock of Grain.

The Directors of the San Francisco Produce Exchange have submitted the following report of the stocks of flour and leading cereals of the crop of 1887 remaining in the State of California January 1, 1888, and a comparative statement of previous years:

Year.	Flour.	Wheat.	Barley.	Oats.	Beans.	Corn.	Rye.
January 1, 1882.	133,161	15,101,220	893,322	35,143	98,843	157,716	32,009
July 1, 1882.	119,324	2,892,048	1,024,416	21,305	48,708	67,716	32,009
January 1, 1883.	158,308	8,841,879	1,641,406	118,660	48,708	67,716	32,009
July 1, 1883.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
January 1, 1884.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
July 1, 1884.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
January 1, 1885.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
July 1, 1885.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
January 1, 1886.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
July 1, 1886.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
January 1, 1887.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
July 1, 1887.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009
January 1, 1888.	177,000	9,794,500	1,728,200	148,330	63,000	90,485	32,009

Hay.

Receipts in 1887 aggregate 111,063 tons, against 99,442 tons in 1886. Dry weather in the early part of the year was against a large crop of hay, and as the consumption was large, the large carryover from the crop of 1886 was soon gone. The consumption in this State last year is estimated at fully 25 per cent over that of 1886, due to more railroad building, more active teaming and poor pasturage in the latter part of the year. Prices kept up throughout the year, and, as the demand run on the better grades, the supply of choice to extra choice was soon exhausted. The only grades in the market are fair to good, but then they are called good to choice. The year closed on a higher range of values than known for years. It is claimed that by the time new hay comes the supply throughout the State will be virtually used up,

and the new come on a hungry and high market.

Potatoes.

Receipts in 1887 compare as follows with 1886 in sacks:

	1887.	1886.
California	992,737	965,775
Oregon	94,659	113,829
Totals	1,087,396	1,079,604

The market ruled strong the forepart of 1887, under light receipts and a good demand. The quality of the bulk of the receipts was only fair. The low water in the Sacramento and San Joaquin rivers allowed larger areas of land to be planted; and as the weather was favorable to crops, a very large yield was the result. Receipts of new and large supplies to draw from caused prices to sag off and rule low up to December, when prices began to show some strength, which was followed by a steady advance until the year closed with at from 20 to 30 per cent higher than ruled in November. Oregon has sent of her new crops very little, owing to high waters flooding several large potato districts. The crop in the Western States is about 25 per cent below an average; and as good prices rule there, Utah is contributing from its surplus.

As new potatoes can be laid down from this State in Chicago by from two to five weeks earlier than they can be supplied from the Southern fields, trainloads were made up here to run through on fast time. A rate of 70 cents for 100 pounds was granted by the railroads and this greatly encouraged the export trade. Chicago took the bulk of the new potato shipments, and as the trains were composed of from 12 to 14 cars each, it may readily be seen that the business was undertaken on no small scale.

Onions.

Receipts compare in 1887 as follows with 1886:

	1887.	1886.
Sacks.		
California	134,035	114,002
Oregon	10,714	4,006
Totals	144,749	118,008

The year opened on a strong market and high prices, owing to light receipts and a good demand. The market held strong up to the new crop arrivals, when an easier turn set in, which was followed by falling prices as new improved in quality and increased in receipts. Prices ruled low up to December, when they began to fluctuate as receipts lessened, but with a strong turn reported. The year closed on a strong market, with prices about 40 per cent higher than ruled in November. Oregon's crop was larger on the beaver-dam lands, and when our market began to appreciate, receipts from that quarter commenced. The quality in 1887 was good.

Cabbages.

The crop in 1887 was quite large and of uniform good quality. More attention was given to setting out cabbages, owing to the high prices of 1886. As the waters in the rivers were low, more land on the river-bottoms was cultivated. The first three months of 1887 prices ruled high, but under a lessening demand and receipts of new for the home trade prices eased off and fell before the spring months had passed to low figures, and by July 50 cents was the top. Toward November prices began to appreciate and were followed by a higher range of values in December, owing to large shipping orders outside of the State to points on the overland railroads. At one time in December hard heads sold up to \$1.25 and \$1.35 per 100 lbs., but fell back to \$1 at the close of the year, owing to freer supplies coming forward.

In root and other vegetables, the year's production, prices and general trade were a counterpart of former seasons, so that a review is unnecessary.

Fruits.

Horticulture in California is making rapid strides, forcing itself to front rank as a leading farm industry. Not only are valley lands found adapted to fruit cultivation, but also the foothills and even higher altitudes. The many kinds of climates and soils admirably fit the State to the cultivation of all varieties of fruits, and those too, of good size, color, and most excellent quality. That this latter assertion is correct is witnessed in the heavy shipments to the East where ready markets are found, and this in the face of heavy freight charges. If freights were reasonable the industry would be capable of greater expansion. Even as it is there is a wonderful growth, owing to the large increase in canning and drying. In order to show the quantity dried and canned, the following tables are given. The quantity and variety dried were as follows in pounds:

	1887.	1886.
French prunes	1,750,000	2,000,000
German prunes	75,000	125,000
Apples, sun-dried	200,000	300,000
Peaches, sun-dried	1,750,000	750,000
Plums, sun-dried	4,000,000	500,000
Pears, sun-dried	40,000	50,000
Grapes, sun-dried	600,000	175,000
Apricots, sun-dried	200,000	150,000
Nectarines, sun-dried	100,000	30,000
Figs, sun-dried	90,000	150,000
Apples, evaporated	550,000	500,000
Apricots, evaporated	3,000,000	450,000
Peaches, evaporated, peeled	500,000	100,000
Peaches, evaporated, unpeeled	750,000	200,000
Plums, evaporated	50,000	85,000
Nectarines, evaporated	50,000	25,000
Totals	10,105,000	5,590,000

The quantity canned and put up (24 cans of 2 each in a case) was as follows in 1887:

	Cases.
Apples	5,500
Asparagus	5,500
Apricots	175,500
Blackberries	25,000
Cherries	60,000
Currants	5,000
Gooseberries	15,000
Grapes	35,000
Nectarines	3,000
Pears	150,000
Peas	25,000
Peaches	220,000
Plums	40,000
Quinces	6,500
Raspberries	6,500
Strawberries	15,000
Total	772,500

The shipments overland of green or raw fruits aggregated in 1887, 35,342,850 lbs. This, of course, includes grapes. Prices throughout the season were good for all kinds of fruits, with relatively higher prices for prunes and plums. Sun-dried fruits are going out of favor, and it will be only a question of two or more years when they will not be found in market. The crop of prunes was very light, but that of peaches and apricots very heavy, but the two latter were marketed at good average prices. The short fruit crop at the East aided no little in giving us good markets for our raw, dried and canned fruits. In the *RURAL PRESS* of December 24th, a full review of 1887 dried fruits was published, which also gave a good idea of the general market for raw fruits, to which the writer advises subscribers to refer for further information.

Estimates of the number of fruit trees now growing in California orchards range from 9,000,000 to 10,000,000. As there has been an immense new acreage added to the orchards of the State during the year, it is safe to say that the latter estimate is none too high. In the foothill districts and in the Sacramento valley thousands of young trees were set out, while in Santa Clara, San Joaquin, Alameda and Solano counties the new acreage is very great. San Luis Obispo has never out much of a figure as a fruit-growing county, but on the strength of the new coast-line of railway being built that way, many trees have been planted which will come into bearing soon after the time that the facilities for reaching the market have been provided.

Olive-culture is making rapid strides, and bids fair to soon be of large proportions. They are now grown in a dozen counties in this State. Santa Barbara and San Diego have been the chief producers, but Placer, Sonoma and Santa Clara are coming to the front as olive growers. Last year the olive crop was small in all the orchards except those of San Diego county, where the yield was very good. It is believed that there are upward of 100,000 trees in bearing in California. A great deal of planting has been done during the year, especially in the Santa Clara valley.

The orange crop promises to be equal to 1886, notwithstanding many large orchards in Los Angeles county were cut up and sold for town lots. The number of new trees that come into bearing offset the number uprooted. The crop is backward and only a few carloads were received in this city in December against nearly 100 in December, 1886. The quality of first receipts are, as a rule, indifferent; consequently, the fruit meets with poor sale. As the season advances receipts increase, the quality improves and the demand grows rapidly. Owing to Florida sending large quantities of her oranges to Europe this season, California oranges will have a clearer field. The only drawback at present appears to be prospective high overland freights. The planting of orange trees is extending to about all the counties in the State, and under considerable rivalry a higher state of cultivation is the rule, which should cause better fruit to be turned out. The better the fruit and the better the selecting and packing for market the higher are the prices realized.

Viticulture not only holds its footing in this State, but is increasing, with a large number of new vineyards being planted each year, while the older established are being improved either by grafting new and improved varieties of grapes or else uprooting the old vines and planting the new in lieu. The greater attention is being paid to table and raisin varieties at the expense of wine grapes, for it has been demonstrated that with our large and rapid-expanding trade for raisins and fresh grapes, that take the general average, better value is received. The 1887 crop was much less than at first estimated. The causes that led to the lessened outturn have been noted in the *RURAL PRESS* at various times. The principal reason for the light yield was untimely rains. Prices the past season were better sustained than for several years past, and at no time was there such a glut as several weeks witnessed in the fall of 1886. The East took larger quantities than usual, while on this coast the increased consumption is placed at 15 per cent over any former year.

Raisins.

The rapid strides made by California in the raisin industry is a source of continued wonder to Eastern and European commercial writers, as well as to the general trade, who take all things for granted without prying into the true secrets underlying success. Californians never do things by halves, and once get them started right there is no fear but the result will

meet the ideas of the most sanguine enthusiast. Beginning with only an experimental few thousand boxes in 1873, it has grown into more than that many hundred thousands, as the following table of production shows:

Year.	Boxes.
1873	6,000
1874	9,000
1875	11,000
1876	19,000
1877	32,000
1878	48,000
1879	65,000
1880	75,000
1881	90,000
1882	115,000
1883	140,000
1884	175,000
1885	500,000
1886	703,000
1887	900,000

Some authorities place the out-turn of 1887 at about 800,000 boxes, equivalent to 16,000,000 lbs. This the writer believes to be too low, as the shipments so far out of the State show. If it had not been for untimely rains the crop would have been fully 1,000,000 boxes, if not reaching to as high a figure as 1,200,000 boxes of 20 lbs each. It was not until 1885 that California raisins came prominently before the Eastern consumption, due to three main reasons. First, cholera in Spain created fears that Spanish raisins would cause the spread of that disease among consumers of the fruit at the East. Second, the persistency and good generalship of Frank S. Johnson of Wm. T. Coleman & Co., assisted by G. W. Meade of G. W. Meade & Co., in keeping that result before the public through the press, and also their able manner in getting Eastern dealers to try California raisins by selling at a low range of values; by this and no other way can a new article be introduced. Third, the first few years' experience demonstrated to packers trading here, and which they were not slow to embrace, that the utmost care must be taken in selecting and picking uniform grades. This soon won its way with consumers, and since then still more care is exercised, as also the using of attractive labels and boxes. The very best improved machinery is only used, while only experienced hands are given employment in responsible positions. There is another important fact in favor of California raisins, viz.: their superior keeping quality. They do not get sugared like the Spanish, which causes the latter to be shunned by many in the East. The improvement in the brands of our raisins sold in the East was so great during 1886 that a greater demand for them than ever was created throughout the East, and every packer of reliable or well known California brands had his capacity tested to the utmost during the past year. In some sections the grapes were not as large as desired, and considerable difficulty was found in securing fruit to make fancy grades, so that a good portion of the product has been run into "loose" raisins. For this class, however, there is a great demand. In the larger factories the work of raisin-packing is almost entirely done by steam-power.

Last year's pack of choice grades is about exhausted, and being well concentrated here and at the East, a higher range of values is looked for before the spring months end.

Honey.

Dry weather in the leading bee districts caused an almost total failure of flowering plants, which, combined with weather otherwise unfavorable for bees, the crop in 1887 was quite light. The quality also did not average good. The crop is estimated as follows in pounds:

Honey extracted	1,250,000
Honey comb	300,000
Beeswax	30,000

The season opened in this city at the following prices:

Choice extracted honey	5½ @ 5¼
Light amber to dark	4 @ 5
Comb honey choice white	13 @ 15
Light amber to dark	12½ @ 8

As the supplies lessened and demand increased, values appreciated. The East called more freely for supplies than ever before, owing to a drought at the West, causing a light crop of honey, many districts proving a failure. The stock of honey in New York City and elsewhere at the East is the lightest known for years, causing very high prices to rule.

So far this winter the weather in this State has been against the bees, owing to more or less dry followed by cold and more freezing weather than experienced since 1854. Of course if warm rains followed by warm, sunshiny days set in soon, pasturage will improve and both wild and cultivated flowers will be in abundance, so as to give the foods all the material required in making and storing up honey.

Butter.

Although the receipts of butter last year were nearly as large as in 1886, yet the year closed on a bare market and high prices, this, too, in the face of a large carryover of pickled from 1886 into 1887. The year 1886 was the best pasturage season known for years. With food abundant and extending well into the year, the output of butter was very heavy, and an unusually large quantity was pickled and packed solid. As fresh roll continued in good supply with comparative low prices ruling, consumers gave it the preference, consequently a large stock of pickled and solid was carried into this year. The fore part of the year was dry and against pasturage, but heavy showers of rain fall-

ing in April and May, caused more natural feed, and as dairymen had increased their number of milch cows, the output of butter was large, causing prices for fresh to rule low. The low prices induced free packing, but not so largely as in 1886. With dry weather and poor pasturage, also an enlarged demand, fully 30 per cent over former seasons, prices began to appreciate, and as the output continued to decrease, notwithstanding free imports from the East, values closed the year 1887 very high, fully 40 to 50 per cent over those ruling on December 31, 1886. On January 1, 1887, there were in this city in first hands 2846 kegs of pickled and 1300 cases of fresh roll, and on January 1, 1888, there were 315 kegs of pickled and 800 cases of fresh roll. B-sides the above at the beginning of 1887 dairymen had lower stocks than at the beginning of 1888.

Cheese.

The output in 1887 was quite large, but the southern counties took more direct from the dairies than in 1886, and consequently the receipts in this city were light. The remarks about butter apply to cheese. The market close fully 40 per cent higher on Dec. 31, 1887, than on Dec. 31, 1886.

Eggs.

Prices ruled fairly good throughout the year, and quite high the last two months, being from 25 to 40 per cent higher than during the like time in 1886. The consumption increased fully 25 per cent over 1886. Like butter and cheese, many points draw direct from large centers of supply, which lessened the receipts in this city. Taken as a whole, the year 1887 was not favorable to chickens, although it was good up to the last three months of the year, dry weather and poor feed being against them; with cold weather toward the closing days. Owing to the large increased consumption of poultry, with good prices ruling, it is claimed by many that there will be more eggs set in 1888 than for some years past, which will have its effect on the egg supply. B-sides, it is claimed that there are fewer hens in the State than in 1886. But as the East sends us liberal supplies, the market is controlled to a very considerable extent by overland receipts.

Dairy Produce.

The monthly receipts of butter, cheese and eggs during 1887 were as follows:

MONTH.	BUTTER—POUNDS.		CHEESE—POUNDS.		EGGS—DOZEN.	
	California.	Eastern.	California.	Eastern.	California.	Eastern.
January	506 30	86 100	316 300	24 800	133 885	6 130
February	536 200	7 600	381 200	15 700	214 9 0	1 0 810
March	1 136 700	3 800	444 300	28 000	189 030	241 380
April	1 103 800	151 100	614 700	24 700	183 840	163 430
May	807 300	173 700	319 800	73 100	134 810	163 960
June	908 400	77 700	309 800	157 000	97 675	227 570
July	1 131 200	43 300	365 100	75 500	62 714	143 980
August	636 200	60 900	266 700	162 300	61 790	120 040
September	433 200	83 000	181 200	97 300	59 960	114 980
October	203 300	783 600	3 889 400	988 470	1 391 745	1 353 335

December	8 019 600	494 4 0	3 657 500	471 000	2 778 280	1 151 000
Totals	9 647 100	783 600	3 889 400	988 470	1 391 745	1 353 335

Hops.

The superior quality of the crop on this coast in 1886, with short crops at the East and in Europe, caused a free marketing and at good prices. As usual, many growers and dealers holding for the last cent carried over considerable both on this coast and at the East, which they have been closing out since at prices considerably less than were obtainable the latter part of 1886 and forepart of 1887. The crop on this coast in 1887 was larger than that of 1886 but the quality was generally poor and irregular. Many growers were fortunate enough to contract their crop at good prices—figures nearly twice as much as obtained at the close of 1887. Crops in Europe were large last year, as they were at the East, but taken as a whole the quality was poor. Dealers and brewers throughout the world let the market sink to low prices up to December, when they came in, particularly in Europe, and bought quite freely, causing better prices to rule at the close of the year. The crop on this coast compares as follows:

	1884.	1885.	1886.	1887.
Bales.	Bales.	Bales.	Bales.	Bales.
California	41,231	26,183	28,411	36,424
Oregon	10,903	7,300	12,549	10,200
Washington Ter.	24,168	17,572	23,794	27,400
British Columbia	111	48	60	95
Totals	76,407	51,112	63,814	74,219

In previous years the total crops were as follows: 1883, 42,027 bales; 1882, 26,453 bales; 1881, 17,662 bales; 1880, 15,465 bales.

Wool.

Last week's RURAL PRESS contained a full statistical review of the movements of wool in 1887 and also the production by years from early days. To this readers are respectfully referred for information on the subject.

The year opened with light supplies and the range 12 cts to 15 cts for fair San Joaquin and 16 to 18 cts for best, Southern Coast 12 to 15 cts and Northern 18 cts to 21 cts. Preparations were made to ship all fall wools East, to be sold for owners' account. Just prior to the Interstate Commerce bill going into operation, on April 5th, there was an active demand, and the market was cleaned up. During the first week of April sales equaled 3000 bales. Then came rates of \$3.70 to New York and \$3.83 to Boston, practically prohibitory. So the market had an excess of dullness. This was, however, soon ended, as it was found that the Canadian Pacific was a most important factor in the situation, as it reduced, or rather fixed, rates at \$1.50 per 100 pounds for wool in grease, and \$2 for scoured. Large shipments began to be made that way, and also by the Pacific Mail, etc., and the market became active again. It advanced first slowly and afterward more rapidly, until an advance of from 10 to 20 per cent was established, after which they settled back under poor assortments and discouraging Eastern advices. Dealers and shippers, as a rule, lost money. The fall clip came on a dull and weak market. As the season for fall wools advanced, prices shaded off, until a low range of values ruled at the close of the year. The change in women fashions is being severely felt by growers of second-class wools. Women now want finer woolen goods, with more mixing with silk, the same as obtained from 1875 to 1879. Coarse wools are neglected. The reason why the European wool markets are higher and American lower is due to finer wools offering for sale abroad. With railroad building in this State, sheep husbandry is giving way to farming, and soon breeding will be carried on on farms for the carcass and not for the wool, as meat will pay more. The outlook for 1888 is bad, as the dry weather has made poor pasturage, and as sheep are poor the wool will be harsh and lifeless. Even with improved pasture and better sheep, many flocks of sheep will have two grades of wool, with a weak, rotten streak between them. Against this buyers will discriminate.

Nuts.

The walnut crop in 1887 was large, as the following comparison shows:

	1887.	1886.
Walnuts	1,500,000	750,000
Almonds	500,000	600,000
Peanuts	250,000	275,000

The dry weather the forepart of the year was against peanuts. The almond crop was light, but whether due to the yield to the tree being less or some orchards uprooted in Los Angeles county and the land sold for town lots, is an open question. The low prices heretofore ruling for almonds were against their cultivation. But prices having ruled high for soft-shelled, will undoubtedly stimulate its culture. Walnuts sold at good prices throughout the year. This is due to the greater favor in which Californian are held. They are gradually but surely supplanting the imported. Peanuts met with good sales throughout the year, with very few changes reported.

Beans.

The crop in 1887 was large and of good quality, the average being above former years. Receipts aggregated at this port 458,339 pounds, against 320,769 pounds in 1887. Notwithstanding the large crop, prices for the new crop gained in strength, closing the year at an advance on an average of about 40 per cent over the opening prices, white varieties showing the most marked advance. The almost total failure of the Eastern crop and a lessened yield in Europe, created a strong demand for Californian from the large distribution centers east of the Rocky mountains. It is claimed that although prices are quite high, still they are liable to go much higher before the spring months roll by.

Seeds.

The crop of mustard-seed was large, and in consequence dealers, aided by the daily press, were enabled to manipulate the market to lower figures than the consumption warranted. The East drew quite freely throughout the year, but was enabled to keep values down by giving lower quotations through the press than actual sales justified. The year closed with a light stock, and with the usual spring demand prices ought to appreciate. In grass seeds the year was unfavorable to free sales, owing to dry weather interfering with seeding. On account of the drouth in the large grain-growing belt in the Western States the crop of several kinds was light, causing higher prices to rule at the close of the year.

GO TO THE OLDEST AND THE BEST.

THE WOODBURY TREE CLEANSER FOR WINTER AND SPRING.

After two years' experience I have to announce that there has not a single case come to my knowledge where the Woodbury Tree Cleanser has not fully and satisfactorily accomplished everything that has been promised.

By reference to a late report from Prof. Klee, I observe he states that he has found very good results from it in almost every case, and that he has encountered no records of any injury from its use. I am informed that it has his recommendation as a thorough-going successful and cheap Winter Wash, and it is certainly endorsed by the leading orchardists in the State. [Please send for their published letters.]

It has had an unexampled success in exterminating Scale on all kinds of Fruit Trees. It is sent all ready for use, and instructions which are very simple, are furnished with every package.

Price 3½ cents per pound in cases, 80 pounds in a case; in 8-pound cans, same price, 15 cents extra for can; 3½ cents per pound (10 per cent off) in barrels; about 400 pounds in a barrel.

I also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly successful. This is the valuable remedy strongly recommended by Prof. Klee for the Cottony Cushion Scale or "Icerya." Price ½ cent per pound higher than the Woodbury Tree Cleanser. I also manufacture the fine Anti-gumming Farm Machine Oils and general Lubricating Oils. I respectfully solicit correspondence.

To Dairymen, Fruit-Growers and Farmers!

SITUATION WANTED.

An experienced man, with wife, wants a situation. Understands Dairying, Irrigating, and General Farming. Can give the best of references. Address, H. B., Box 361, San Francisco

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a lifelong study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office.
U. G. ROOT, M. C., 183 Pearl St., New York.

Utilizing Flax Fiber.

The idea of using home-grown flax fiber to supplant the large quantities of twine and other manufactured articles which are now brought here from a distance has been a recurring subject for discussion for years. Several efforts have been put forth to establish factories which it was hoped would begin with coarse linen manufactures and gradually work up to higher and finer products. For some reason or other these undertakings have not hitherto reached a successful basis, but it is encouraging to know that effort is still being put forth, and it certainly appears, upon *a priori* grounds at least, that we should have manufactures of this kind in profitable working. The latest announcement looking in this direction is the starting of a twine factory in East Oakland adjoining the cotton-mills. The *Chronicle* gives this account of the origin of the enterprise:

The manager and principal owner, Mr. Bruce, was formerly in the employ of the cotton-mills, and during a visit to the coast counties saw some samples of flax straw which he recognized as equal to the best French flax, and the idea occurred to him that its manufacture into twine could be made profitable in this State. Considerable flax is grown along the coast for the seed, which is sold to the linseed oil factories of San Francisco, but the straw has heretofore been thrown away as useless. He interested a few capitalists, among them Daniel Suter of San Francisco, and the plant for the mills was procured. About one dozen machines are now in operation manufacturing flax twine, which commands a price in California that makes the manufacture profitable. Mr. Bruce, who has had considerable experience in the flax industry, as operated in Scotland, states that the coast soil, with its damp, foggy climate, is peculiarly adapted for flax growth, producing a strong and fine fiber. The more fog the better for the fiber. The straw, he states, is as valuable as the seed, and farmers may thus make a double profit. An acre will produce two tons of straw and 1000 pounds of seed. The straw is worth about \$12.50 per ton and the seed 2½ cents per pound, or a gross income of \$50 per acre.

We do not vouch for the estimate of crop and values. It has been claimed by some that the condition required in seed and in fiber by the users of each prevented both from being utilized from the same plant; that a plant which fully matured its seed had gone too far to yield the best fiber. We are not practically informed on that subject. We know, however, that where the flax industry is important, as in some European countries, they have different varieties of flax, of higher growth than the seed flax grown in this State, which are advocated by fiber growers. A collection of fiber varieties was secured some time ago by the State University and has been grown from year to year at Berkeley. These varieties have already been mentioned in our columns, and the seed is distributed to those who desire to test its growth. We are very anxious to see the flax industry located here and desire the success of all who may put forth effort toward that end.

CITRUS WINDFALLS are all utilized in Florida by crushing them and extracting the juice, which is made into wine and excellent vinegar.

THIRTY thousand sheep owned by Oregonians are being wintered in the vicinity of Fremont, Neb.

THERE is talk of organizing a Horticultural Society in Colusa.

The Woolly Aphis.

WALNUT GROVE, CAL., Jan. 6, 1888.

Mr. Charles J. Woodbury, 123 California St., S. F., Cal.—DEAR SIR: Yours of the 3d inst. to hand last evening. In regard to the Woolly Aphis, I can only give you my experience. When I came here, my apple trees were badly infested with Aphis, so I washed them thoroughly to exterminate and have not seen any signs of the Aphis since, which has been over two years. Yours respectfully,

L. D. GREENE.

I will remark that I have known of no case where my tree-cleanser has been used as an antidote for the Woolly Aphis where it has not been perfectly successful.

Full directions accompany its use. Price, 3½ cents per pound in cases, 80 pounds in a case; in 8 pound cans same price, 15 cents extra for can. In barrels, 3½ cents per pound, 10 per cent off, 400 pounds in a barrel. I also manufacture the fine Anti-Gumming Farm Machine Oils and General Lubricating Oils.

Address CHARLES J. WOODBURY,
123 California St., S. F., Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

HOW HE WON.

William Beach, Hanlan's Conqueror, Tells How he Did It.

The recent exploit of Mr. William Beach leaves no doubt that he is the handiest man in the world with the sculls. The ease with which he outrowed his opponent, the supposed invincible Ned Hanlan, shows that in form, stroke and muscular development, adapted to sculling, he has no equal.

Although an Australian by virtue of residence, Beach was born in Surrey, England, in 1851, and removed with his parents to New South Wales in 1854. He was brought up to his father's trade, and, while toiling like a young Vulcan in the smithy, unconsciously developed that magnificent physique which has since brought him world-wide distinction. When about 23 years of age, Beach commenced rowing on the Illawarra lakes against local competitors, and from the outset kept winning until gradually handicapped out of all races. Following are his chief aquatic performances while in Australia:

December, 1880—Won Deebie's handicap, Woolloomooloo bay.

January, 1881—Second Pyrmont Regatta, won by Pearce.

January, 1881—Second National Regatta, won by D. McDonald.

February, 1881—Beat N. McDonald, Parramatta river.

March, 1881—Beat George Solomons.

May, 1881—Beat Charles Reynolds.

October, 1882—Second Punch trophy, won by E. C. Laycock.

December, 1882—Beat T. Clifford, Parramatta river.

January, 1883—National Regatta, swamped, won by Messenger.

March, 1883—Nowhere, Grafton Regatta, won by D. McDonald.

March, 1883—Won Woolloomooloo Bay Regatta prize.

December 7—Won James Hunt's trophy, Parramatta river.

April 2, 1883—Beaten by E. Trickett, championship (first time).

April 12, 1883—Beat E. Trickett, championship.

April 17, 1883—Beat E. Trickett, championship.

April 12, 1884—Beat E. Trickett, championship.

August 16, 1884—Beat E. Hanlan, championship world.

March 17, 1885—Beat T. Clifford, championship world.

March 27, 1885—Beat E. Hanlan, championship world.

December 19, 1885—Beat N. Matterson.

November 26, 1887—Beat E. Hanlan, championship world.

Mr. Beach's system of training includes a run of two or three miles before breakfast, a walk of six or seven miles afterward, and a pull over the course. After dinner comes another two-mile walk and a second pull over the course, during which he rows himself right out, eases off, and then pulls again. A long walk concludes the day.

A man under such physical strain, even though he be a giant, must often feel the failure of his strength to his will, and, powerful though he be, it is not surprising that Mr. Beach candidly states that during his training, previous to meeting Edward Hanlan the second time for the world's championship, his trainer bought for him Warner's safe cure, and he says: "I was agreeably astonished at the great benefit which followed its use." While in training he finds this the best possible aid to a command of all his natural powers, because it does not first goad and afterward weaken the system, but acts in perfect harmony with nature's laws.

Mr. Beach's experience is confirmed by the experience of many thousands of athletes all over the world. Under the great physical strain they break down and die prematurely, because they have not been able to keep disease away from their kidneys and liver, whence most diseases originate. Mr. Beach recognizes this necessity, and has sagacity enough to use the only scientific specific for that purpose. He has not only the prestige of victory, but the prestige of a true scientific method of training and keeping up his wonderful physical condition. If he did not voluntarily give up the championship, it would no doubt be a long time before it was wrested from him.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Sample It.

Three select samples and three future issues of the *Illustrated Pacific States Weekly* will be sent, postpaid, to any address on receipt of 25 cents. Office, 220 Market street, S. F.

Black Scale.

December 29, 1887.

Messrs. Woodin & Little, 509 and 511 Market St., S. F., Cal.—GENTLEMEN: Referring to Prof. Ongerth's Liquid Tree Protector, I desire to say that about two months ago I found quite a percentage of my olive trees infested with the black scale. In some instances the tree was entirely enveloped by a black smut, while the branches, to the very extreme tips of the tender shoots, were covered with the young scale. I sprayed my trees once only with the Tree Protector. The effect was wonderful. It not only completely and entirely destroyed the scale, but it seems to have invigorated the growth of the tree. It is all and more than all you claim for it.

Very respectfully,

THOMAS BECK, U. S. Appraiser.

Do you think of buying a piano? Then observe Kohler & Chase's advertisement of the "Ivers & Pond" in this issue.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

376,153.—CABLE-RAILWAY CROSSING—E. S. Holden, S. F.

376,339.—BELT SHIFTER AND TRAINER—F. L. Palmer, Berkeley, Cal.

376,340.—ELEVATOR—F. L. Palmer, Berkeley, Cal.

376,172.—PAYING COMPOUND—A. Walrath, Nevada City, Cal.

376,403.—CAN-FILLING MACHINE—W. H. Wright, San Jose, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Combined Plow-Seeder and Pulverizer.

Mr. L. B. Ruggles, president of the Traver Warehouse and Business Association and a farmer of large experience, has been experimenting for some time past on his farm, and has finally constructed an attachment to a gang-plow which he claims to be superior to any now in use for seeding and the other purposes for which it is intended.

A description of the new invention is as follows: The attachment consists of a number of drill-wheels, 16 inches in diameter, having a V-shaped or cutting edge, set in a wooden box-like frame that may be adjusted and hinged to the rear of any gang-plow to which a seeder is or may be attached.

There are two drill-wheels for each plow in the gang, one to form a drill-row in the ridge or center of each furrow, the other in the lap or where the furrows meet, thus forming twice as many drill-holes as there are plows in the gang.

The ordinary gang-plow seeder will be used, but transferred to the top of the drill-frame, and agitated by the same wheel and method as in ordinary gang-plow seeders. A seed opening is over the rear of each wheel and the seed is conveyed to and dropped in the channels formed by the drill-wheels.

The planter is attached to the rear of the drill-frame by steel springs and is a bar the same length as the drill-frame, beneath which are as many curved steel blades as there are drill-rows, and each blade catches the ridge left between them, turns it back over the seed, presses the soil upon it and completes the work.

The effect of the wheels and planters is to thoroughly press, pulverize, level and cultivate the soil, and deposit the seed at a uniform depth and in rows of more suitable distances. A caveat has been filed and steps taken to protect the invention by patent.

Mr. Ruggles claims that there is no better time to sow grain than when ground is in good condition for plowing; that if plowed and left to wait for the drill or seeding at some future time it is liable to dry out or be packed again by heavy rains; that land well plowed is left too loose and porous for seeding and requires pressing down again, and the great trouble with the ordinary gang-plow seeding is the ground is left unprepared, is loose so the air gets to the seed, and the roots, if they start at all, are liable to dry out and perish; that the surface is uneven, some seed falling to the bottom of the furrow where it is too deep, and some upon the surface, where it lacks moisture and perishes or makes a feeble growth; that one opening in the seeder for each plow is insufficient, as it leaves the rows too far apart and too much seed is left in one place and not enough in another; that seed should be planted at a more uniform depth, and experiments prove that it should be not less than one nor more than two inches deep; that seed should be far enough apart to stool, and yet close enough to utilize all the space; that after land is plowed it should be again pressed down so as to close up the spaces between the particles of earth and retain the moisture longer, and hence land sown by this method will be more likely to make a good stand, sure growth and insure a better yield.—*Traver Advocate*.

YOUNG MEN or women who desire instruction in penmanship, book-keeping, short-hand, type-writing, or other commercial studies, the common English branches or modern languages, are referred to the advertisement of the Pacific Business College, which has now been established a quarter of a century.

GREAT SALE OF HORSES.—Do not overlook the auction sale of horses advertised in this issue by Killip & Co., to occur on Feb. 16th. Sale catalogues are now ready, and should be sent for and studied over by our stockmen.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and liberal terms. Address, J. C. Hoag, 312 Van Ness avenue, San Francisco, or Traver Beach, San Jose, Cal.

About Stopping This Paper.

We particularly request any one receiving this paper, who does not wish to continue it, or who does not intend to pay for it, to send written notice of that fact to us. Of course, this does not apply to those who for good reasons know that the paper is sent to them complimentary. In sending word to the publishers, be particular to note all of the following points: 1st, to send it to the P. O. by a trusty hand; 2d, to be sure you have a stamp on it; 3d, that it is correctly addressed; 4th, that your name is plainly written; 5th, that you give the name of your P. O.; 6th, that you give the name of the paper (or we should have to look over the long lists of subscribers on several newspapers). If your letter reaches us with any one of the above points overlooked, we should have to look over thousands of addresses to find your name to discontinue your paper. By missing one or more of the points above enumerated on the part of subscribers, we are doubtless often blamed for not stopping papers when it is impossible for us to do so, and in many cases receive no intimation even about the matter.

A Fine Japanese Orange.

We have tested and are very favorably impressed with oranges brought us by H. E. Amore, of the Japanese Free Importing Co., whose office is at 120 Sutter street, in this city. The oranges, although more than a month from the tree, having been plucked rather green in Japan, were of very sweet and agreeable flavor. The orange is apparently of the Mandarin type, and the most desirable we have seen. It is named the "Oonshiu." The Japanese Agricultural Association of Tokio says in its sixth annual report:

The "Oonshiu" orange is of medium size, rather large, oblate; rind thin, smooth, deep orange color; pulp sweet, juicy, most delicious, containing hardly any seeds or seedless. It is mostly esteemed for its excellent qualities for table use, as well as for being seedless—the best variety of Japanese oranges.

This description seems to fit accurately the samples shown us. They were about two inches in diameter, and we are told they sometimes reach three inches. The skin separates easily and cleanly, and the fruit must become popular.—*Rural Press*, Feb. 12, 1887.

\$500,000

On Country Real Estate in large and small amounts at lowest rates, by A. Schuller, 106 Leidesdorff St., room 3.

LEWIS' FORCE PUMP AND SYRINGE.—This device has met with very large sale and has, we understand, given great satisfaction for insecticidal purposes in gardens. It is advertised in this issue of the *RURAL*.

HORTON & KENNEDY'S
FAMOUS

ENTERPRISE

Self-Regulating

WINDMILL

Is recognized as the

BEST.

Always gives satisfaction. SIMPLE,

STRONG and DURABLE in all parts.

Solid Wrought Iron Crank Shaft

with DOUBLE BEARINGS for the Crank

to work in, all turned and run in ad-

justable babbitted boxes.

Positively Self-Regulating,

With no coil springs, or springs of any kind. No little

rods, joints, levers, or anything of the kind to get out of

order, as such things do. Mills in use 6 to 12 years in

good order now, that have never cost one cent for repairs.

All genuine Enterprise Mills for the Pacific Coast trade

come only through this agency, and none, whether of the

old or latest pattern, are genuine except those bearing

the "Enterprise Co." stamp. Look out for this, as

inferior mills are being offered with testimonials applied

to them which were given for ours. Prices to suit the

times. Full particulars free. Best Pumps, Feed Mills,

etc., kept in stock. Address,

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!

FERTILIZE!

NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOEBIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.53 "
Potash.....	2.53 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.95 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture. BERKELEY, Nov. 20, 1886.

Dr. J. KOEBIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully, E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO., H. DUTARD, President, room 7, Safe Deposit Building, or

FEMALE OVERSEERS OF THE POOR.—With reference to the movement in favor of electing women as poor-law guardians in London this winter, the *Pall-Mall Gazette* says: "The ideal to be aimed at is a board composed of equal numbers of both sexes. It is no wonder that the poor detest the poor law when the boards which stand in loco parentis to the pauper are almost exclusively male. If our poor-law administration is to be natural and humane, the sex of our mothers and sisters must be as largely represented on boards of guardians as it is in our own families."

CHOICE wheat is selling at Elmira as low as \$1.20 to \$1.23, and a great deal is being shipped at these figures from the warehouses.

Of hides and tallow the United States produces \$82,949,207 worth. Russia follows close after with \$81,000,000.

Ongerth's Tree Protector.

WOODIN & LITTLE, Agents, 509 and 511 Market St., San Francisco, Cal.—GENTLEMEN: In reply to yours of the 29th ult., as to effects of your Liquid Tree Protector on the tree you treated for me last April, I would say that where the wash was applied the insects of all sorts are certainly killed. The wash is still on the tree, and the bark under it shows a healthy and lively appearance. I was afraid for a while that owing to its gummy feeling and appearance the pores of the bark might be closed to the great detriment of the tree, but so far I am glad to say there have been no indications of any ground for my fears. I am so well satisfied of this that I shall entirely paint the trunks and larger branches of all my trees with your preparation this winter.

I would add that your Grafting Compound is the best preparation I ever saw for covering wounds on trees, and it is apparently not affected by any sort of weather. Yours very truly,

R. D. Fox,

Proprietor Santa Clara Valley Nurseries.
San Jose, Dec. 5, 1887.

Galbraith's Horses.

A new importation of horses just arrived in splendid condition, brings our stock up to about 200 stallions, nearly all of which are from two to six years old, of choice breeding and highest individual merit. Our new illustrated catalogue is now ready, and will be cheerfully sent free of charge to all applicants.

At the great American horse show held at Chicago in November, our stock won no fewer than 28 premiums, including first prize for Clydesdale stallions, four years old or over; first, third and fourth prizes for English Shire stallions, four years old or over; first, second and fourth prizes for English Shire stallions two years old; first prize for Cleveland B. y stallions, two years old; first prize for pony stallions, and grand sweepstakes premium for best draft stallion of any breed.

Inspection of our stock cordially invited.
GALBRAITH BROS.
Janesville, Wis., Jan. 4, 1888.

From Seaboard to Seaboard.

EDITORS PRESS:—A few weeks since we reported sales of Cleveland Bay stallions for California, later to Arizona, and now comes North Carolina with a call for a carload. One of the largest planters and real estate owners of North Carolina purchasing of us the grand young C. B. stallion, Ferdinand, with enough mares and fillies to fill a car. These together with the Shire stallions Talisman, 318 (4723) to Chas. Westrup of this State, and Lord Byron 329 (4543) to a company of 11 Danish farmers in Western Nebraska, the Cleveland Bay stallions Warlock 52 to W. E. Wood of Nebraska, True Briton 144 to G. R. Humphrey of Iowa, Kingfisher to Peak & Dawson of Illinois, Endymion to J. R. Nation and C. F. Cranor of Indiana, constitute our most recent sales.

ORANGE AND LEMON TREES
 In Large or Small Lots, both Wholesale and Retail,
 Cheaper than Ever Before Offered on this Coast,
 —AT THE—
CAPITAL NURSERIES,
SACRAMENTO, CAL.

These Trees are all budded with the very best known varieties and are true to name and free from insect pests. We also have an immense stock of all kinds of Fruit, Shade and Ornamental Trees, Vines, Plants, etc. In fact everything in the nursery line at lowest market rates. Also a complete assortment and large stock of Field, Garden and Flower Seeds at lowest market rates, either wholesale or retail. Our Seeds are all tested before sending out.

Send for Seed and Tree Catalogue. Call, if possible, and see our stock. Special rates (very low) given on large orders. Correspondence solicited. Address all communications to

IMPORTERS, MANUFACTURERS, AND DEALERS IN

HARDWARE AND AGRICULTURAL IMPLEMENTS.

GEM SEED SOWERS.

No. 1, Weight, 130 lbs. \$20.

This Machine is run with a Chain and Bevel Gear. It is the one we have sold for years, and has given the best satisfaction of any broadcast seeder yet invented.

No. 2, Weight, 154 lbs. \$22.50.

Runs with Chain and Belt Gear. The advantages gained on the bevel gear are smoothness of movement, noiseless while running, durability of the fast running parts, and the evenness with which it sows the grain.

No. 3, Weight, 164 lbs. \$25.

Runs with all Gears. This machine is preferred by many to the others which run by Chain. The feed valves and distributor are the same as in the others.

We have manufactured the GEM SEEDERS for a number of years, and they have given better satisfaction than any other Broadcast Seeder in the market. They throw the seed horizontally instead of vertically (as in all old-style Seeders), and thus save a large portion of the grain. Where sold they have never failed to give satisfaction. ARMSTRONG'S PATENT FORCE FEED is attached again this year, and is considered by those who have used it, a great improvement.

THE GENUINE GEM SEEDERS are manufactured exclusively for us at Benicia. SEE THAT OUR NAME IS ON THEM.

ACME PULVERIZING HARROW, CLOD CRUSHER & LEVELER.

DON'T BE DECEIVED BY WORTHLESS IMITATIONS.

All genuine bear Trade-Mark, have Steel Clod Crushers, Double FLEXIBLE Gang Bars and the Improved Style, also has

ADJUSTABLE REVERSIBLE COULTERS,

Which when worn may be turned end for end, thus giving double the amount of wear. Works the entire surface of the ground. No other Harrow combines these points.

Sizes: 3 to 12 Feet. With or without Sulky.

ILLUSTRATED PAMPHLET FREE.

DUANE H. NASH, Sole Manufacturer,

MILLINGTON, MORRIS COUNTY, NEW JERSEY.

SOLD BY:

BULL & GRANT FARM IMPLEMENT CO., San Francisco and Los Angeles, and

STAVELAND & WALKER, Portland, Oregon

FERTILIZERS!

Feed the Land and it Will Feed You.

Fertilizers lessen the necessity for irrigation, increase the yield, improve the quality of crops, and keep the soil in a strong, healthy condition.

Special Fertilizers for all Crops.

THE CALIFORNIA BONE FERTILIZERS ARE CHEAPER THAN BARN-YARD MANURE.

Owing to the gratifying success our product has met with during the past season, we feel greatly encouraged in offering our Fertilizers, and can guarantee our patrons that our former standard of excellence will be fully maintained.

Scenes in San Jose and Vicinity.

As attention turns this week to San Jose as the point where the American Horticultural Society holds its first California meeting, we

Observatory increases as that princely donation of the late James Lick is now almost ready to be finally bestowed upon the people of California through the Regents of the University as its custodians. The great telescope is practi-

above the sea and 13 miles distant from San Jose on an air line. The road is full of picturesque beauty, and bids fair to be well traveled not only by the throngs of tourists, but by the most famous astronomers of the world, for

Beach, and but a short distance further to the left is the main street of San Jose, which runs at right angles to the street on which the courthouse is located. This main street is a notable one, for toward the west it continues into the

ON THE ROAD FROM SAN JOSE TO MT. HAMILTON.

A SHADY NOOK ON THE MT. HAMILTON ROAD.

SANTA CLARA COUNTY COURTHOUSE, SAN JOSE.

THE CALIFORNIA FAN PALM IN A SAN JOSE GARDEN.

give on this page a few of the hundreds of interesting views which the Garden City and its environs afford. In former issues we have had scenes in orchards in the important Santa Clara district and reproductions of famous pieces at the citrus fairs held there during the last two years. At this time we have two scenes in the picturesque region through which the approach to Mt. Hamilton leads, and two views in the city. Interest in Mt. Hamilton and the Lick

cally finished. Its objective, three feet in diameter, has already assaulted the heavens, and as soon as the minor fittings are complete, the formal transfer by the Lick trustees will be made and Dr. E. S. Holden, ex-president of the University, will assume charge as director of the observatory. The visitor to Mt. Hamilton passes eastward over 26 miles of well-built road, built by the county of Santa Clara, to reach the observatory, which is 4300 feet

every facility is to be given them, according to Prof. Holden's plan, to profit by the peerless lenses of the Lick telescope.

The Santa Clara courthouse, of which a view is given, is a substantial and well-planned building, situated opposite St. James' park, a very pretty breathing-place in the center of the city. Our view includes, just to the left of the courthouse, the St. James hotel, owned by the well-known farmer-landlord, Tyler

Alameda—the "beautiful way"—planted with shade trees years and years ago by the old padres, which connects San Jose with her beautiful sister town, Santa Clara. The same street continued eastward from San Jose reaches to Alum Rock, a beautiful park just at the base of the hills, and thence also leads out the famous roadway to Mt. Hamilton.

Another pretty scene shows twin palms, popular ornamental plants in many of our towns.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

California's Phenomenal March.

EDITORS PRESS:—It is but a few years since California was considered, by the residents of the Eastern States, as an isolated portion of the country, valuable for its enormous production of gold and silver, but otherwise of comparatively slight importance, and certainly not destined to become the home of wealth, refinement and culture, and the garden spot of the United States.

For a time numbers of those who had taken up their residence in this favored State occasionally returned to their old homes, and, full of honest pride for their adopted State, would describe something of its natural advantages; its balmy, healthful climate and beautiful scenery, not surpassed on any portion of the globe; its wonderfully fertile soil, capable of producing five crops of hay or two crops of corn in a single season; strawberries from April to January; profitable crops of fruit at three years from planting; beets weighing from 50 to 80 pounds each and yielding 40 tons to the acre; big trees, from 10 to 32 feet in diameter, etc., etc.

While these facts were related in all sincerity, they were, nevertheless, too much for our Eastern friends to "swallow," and the reputation of Californians for truth and veracity suffered accordingly.

Gradually, however, there came a change. Occasionally parties from the East came here for a few months' sojourn, in search of health or pleasure, and upon their return home gave expression to their opinions of the Golden State, and these opinions, coming from disinterested parties, attracted attention and created a desire among our friends beyond the Rockies to learn more about California. The number of these visitors rapidly increased, and then came the great excursions of the Knights Templar, the Odd Fellows and the Grand Army of the Republic, and these thousands of reputable people, returning to all parts of the Union, related what their eyes had seen upon these golden shores, and California's claims could no longer be gainsaid.

Hence it is that the mighty human stream now pouring into California was not set in motion by Californians interested in creating "land booms," but by disinterested Eastern people who had visited us and returned home with a report that California was indeed a wonderful land "flowing with milk and honey." Never before in this or any other country has been witnessed a tide of immigration similar to that now pouring into California. Throughout the length and breadth of the Eastern States is being taken up the song:

"We are coming, California, three hundred thousand more,
From Mississippi's winding stream, and from New England's shore;
We leave protectors for our ears, our arctics and our muff,
We leave our overcoats of fur and tons and tons of stuff;
We're bound to have the climate of that great Pacific shore,
We are coming, California, three hundred thousand more.

"If you look up all our valleys where the harvest ought to shine,
You'll see our sturdy farmer-boys fast forming into line;
They're tired of the stony soil, of snow, and rain, and sleet,
The city merchant joins the throng, he's tired of the heat.

The blizzard shrieks behind us, we skurry on before
We are coming, California, three hundred thousand more."

Between September 1st and December 15th, there were brought to California over the various transcontinental lines upward of 54,000 persons, and the tide continues undiminished. Large numbers of the throng are men of wealth who come to establish beautiful homes in this land of sunshine, and to invest in mercantile or manufacturing enterprises, or in securities second to none on the globe, viz., California lands. Thousands of our new-comers are sturdy farmers in middle life, who, by years of untiring industry and economy, have managed to acquire a competence, and have concluded to leave the snow, and ice, and blizzards of the East and come where they can live in comfort and till the soil twelve months every year.

Who can estimate the future of this great State, enjoying, as she does, more of nature's gifts than any other spot on earth, and populated by these thousands of intelligent, wide-awake, well-to-do people. The imagination is not capable of producing a brighter picture than California will present 25 years hence.

Already may be seen a wonderful change. What were formerly large stock and grain ranches thousands of acres in extent have been subdivided and converted into general farms, vineyards and orchards. Lively, prosperous towns are springing up all over the State, and the character of their public buildings, churches, schools, business and general improvements indicates a degree of prosperity never before witnessed in any part of the Union. The southern portion of the State was the first to feel the beneficial effects of this

"moneyed immigration." This was due, in great measure, to the impression that only in "Southern California" was to be found the glorious climate of which we boast.

The development in that portion during the last three years has indeed been wonderful, almost beyond comprehension, but it is no longer confined to any one section, and it is well for California that it is not. The tide has rolled steadily northward, until now it has reached the extreme head of the great Sacramento valley, at Shasta's feet, a distance of more than 600 miles, and still our new friends find themselves within the great citrus belt, and enjoying the same average temperature throughout the year experienced in the southern portion of the State, the mercury never falling below 22° above zero, and very rarely reaching that point. While from earlier attention to the industry, the southern counties are naturally further advanced in the production of citrus fruits, yet Northern California's recent citrus fair has conclusively proven her claims in this particular.

She also enjoys advantages in the way of an abundance of good timber and a rainfall so plentiful as to obviate the necessity for irrigation; and last but not least, an additional and almost unlimited market for her fruit productions has been opened up by the recent completion of the California & Oregon railroad, making all rail communication with Oregon, Washington, British Columbia, Idaho, Montana, and Dakota, all of which will be large buyers of Northern California fruit.

We travel over our beautiful State and we find everywhere unmistakable evidences of unparalleled prosperity, and as we recall the California of only ten years ago, we are forced to exclaim, wonderful change! And yet Californians have really no reason to be surprised. We have had this same wonderfully fertile soil, this same unapproachable climate, ever since we crossed the Sierras or entered the Golden Gate. We know, because we have seen it throughout the State, that our valleys and foothills, when properly tilled, will produce fruit crops netting from \$100 to \$400 per acre, and general farm crops far in excess of anything ever seen east of the Rockies. We know beyond a doubt that California is to be the fruit orchard of the world. Within her borders may be grown in wonderful profusion nearly every variety known on the face of the earth. Oranges, lemons, olives, figs and pomegranates, as well as the hardier fruits, are grown from San Diego on the south to within a few miles of snow-capped Shasta on the north, nearly the entire length of the State.

Our soil produces from 5 to 13 tons of grapes and from 7 to 12 tons of prunes to the acre, while orchards of walnuts, oranges and olives yield in some cases, when in full bearing, from \$500 to \$1000 and even more net profit per acre.

What wonder, then, that our lands are sought after? We have many of us cultivated the rocky hills of New England, and know by experience what it is to labor all summer to provide food and fuel for the coming winter, and we are able to appreciate in a measure, at least, the manifold advantages possessed by California and only awaiting development by the thousands now coming and the hundreds of thousands which are sure to follow. California is already the wealthiest State per capita in the Union, but her present prosperous condition is only the shadow of what we shall see a decade hence. Her march is only just begun. With her climate and her soil, and with the class of immigration which we have described pouring in in such numbers, she will continue on her course until she has far outstripped every one of her sisters of the Union. God speed her!

G. W. H.

Notes on San Mateo County.

EDITORS PRESS:—The county of San Mateo is set off from the southern portion of San Francisco by Act of the Legislature consolidating the city and county government of San Francisco in 1856, and organized into a separate county government. While one of the smaller counties in area in the State, there is perhaps no other county having such a variety of soil, climate and scenery. The northern and coast portion is within the fog belt, and among the richest and most productive portions of the State for vegetables, cereals, natural grasses and the hardier fruits. As a butter-making section it is unexcelled by the dairy region of Point Reyes. For the production of vegetables this section is unrivaled by any part of the United States. A great many carloads of vegetables have been sent East from this section during the last two years, and shipments will be greatly increased this year. So immensely profitable is this new industry that a large part of this section of the county would undoubtedly be diverted to this use if the facilities of the proposed coast railroad were available. This section, which a few years ago was held at small figures, bids fair to become the most valuable land of the State. The time is not far distant when thousands of carloads of fresh succulent vegetables will be sent away from this region East in January, February, March and April to grace the tables of our Eastern friends.

The mountainous portion of the county is largely covered by magnificent forests of redwood, oak, laurel and madrone. These forests, though furnishing employment to a great many woodmen, are still largely unbroken on

the western slope of the Coast Range. Here are opportunities for homes for thousands of people who love the stately grandeur of mountain scenery and the silent, primeval forests. But it is on the flats, hills and mountain range facing the east and sheltered from the trade winds, bathed in summer's eternal sunshine, that the greatest immediate changes are about to take place. From Milbrae southward no more charming country can be found in any part of the world, with a climate unexcelled, a soil unsurpassed, a variety of scenery to suit all fancies. This favored section challenges all others in regard to its numerous advantages. The natural suburb of the metropolis of the West, the only point which can be reached by land, it is indeed surprising how it has been neglected so long while other sections having few of its advantages have become densely populated. This has perhaps grown out of the indisposition of many large land-owners to divide up their estates and partly because the transportation company for some reason has maintained higher rates of communication to this section than to others equally distant; but all this now seems to be undergoing a decided change.

The transportation company is reducing its rates, the land-owners are cutting up their land at very moderate prices. We are of opinion that the next three years will work such wonderful changes in this favored section that the old residents will scarcely know their surroundings.

This section has heretofore been particularly the homes of millionaires, too numerous to mention. This section was a favorite home of I. C. Woods, W. C. Ralston and Milton S. Latham, three men whose histories were so strikingly similar, possessed of keen, penetrating intellects, coupled with great activity, achieved pre-eminent success in early life, yet met with great reverses and closed their lives in sadness, if not in despair. They will all be remembered kindly and sincerely, lamented so long as the old residents live.

For beauty of location, a genial and healthy climate with pleasant surroundings, it would be hard to find a place more eligibly located than San Mateo, Belmont, the new town of Phelps, or Menlo Park, while for business and manufacturing no place can exceed the facilities afforded by Redwood City. A large part of the county is, and must always be, tributary to her commercial, mechanical, and manufacturing enterprises. This town has water and railroad facilities connecting her with San Francisco and other towns, while she has hauled to her wharves tan-bark, wood, lumber, grain, and other articles which should enter into her manufactures and mercantile enterprises. When we view the advantages of her location we can but feel surprised that she has not a population of 20,000 instead of 2000.

For fruits, including oranges, lemons, limes, figs, olives, nuts, and grapes, a large part of San Mateo county, east from the summit of the Coast Range, is not excelled by many of the great fruit belts of the State, while the sheltered parts of the coast side are particularly adapted to apples and pears.

OLD RESIDENT.

HORTICULTURE.

Mission or Piccholini Olives.

EDITORS PRESS:—The comparative value of the Mission and Piccholini varieties was discussed at the Santa Rosa convention, where Mr. Butler said: "I would give the preference decidedly to the Mission. While there are not many more on the Mission, the Piccholini are so much smaller, it gives a decided advantage to the Mission."

My opinion about that is quite different. I never heard it proved that the Mission will have more berries than the Piccholini, but know some facts to the contrary. At the place of Dr. Clark here are two eight-year-old trees, a Mission and a Piccholini, standing only 15 feet apart, and having had always the same care. Last season the Mission yielded 49 pounds of berries while the Piccholini gave 63 pounds. This season the Mission had hardly any fruit, while the Piccholini was considered more loaded than last season. On the whole place the Missions yielded a fair crop last season, though the Piccholinis had more. This season the Missions bore hardly any fruit, and, in spite of that, the whole crop was about 30 per cent more than last season.

There is another big advantage for the Piccholini. Dr. Clark commenced to gather the ripe Piccholinis in 1887 on November 1st; the Missions he gathered just before Christmas and then they were but three-quarters ripe. This late ripening, I think, will interfere with the growth of the next year.

I expressed this opinion a few days ago to Judge C. A. Tuttle here. "Well," he answered, "this will account for a fact which, so far, I could not explain. I have on my place two Mission olives, one of which had a fair crop last year, while the other had only few. This year it is just reversed. The poor one of last year has a good crop, while the other one has hardly any berries." The judge picks his olives when they are dead ripe, that is, in February, and is fond of eating them then, as they are, because they have lost all bitterness.

Ellwood Cooper had a small crop this season, though all conditions for vegetation were very

favorable. Might not this interference be the reason of the smaller crop? Has he, perhaps, also remarked that only every second year the crop will be a good one?

Mr. Cooper said about his Mission olives: "We take everything off; pick all the olives on the tree—green, red and purple." On the Piccholini I never have noticed a different state of ripeness, neither in Italy and France nor in this country, and I am pretty sure I would have noticed it if there had been any. I am convinced that the oil of the green olive is different from the oil of the ripe one; perhaps it is better in quantity or quality, but very probably it is not as good. With the Piccholini we can wait till the berries are in that state of ripeness which will yield the best oil; with the Mission we can not, if we do not choose to have two gatherings. There is one advantage of which I have heard in favor of the Mission: that it will take the graft easier. It is very probable that among the 40 or more known varieties of olives there is a better one than either Piccholini or Mission, and it is possible that when we have found this out in a few years we would like to graft. But I do not certainly know that it is so very difficult to graft the Piccholini, and then it is uncertain also whether we shall find any very fine new variety with which it would be profitable to graft large trees. Therefore I shall give the preference to Piccholini as long as no other kind has proved itself to be decidedly better.

In crushing there appears another difference. The large berries of the Mission often slip from under the approaching rolling-stone, while the smaller berries of the Piccholini are more densely packed together and cannot escape it. The result is that even when with the Missions the stone is kept rotating a longer time, still some whole berries will be found in the pulp, out of which the oil could not be expressed, while the Piccholinis all are crushed.

I would like to answer a few "Olive Notes," which are contained in the S. F. Merchant of January 6, 1888, p. 87.

"In dry soil a hole 2½ feet deep and six or eight feet square should be dug." If the correspondent had advised to dig a hole 16 feet square, the distance of the trees being 32 feet, it would have been better. I plow first the land at least three times, the last time with three horses, about 20 inches deep; then I dig a round hole three feet in diameter, that eight holes may be dug to one hole of the correspondent. This will cost me less, and, I am sure, give better satisfaction.

"Either set out the trees immediately after the first rain or wait till February or March. In either case the ground is warmer than when the tree is planted in midwinter." For this very reason it is best to put out the trees when the ground is cold, provided that it is not frozen and no frost is to be expected. Every tree will be hurt least in transplanting when its vegetation is at a rest. The olive will grow in California for 11 months and stand still only for one month. During this period even the smallest twigs will show only ripe wood, and the little sucking roots will not grow. If the trees are transplanted later, they have already commenced to grow again and the young sprouts invariably will wither in spite of the best care. Therefore the best time for transplanting is right after the cold spell.

"Twenty-five or 30 pounds of berries make a gallon of oil." It takes Dr. Clark here 54 pounds, but he does not press out the oil of the third quality. So far we have not heard it proved that less than 40 pounds are needed to one gallon of oil.

"The olive ripens here in November and December, and the tree is perfectly free from disease." About the ripening of the different kinds, we have spoken above, and when Mr. Cooper has to spend \$1 and \$1½ per tree to fight the scale, I think this a fact well worthy to be mentioned.

In column one, page 87, the Merchant says: "It is a great mistake to presume that the olive can be grown on a barren soil without fertilizers." In column two: "It is an established fact that olives thrive and grow the best in the rockiest and most sterile places." There is no doubt that every tree will grow better in a good soil than in a poor one, but what might be a good soil for an apple tree is a poor one for a peach. I have seen in Italy the finest olives three and four feet in diameter growing out of the very rocks on steep hills, where cultivation could not be thought of; and the same can be seen here with oaks, and where an oak will grow an olive will grow also, sure enough.

Part of my land is what by most people would be called a very poor land. On a steep hill with a southern elevation the plow hardly scraped the surface, laying bare the bedrock often at two inches. But this bedrock slate with vertical layers can be broken with the plow, and when exposed to the air will rot very quickly. There are now, after three years' cultivation, not many places where the plow is not going into the beam; besides, the plants will sink down their roots between the strata and always find the necessary moisture without irrigation. The olives and vines on this hill are as splendid as I have seen them anywhere, while oranges, lemons and most of the deciduous trees except nectarines and walnuts make a poor growth.

What we want to advance the cultivation of the olive is not small talk and private opinions of reporters, but facts and reasons given by experienced ranchers who are not afraid to put their names to what they have written.

Auburn, Jan. 9, 1888.

F. Closs.

THE VINEYARD.

Grape Pruning.

EDITORS PRESS:—In the RURAL of Jan. 7, 1888, appeared an article on grape-pruning by Geo. F. Waters of No. 8 Beacon street, Boston, Mass. In this article Mr. Waters states in italic that in pruning, as in everything else, experience teaches. Just how any one can gain experience in grape-pruning at No. 8 Beacon street, Boston, Mass., is hard to understand; yet Mr. Waters' article reads as if it were written by one who has his knowledge more from experience than from theoretical book-learning; and it is not so much to deny Mr. Waters' statements as it is to give my experience in what Mr. Waters calls bud-pruning that I begin this article.

Bud or what is here called "summer pruning" is a system very generally advocated in this State. Some 12 or 13 years ago I summer pruned a strip of about ten rows of grapes for a trial. This was done when the canes were about three or four feet long, and they were cut back so as to leave about two-foot canes. I do not remember what effect this summer pruning had on the quality of the grapes; but when pruning the vines next winter I noticed that the pith of the canes in those ten rows was of a blackish-brown color, and the wood of a peculiar nature, and it lasted several years before these vines made as healthy a wood as the vines not treated in this way.

A year or two afterward a neighbor "of an experimenting turn of mind," while going through these vines discussed the subject and treated one of the healthiest vines he could find to a thorough summer pruning, and the grapes on that vine partly sunburned or mildewed and the balance were of inferior size and color.

Again, a few years later, after a late rain, I wanted to give a certain piece an extra cultivating, and cut the ends off the canes to make room for the horse and cultivator to pass, and again I noticed the same effect, namely, want of size, sugar and color in the grapes and a rotten condition of the wood.

I have also noticed the same thing in several other vineyards where summer pruning was resorted to, and also several times when cows came in the vineyard and topped off some of the first vines in their path.

That a growing cane suddenly cut off during the thickest part of its growth should become sickly seems to me so logical in itself as not to need explanation, and any one who has paid the least attention to growing plants in general must admit that by continued severe cutting during the growing season any plant or tree could easily be killed.

It is claimed by men who have given the scientific part of grape culture more study than I have, that although before ripening a bunch of grapes may contain nearly all the material for perfect grapes, this material is in a different state and must first flow with the sap through the leaves, and there undergo the necessary changes and then descend again to the cluster, which becomes perfect and ripe as soon as all the juices in the cluster have passed through this natural laboratory.

That the leaves are needed to form perfect fruit can be seen by going through a vineyard about the time grapes begin to ripen. Whenever a vine has, through any cause whatever, lost its leaves or only produced imperfect ones, the grapes will be found to lack color and sugar, and no amount of letting them hang on the vines will ripen them.

This can best be seen in a vineyard of which the soil has become too dry by insufficient cultivating. In such a vineyard the only perfect grapes are found on vines with perfect green leaves, while the grapes on other vines hanging in the full glare of the sun will, "all opinions to the contrary notwithstanding," never ripen.

Pinching.

Some grape-growers who believe in summer pruning try to remedy the evil by pinching out only the very tender little top. If this be done, the growth of the vine will not be checked, as the expanding leaves take up the sap for a week or so, after which time the lateral branches start out to grow, and the only danger is that fruit buds forming for next year may be forced so as to sprout, in which case the vine will present a mess from which it will take a pruner two or three years to extract a decent-looking vine. The free effect of this pinching out the top will be to make the young growth more compact with the leaves nearer the center of the vine; but as grapes will mature just as well in the hottest sunshine as in the shade, so long as the vine is healthy, and as besides I have noticed that during blooming grapes will set much better on clusters hanging outside where the dew and fog can dry off from them than they do on clusters in the middle of the vine where the blossoms will sometimes not become dry till hours after the sun comes out, I do not think that either pinching or cutting the top out of growing canes can be beneficial in a single case, with the exception of young vines, which are apt to grow such long and heavy canes that the wind would break them off if they were not shortened.

In returning to Mr. Waters' article, it will

be seen that what Mr. Waters says experience teaches is not just how to benefit a vine by bud-pruning, but rather how much a vine can be injured without quite killing it. Some vines would die unless a few leaves were left beyond the clusters, while others will even succeed in dragging out a miserable existence if no leaves at all are left beyond the clusters; but Mr. Waters forgets to mention a single reason in favor of mutilating a vine in this way, unless it be that afterward there will only be little foxes to cut off instead of long canes.

There is not another important industry in this State conducted in such a happy-go-lucky way, or about which so many erroneous opinions prevail, and as new-comers are constantly trying to obtain information on the subject, I believe a

Few Hints on Grape Pruning

Will be appropriate. Some seem to think if they can only secure an Italian or a Frenchman and turn him loose in the vineyard with a saw and pruning-shears they have done all that is necessary. Many of the worst pruning jobs I have ever seen were done by some of these Italian woodchoppers who did not know a thing about viticulture except how to stow away large quantities of the wine when it was red.

One of the first supposed principles in pruning vines or fruit trees of any kind is to make them bear. This may be the object in old vineyards on the other side of the Atlantic. The problem here is more how to so prune that the grapes produced shall be of good quality and the least possible amount of strength be wasted in producing superfluous wood.

Propagation seems to be the one object for which all living organism strives. It is a well-known fact that plants of all kinds, when approaching the end of their existence, will spend their last efforts in trying to propagate their species, while on the other hand a young, thrifty plant will abstain from bearing so as to reach its greatest possible size, as a future field for reproduction.

If seeds only were desired, the result to work for on grapevines would be to keep them as near dying as possible. But as the desired covering of the seeds is more of an artificial than a natural product, the object is to keep the vine in as thrifty a condition as possible for developing the fruit, and yet not so thrifty as to prevent fruit buds from setting.

By watching a young sprout on a grapevine it will be seen that at each joint is a growth capable of becoming a cluster under the necessary circumstances. On young vines these growths take the form of tendrils, while on old vines the first ones produced will be large clusters and the balance tendrils, which on some varieties will again form small clusters in June, which make the second crop grapes. I have seen exceptional cases where the first clusters formed this way would gradually grow smaller till there were as many as ten in succession, the first one a good, large bunch and the last one a mere tendril with four or five blossoms on it; but the rule is that each young sprout comes out with two large clusters on the first joints and no more.

Some varieties of grapes have a capacity of producing clusters on all sprouts, whether starting from old or young wood, but most varieties will only produce fruit on sprouts starting out of the large buds found on one-year-old canes, while the small buds found near the joints of the two and one-year-old wood, as also all buds on old wood, will be barren.

Again, some kinds of grapes produce clusters which average two pounds in weight, while others only have half-pound bunches. These are the varieties generally pruned short, and requiring the most care. Most of the long-pruned varieties have an instinct for prolonging their own life, which they follow by varying the size of their bunches according to how hard they have been taxed the year before; but the smart viticulturist gets even by leaving more buds as the bunches grow smaller.

Now in pruning the first thing to do is to make up your mind how much grapes your vineyard can produce to the acre. Some vineyards have been known to bear 20 tons to the acre, but the average is generally admitted to be about 3½ tons. Winemakers insist on from 18 to 23 per cent of sugar; if the grapes test below 18 they have been allowed to overbear; if they test above 23 the vines did not bear as much as they could. It may happen that some grapes of the raisin varieties test sweet enough, but have only formed canes from six inches to a foot in length; this is another sign of overtaxing the strength of the vines. It may also happen that three-fourths of the grapes are sunburned. This only happens when the roots cannot furnish moisture for all the grapes on the vines, which is another sign of over-producing. Mildew is more a result of general debility caused by over-production the year before, although a vine loaded with more grapes than the roots can find either food or moisture for is much more subject to mildew than a vine not so situated.

How Many Buds to Leave.

After having decided what amount of grapes your vines can bear, say ten pounds to the vine, "which would be the average with vines planted eight feet apart," it would only seem necessary, for the two-pound cluster varieties, to leave one spur with one small and two large fruit buds, but if this were done the result would most likely be that the thrifty growth of the sprouts on that spur would prevent the fruit buds from setting, and the extra amount of saps in the vine not being able to all go into the three sprouts, would burst out on different

places and form black-knot. With varieties producing half-pound bunches this danger would be obviated, but grapes do not always set well. In case of a shower of rain during blooming nearly all blossoms open at that time would drop off, while grapes already set keep on growing, and the closed buds will not open till after the rain is over. If, however, the rain keeps on for a week or so, all buds will drop off and a whole vineyard may not yield a pound of grapes, but this rarely happens in California. There are several other causes which may prevent grapes from setting full, for which reason it is better to leave two or three or four times as many fruit buds as is required. There is, however, a limit to this amount, as conditions, "climatic or otherwise," which would prevent a vine from bearing 10 pounds of grapes on 20 fruit buds, would also most likely prevent such a result on 100 buds. After pruning a vine so that it has 10 or 15 or 20 fruit buds left, "on vines which set well 10 would be enough, while on others it would be safer to leave 20." It will be seen that vines of some varieties will hardly put forth a single sprout beside the ones from the fruit buds, while others will be covered with over 100 suckers. On vines which make the most suckers I have noticed that all these sprouts together would make such a close mass of leaves as to completely hide all blossoms, and these would, in case the weather was inclined to be only slightly damp, not get a chance to dry off for days at a time, and consequently not set. This can be prevented by pulling out all suckers before blooming and also by leaving the spurs longer, so as to spread out the vine a little more.

Suckering.

That these suckers must be taken off is admitted by all, but very few growers go further than to pull off the ones at the base of the vine, although some take off all sprouts starting out of wood older than one year, and a great many do not touch their vines between pruning and grape-picking. Still, this suckering is one of the most important parts of grape-growing.

Although it is my experience that grapes will not mature well if the tops of the canes are removed to such an extent as to leave practically no foliage beyond the clusters, I also know from experience that all the leaves on the bearing cane are sufficient for the purpose, and that the removal of all sprouts except the ones wanted for bearing is a great saving of the strength of the vine. I have personally removed at times as many as 100 long, heavy canes in winter pruning from vines which had not been suckered during summer. If grapevines were only intended for a year or two, this would, perhaps, not be so detrimental, but when it is taken into consideration that vines are expected to live for hundreds of years, and that scientific viticulturists tell us that the growing of wood, which is completely removed from the vineyard, is a greater drain on vines than the fruit production, it will be seen that every ounce of wood allowed to grow unnecessarily is simply taking that much off from the existence of the vine.

I have seen many vines die off, and again sprout from the ground, where I am as sure as any one can reasonably be that the only cause was general debility occasioned by over-production of either wood or grapes.

The time required for removing all superfluous sprouts is no excuse for not removing them. It is a great deal easier to remove them when it can be done with the fingers than it is to cut them off later with shears and saw.

The greatest trouble is to find hired help to do it as it should be done. It requires more study and a better knowledge of the general principles of pruning to do this as it should be done than to prune in winter, as a vine properly attended to in summer leaves the pruner no choice whatever in any respect as to which canes he will keep, his only work being to judge how many buds he will leave on each spur, and occasionally to cut off a cane which is getting too far out in the row away from the stump.

The proper time of the year to remove all superfluous sprouts and grapes is after the grapes have set and are about the size of heavy shot. I have never yet seen anything which would make small grapes drop off the bunches after they were once set unless it were physical force, a heavy frost, or some similar disaster; and any one who has had a little experience can tell just as well how many pounds of grapes his vines will yield when the grapes are first set as he can when they are ripe.

One trouble in this thinning out is that the canes with the heaviest buds will always be found to grow out of the last bud on the end of the spur, and after instructing a man so that he will know how many canes with how many bunches to leave on each vine, he will invariably leave only those extreme canes so that the vine will each year spread out several inches in all directions and would soon stop up the rows so as to prevent cultivating. Just here is where the most judgment is required, so that when a branch begins to grow out too far, a sucker without grapes on it is left as near the body of the vine as possible, which will be the fruit-bearing wood for next year, when the branch must be removed at the place where this cane sprouts from it.

Where a branch runs too far out and no cane is left, the branch can be cut off in winter, leaving a three or four inch stub from which sprouts will invariably start, one of which can be kept by the summer suckerer; but the or-

dinary hired man will be very apt to pull them all off unless he is very careful.

Pruning Systems.

In this article I have avoided advocating any of the different systems of pruning in vogue "and which have each and all been so clearly proven the only and the right system of pruning by their respective defenders or inventors," as the foregoing remarks apply to all of them. I for myself consider them a mere matter of taste. I have never yet seen a style of manipulating pruning-shears so as to make vines bear more than the strength of the soil and the atmospheric conditions would permit. I remember a case of a professional pruner who came along with knife instead of shears, who showed me how to prune one vine so that it would bear 75 pounds of grapes; the next vine he could allow only 45 pounds. It was a good year for grapes, and in picking I put all the grapes from the 75-pound vine in a small bucket, and the 45-pound vine also had a small bucketful.

In my opinion, the main object in pruning is to leave the right number of fruit buds and to keep the vine in the shape required according to the rules of your own pet system. If I were to make any choice it would be in favor of pruning varieties which set only under favorable circumstances with long canes and easy-setting varieties short, but as this would subject most climbing varieties to short pruning and several varieties of table grapes to long pruning, it would seem a hopeless undertaking to get any one to think this the right way.

In finishing I will only once more say that in my opinion nearly all the diseases of grapevines are caused by exhaustion, and that by allowing vines to overbear grape-growers only help to kill the goose that laid the golden egg.

Forestville, Sonoma Co. L. C. CNOPIUS.

THE FIELD.

The Watsonville Sugar Factory.

The *Pojaronian* gives notes of the progress of the new sugarie at Watsonville, which will interest many of our readers:

W. C. Waters, architect of the Western Beet Sugar Co., is here this week and has instituted active work on the factory tract. For two weeks past teams have been hauling gravel for the concrete foundation and sand for use in making mortar. Mr. Waters has had Mr. Wetherill boring for water near the factory site, and at the same time has been able to determine the character of the land for a foundation. The borer passed through a deep stratum of stiff yellow clay, and Mr. Waters feels much pleased at the discovery, for he considers it an excellent stratum on which to rest the foundation. The soil above the stratum will be taken out for an area sufficient for the factory site. When this has been done a concrete foundation of at least two feet in thickness will be put down. From this foundation the brick walls will arise to a height so as to be even with the floor of the freight cars when on the side track at the building. Also upon this foundation will be built the brick piers to serve as bases for the iron posts that are to support the upper floors. After this work is done the concrete will be covered with dirt to about the height of the brick walls, and after this dirt has been well tramped down in the construction of the factory it will be covered with bitumen flooring even to the top of the brick wall.

The dimensions of the buildings have been somewhat changed since our previous report, and it is now settled that the main building will be 28x65 feet, two stories high at the ends and 4½ stories high, exclusive of tower, in the middle. Above the brick walls the building will be of wood and iron, with corrugated iron roof. The beams and girders will be of iron, and the building will be so constructed that the pressure of the immense weight of machinery will be greatest at the center and graduated therefrom. About 24 feet from the main building, and of about the same ground dimensions, will be the boiler-house and storage-room. Between the two buildings will run the main railroad switch. The boilers, 10 in number, are now being made in San Francisco. The evaporating plant was shipped from Germany on the 2d inst. Adjacent to the factory will be a large cistern 16 feet in diameter and 20 feet deep, with concrete sides, from which the water for the factory (about 2,000,000 gallons daily) will be pumped. It is supposed that this cistern can be supplied from small wells bored from the bottom. A fire-pump will be ready for use at any time, and the factory will be well supplied with hose. The office will be located at the corner of the Peckham lot, where there is now a dwelling-house. Adjoining it will be the weighing scales, and extending therefrom to the factory will be three immense beet sheds or bunkers V-shaped. Each of these bins will be about 900 feet long. Under each will be a concrete ditch, into which the beets will drop and be swept by water to the factory, and from thence taken to the cutting machines.

The factory will have a capacity of 700 tons of beets per day, but for the first season it is not expected to handle over half that amount daily. Mr. Waters feels confident the factory will be ready for operations before September 1st. The beet seed was shipped from Germany on December 13th, and is expected to arrive before the end of the month.

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Debris Evil.

The text of the bill "for the investigation of the mining debris question in the State of California," introduced in the U. S. House of Representatives by Hon. Marion Biggs and referred to the Committee on Mines and Mining, is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Secretary of War is hereby authorized and directed to detail three officers from the Engineer Corps of the United States Army as a commission for the purpose of making a thorough examination and investigation of the mining debris question in the State of California, and for a complete examination and survey of the injured river channels, its tributaries, and lands adjacent thereto, with a view to their improvement, and to devise some plan whereby the conflict between the mining and farming section may be adjusted. And that the sum of \$10,000, or so much thereof as may be necessary, is hereby appropriated, out of any money in the treasury not otherwise appropriated, for the purpose of carrying into effect the provisions of this Act, the said sum to be expended at the discretion of the Secretary of War; the said commission to report as early as practicable to the Secretary of War the result of their investigation."

The word "its" above italicized, should evidently be "their."

In the course of a long editorial on the bill the Marysville Appeal remarks: "There is just one good thing in this bill, and that is the clause providing for 'a complete examination and survey of the injured river channels, their tributaries and the lands adjacent thereto, with a view to their improvement.' An appropriation for such examination and survey would be all right, and is, in fact, highly desirable. But no investigation of the 'mining debris question' is called for—there is no such 'question.' The only debris question that ever existed was long ago settled in the courts. A debris evil remains in the choked condition of certain river channels, as the result of past hydraulic mining, and this Congress may properly attempt to remedy by engineering, at the same time prohibiting, under severe penalties, the continuance or resumption of such hydraulic mining as caused the mischief."

"The interests injured by hydraulic mining have no reason to apprehend unfavorable results from the investigation called for by the Biggs Debris bill. The more fully the facts of the situation are brought to the attention of Congress, the more hopeless the case of the hydraulic miners will appear. But the passage of this Biggs bill, as a whole, would be decidedly objectionable, for the reason that such a reopening of the subject would tend to make outside capital shy of investment in the region liable to be injuriously affected by the resumption of hydraulic mining. Strangers would perceive the extent of the injury caused in the past, and would be fearful that ignorance or corruption at Washington might result in the general resumption of hydraulic mining and the infliction of further injury. They would say: 'The question is still unsettled, and we cannot, as home-seekers, afford to take any chances.' And some such fear would likewise be apt to creep over the people of the valley and paralyze progress as hydraulic mining did in the past."

"The people of the valley have fought their own battles, and have paid dearly for the security they have gained. That security should be left undisturbed, and Congress should confine its efforts to the improvement of the rivers and the punishment of hydraulic miners who may be proved responsible for further damage to the channels."

LODI had her installation exercises on the 18th, conducted by the Worthy Master of the State Grange, aided by Sister C. P. Allison. The Sentinel of above-named date says: "Mr. Overhiser, who has recently returned from an extended tour through the Eastern and Southern States, was welcomed home by the Grange, the members of which are old-time friends of his. At the conclusion of the installation ceremonies the members partook of a feast which had been prepared by the good sisters of the Grange. The collations served by the Grange are always 'something extra,' and this was no exception to the rule."

TEMESCAL GRANGE had a very pleasant meeting last Saturday. W. M., Overhiser of the State Grange gave a highly entertaining account of his recent trip Eastward. The tariff question was discussed by Bros. Thos. Paulsen of Oregon, Amos Adams, W. C. Blackwood, S. T. Coulter, and S. Goodenough. Two applications were made for membership.

BRO FLINT, Worthy Lecturer of the State Grange, is up and doing. He writes the Patron that he will go to Merced on Wednesday of this week to help them confer the third and fourth degrees upon a class of 12 and install officers, and is to be in Auburn the 23th to do the like for Eureka Grange.

WOMAN SUFFRAGE.—Gov. Sample signed the bill, whose passage we noted last week, giving the ballot to women in Washington Territory.

Shiftless Farming.

The Territorial Enterprise had some observations and reflections the other day intended especially for Washoe county, Nevada, but suggesting wholesome hints for dwellers in many another region. Readers may make their own application of what we quote:

A reporter, while in Reno last week, noticed several ranchers buying at the stores such articles as butter, eggs, ham, bacon, potatoes, wheat for chicken-feed, and other articles that can be raised abundantly and profitably throughout the valley. Inquiry of the storekeeper revealed a wretched and shiftless condition of things on the part of the ranchers. They raise scarcely anything but alfalfa, and this they sell in the stack, principally to California cattlemen, who, in fact, make about all the profit represented in the alfalfa by loading it inside of their cattle's skins.

To a man up a tree all the poetry of farm life is knocked into a cocked hat in contemplation of the fact that their fresh eggs come from the store and they have to drink black coffee or use condensed milk, but such seems to be the case with Washoe county farmers.

It would seem that with such a market as Virginia City affords that Salt Lake stale eggs would be at a happy discount, but it is lamentable to say that they are not, and if a man wants to buy a chicken within a radius of 30 miles of the city, he is politely referred to Mormonism.

That there is a big field in Washoe county for men who will follow farming right "up to the handle" is a self-evident fact, and they will get along without plasters and mortgages on their farms, too.

Presentations at Santa Rosa.

The Republican of Jan. 19th makes friendly mention of recent doings among Sonoma county Patrons. We quote the greater portion of its account, as follows:

Saturday was a day long to be remembered in the annals of Santa Rosa Grange. The occasion was the installation of officers in their respective offices for the ensuing term. P. M., Nelson Carr of Bennett Valley Grange having been invited to act as installing officer, performed the ceremonies, ushering the newly elected into their respective stations to execute the government of the Grange.

After these ceremonies were concluded, the Grange dinner with all its bounty, as prepared by the matrons and maids of the Order, was awaiting the members and a few invited guests. The appetites of all were fully satisfied, and it was found that the proverbial twelve basketsful were still remaining.

As a testimonial of the high regard in which the Grange held its Worthy Master, E. W. Davis, with appropriate words C. E. Gamble, in behalf of his fellow-members, presented him with a beautiful gold scarf-pin, which was accepted with an apt reply by the surprised recipient. The secretary, Miss Martha Lumsden, was presented with Shakespeare's works in appreciation of her valuable services, also calling forth a well-delivered response, notwithstanding the young lady was genuinely surprised.

OUR COUNTRY NOT FOR ANARCHY.—We find this terse paragraph among our clippings uncredited, but it can go on its intrinsic merits: "There is no room in America for anarchists. They should not be allowed to parade the streets of great cities as they do, and make speeches in defiance of our laws. This is, and should be, a free country; but the right of a lawless people to organize for the purpose of tearing down our institutions and abolishing all right to the ownership of property, is entirely beyond the meaning of personal or political liberty."

DANVILLE GRANGE purposes celebrating the birthday of Washington. It is a good idea, which other Granges will do well to catch, thus to do special honor to his memory and improve the occasion for arousing a patriotic and humane ambition in the breasts of our young men and women.

BENNETT VALLEY GRANGE'S MEETINGS, on the 1st and 3d Saturdays of every month, are always well attended, enjoyable and instructive. Bro. J. B. Whitaker adds to this the cheering news that they have a class of six to initiate February 4th, and invites all Patrons in good standing to be there at 10 A. M.

THE officers of Woodbridge Grange were publicly installed on the 17th by Worthy District Lecturer, J. D. Hoffman, Bro. Wm. Treadway assisting. After this business had been duly attended to, a fine collation and an hour of social converse were enjoyed.

ENTERPRISE GRANGE had installation exercises on the 7th, Bro. G. W. Hack of Sacramento officiating and adding some good suggestions about the work. They also conferred the first degree on a class last Saturday—so writes Bro. Geo. Wilson.

GRASS VALLEY GRANGE meets every Saturday night, weather favoring, and is gaining new members besides welcoming back into the fold many who belonged to the Order years ago.

Petition to Congress.

At the last meeting of Temescal Grange the following petition was signed by all but two of the members present:

To the Honorable the Senate and House of Representatives of the United States.

Your petitioners, citizens of the State of California, most respectfully, yet urgently and solemnly, protest against any legislation by which any reduction will be effected in the tax now imposed by law on the manufacture, importation or sale of either spirituous or malt liquors or tobacco.

Other Granges are invited to cut out this form and paste it upon suitable writing-paper or copy out a similar petition, secure as many signatures as possible, and send them to the secretary, Mrs. Nellie G. Babcock, North Temescal, Alameda Co., Cal., to be forwarded to Washington.

Grange Elections.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

ELK GROVE.—James Caples, M.; J. S. Williamson, O.; Gillis Doty, L.; John D. Hill, S.; Frank Graham, A. S.; Mrs. McConnell, C.; F. Stelter, T.; Mary Kerr, Sec.; John Winkelman, G. K.; Ruth Le Boyd, Ceres; Nellie Andrews, P.; Hattie Caples, F.; Mrs. Hill, L. A. S.; Hattie Foster, Org.; Z. L. Garwood, Trustee.

SAN JOAQUIN COUNTY POMONA.—[Corrected list.]—T. C. Shaw, M.; S. Ferdun, O.; Sister S. L. Aldrich, L.; C. W. Norton, S.; R. Pixley, A. S.; A. A. Gurnsey, C.; F. M. Smart, T.; J. D. Huffman, Sec.; C. P. Allison, G. K.; Sister Alida Allison, P.; Sister C. W. Norton, F.; Nellie Hutchings, Ceres; Sister J. D. Huffman, L. A. S.

TWO ROCK.—S. L. Barlow, M.; W. Church, O.; Sister E. C. Hinchshaw, L.; C. Nisson, S.; J. C. Purvine, A. S.; Sister S. Q. Barlow, C.; W. D. Freeman, T.; A. P. Martin, Sec.; S. H. Church, G. K.; Sister L. Martin, P.; Sister M. H. Doss, F.; Minnie Church, Ceres; Sister J. C. Purvine, L. A. S.

SOUTH SUTTER'S officers for 1888 are nearly all new. This Grange appears to be prosperous and hopeful.

The Tariff.

EDITORS PRESS:—In the PRESS of 14th inst., W. H. Aiken makes the following affirmation: The policy of protection to American industry has been steadily maintained since 1861, and a change in that policy, which is now threatened, means a large and permanent reduction in the wages of American labor and of capital invested in manufacturing. The value of a protective policy to this country can be clearly demonstrated.

Now, I deny that the policy of our Government has been such as to foster the general industry of the country, or that a change in that policy threatens a large or small, permanent or temporary, reduction in wages of the American laborer, or of capital invested in manufactures.

But upon the contrary, the policy (or the effect of the policy) of the Government during this period has been such that labor has received less than it would under free trade, and that the laborer will receive the maximum of wages under a policy of minimum restriction upon foreign commerce.

Now, this is affirmation against affirmation, neither of which in my opinion has any real value. Nor do I consider the long list of authorities he quotes but little better, for a number of reasons, one of which is that many of these men have under other circumstances given utterance to opinions the opposite of these, e. g., one of the greatest speeches Daniel Webster ever made was in behalf of free trade. Clay circumscribed the time to which he would grant assistance to manufacturers. For an illustration of change of opinion, from change of conditions, see Senator Evarts' opinion as to the constitutionality of the Oleomargarine bill, when given as a paid attorney and as a Senator.

But if the affirmation of protectionists, free-traders or political celebrities are not convincing evidence, are we at the end of investigation?

If tariff taxes are beneficial (as you say), or if they are injurious (as I say), is it not possible to explain them by known laws? It would be a strange machine that would convert raw material into a finished product—say wool into a hat—but that we could not trace the stage of progress.

The reason, and the only reason, that I have taken up my pen at this time is to request Mr. Aiken to explain to us the economic mechanism by which tariff taxes benefit us.

If Mr. Aiken will undertake to show us how the farmer, mechanic and laborer are benefited, I will (if I am not convinced by his argument), if an opportunity is afforded, endeavor to show that these classes are injured thereby.

W. S. CUNNINGHAM.

Lemoore, Jan. 6, 1888.

[As we have already said, we fear being swamped by a discussion of this subject on general principles. Statements of this nature are available to those who desire information. Let the argument be upon local interests or at least with illustrations drawn from local industries.]

—EDS. PRESS.]

Managing a Rabbit-Drive.

Toward the close of our illustrated article on driving jack-rabbits, in the RURAL PRESS for January 14th, we mentioned a dispatch from Bakersfield reporting the slaughter of 5075 of them. It appears that all these were killed in a single afternoon. The account of the affair given in the Echo of Jan. 12th is so sprightly, and contains so many valuable practical hints as to how a drive must be managed in order to secure the greatest success, that we quote it bodily:

In accordance with posters generally circulated about Bakersfield, a second rabbit-drive took place at H. L. Borgwardt's ranch, the same place as the former one. At 1:30, the hour set for the meeting, at least 500 people had assembled on the grounds, and after partaking of the generous lunch prepared by Messrs. Swain and Borgwardt, proceeded to the place where the drive was to be held.

Preceding this, Commander McCord had sent a large delegation of horsemen to "round up" the rabbits in the field west of that where the principal work was to be done, so that by the time the crowd was ready to move in a body to the place where the drive was to commence, hundreds of rabbits had been driven out before them.

Companies were rapidly organized, 20 men on foot being assigned to each captain who was mounted. Eleven companies of men and boys were given positions, and two of ladies and girls under command of lady captains; and it is claimed by those present that more enthusiastic hard work was done by the latter than by any one else. Two large companies of men and boys on horseback, commanded by competent captains, were placed at the extreme right and left wings. The whole command formed a semi-circle.

When all were in position, the commander raised his handkerchief, the signal for the start; this was repeated by his assistants and the captains, and simultaneously the whole line began a quiet work toward the corrals. At first the rabbits trotted slowly ahead of the drivers, but soon the horsemen on the left wing opened up a general shout, contrary to the program, which so excited the rabbits that they turned toward the right wing and ever so hard work of those in charge of that wing could not keep half of them from passing the line.

As the circle gradually closed, the drivers made a more compact body, so that when they reached the rabbit-tight wings there was little chance for a rabbit to go back without encountering one of the clubs in the hands of the foot-men; hundreds of them were killed in this way.

Just before the gate to the corral was reached, there was a general disposition on the part of the rabbits to turn toward the crowd. Had the latter been held in check for a minute, so as to give the rabbits an opportunity to see the gate, every rabbit would have been captured; but there was no such delay, and the result was that nearly half of them went through the crowd.

It was estimated that 2000 were corralled this drive. They were speedily killed with clubs, and a second drive ordered. Commander McCord sent a large force of horsemen into the field north of the one where the main drive was held, to drive the rabbits in front of the companies, and it proved to be an excellent move, as it increased the count in the next drive by at least 1000. Aside from the shouting by those on horseback, the last drive was as near a success as any one could wish. At the close, when fully 3000 rabbits were massed in front of the gate, undecided which way to turn, the commander and his assistants held the crowd in check until the rabbits started for the gate, when a general rush was made, and in an instant 3000 more rabbits were in the corral. After the killing, a count was ordered and the number was 5075 in the corrals, and it was estimated that at least 500 were killed on the outside. This would total over 5000 rabbits killed inside of one week on a field of less than 300 acres.

Sericulture.

The State Board of Silk Culture held a meeting at 21 Montgomery avenue on Saturday, Jan. 21st; present, President Price, Secretary Sellers, R. H. McDonald, Jr., and Isaac Trumbo.

Nine varieties of Japanese tinted cocoons were exhibited, and it was announced that eggs from which such cocoons are generated are ready for free distribution.

The Filature Committee reported that everything was working smoothly, and that there were vacancies for two more pupils to learn the art of reeling silk.

Several thousand mulberry trees have been received by the Board and will be distributed judiciously among the silk-growers of the State. Letters from a number of persons were received asking for trees and about sericulture, and the secretary was directed to furnish correspondents with the necessary information as soon as possible.

WEATHER REPORTS.—The reports of Pacific Coast weather, kindly furnished us every week by Serg't Gorom, will be extended in our next issue to include Eureka, Fresno and San Luis Obispo.

AGRICULTURAL NOTES.

CALIFORNIA.

Contra Costa.

RAISINS.—*Martinez Gazette*, R. C. Terry of the well-known Glen Terry vineyard, near Clayton, left at the *Gazette* office on Thursday a sample-box of his curing that would challenge the admiration of an epicure. In size and flavor they are about perfect, and the neat and tasty manner of packing is in harmony with the delicious quality of the fruit itself. Mr. Terry has found a ready demand for all the raisins he has made, and next year will double the amount of his product.

DANVILLE ITEMS.—*Cor. Gazette*, Jan. 20: The weather has been very cold here for over two weeks, but for the last 48 hours has been moderating. Grass and grain have been growing backward, but now have a more healthy color. Farmers, as a rule, have been unable to plow before 10 A. M. since the snow, and some who had land on north side of the hills have had to suspend operations entirely until the ground thaws. A gentle rain commenced falling about 4 o'clock this morning, and by 6 o'clock we were having a rapid downpour, which melted frost out of the ground in better shape than a week of sunshine could have done. Tree-hole digging has commenced, and this season bids fair to add a large acreage to our orchards, and many comparatively new varieties of trees for this valley are to be planted. We have had severe cases of sore throat among horses in this vicinity, but the epidemic seems to have subsided and stock is improving.

Humboldt.

PERSIMMONS.—*Ferndale Enterprise*, Jan. 13: Si. Morrison of Bear river informs us that his persimmon tree was loaded down this season. He pulls the persimmons before the frost nips them and lets them ripen off the tree. He says this plan works to perfection. He intends planting more of these trees this year.

A FAT CHICKEN.—*Mrs. Cutler Hatch* called us in while we were passing her residence Monday and showed us a quantity of fat taken out of one chicken, which weighed exactly 2½ pounds.

Los Angeles.

FORESTRY.—*L. A. Times*, Jan. 20: H. R. Lee, superintendent of the forestry experimental stations, has been at work at the forestry park at Santa Monica for some time. The land is now cleared and the planting will be done immediately. Mr. Lee is an energetic worker, and will take every advantage of the rainy season to get his trees out in good shape. The station at Santa Monica will be a complete climatic contrast to the one to be established in Hesperia.

Mendocino.

LIVE-STOCK AND THE WEATHER.—*Mendocino Beacon*, Jan. 21: Chester Woodruff of Usal dropped into the office Thursday. From him we learn that the late cold weather has not been very disastrous to sheep on the coast. Out of nearly 2000 sheep and lambs on his range only a few have died. Both the sheep and lambs are frisky and seem to be doing well. Mr. T. McGimpsey of Anderson Valley was in town this week, and reports everything looking pretty well in Anderson, although the weather has been very cold, as low as 16°. He says stock there has weathered the storm and cold weather well, very few dying.

Napa.

IN THE WARM BELT.—*Register*, Jan. 20: Mrs. Samuel Lake yesterday brought into our office a branch of raspberry vine measuring eight and one-half feet in length, taken a few hours previous from her mountain ranch in the Napa Redwoods. This was wholly the growth of last season. The numerous leaves on the vine were as fresh and green as if it were early summer. The thermal belt of the Redwoods is rarely affected by frosts.

Placer.

CITRUS STOCK BROUGHT IN.—*Newcastle News*, Jan. 18: Mr. J. E. Cutter of the firm of Twogood & Cutter, Riverside, arrived here on Saturday with a carload of young orange trees for the Newcastle Fruit Co. The trees are very fine looking, and were completely disinfected by dipping in kerosene emulsion as they were unloaded from the car—a practice universally adhered to by that firm, whether there is any sign of scale or not. During transit the roots of the young trees were completely covered with native soil, and as a consequence the trees look as bright and fresh as when taken from the nursery.

Sacramento.

VALLEY APPLES.—*Record-Union*: It is not generally claimed that apples grown in the valley sections of the State are of as high a standard as those from the mountain altitudes, but some of most excellent quality are raised in Sacramento county. Samples of Spitzenbergs were yesterday shown from Geo. W. Hancock's orchard, on the Cosumnes, which in size, color, firmness and flavor, equal any in the market. Such apples will bring high prices in any market, and their culture cannot be otherwise than profitable.

San Joaquin.

EDITORS PRESS:—What has happened to our California climate—this "Garden of Eden"? During my residence of almost 15 years, I have never experienced such cold weather. We may have had days and nights nearly as cold; but

never days and even weeks when one night's freezing was added to the last, making horse-troughs almost solid ice. A friend suggests some items as worth recording, such as a heavy horse falling on the ice without breaking it. But I fear our Eastern visitors are already inclined to take wing. One day our windows showed considerable work of frost-fairies—a thing our California-born children had never seen before. Upon touching the glass the picture was found to be outside instead of on the inside as I had expected. I do not remember having seen this before. Can any young California scientist explain the philosophy of this? The freezing weather is hard on growing crops. A welcome change has come at last in a warm rain. If the weather clerk will send along a few weeks of sunshine and showers we will soon forget the unaccountable behavior of the past. At present farmers are not very hopeful; old settlers say cold weather and poor crops keep company.—*Mrs. J. M. K., Tracy, Jan. 21st.*

JACKS AND JENNIES.—*Stockton Independent*, Jan. 20: I. R. Mickey and Supervisor Snow of Stanislaus county, who are partners in the stock-raising business, yesterday purchased one of L. U. Shippee's fine San Joaquin jacks for \$1400. The animal will be taken to Milton tomorrow morning. This jack is two years and ten months old, and 15½ hands high. He was raised by Mr. Shippee at the stock farm on Cherokee lane. The sire and dam were imported from Kentucky, and are now on the ranch. The youngster is said to be one of the finest animals in the State. His color is black with a tan-colored nose, and he is of perfect form. He has been exhibited at the State and Stockton Fairs and carried off a premium at each exhibition. Mr. Shippee has three more young jacks of the same age and qualities. He owns a band of 30 jacks and jennies, nearly all of them being importations from the best Kentucky breeds.

Shasta.

CITRUS ASSOCIATION.—*Redding Democrat*, Jan. 18: The certificate of incorporation was received from the Secretary of State last Saturday, and the same afternoon an election of officers was held with the following result: Pres., S. J. R. Gilbert; V. P., R. M. Saelzer; Sec., Dr. J. H. Miller; Treas., Bank of Shasta County; attorney, F. P. Primm. Previous to his election as attorney Mr. Primm resigned as director and Mr. Edward Frisbie was elected in his place.

Sonoma.

EDITORS PRESS:—All early-sown grain is looking well. Vineyard pruning in our section is about half done. We have had a very cold spell of weather, but it is raining now and is quite warm. Anywhere within eight miles of the new railroad, land has doubled in value. A great many are planting table-grapes and orchards, and our nurserymen cannot supply the present demand for trees.—*J. B. W., Santa Rosa, Jan. 21st.*

PAVING HORSES' STALLS.—*Petaluma Courier*: John A. McNear of this city, owning several horses whose feet were injured by standing on the usual floors provided in stalls for them, concluded to try a new experiment. He had his stalls properly graded, and then laid the floor with basalt blocks so arranged that the horses could stand or lie down comfortably, and at the same time afford proper drainage to carry off the surplus water. The beneficial results were beyond his calculations. His horses' feet improved right along, and the advantages otherwise were so good as to recommend it to other owners of horses. He claims that the feet of the horses are better preserved, it is easier for them, and the drainage is more perfect than by any known system of building stalls in a horse-stable.

SUGGESTION ABOUT CHERRIES.—As it appears that the Tartarians and other black cherries have outgrown the market, are unfit for canning, and too tender for Eastern transportation, we suggest that the most salable and popular varieties, such as the Rockport and Napoleon Bigarreau, be grafted into them. The Bigarreus are a No. 1 shipping cherry and good for canning purposes. We know from the experience of some of our oldest and most extensive orchardists that they can be grafted, as suggested, as easily and successfully as the apple or pear, and in three years from time of grafting the trees will be in full bearing. By changing the cherries mentioned the growers will have first-class fruit for the local trade for canning or shipping purposes. We advise our readers who have more of the black varieties of cherry trees than they can make profitable, to try this experiment. Several whom we can name, if necessary, have tried it with the most satisfactory results.

FIRE-WOOD SCARCE.—*Santa Rosa Republican*, Jan. 19: There is almost a wood famine in this locality and the price of wood is already unparalleled. Several years ago the great activity throughout the county in planting vineyards caused a great deal of wood to be cut, and for some time the market was glutted and the best wood brought only a nominal price. Then a reaction followed. Every one who had timber land left his trees untouched, as the price of wood would not pay for the cutting and hauling. This inactivity is now having its effect upon the wood market, and it is almost impossible to obtain wood, although this is considered a well-timbered locality. The best quality of four-foot oak wood is readily sold for \$8 per cord. Stove wood is correspondingly high and is hardly obtainable at

PACIFIC COAST WEATHER FOR THE WEEK.

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature. Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

any price. Considerable coal is being brought to this city and used in the place of wood.

FERTILE.—*Santa Rosa Democrat*, Jan. 14: From about a quarter of an acre of land, at the County farm, the following products were harvested this season: 2½ tons of pumpkins, 1 ton of beets, 5 dozen muskmelons, 1 dozen watermelons, 400 lbs. tomatoes, 700 lbs. corn, 75 lbs. potatoes, and 50 lbs. summer squash.

Tehama.

THE VINA RANCH.—*The Napa Register* of Jan. 20th gives some points in regard to Senator Stanford's big ranch at Vina, got in conversing with H. W. McIntyre, the superintendent. The ranch comprises 55,000 acres devoted to farming—grain and alfalfa fields, the raising of blooded stock, vineyard, orchard, etc. Three thousand acres are planted to vines of the finest varieties. A portion is the old Gherke vineyard, 75 acres of Mission vines 25 years old. The wine-cellar, built for the most part within the last year, is of brick, hollow walls, having a storage capacity of 170,000 gallons, and is provided with all modern improvements and everything that experience could suggest and money provide. A large number of men are of course required to care for this vineyard. The annual pruning is now about half completed, 125 men being engaged. Plowing is under way, between 50 and 70 horses being in use daily. While harvesting the grapes 260 or more pickers are employed. Besides this large force a number of men are constantly at work about the cellar. In the orchard a large amount of fruit of several varieties is grown. Apricots, peaches, plums, etc., do exceedingly well there. The climate is such that fruit is readily dried in the open air. A very fine quality of raisins was cured on the place last year. The climate of Vina is much warmer in summer than that of Napa valley, the thermometer ranging at times from 110° to 114°. Last Sunday the thermometer stood at 16°. Snow fell to the depth of several inches, but immediately disappeared.

Tulare.

A SAMPLE RADISH.—*Traver Advocate*, Jan. 21: There has been on exhibition in Mr. Earl's window a large radish, grown in his garden at Traver. It weighed 8½ pounds and is of the Long Blood variety, which never develops the strong taste usual with that vegetable after it reaches a certain age. When it attains the size of an inch in diameter and begins to get pithy, the plant sends out rootlets, which, as they grow, are tender and of excellent flavor. The specimen shown was full of these "rootlets," which were excellent eating, tasting like young radishes.

Yolo.

CANNERY FOR WOODLAND.—*Democrat*, Jan. 19: Some months ago a company of our own citizens purchased the property known as the Woodland winery, being the two-story brick structure near the depot, having a frontage on Main street of 152 feet. This company has determined to arrange the upper portion of the building for an extensive cannery. They will manufacture everything used in the business, including the cans, and give employment to about 60 men. A cannery has been a necessity in this community for two or three years, and will pay from the start. It will also encourage the production of more fruit. It would be well for all farmers having available land to plant for this summer's use corn, tomatoes, peas, beans, and such vegetables as will be required for the purpose of the cannery.

A MODEL BARN.—*Winters Express*: We took a look at S. H. Hoy's new breeders' barn Thursday, and without hesitation pronounce it the most convenient structure for the purpose we have ever seen. It was planned and built by J. P. Steward. It is 36x66 feet, with a hay-loft with a holding capacity of 100 tons of baled hay. On the ground floor are six box and two open stalls, a grain-room, bedroom for the men, harness-room, platform for washing buggies, and a place to stand vehicles. On the west side is a corral 50x66 feet, inclosed by an eight-foot board fence. There are two other corrals, for mares and other stock, and a large space which will be planted and used for a small pasture. Water is piped through the building and there are all necessary openings for ingress, egress and ventilation.

Yuba.

THE SMARTSVILLE DITCH.—*Marysville Appeal*, Jan. 20: James O'Brien said yesterday

concerning his irrigating ditch enterprise: "I have let the contract to two parties, and they must have it done by the first of April. There are now 40 men at work, one contractor employing some Chinamen. Before long there will be over 100 men at work. The ditches and pipes will be about 14 miles in length, running from the northeast of Timbuctoo, where I tap the river, to my ranch above Riley Lane's place. I can take 10,000 inches. My ditches will carry 8000, but I do not propose to use over 2000 at the start. This will irrigate the 4000 acres of land which I desire to use. Of course I shall sell water, and at a surprisingly low figure. The lands there now are cheap, but when the water is on them, look out for a big raise. These acres grow sheep now, but within the next few years they will grow anything."

OREGON.

HYBRID POULTRY.—*Rogue River Courier*, Jan. 12: A singular fact relative to imported Chinese pheasants and our domestic fowls has come to the notice of people living in Santiam valley, west of Jefferson. The pheasants introduced a brood of Plymouth Rock chickens to adopt their wild life and assimilate with them. It being against the law to kill Chinese pheasants, they had become plentiful in that vicinity and are not very wild. This hen and her young brood were coaxed away from civilized ways by the pheasants, and her chicks were well grown. The owners of the brood watched the result with interest, thinking that next spring the two kinds of fowls would mate together, and wondering what the hybrid product might be; but some "pot-hunters" came across the mixed flock and shot all the chickens but one young rooster, which manages to fly as far as any of his adopted brothers and is as wild as they. The whole brood had become wild and took wing for long flights just as the pheasants did.

THE FREIGHT BLOCKADE.—Nearly 2000 freight cars are said to be blockaded on the lines of the Union and Central Pacific, and Denver & Rio Grande railroads. On Monday and Tuesday of this week about 250 freight-cars arrived here over the Central Pacific railroad, and that road is getting every engine it can obtain from other lines to move the enormous amount of merchandise which is reported to be pressing in at the farther end of the route in volume quite equal to that now discharging at San Francisco.

COTTON FROM PLACER COUNTY.—On Thursday of last week Mr. Oliver Hyde brought us specimens of cotton grown as a test at Lincoln, Placer county, from seed obtained last year at the Oakland cotton-mills. The plants, we understand, received no irrigation, and the bolls are well developed.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

F. B. LOGAN—Santa Clara Co.
JOHN G. H. LAMPADUS—San Benito Co.
G. W. INGALLS—Arizona Territory.
WM. WINSTON—San Joaquin and Stanislaus Co's.
A. F. JEWETT—Tulare Co.

C. E. WILLIAMS—Yuba and Sutter Co's.
R. G. HUSTON—Montana Territory.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

A Modern Drinking Song.

Fill high your bowl with Fusel Oil!
With Tannin let your cups be crowned!
If Strychnia's generous juice abound!
Or, animated atoms brew—
And fill your arteries, hearts and veins,
With glee—and Infusorial Glee!

Ab-h-h! fragrant fume of Kreosote!
Bewitching bowl of Prussian Blue!
Who would not cool his parching throat
With your bright offspring, Mountain Dew?
Stronger than aught that wrecked the frame
Or shook the mighty brains of Burns!
Surely, you'll set our heads aflame
When'er this festal day returns!

Bring on the beer! Fresh Copperas foam,
With Alum mixed in powder fine!
How could my foolish fancy roam
In search of whiter froth than thine?
Thine Indian berry's essence, spread
Through amber wavelets, sparkling clear,
Benumbs dull care, strikes feeling dead
And narcotizes shame and fear!

Far down thy bubbling depths, Champagne,
Drown'd Honor, Love, and Beauty lie;
They fought th' unequal fight in vain,
Shall we, then, merely drink and die?
Sweet Acetate of Lead forbid!
To ev'ry drink add pangs, and tell
What tortures in thy bosom hid
Anticipate the stings of Hell!

Then drink, boys! Drink! We never can
Drink younger—and we never will
Remember—or aught resembling man—
While poisoners have the power to kill!
Amen! From Frenzy's screech of mirth,
To maudlin Sorrow's drunken flow,
Let's rave through scenes unmatch'd on earth!
And not be surpassed below!

—George Sennott.

A Day in a Kindergarten.

[Written for the RURAL PRESS by JOAQUIN MILLER.]

Kindergarten? You ask what it is. You ask, above all things, what in the world I want to take up this sort of work for? You refuse to follow me to one of these little Babels for babes? I admit it is not quite as ponderous a subject as a brain of a Moltke or a Grant might be amused with; but still it is a matter that lies mighty close to the nourishing roots of this nation. It is the father of the fatherless; it is the great big broom that sweeps the streets of its motherless and unclaimed children; to the great comfort of the children and to the prodigious advantage of the street.

Less than a century ago a German, a queer-looking man with long hair parted in the middle, a most kindly looking man, began to teach babes. He was the first man, it seems to me, who took to his noble heart and tried to teach the simple and sublime lesson of the lowly Nazarine, "Suffer little children to come unto me."

I spent the best portion of to-day in the Silver-street Kindergarten, and I am a better man for it. I think if I were a woman and had no work nearer home and wanted to do some solid good, I would go and teach in one of these lowly little schools for babes.

This is the largest of the many full schools of this kind in California. Yet in the center of the wide and roomy hall known as the Crocker Class—because the building is owned and the school endowed and supported mainly by Miss Crocker of California—in the center of this room, I was going on to say, stood a pretty hobby-horse, all saddled and ready for the rider. Over yonder in a big box was a big heap of sand for children to play with. Flowers all about the walls; humble walls, mind you, a humble place indeed, the piteous signs of poverty all around. And yet cheer, content, comfort, even a hilarious hobby-horse with tow-tail to the breeze and wooden nose high in the air, as if ready for the gayest of gallops away out over the blossomed hills. The hundreds of little people here are not much more than knee high; some of the little men in petticoats; some sweet little ladies might be still at the breast in their mothers' arms, if mothers they ever had.

The admission for all these little folk is free. I found twelve young teachers here, only two of whom draw any salary. They are strong, healthful and happy young women; and strange to tell, eleven of the twelve are, and each one after her fashion, singularly beautiful. I think I never in my life saw so many pretty women engaged in humble and—commercially speaking—unprofitable work, in any one city before. And even the one who, at first glance, seemed the least beautiful of the twelve, was so kind, so patient and so attentive to the little weary, sleepy and slipshod waifs before her that ere I came away she began to blossom out and shine forth as the fairest of the whole fair flock of twelve pretty little missionaries.

Each child has a seat to itself, with a common

little table running along before the children. On this low little table with its continuous rows of checkerboards, for blocks, the babies play, or work, or rest their hands or heads when weary; and now and then a little head sinks lower and lower till finally it lies quite still. And then some sweet woman, whom God has made childless, that these babes may call her mother, comes forward, lifts the little one out from behind the low checkerboard table, carries it away and lays it to sleep on a sofa along with others that may have been overtaken by sleep at times before.

And what is the first lesson at a Kindergarten? Well, I must tell you in the first place, there are no books. And indeed there are no lessons. The duties, or rather the objects to be studied, are called "gifts." That is, a child is given some sort of toy or present. And this "gift," or toy, or present, is used as an object of instruction. For example, the first thing given a child is a little red ball of yarn. This teaches it color, texture, motion, many things. After this first little red ball of yarn comes a little ball or globe of wood. Now comes a square block of wood. Then little bricks of wood, and with these the children build, and build, and build on the little checkerboard tables before them, till they tranquilly drop to sleep from their pleasant and instructive toil.

At this Kindergarten there is no compulsion. There is no thought of harshness or hardness anywhere, or in anything here. And what a curious mixture of little humanity to be sure! The tow-headed little Saxon, and the black-eyed little Italian, the Kanaka, and the Mexican. And yet kindness to, and from, all, as if the gentlest blood of the land flowed in the veins of these little waifs that have been thrown up on our shores here by the four winds of a stormy world.

"This little man comes five miles every morning," said the motherly but young and pretty principal, as she laid her kindly hand on the black, matted hair of a strange and half-wild little creature; "his father is a bootblack, who works near here and brings the boy when he comes to his work."

I spoke to the little lad in Italian, for they told me he had not yet learned to speak English, and he clutched at my hand when he heard his mother tongue, and wanted to follow me about and stay with me. His great black eyes were full of tears, but he said no word at all.

These little people are not left long at their blocks or at any other of the many and always instructive "gifts." They are called to their feet every sixty minutes or so and then marched out into the yard to the sound of cheerful music. Here their teachers are still with them, directing their plays, and picking up the little men or little women as they fall asleep in their first little battle of this life.

To see this Lilliputian army march out, or march in from their recreation to the sound of music led by their drum-major in petticoats and wearing a big red paper cap, would make you laugh and shout with delight; so dignified is the drum-major; so certain are these hundreds of little people of their importance. And you are glad, glad to the heart. The step is a long one above the gutter; and from the pride, the joy, the exultation which they feel as they march in and around, and take their places again like little soldiers, you are certain they will not easily let go and recede to the low walks to which so many of them were unhappily born.

Games they have too, every day, almost every hour. There is a great big circle around the center of the hall; here, with much effort, they manage to set their feet; and then out of this wide and crowded circle are chosen the brightest and promptest to take the lead and play their pleasant, instructive and exhilarating little games. They may build a bird's nest; this may take twenty children. Then there are half a dozen little birds in the nest; there is much noise and fluttering and flopping of wings, especially if the bird is the American eagle.

There is a great deal of singing at this big baby school, also. There are tears in the little eyes now and then, too; maybe some one is thinking of mamma, who sang for her once but will never sing for her any more. But be that as it may, if you can sit and hear this strange, weird cry, coming up from out the earth as it were, coming up from these baby lips that lift so curiously, plaintively—I say if you can see and hear all this without moistened eyes, then you are less the man or woman I would wish you to be.

Joseph, poor little Joseph, was here at this Kindergarten on Silver street, San Francisco, in all his early Egyptian rags and wretchedness. He surely had been stripped by his brethren of his coat of many colors and sold into slavery. But his father had found him and clothed him very curiously in all his former extravagant glory. And if this little knee-high Joseph here had not a coat of many colors now, he at least had many coats; for he was so laden down with garments that he could hardly march to the music or move around at all. He had only about one shoe and a half, and no stockings at all to the weary little feet that have wandered away up out of Egyptian darkness and slavery. He had a dozen pretty American ladies for his nurses and his mother. But coats!

he had coats enough for his whole tribe; as if his father had, maybe, been moving his second-hand clothing store and loaded down little Joseph to save cartage.

And "Roland" was here also. "You are an Englishman, are you not, Roland?" said the kindly lady who led me about among those who loved her. And little yellow-headed Lord Roland gave her a courtly bow in answer, that Lorne himself need not have been ashamed of. Let me observe that Roland's soft Saxon hair was neatly combed and cared for; and his rosy face was very clean. He is still in petticoats. And his long, checkered dress, reaching almost to his heels, reminded me somewhat of an English ulster that had not yet got its growth. But I must admit that it was very clean, even to its ragged strings. Dear, pretty, dimpled little Lord Roland of the San Francisco Free Kindergarten; maybe he at least has a mother. I hope so, for he is as loving as a lamb.

"These are our two favorites," said the principal finally as she led two curious little creatures before me. I think she must have at that moment dug them up out of bed, they were so small, so wee, wee, as the Scotch would say. And one was a Kanaka, as brown as a nut, and as sweet as a nut I should say. The other had a tousy and tossy head of flax. Both were very clean, but neither big enough to walk. They could barely toddle. It did not take a very wise man to see that the "favorites" were favorites simply because they were so small and helpless. Oh, what a glorious good world this is, and always will be, so long as woman remains in it to help the helpless, to give all her strength to those not strong enough to stand alone.

"What do you think of these Kindergartens?" I asked of the only policeman I met in the vicinity of this place. For I have known the man of old; and I remember the time when drunken men, brawling women, and dissolute children made many policemen, instead of only the one now, necessary in this quarter.

He now walked quietly down the street with me and said, after much praise and most favorable comment, "If I could open plenty of Kindergartens, sir, I could almost shut up the penitentiary, sir."

I think the man with the club and buttons is about right.

A dear, sweet friend of mine, or rather of humanity, the wife of President Diaz, has opened a house in the City of Mexico, where working-women may leave their children through the day while out to service. I am going to write her at once to turn the place into a Kindergarten. And if some one, two, three, or ten good, patient and stout-hearted American girls will only go down there to the City of Mexico and show her how!

I here append the printed report of this sort of work in California. And I must beg your pardon, dear reader, for getting down out of the clouds and the sweet air of the Sierras, into the dirt and back streets of San Francisco. But if you could see the heart that these women put in their work, if you could see the big work and the small reward, the great praise, and the little pay, why, you would love them, and you would go and see them and help them, if only as I help them, with best wishes and a kind word. And you would love and adore Adolph Sutro, Miss Crocker, and all these other good and great people in the background, who pay the bills and make these big-little free schools possible. But here is what the head of this largest school of the kind has to say of the work in California generally and her own place of work in particular as well:

"The era of free Kindergarten in California began with the year 1878, but something had been done for the introduction of the system into San Francisco a few years previous.

"There may have been various efforts made to teach the Kindergarten system in California by persons possessing some knowledge of Froebel's educational methods; but I can obtain no information covering any successful attempt previous to that of Frau Bertha Semler, who came to this coast in 1873, and had for some years a large and flourishing German-American Kindergarten. She interested many persons in the project and a society was formed which purchased a property on Turk street for school purposes, and otherwise aided in the endeavor to plant this system on California soil. This society, however, was dismembered at the end of the year, and since then Frau Semler has taught smaller classes in her own house. She has now retired from active work, although she is much interested in all that pertains to the Kindergarten.

"As a pupil, in her younger girlhood, of Froebel himself and as a friend and pupil of Froebel's widow, Frau Semler has been a most worthy exponent of the Kindergarten method; and any woman who indulges in a personal adoration of the undeniably great, as well as sincerely good, educator can talk with her without having her high ideas of the man disturbed or changed.

"This school on Silver street was the first free Kindergarten west of the Rocky mountains, and the Directors of the San Francisco Public Kindergarten Society, who were its sponsors, were most wise and efficient. On being called by them to organize the new institution, I came from private teaching in Southern California, and had the rather difficult task of endeavoring to build, wisely and well, a foundation plan for future work of this character among poor and neglected children. The first trustees of the society were mostly German and Jewish ladies and gentlemen, progressive in their ideas, energetic in their labors, and generous in their contributions. It was their wish, from the begin-

ning, to interest the general public, and not to fetter their work with any narrow distinctions of class or sect. So the society grew in strength and efficiency, month by month, its members coming from widely differing sources, but all animated with so much good-will toward the beautiful and generous charity which was their common care, that there could not fail to be entire harmony. This society is still in active service, though retaining only two of its original officers, Judge Haydenfeldt and Miss Emma Marwedel. Its Kindergarten is now located on Seventh and Market streets.

"All our first attempts, doubtless bristling with the faults of inexperience, were kindly accepted by the public with far more enthusiasm than they deserved. Indeed, from the very beginning, Kindergarten work in California has had the most signal success. The people have given their money freely and gladly, the Kindergartners have been thoroughly in earnest and devoted to their calling, the children have flocked by tens and hundreds to every door that has been opened."

Oakland, Cal.

Humane to Beasts.

"Hope Arlington" preached a sermon to the people of Fresno, which, notwithstanding its local references, is full of suggestions that will bear applying in many other places. She says:

In Saturday morning's *Republican* occurs the following notice: "A horse suffering from glanders and a gunshot wound was running around loose on Mariposa street yesterday morning. Some one had evidently attempted to kill the animal and failed, but it was criminal carelessness to allow the beast to get away and come among other horses." The reporter of the item says not a word in regard to the brutality of the inhuman scoundrel who shot and wounded the already suffering animal, and then let it wander away to suffer, and die of the wound and disease, or to starve to death. Poor, faithful horse! Man's best friend, if only rightly treated.

If the officers who kindly led away and killed the poor beast, in order to end its suffering and avoid the spread of the disease, will do their whole duty they will soon search out the man who committed the "criminal carelessness," and punish him to the extent of the law. I will give \$5 myself to know who it was, and have him held up to the gaze of the public. We are supposed to be engaged in a mad race after the god of mammon, but I do not think we are so lost to humanity as to care nothing for the suffering of the dumb beasts about us. We hear a great deal about "man's inhumanity to man," but too little is said about man's cruelty to the useful animals which were given to us by the Great Creator for our use and not abuse.

Is cruelty to animals to be allowed to go on without a word of protest, and the children to grow up in the belief that it is man's right to abuse the dumb beast entrusted to his care? What will be the result on the mind and disposition of the child thus taught? I knew a woman who allowed her little child, two years old, to take a stick and beat to death a little kitten on the kitchen floor, and she laughed about it as she told it. I remember yet the thrill of horror that ran over me when I listened to this story, and I never saw the child afterward without a shudder of repulsion. If that child grows up to be a murderer, think you that mother will not remember the act of the baby and too late reproach herself for cultivating in it the disposition to murder?

A fountain in the court-house grounds will be a beautiful thing, but would not the ladies who are interested in this fountain have done a better and more humane thing had they planted a row of shade trees about the edge of the court-house grounds where in the hot summer days horses could be tied in the shade, while they rest after hard labor? A watering-trough placed in some suitable location, arranged in such manner that it should be always full of fresh water, so that a teamster should have no excuse for not properly watering his team, would be also a most desirable thing. This matter of trees about the edge of the court-house grounds (if it is the intention to allow the tying of horses to be continued there) should be looked into at once by the proper authorities, and unless it is absolutely necessary for the growth and success of the city and county, that the county property should be used as a place to advertise, there should be a double row of quickly growing shade trees planted inside the fence, all around the grounds. Aside from the benefit to the horses tied there, in the awful heat of the sun beating upon the dry sand at 110 degrees in the shade, tied there, some of them from early morning until late in the night, without water and without feed, the master—what a misnomer!—lying in the back yard of a saloon, in a condition not to be described; it would also add greatly to the beauty of the court-house grounds.

They say a man's sincerity is only tested by his willingness to put his hand into his pocket and so, financially, help out a project which he advocates. Well, I am not a man and consequently have not a pocket, but I can testify to my sincerity in the cause in which I am deeply interested, and will give \$15 to aid in the planting of the trees and the expense of a watering-trough, and will also agree to put my hands in my husband's pocket, or in other words, to induce him to give as much more, which I know he will do willingly. Can we not have a society for the prevention of cruelty to animals in Fresno, and show to the world that we are as humane as our sister city, San Francisco?

YOUNG FOLKS' COLUMN.

Nellie.

[A TRUE INCIDENT.]

(Written for the RURAL PRESS by MRS. M. F. ROWE.)

"Who is this little girl?" asked Miss Grace one Monday morning, as she glanced around the ring of happy faces and noticed a little stranger.

"That's the Nellie Sullivan," spoke up little Tim O'Donnell, "and please, Miss Grace, can she come to school to-day? for her mother must go out to work."

"Yes, indeed, she may come; not only to-day, but every day, if her mamma is willing. Where does she live, Tim?"

"In the same house with me, only on the floor above."

"Well, I will see her mamma and ask her to let Nellie come every day. Will you bring her, Tim?"

"Oh! yes, ma'am."

"And would you like to come, Nellie?"

A bright little face raised to the teacher's, and an eager little nod was a more eloquent answer than words.

That same afternoon Miss Grace accompanied Nellie home and met her mother, a pleasant-faced, hard-working woman.

"Sure, Miss, it's too bad to be sending such a baby to school. She's not four yet until next month; but some of the ladies where I work don't want to be bothered with a young one 'round, and I can't leave her alone. She's the only one that's left me of five, and it's very dear to me she is."

Miss Grace explained that the kindergarten was intended for just such little ones as Nellie, and asked that she might come every day.

"Indeed she can come, Miss, and thank you kindly. I shall be glad to know she is safe while I am out at work."

"Have you no husband?"

"Indeed I have, Miss, and a good one, too, when he's himself; but what with the strikes and the drink it isn't much Mike brings in, and if I didn't work it wouldn't be long we'd have a roof over our heads—not that I'm complaining, for there's many worse off than me, but I want to keep a bit of a home together for Nellie's sake."

"Then when you are away working you may feel that Nellie is as safe as she would be with you. Send her with little Tim downstairs and I will see that he brings her safely home again."

"I will. Thank you, Miss, for your kindness."

So little Nellie became a regular attendant of the street kindergarten. No matter what the weather was, she was always there. Miss Grace learned to expect to see the faded and patched gingham apron—not always overclean, for who amid the drifting sand and black coal smoke of San Francisco alleys can keep little ones always clean?—but the little face was always smiling and happy. A casual observer would have said, "What a homely child." Indeed there seemed in her face no "redeeming feature" save the unconscious grace of happy childhood; yet, in spite of the plain features, there was the bright mind that attracted even strangers. Very few of the visitors to the kindergarten left without noticing little Nellie.

So the days and weeks went by, and the child became more and more attached to the pretty room, and more than ever in love with her dear Miss Grace.

Several months had passed when one Friday afternoon Miss Grace noticed as she bade the little ones good-by that Nellie's face was unusually flushed, and that she had a sharp, croupy cough.

"Hurry home with her, Tim; she is not well," and she pinned the little shawl more closely around the child's throat, and with a kiss on the hot forehead, she sent her away.

Monday morning as the teacher entered the room the children flocked around her, saying: "Oh, Miss Grace, Nellie is dead; she died this morning."

Dead! how that word sends a chill to the heart when we hear it spoken, of only a stranger, but when it is said of one whose daily life touches ours, "She is dead," how everything seems to stand still as we try to realize all that little word means. So in the kindergarten that day there were sorrowful little faces, and little ones wept as Miss Grace told them of their little playmate whom the Good Shepherd had taken so tenderly in His arms and carried to the heavenly fold where there was no more sickness or sorrow.

And after the little ones were gone there remained the sad duty of going to the desolate home to comfort the stricken mother. The little room that served for all purposes except sleeping was strangely quiet and orderly. Here and there on the wall were pinned little squares of Bristol-board, worked in bright worsted—Nellie's "sewings," and suspended from nails were festoons of bright-colored chain-papers, also the work of the busy little fingers now still in death.

The father sat beside the little coffin on the pine table, with his bowed head resting in his hands, while the mother at the sight of Miss Grace burst into fresh cries and sobs. Ah, to these parents, plain little Nellie in her faded gingham apron was as inexpressibly dear as is

the dainty, velvet-clad darling to those more favored by fortune, and all the dearer because four other little ones had been laid away before their baby lips had learned to lip that sweet word mother.

"You've come to see Nellie, Miss," said the poor mother as soon as she could command her voice. "Oh, my poor darling is gone and what shall I do without her? It was the school, Miss, that she was talking of all the time and I couldn't keep her home a single day. She was so happy there, and every night she'd have something new to tell me. Many's the night of late that Mike's staid home to listen to her little songs. She would sing so sweetly and make the motions so cute for such a little one. And always at the last she would fold her little hands and close her eyes and sing her little prayer. Oh, it was beautiful to see her, Miss. And, when she was taken with the croup, she still talked about the school and would she be well enough to go Monday, because Miss Grace would miss her. Ah, it was just the way the others went, and I knew she wouldn't live. But she would talk even to the last when she was panting and struggling for breath. And the last words I heard her say, with her poor parched lips, was 'Miss Grace, Miss Grace,' and then she was gone." And the poor mother sobbed and moaned over her child's still form.

The teacher's tears mingled with the bereaved ones as she placed some white buds in the tiny waxen hands and kissed the marble forehead, and as she turned to go the father arose and offering her his hand said:

"God bless you, Miss! I shall never forget you. You made our little Nellie happy." And we too, say: "God bless the faithful kindergarten, who, with loving heart, goes out into 'the highways' and byways of the great city, and from the homes of poverty, gathers the little ones into the bright, pleasant schoolroom and there 'makes them happy'."

And you, to whom God has intrusted wealth, let your charities extend also to this greatest charity and out of your abundance give freely, that the little ones may at least have a happy childhood. The Master hath said: "Inasmuch as ye have done it unto one of the least of these, ye have done it unto Me."

Grass Valley.

A Warning to Young Gunners.

EDITORS PRESS:—I will relate an accident which happened in the spring of 1885, which, though it occurred nearly three years ago, I remember very well. My father had some ground planted to melons about three miles from our house down in the tule in Yolo county, about a mile from the Sacramento river.

As soon as the melons came up, the quails and rabbits began to destroy them, and we had to use "a little pepper and salt on 'em." My brother or I had to go over to the patch every morning. The morning that this accident occurred my brother John went. He got up pretty early that morning, hoping to get some quail which abounded in the brush around the melon-patch. My father did not like him to take the powder, shot, etc., along with him, but this morning he wanted to take them, so my mother gave him the powder and a small cap box of shot, and expected him to say that there was not a load, but he put it in his pocket without saying anything and went away.

He did not see anything when he was going down, but when he got to the patch he saw some quails at a distance, which flew away when he approached them, but he fired at them to give them a good scare. When he loaded the gun he found that he had lost one of the wads, but found some greasy paper which our hired man had his lunch wrapped up in. Taking a piece about eight inches square, he made it into a wad and rammed it on top of the shot. After loading the gun, he shouldered it and started for home, not meeting any game until nearly home, when he saw a large flock of quail run across the road, and as soon as he saw them, he "whipped" down the gun and "blazed away at 'em," firing off the barrel he loaded up with his fine wad and cap-box of shot.

We had just got done milking when Allie said that he had come back with his face covered with blood and the gun broke in two pieces.

Mamma said that when he came on the porch she asked him if he was hurt and he said: "I don't know." But she thought he had had the nosebleed and rubbed the blood over his face, then took the gun apart so that he might scare her, but when he got into the house she found two cuts on his face. The barrel, which he loaded with his Spanish wad and the cap-box of shot (there were four charges of shot in the box, as we afterward found) made the gun kick him senseless. He held the gun so firm to his shoulder that it broke the gun open. How the cuts came on his face I don't know, but I think that the hammers of the gun must have hit him some way when the gun broke. Anyway when he came up to the house he was still senseless, and as he came back to his senses he wanted the quail to eat, and when I went down to get the quail I found the ground covered in three places where he had rolled around.

My mother said that he should not go hunting for a week, but he wanted to go as bad as ever the next day.

I think every one, who has firearms in his or

her possession, should be very careful with them, but a great many persons have firearms in their possession when they have no business with them, and, while some have them to hunt with, others have them just to say they have got some, and I think if they would leave them alone it would be a great benefit to the country.

WILLIE KITE.

[We don't quite see how he could come home and still be "senseless;" probably Willie means "dazed" or that he had but partly regained his senses or something of that sort. We hope all boys will profit by this lesson. —EDS. PRESS.]

GOOD HEALTH.

How to Keep Warm and Avoid Colds.

Some people may not know that when exposed to a severe cold a feeling of warmth is really created by repeatedly filling the lungs to their utmost in this manner. Throw the shoulders well back and hold the head well up. Inflate the lungs slowly, the air entering entirely through the nose. When the lungs are completely filled, hold the breath for ten seconds or longer, and then expire it quickly through the mouth. After repeating this exercise while one is "chilly," a feeling of warmth will be felt over the entire body, and even to the feet and hands. It is important for all to practice this exercise many times each day, and especially when in the open air. If the habit ever becomes universal, then consumption and many other diseases will rarely, if ever, be heard of. Not only while practicing the "breathing exercise" must the clothing be loose over the chest, but beginners will do well to remember, in having their clothing fitted, to allow for the permanent expansion of one, two and even three inches, which will eventually follow.

One might with propriety say that too many people choke or stifle the skin by an excess of clothing, and, as a consequence, take cold easily. Some impurities are thrown out of the system by the skin, as others are by the lungs, the bowels and the kidneys. It is absolutely essential to health that the emanations from the skin pass easily through the clothing. This—which is called "transpiration"—may be interfered with by an excess of clothing, or by clothing of a very close texture. All who wear india-rubber coats know how uncomfortable they cause them to feel after they have been on a short time. On the accession of Leo X to the papacy, there was a grand procession at Florence in his honor. A little girl was made to personate the golden age by being coated, from head to foot, with gold leaf. Before the day was over she died in convulsions, killed because "transpiration," or, in other words, because carbonic acid gas and dead, worn-out matter, which should have been thrown out by her skin, was shut up in her system by the metallic covering. Ordinary clothing will not, of course, prevent transpiration, but an excess will interfere with it; and when too much clothing is worn the same soon becomes foul, unless the outside air can freely mingle with the gases from the body and so dilute them. Some wear the thickest and heaviest under-vests which they can buy, and such people are very generally the victims of frequent colds. Following the rule of light clothing, they would be much safer from the dangers of exposure were they to wear two light under-vests instead of one very thick and heavy.—Ex.

TEA-POISONING, it is claimed, bids fair to become chronic. Dr. Bullard gives in the Boston *Medical and Surgical Journal* the details of 74 cases of chronic tea intoxication investigated by him. His conclusions are that the action of tea is cumulative; its action is more pronounced on the young and on those subject to anemia or physically depressed, although persons otherwise healthy occasionally show toxic symptoms; the average amount of the beverage required to produce poisonous effects in persons accustomed to its general use is a little less than five cups per day. Chronic tea-poisoning, Dr. Bullard asserts, is a common affection, its symptoms being usually loss of appetite, dyspepsia, palpitation, headache, vomiting and nausea, and nervousness, combined with various forms of functional nerve affections, such as neuralgia, hysteria, etc. Besides these, constipation and pain in the left side are frequent.

THE DEATH-RATE.—Modern sanitary improvements, says Sir Spencer Wells in a late address before a medical society in Nottingham, England, have reduced the annual death-rate from 29 in a thousand to 19. He further said that it ought to be reduced to 15 or 12. He then said: "And if we have—as we really have—seen the average duration of human life in Great Britain advance from 30 years (which it was half a century ago—to 49 years (which it is now, according to life tables), why may we not witness a still further advance? Why should 70 or 80 years remain as the usual limit of human life? Why should its natural duration under perfectly healthy surrounding conditions not be at least 100 years, with an occasional extension of some 10 or 15 years more."

DOMESTIC ECONOMY.

Household Hints.

EDITORS PRESS:—Try frying tomatoes with onions and see what a nice dish they make. The tomatoes take away the strong smell that usually pervades a room when cooking onions. For washing greasy and milky dishes a lump of washing soda the size of a walnut in the dish-water is much better than soap for cleaning.

When you boil rice, to two cups of rice add one cup of raisins. It is excellent for dessert with cream and sugar, or a made sauce.

Don't forget to put a good handful of sugar in your pancake-batter some mornings; it makes such a nice change from the usual pancake flavor.

MRS. J. H. Los Alamos.

RAISED DOUGHNUTS.—A little less than one-half cup of melted lard rubbed into one cup of sugar, one cup of warm sweet milk, one-half cup of yeast, one egg, one-half teaspoonful of baking soda, a little salt, and nutmeg or cinnamon; let it rise till light, then turn out on a warm dough board, but do not roll at all; let it rise till light, then fry.

PLUM PUDDING.—One pint of chopped suet, one pint of tart apples, one pint of raisins, one pint of currants, one-half pint of sugar, one-half pint of sweet milk, one cup of citron; beat eight eggs and mix with the above, and add sufficient flour to make it stick together; boil three hours in a cloth bag, and serve with sauce.

MINCE PIES WITHOUT MEAT.—Three pounds of apples, three pounds of raisins, three pounds of currants, 1½ pounds of suet, 1½ pounds of sugar, and a little mixed spice; each to be well chopped, and then mixed together with a little chopped candied peel, a few pounded almonds and half a pint of liquid currant jelly.

CORNEBEEF.—Boil until soft enough to remove the bones; place in an earthen dish and pour over it the water it was boiled in. Place a plate on it and a heavy weight; have sufficient water, so that when the weight is on it will come to the top of the meat. Let it stand until cold, then cut in slices.

STEWED FISH.—Place the fish in a pan of salted water and simmer one hour. Lay the fish, minus the head, on a platter; pour over it drawn butter, then spread with mashed potatoes enough to cover it nicely. Over the potatoes spread the whites of four eggs. Put in the oven and bake a light brown.

DATE PIE.—One pound of dates, one quart of milk and three eggs. Season the same as for squash pie. It needs no sweetening. Put the dates in the milk and heat until they are soft enough to sift. This makes two good-sized pies. Use one crust, the same as for squash.

MACKEREL BALLS.—Let the fish stand in water over night; in the morning pour some boiling water over it; pick it carefully from the bones, and add an equal quantity of cold mashed potatoes, two beaten eggs and a pinch of pepper. Shape into balls and fry in hot butter.

BROWN BREAD.—One pint each of Indian meal and rye meal, one-half pint of wheat flour, one-half cup of molasses, one tablespoonful of salt, two-thirds of a cup of yeast and one pint of hot water; mix, let it rise, steam three or four hours, and brown the top a little in the oven.

PORK CAKE.—One pound of fat salt pork chopped fine, one and one-half cups of boiling water poured over the pork, two pounds of raisins, currants and citron, two cups of sugar, eight cups of flour, one tablespoonful of soda, and cloves and cinnamon to taste.

BUTTERMILK CAKE.—One cup of buttermilk, one large cup of sugar, two-thirds cup of shortening, two eggs, and one teaspoonful of soda. Flavor to taste. By putting in mixed spices it makes a good spice cake, and I sometimes put in a cup of raisins.

CHOCOLATE JELLY.—Take seven spoonfuls of grated chocolate, the same of white sugar, one cup of sweet cream; mix together, and set over the fire, and let come to a boil. Pour it over cornstarch pudding, or put between layers of cake.

COCONUT COOKIES.—Three cups of sugar, one cup of butter, one cup of sweet milk, two eggs, one cup of grated coconut, two teaspoonfuls of baking powder, flour enough to make a dough; roll out, cut in shape and bake.

GRAHAM BREAD.—Two cups of sweet milk, one tablespoonful of sugar, one teaspoonful of salt, one rounded teaspoonful of soda, and four cups of graham flour stirred into the other ingredients.

HAM CROQUETTES.—One cup of ham, two cups of potatoes, one cup of bread crumbs, one tablespoonful of butter and one egg. Make in balls, roll in bread crumbs, and fry in hot lard.

MUFFINS.—One egg, one cup sugar, one-third cup butter, one-half cup milk, salt, spices, one teaspoon baking-powder and flour to make a batter. Bake in a hot oven.

PICKLED FISH.—Spice the vinegar, cooking the spices in a bag; when hot put the fish in and let it boil slowly until tender. Take out carefully and lay away in a stone jar.

MOLASSES BUTTER-SCOTCH.—One cup of New Orleans molasses, one cup of brown sugar, one-half cup of butter. Boil until it snaps when dropped in cold water.

The Week.

Jack Frost, who nearly a fortnight ago laid hold of California in a way she had not felt the like of in this generation, was already losing his grip when we went to press last week, and the State has since been bathed its entire length with copious and genial rains. The injury to fruit trees seems on the whole to be pretty light, but the limits within which citrus culture may be deemed a reasonably safe venture are established better perhaps than ever before. Now is the time to apply the pruning-knife promptly and thoroughly to frost-bitten wood, whether in orchard or flower-garden, that no poisonous sap may descend into and harm the healthy parts.

A LARGE EDITION.—We print this week an unusually large edition of the RURAL PRESS, to be distributed at the Citrus Fair in San Jose by F. B. Logan, our agent for Santa Clara county.

THE STATE BOARD OF FORESTRY held a meeting in this city on Monday last, but a report of their proceedings is temporarily crowded out of our columns.

What Civilization has Done for Man-kind.

Civilization is derided by some men as though it were a crime. Men speak of progress and poverty as though they went together, and great wealth meant also great poverty and suffering.

It is all error, all a delusion, sophistry, misrepresentation. Civilization has lifted man up from a mere localized animal, contending with wolves and bears, into a god that enjoys the entire earth and makes the elements his slaves. Civilization has extinguished poverty at every step, and made it almost impossible, and promises in the near future to make it entirely so. Let us illustrate. Take a square mile of land of average fertility. In savagism it contains and supports two poor, miserable human beings. In the finest seasons they get plenty to eat. At other times they starve. Their home, a brush tent. Arms, tools, animals, or stores, none. Life is a battle for life, and extinction almost as likely as increase. There is no value, no rent, interest, profit or wages. This is the original first stage.

In the pastoral age, the land sustains five persons, an advance truly. A tent appears, clothing of skins, milk, meat, and stores for winter. Three of the five never know actual want. The other two are slaves, and yet not near so poor and wretched as the two savages in the savage state.

Then comes the simple farmer. The square mile has 20 people. One is the landlord—the chief, judge, director, above all want. Four are renters—think, work, direct, have a homely plenty, with pains and care. Ten others are skilled laborers—always employed, with homes and above want. Three others are unskilled—often unemployed, and poor, but never so poor as the two were in savagism. Only two remain. These are, perhaps, drunken, idle or criminal, and almost down to the level of the savage. The land has value, and pays rent. Farms and workshops bring profits.

Another advance! Work animals, improved implements, orchards, gardens, and the simple arts raise the population to 100 on the same square mile. Fine houses appear; dress becomes showy as well as useful. The proprietor is a fine gentleman; he is well supported by ten substantial renters. Ten tradesmen have come; 60 skilled laborers have cottage homes in humble plenty; 15 are rather pinched at times for work, but still live and thrive. Three shifty vagabonds manage to live by crime. And still the two downright poor are there! They are not as poor as the savages, but still they are there very poor.

We rise again to the highest civilization. Now there are 300 people on that square mile, where before the two, the five, the twenty and the hundred dwelt, as we have described. The land is worth \$500 an acre. The improvements as much more. Those 300 people average \$2500 each when all their possessions are summed up.

The dwellings are solid and costly. The land is drained or watered at will by pipes laid all through. Gas, heat, steam and water are furnished in the same way. The streets and roads are perfect. Libraries and newspapers are there. Schools, churches, theaters, halls, baths, music, statuary, pictures, flowers, are all there. Moving from place to place, up or down, is in palace cars or gorgeous steamboats.

The people! Look at them! Really they all look like gentlefolks. All are clad, shod and even ornamented. You cannot meet one naked in a week. Out of the whole 300 there is not one to be found as poor as those two savages. True, that some are very poor as compared to others, very poor, but not when compared to the two savages. At times their pride may seem to make them even poorer. All the soil is owned. They have no right, save upon the streets and roads. They cannot hunt, or fish, or dine on locusts or grasshoppers as the savage could. But it cannot be denied that there is the almshouse, the hospital and charities open for all. No one is denied.

And that almshouse! Pride does not like it! Granted! But pride is not poverty. Why, it is a palace compared to the lair of the savage. Its food is a feast, a daily feast, compared to his habitual fare. Its shelter perfect, compared to his rude shelter. The two poor are still there, and there may be four, or ten, but their poverty is wealth in comparison to that of the

savage. Yet men talk of progress and poverty, of progress making poverty. It is all a mistake. It makes wealth, ease, plenty, elegance, mind, art, literature, travel, and constant lesson and advancement. Where it leaves one poor it makes ten rich.

The improvement that has made that square mile support so many people so grandly, is a matter of accumulation. It does not come in a day. It is the saved-up labor of many persons and of many years. We find it now worth \$2500 to each person, in all \$750,000. The interest of this sum at five per cent per annum is \$37,500. This makes at least 40 people able to live without labor. They have nice houses; they travel. They see what others are doing in other lands, and they return home to introduce all manner of improvements, till that square mile presents all the advanced ideas of the world. Their homes are models for the rest to copy, to work up to. They show how science can add to comfort.

Now, who does all this accumulated value belong to? Naturally to those who have made and saved and invested carefully. Some have reaped tenfold and others only two; but all who make and save and invest reap some profit.

Now, mankind has always been divided into three classes:

1. Those who make and save, invest wisely, and leave the world richer and better for their having lived in it.

2. Those who are content to spend all they make, and die as poor as they were born.

3. Those who tend to idleness, vice, crime and depredation, and tend to keep the world back and make it poorer every day.

The last are a constant cost to all the rest. As paupers, incompetents or depredators, they have to be supported mostly by the rest. A nation of such would soon make famine, pestilence, anarchy and destruction. They have been a dead weight on human progress from the beginning. They resist every step in advance. They are the objects of all our criminal law and most of our charities.

The second class is better. It works, but eats, drinks, and is merry and dies. It saves nothing. Not because it cannot so much as that it will not. The drunkard, for instance, you might increase his wages in vain. He will die poor. Then there are many good, honest people in this class who labor diligently and skillfully, and make wealth for others; but for themselves they make no accumulation. They want none. They pass through life useful indeed, but only for what they leave in the hands of others. A nation of such would always be poor, weak, helpless, and a prey to the first invader, for they would have neither guns nor munitions of war when the battle came.

The accumulators are the evangelists of civilization, the builders of progress, the patrons of science, of art, home, comfort, elegance and strength. They have made this square mile support 300 people. They have urged the workers to industry and directed their efforts. And they have continually labored to reclaim the depraved and useless, and to repress where they could not reclaim.

Do you doubt it? Behold the churches, schools, asylums, and all manner of charitable and instructive efforts voluntarily supported by the rich, and wholly directed to the benefit of the poor.

Still these poor and these depraved, who are worse than poor, will hang upon the outskirts of society, howl and growl at progress, and forever make war on a civilization in which they refuse to take a part. Where our fathers became herders, these refused and remained savages, preying upon the fold. When we became farmers they refused to till the soil, but stole the fruits. And now we have become capitalists, scientists, artists, travelers, and men of ease and leisure, they disdain to follow in our footsteps and want to divide our fortunes.

It is not to be denied that in the Great Republic we have perhaps been a little too careful of the interests of capital and too unmindful of those of our common humanity; but it is certain that no state of society can prosper where thrift cannot enjoy its reward, or idleness and vice are not made to feel all the consequences of their own acts.

When we have made it certain that no honest citizen willing to work shall lack bread or his children be raised in beggary, we shall have done all that justice may demand. Vice and crime have no claims upon us, while those who

build up the nation and give it wealth and strength must forever be the objects of regard and protection. This is civilization. Any other course would result in anarchy and savagism and make paupers of us all.

The American Horticulturists in California.

[Editorial Correspondence.]

SAN JOSE, Jan. 24.

Before beginning an account of the opening of the meeting of the American Horticultural Society in San Jose, it will be proper to allude briefly to the advent of the delegates to the State. After receiving the welcome greeting of Riverside, in the shape of fruit and cordial words, at Indio, the course continued westward to Los Angeles. From this point a day's excursion, arranged by the enterprising people of the Santa Ana valley, was taken and thoroughly enjoyed. Afterward the delegates received ovations en route at Tulare and Fresno. At each place there was a most cordial demonstration—carriage rides over the beautiful country adjacent thereto and public receptions at which pleasant words were spoken both by Californians and their guests. These wayside visits were a decided benefit both to the visitors and the State, for the result is a much better acquaintance with the resources and development of some of our leading districts which could not have been gained by a hurried-through ride.

After experiencing these pleasant diversions, the delegates arrived in San Francisco on Saturday and Sunday, and were cordially received by the officers of the State Board of Trade. An informal reception was held, at which addresses were made by A. T. Hatch, president of the State Board of Trade, Prof. Hilgard, president of the State Horticultural Society, M. M. Estee and others. A trip to the Cliff House and Sutro Heights, and another reception at the State Board of Trade rooms, filled the time well until Monday afternoon, when the delegates departed for San Jose.

On arrival at San Jose, they were met by Messrs. Barbour, Goodrich, Cadwallader, Adel and others and assigned to the hospitality provided by the citizens at the hotels and private residences. The expression of the visitors, as we have heard it, is one of appreciation and gratefulness for the kind and generous reception which has been tendered them ever since they entered the State, and they came to their

Opening Meeting

This morning in the best of spirits. Much pleasure was produced at the opening by the presence of President Parker Earle of Illinois, who had been delayed from the journey with the excursion train, and by the appearance of the secretary, Prof. W. H. Ragan, who was obliged by illness to stop for rest at Santa Ana. Thus full officered, with a most excellent place of meeting in the Baptist Tabernacle on Second street, and with the warm sun streaming through the windows to assure them that they had really escaped the land of blizzards, the opening session began at about 10 o'clock on Tuesday morning. This session was preparatory in its character. It gave opportunity for friendly greetings and for enlarging the membership by the enrollment of many Californians. The following Committee on Order of Business was appointed by President Earle: Messrs. Hubbard of New York, Goodman of Missouri, Wilcox of California, Smith of Wisconsin, Evans of Missouri, Avery of Iowa, and Ragan of Indiana. A program was laid out for the afternoon and an adjournment taken.

The afternoon was given to grape culture East and West, opened with an interesting essay by Prof. Hestmann of Napa. Then followed a discussion showing clearly that grape culture at the East in many States is a most profitable and rapidly growing industry—far more so than Californians usually know, and because of the interest in such information we shall take more time than we can now command to write out our notes taken during the discussion. Both Eastern visitors and Californians took part freely in the conference and gave each other good points, fully showing in this one meeting how important it is for fruit-growers from all parts of the country to compare notes.

On Tuesday evening was the formal reception to the society by the citizens of Santa Clara county in Horticultural hall. This excellent

Health Homes on the Desert.

While there is little doubt but the invalid class is on the increase in the United States, and perhaps also in most other civilized countries, it is notoriously the case that the victims of consumption are being everywhere multiplied at a very rapid rate. Of the deaths that occur in the Atlantic States 20 per cent or more are caused by affections of the respiratory organs, pulmonary or bronchial, both being in most cases involved. There was a time when the notion obtained among the practitioners of the healing art that this disease could be cured, or at least palliated, by drug medication—an idea that has become to be so thoroughly exploded that it can hardly be said to hold any longer a place in the therapeutics of even the most conservative school of medicine. It is now admitted by the profession everywhere that about all that can be done for this class of ailments is to place the sufferer under the most favorable conditions and leave nature and natural remedies to work a cure or stay the ravages of the malady as far as may be. To this end, the first thing to be done is to supply the sufferer with fresh air and plenty of it. The next thing to be done is to keep him as much as possible in the sunshine. Then come in good water, suitable diet, judicious exercise, bathing, and such other auxiliaries as in every disease tend to a restoration of health, the air and the sun being the agencies most to be relied upon for cure or relief in cases of consumption, though there are numerous other bodily ailments in which these will be found almost equally effective.

If then the theory above advanced be correct it becomes pertinent to inquire after the country or locality that to the largest extent meets these requirements—where shall we find the purest air conjoined with the least intermitted sunshine. In our opinion this condition of things will be found in the barren region that

occupies the southeastern angle of California—anywhere on the Mohave or the Colorado deserts. There is not in this region, covering an area of 20,000 square miles, an acre of malarial land, there being here more than 300 absolutely clear days in the year. As the annual rainfall hardly ever exceeds six or eight inches, the surface of the earth is nearly all the time warm and dry, and everywhere as clean as a well-kept park. While the summer months are extremely hot, the temperature during the rest of the year is moderate, and the climate in all respects delightful. No snow falls here except on the mountains, nor is ice to the thickness of an inch ever seen. The doors and the windows may be kept perpetually open, nor are there a dozen of nights in the year but what a man under a pair of thick blankets can sleep in the open air without peril to health or the least discomfort. Even the most delicate invalid could, if so disposed, keep out of doors nearly the whole time; and thus would the consumptive patient be able to avail himself of the best possible means of recovery. While this region would offer to every person of impaired health an incomparable winter resort, it would be to those afflicted with cutaneous and pulmonary complaints especially well adapted.

From what has been said the reader will infer that this great southeastern Sahara is not a very attractive country as regards soil, scenery or natural productions, as indeed it is not. It

is what its name implies, an arid, sterile waste, so barren of even the lowest forms of life-sustaining foods that the Digger Indian, least dainty of mortals, has never been able to subsist there. It is, in fact, an almost rainless, treeless, waterless region, yet withal so clean and pure, so free from mists and clouds and insect pests, so sequestered and quiet, that it ought to form a welcome retreat for those in search of health, rest and peace.

A race is coming on—a race has already arrived—who are so far gone and effete that they require not so much exercise or recreation as absolute rest—rest, not only from work and the worry of business, but rest from the excitements and the excesses of a too active or a too luxurious life. If we could confine them in a vacuum or temporarily suspend animation, it would be the proper treatment for them. It is just because there is nothing or so little on these deserts that they would constitute the most suitable asylum for a class of patients whose vitality is so nearly extinct.

Exercise if needed could, of course, be taken here. There are mountains that might be climbed, while the pedestrian so disposed might start out and walk a hundred miles in almost any direction without impediment. The most

Insurance and Mutual Benefit Humbugs.

In view of some cruel frauds that have lately come to light here in San Francisco, we last week warned our readers against the "half-interest" swindle which has been worked here, in one form or another, with considerable success.

To this and the Louisiana lottery, and the entrapping of "local agents" for burners, hay-forks, etc., and other games for fleecing the credulous, against which we have tried from time to time to put our patrons on their guard, we must add the "mutual benefit" and "life-insurance" tricksters who appear in a place with some pretentious plan for making something out of nothing, talk "confidentially," glibly and mystifyingly to such as can be found verdant enough to listen to their specious stories, collect all they can in the way of premiums or assessments (whatever they may call them), and then, after they have reaped about as large a crop as the credulity of that neighborhood seems likely to yield, hie off to pastures new—for instance to California—and start afresh in the nefarious business of working a new set of dupes up to the point of tak-

Cleveland Bay Horses.

These fine horses are winning popularity for the uses to which they are especially adapted in this State as at the East, and their career here is destined to be honorable. We shall need other horses than the majestic drafts and others than the airy racers. There is great need in fact for a quick-walking horse of medium weight in all our lighter field work and for the vast amount of orchard and vineyard cultivation which is to be done. And then for fine carriage-horses, why, we shall all have them as we get rich and are blessed with leisure.

The picture of a Cleveland Bay on this page is enough in itself to win all to admiration of the breed. This fine animal is True Briton, imported and owned by George E. Brown & Co. of Aurora, Ill., the well-known live-stock men. True Briton was foaled in 1882, imported in 1884, and has proved himself a sure and valuable foal-getter. Sired by Baronet, dam by Pride of the North, and with a long line of grand horses in his pedigree, his breeding fully justifies the superb style and handsome finish which placed him a close second in a strong string at the recent American

Horse Show at Chicago, being only beaten by his stablemate, Marlboro, also owned by Geo. E. Brown & Co., who, by the by, seem to have things pretty much their own way in spite of the very strong competition, having won first, second and third in "four-year-olds or over," first, second and fourth in "three-year-old stallions," first and second on "four-year-olds," and first on "two-year-old mares;" also first and second for pairs of mares. Such an array of prizes would indicate that this firm is maintaining its reputation for being in the lead, particularly so as the show of Cleveland Bays was undoubtedly the best ever seen in this country.

Cleveland Bays have a special local interest just now

CLEVELAND BAY STALLION, TRUE BRITON, IMPORTED AND OWNED BY G. E. BROWN & CO., AURORA, ILL.

of the country being level and the surface hard, riding on the bicycle could be practiced to good advantage, the opportunities for locomotion by other methods being equally good. Being traversed by several railroads, this region is easily accessible from every quarter. That there will in due time be established here a sanitarium for that class of valetudinarians who require most to bathe in the sunlight and to plentifully breathe the pure air, and for those who need mere abatement more than anything else, we verily believe.

It should be stated that water can be obtained in most places on these deserts at inconsiderable depths. It is apt to be soft and pure, and, while the flow is not always heavy, it would, in most instances, suffice for the uses of a large establishment, baths included, provided the number of bathers was not inordinately large or their ablutions unreasonably frequent. The practice of hydropathy might not always be feasible. The disciples of that school might, in some cases, have to forego the pleasure of the plunge bath and the douche, though the dripping sheet and the wet compress would be luxuries in which they might occasionally revel. In the sun bath all could indulge without let or limit, and in the atmospheric sea, charged with the life-giving ozone, lave themselves to their heart's content.

SYDNEY, N. S. W., celebrates a centenary.

ing stock in their make-believe scheme of beneficence.

We have especial reason at this time for uttering these words of caution. It would avail nothing to give names, however, for aliases are easily assumed; but we say to our honest friends who (just because they are honest themselves, and would not knowingly misrepresent) are apt to be too easily imposed upon by the misrepresentations of dishonest "confidence" operators—we say to them again: beware of trusting the slick, affable, open-mannered, taking stranger who—however agreeable he may make himself for awhile, and whatever pretense he may skulk behind—is merely after your money.

THE COMING OF THE TEACHERS.—The local Executive Committee of the National Educational Association appears to be wide-awake and active in preparing for the great convention of teachers to be held here next July. It is thought that 10,000 people will attend, and nine of the principal halls in this city have been engaged for sessions of the different sections.

THE RENO GAZETTE says there are not so many cattle in the U. S. by 10 per cent as there were in 1882, when choice Texas steers sold for seven cents per pound.

ONE sheep-owner in Colorado has a flock which is said to number over 30,000.

because of a recent importation under the auspices of Seth Cook, owner of the famous Cook Farm at Danville, Contra Costa county. A sale of these horses has already been announced in our advertising columns. The lot is a small one and there will not be probably more than enough to whet the appetite of our people for these horses. The announcement also in another column of the retirement of George E. Brown & Co. from business is also of interest in this connection.

Probably a few facts about the Cleveland Bay which we take from a catalogue recently issued by Mr. Cook will be of interest:

This breed of horse takes its name from the district of Cleveland, in Yorkshire, England, and from their prevailing color of bay. The most reliable writers say the Cleveland Bay was a well-established breed before the thoroughbred or racehorse, as now developed, was known; anyhow, there is distinct proof that, as far back as the middle of last century, they were the favorite coach horse in England, and have continued to be so up to the present time.

Mr. Lloyd, in his description of Cleveland, says the Cleveland Bay horse should stand, at maturity, from 16 hands 1 inch to 16 hands 2½ inches high, have good sloping shoulders, short back, powerful loins and long quarters, head well carried, and general appearance denoting activity and strength combined in a manner not seen in any other breed. His action is not remarkably high, but is the kind of action for getting over the ground. In color he is bay (either light or dark) with black legs, clear of hair and white; nothing except a star or a little white in the heel is allowable, a blaze or white

ankle proclaiming at once the admixture of foreign blood. There is no breed of horse living that so completely "fills the bill" as a carriage or "general-purpose horse" as the Cleveland Bay. He is good alike on the road or in the field, and in breeding he gives color, bone and style to his offspring in a very unmistakable manner; his disposition is good and he is easy to break and handle.

Cleveland Bays are the favorite coach or carriage horses, being more uniform in color, size and form than any other breed. What is more handsome than a pair of well-mated rich bays, with black legs and flowing manes and tails? These can be raised from ordinary mares crossed with a good Cleveland Bay sire.

Wherever bred to any extent the Cleveland Bay has become very popular, and his produce finds a ready sale at remunerative prices. It is a well-known fact that there is nothing more difficult to find than a really handsome well-mated team of carriage horses, of good size, style and action. This is partially accounted for by the great demand there has been for heavy draft horses, and the consequent neglect of the medium or "general purpose" horse. I can show colts from Cleveland Bay sires (from all colors of mares) which speak for themselves of the pre-potency of his breed, as regards color and form.

FRUIT SHIPPING.

California Fruit Union.

Full Report of the Secretary for 1887.

Mr. President and Members of the California Fruit Union:

We present this, the Third Annual Report of the California Fruit Union, for the season of 1887, just closed, to you for your consideration, with a somewhat greater degree of satisfaction than when submitting the record of any previous year's work.

Surely the past season, when all things are considered, has been quite a satisfactory one to the average fruit-grower. Where, possibly because of exorbitant freight charges and the failure on the part of the railroad companies to live up to their promises of a year ago, made to us at a similar meeting, growers have lost money on their Eastern shipping, the deficit has been much more than made up by the phenomenally high prices which have ruled for dried fruits during the season.

Our canners have taken largely increased quantities of fruit over former years, at moderately fair prices, and have been so successful in placing on the market the result of their season's work that from all sides we learn of new canneries being started and the capacity of established ones greatly increased.

Our people are fast awakening to the fact that they are well repaid for all the additional attention they may give to carefully drying and packing their fruit, and the past season has seen rapid strides toward perfection in both particulars; while the universal verdict of those who have spared no pains is that they have been more than proportionally repaid for their extra labor.

Preparing Fruit for Shipment.

When the same care is taken in selecting and packing for Eastern shipment, and when we can convince the railroad people that our interests are identical and that while they are assisting the one they are only increasing the profitability of the other—should this time ever come—then can we look forward with pleasure to the report of a successful year's business, as we have found these two factors the most important of all and entering largely into every case of unsatisfactory returns.

Were any of you to happen at Sacramento on any day when a fruit train of ten or a dozen cars stands there ready to start on its five to eight-day trip and take a hurried inspection of the fruit in the different cars, at the same time being careful not to acquaint yourself with the brand on the ends of the various boxes, you would involuntarily exclaim: "This certainly is not my fruit;" "This man evidently does not know what he is about," etc., opening the boxes and crates on all sides and finding here one even now not over seven-eighths full, then one so full that the fruit is badly bruised by the cover, here a box with the fruit perfectly ripe and soft, in perfect condition for the table, there a box with the fruit wrapped in newspaper or common brown wrapping paper, while the next might possibly be a crate of fine-looking grapes, but on taking up some of the bunches you find that as a consequence of not being allowed to wilt, but having been packed immediately on being gathered, the packer has loosened a great many berries from the stem and the juice from these is damaging the entire crate. It would certainly be a revelation to many.

They would thereafter not be so prompt in condemning the commission-men and would go home and resolve at least to be very careful in selecting nothing but perfect fruit, and to give the greatest attention to the proper packing of the same, and in all probability they would exercise the greatest care for a time; but let one of our friends secure space for say 200 boxes in a car to leave on a certain day, and then on the day of packing let several of his hands unexpectedly leave and the work drag or possibly

a cool spell has been experienced and the fruit has not ripened as fast as expected, and in order to fill the required number of boxes cannot be so closely selected, and we are afraid that the result would be that we should soon learn that the Omaha or the St. Louis agent, who, as the case might be, should chance to receive the car containing his fruit, were certainly swindlers.

We would strongly urge on every grower that they take a great deal more care in thinning, which is the first step in properly selecting, and then use the greatest care in packing their fruit, and we feel convinced that they then will be much better pleased with the Union or any other organization which essays to forward their product for them.

The annual meeting of last year found us with 217 stockholders, who had paid the four calls of 25 per cent each made upon them, and represented 5186 shares of stock.

Membership in the Fruit Union.

We feel extremely gratified in saying that we now have 486 stockholders who have paid up in full the stock subscribed by them, and the books of the corporation show that they hold 12,323 shares of stock, a gain for the year in numbers of 269 members, and in shares outstanding of 7137, which is certainly a very creditable showing of increase. At the same time we have on the delinquent list 217 members, who hold 3415 shares, on which about \$1500 is still due.

The appended table shows that we have the largest representation in Solano county, where 3325 shares are taken, which, together with Sacramento county with her 2349 shares, aggregates in the two counties nearly one-half the total amount of stock subscribed. Should we include the 1760 shares of Alameda county and Santa Clara county, 1638 shares, we should have, as subscribed in the four counties, 9072 shares of stock—three-fourths of the entire issue—the other 19 counties representing, all told, only 3151 shares. Very little new stock has been subscribed for during the year, the large increase in number of members and outstanding stock being due chiefly to the paying of delinquents and their thereby having their names again enrolled among the members.

We are sorry to say that the representation from four of the counties, originally included in our membership, has, through lack of payment of installments when called, dropped entirely out.

Totals.	15,728	703	456	12,323

The total number of shares at the annual meeting January 19, 1887, was 5186, and the number of stockholders at that time was 217.

Financial Statement.

Financially the affairs of the Union are in a very satisfactory and prosperous condition.

There has been paid in on stock subscriptions during the year \$5408.75, and we have had reported a total amount from the various agents of \$17,017.06, which would make the gross receipts \$22,425.81, of which we have on hand in the form of office furniture, box brands, claims against members for freight which we have been

obliged to pay for them and will now have to carry over to another season, commission yet due from agents, bank account and cash on hand, a total of about \$11,300, showing that the entire disbursements for the year aggregate about \$11,000, of which amount \$1720 was expended in liquidating the indebtedness as reported a year ago. The following balance taken from the books gives the itemized receipts and expenditures for the year:

January 13, 1888.

Expenses	\$361.77
Office Rent	330.00
Office Fixtures	480.45
Stationery	47.75
Telegraphing	1,367.03
Printing	169.90
Salaries	7,689.50
Advertising	21.40
Discount and Exchange	19.48
Postage	166.24
Fuel	15.00
Stock	\$14,021.50
Traveling Expense	1,161.77
Telephone Rent	152.40
Received from Agents (Com.)	17,017.06
Freight Due from Stockholders	272.14
Commission Due from Agents	2,689.97
Profit and Loss	8,238.19
Cash	63.38
Nt. Bk. of D. O. Mills & Co., (Treas.)	8,460.02
Totals	\$31,035.56

A more extended explanation being due the stockholders, we would say that in the account headed "Expense" is included among petty amounts the charge for legal services in drawing up the form of bond and contract used with the different agents the past season, and also the amount paid for collecting a portion of the delinquent subscriptions.

The office fixture account is largely increased by the purchase of a safe, which was found to be an absolute necessity, as books and papers were continually accumulating which must be preserved.

It is needless to mention that the salary and traveling expense accounts show the amounts paid to and by the Eastern manager while on his mission in the interests of the Union in the Eastern States as well as the amounts paid out here, while the salary account is also increased by the payment of \$1566.50 which was owing to the officers at the time of the last report.

Disposal of Earnings.

The profit and loss account represents the balances given in the statement of last January. You will see by the above figures that we have in the bank about \$8500, and we would add that \$100 will pay all our outstanding indebtedness.

It has been suggested by some, inasmuch as the stock of the Union, as such, is not supposed to be a money-making investment, that it might be well after paying a six per cent dividend on the stock issued, this being the maximum rate as provided for in the by-laws, and after reserving from the remainder funds enough to pay all expenses which may be incurred between the present time and the opening of the shipping season, the period whence our revenues are derived, to then divide the remaining portion among those who have shipped in proportion to the amount so shipped by each one. This would be manifestly a just way to dispose of the surplus, as the money would then return to those by whom it was brought into the treasury.

On the other hand, there are quite a number who favor using the money on hand in developing new markets, establishing new agencies, etc.

Need of Wider Distribution.

We found repeatedly during the past season that the ten agencies which we had were wholly inadequate to handling the proportion of the fruit which the Union shipped. According to the figures most kindly furnished us by General Fruit Agent Gray of the S. P. Co., 1700 cars of green deciduous fruits, destined for Eastern markets, left the State during the past season. To the agents of the Union in the following cities, Boston, New York, Philadelphia, Minneapolis, St. Paul, Chicago, Omaha, Carson City, St. Louis, and New Orleans, we shipped 760 cars. These same markets received from others not working with the Union 435 cars, while to other cities in which we had no agencies established we find that about 500 cars were dispatched.

Surely, when we consider that Cheyenne took

during the season 15 carloads, Council Bluffs 37, Denver 286, Houston, Texas, 14, Lincoln, Neb., 46, Louisville, Ky., 16, and San Antonio, Texas, 12 cars, and that we had no representative in any of these cities, it would certainly appear that the work for another year was not alone that of educating the people in the markets already occupied, but a large area of new territory is yet to be surveyed and arrangements perfected for introducing Union fruits.

According to the figures furnished us, there has not, during the season, been a full carload billed direct to Cleveland, a city of 250,000 population, while Cincinnati presents a record but slightly better, with four cars as the consuming capacity of her 275,000 inhabitants; while in direct contrast, Houston and San Antonio, Texas cities, neither of them having over one-ninth the population of the Ohio cities, have received 14 and 12 cars respectively, and this, too, despite the fact that their fruit must necessarily go by the southern route, across the hot plains of Arizona, New Mexico, and Western Texas, a trip which, all who have had to do with fruit shipping know, means an equivalent to several days' travel by the cooler passage.

The matters of the establishment of an agency at Buffalo, N. Y., from which point fruit could be shipped into Ontario and the Canadian country, and now that the railroad is completed, so doing away with the ever-disastrous ocean voyage—the making of Portland a point of distribution for the Northwest and mountain districts, are subjects which present themselves to every one who, being interested in the past season's business, noticed the frequency with which the telegrams came in, "Market full; hold up a little," etc.

From this table of the total shipments of deciduous fruits by the entire State we learn that which may be unknown to many, namely, that the competition offered us by our southern co-workers amounts absolutely to nothing, as the total shipments for the season from that section aggregate only 11 cars, or 1-155 of the entire output. True, we have the figures from but one of the railroads, but even after allowing the other road the same number of cars, the total is truly insignificant. The figures as furnished us, will be found in the table at the top of this page.

Peculiarities of Distribution.

It might be a matter of surprise to some to note that, according to these figures, while Chicago received from all sources for the season 657 cars, Denver 286, Minneapolis 113, New York takes the fourth place in the list, receiving 105 cars, or nearly one-sixth as much as our oldest and best developed market—nearly one-half the amount sent to our nearest and consequently most accessible market, and is but barely outranked by Minneapolis, which is certainly a very creditable showing for a market which last season averaged one car per week. Nor has the enlargement of the other markets in which we had representatives been neglected.

Messrs. S. G. Palmer & Co. of Minneapolis wrote us that in the season of 1886 they handled in the neighborhood of 20 cars, while this season we have sent them an equivalent to about 45.

Messrs. B. Presley & Co. of St. Paul make a similar showing, having doubled their previous sales the past season.

From Messrs. Macluca & Bros. of New Orleans we learn that two years ago they handled nearly 20 cars, while this season they have increased the number over 50 per cent.

B. M. Tanner of Kansas City says that six cars at the outside would represent the receipts in his city two years ago, but for the season just closing he alone has secured 22 cars; while in Boston, which two years ago averaged less than one-half a car per week, Messrs. Blake & Ripley have this season very successfully disposed of 40 carloads which the Union has shipped them.

We might go on and show how the other markets have nearly equally as well increased their consuming capacity, and this too, in nearly all cases, not by forcing the fruit on the market and selling it for little or nothing, but as a rule making quite satisfactory returns, so that were we to take the average of the entire season's business of both green and dried fruits it would make a very good showing when we consider the abundance of the crop just harvested, and despite the excessive freight rates under which a large portion of the green product has gone forward.

But referring to the table showing the shipment of the 760 cars made by and through the Union, a radical change from the manner of the previous season's operations is at once seen. While in that year all our fruit was sent to Chicago and from there distributed, this season only 422 cars, or about one-half, has been sent to that market.

We have furnished St. Louis 55 cars, New York 52, Minneapolis 53, New Orleans 42, Boston 40, Omaha 39, St. Paul 28, Kansas City 22, and Philadelphia 7 cars. These cars have been received from the following points: From Sacramento 241 cars, from Vacaville 186, San Jose 126, Natoma 41, Davisville 38, San Lorenzo 25, Newcastle 19, Winters 18, Suisun 16, Wrights 13, Marysville 12, Malaga 12, Woodland 7, Cordelia and Chico each 2, while Berkeley and Napa complete the list with 1 each.

As an evidence of how the cars have been scattered let us take the total shipments from

Sacramento and we find that of the 241 cars, 75 were sent to Chicago, 20 to St. Louis, 32 to New York, 28 to Minneapolis, 15 to New Orleans, 32 to Boston, 18 to Omaha, 10 to St. Paul, 7 to Kansas City and 4 to Philadelphia.

Distribution by Carloads.

For the benefit of those who may examine this report when printed, we give below a table setting forth the facts in detail as stated above:

	Chicago.	St. Louis.	New York.	Minneapolis.	N. W. Orleans.	Boston.	Omaha.	St. Paul.	Kansas City.	Philadelphia.	Totals.
Vacaville.....	120	4	14	11	17	2	11	3	3	1	186

Totals.....	422	55	52	53	42	40	39	22	22	7	760

The shipping season of 1886 lasted six months, the first car starting May 19th and the last leaving Nov. 18th, while the season just closed was one week longer in duration, extending from May 18th to Nov. 24, 1887.

From the statistics in the office we find that the total business of the year foots up as follows: Number of boxes shipped, 328,296; number of crates, 169,268; or a total of 11,363,020 pounds net of fruit. The gross receipts have been \$675,864.44, freight \$283,033.80, cartage \$6002.35, commission \$67,254.40, causing the gross charges to aggregate \$356,289.59, which leaves as net returns \$319,574.85, or about 2 8-10 cents per pound.

The Auction Plan.

At the beginning of the present season all anxiously awaited the result of the contemplated new departure—that of shipping our fruit in large quantities direct to the Atlantic cities and there selling it at auction.

By far the larger portion of our growers doubted its practicability; a few thought that in the end, after successive seasons and the enforced liberal distribution of a large amount of fruit at nominal prices, it might be a success; while a very few were enthusiastic believers in the auction plan and declared that it was the only solution of the problem of how to successfully ship in a green state the abundant fruits of our State.

We had certainly arrived at a very critical period. With the amount of fruit which was produced in 1886 the canners were almost buried; carload after carload was piled into our local markets and sold at prices which would not pay for boxes alone, and the information was received from the East that the limit had been nearly reached at which their people would take our fruit at paying prices to the producer.

There was not only the production of the present acreage to provide for, but thousands of acres would soon be sending forth their quota also.

But while it might justly be termed a venture on the part of the consignors, and certainly there was a great lack of the almost necessary experience on the part of those to whom the consignments were made, as any whom might have been selected as agents would alike have been but novices in the handling of our fruits, nevertheless all must say that the results have well repaid whatever may have proved a loss financially. While in many instances, notably in the Boston market, have the returns been highly remunerative, and with reasonable freight charges and facilities, which are the great essentials, we can look forward to another year's dealings with these heretofore untried markets with the perfect assurance that a very profitable business can be carried on with them.

The auction plan with them has certainly proved a great success, everything being considered. There are many on all sides who heartily commend its methods. The fact that on the seventh day, even when sending to the most distant market, a shipper can be informed exactly what his fruit brought; that he also knows that every box is sold and the entire shipment accounted for; and, finally, that within two weeks from the day of loading he will receive the net returns for the consignment—these facts will always cause this manner of handling our fruits to be popular.

With but two exceptions, all such of our fruits as arrived in anything like first-class condition sold extremely well, and had there been no delays in transit, which not only affected the condition of the fruit, but also, through repeated postponements of the time of sale, destroyed the confidence of the larger purchasers, and especially had not the low freight rate been so hedged in by the railroad company that it was only a very short time that we could avail ourselves of it, and that at the expense of a day's time on all cars destined for points other than New York, the number of cars sent them would most certainly have been doubled.

Apricots and Muscats.

The two exceptions noted above are those of apricots and Muscat grapes. Some of our

fruit-shippers have found to their cost, this season, that the fruit-lovers of New York and Boston do not materially differ from those of all the other Eastern cities, and it matters not though these fruits be presented to them in perfect condition, they will, even then, consume them in very limited quantities.

This will doubtless continue to be the case with the apricot from the fact that this fruit, when picked in condition to stand the trip, does not ripen in transit, as does the peach, but on the other hand becomes leathery and often loses the little flavor it had originally.

But for the Muscat grape, from the experience in the Chicago market, we have better hopes. When our grapes begin to sell on their merits, regarding flavor, as they now do because of their size and color, then we predict this grape will assume its proper position and be one of our best-paying varieties.

Other Fruits.

The prices realized from the sale of peaches in the Atlantic seaboard cities, which lie adjacent to their finest peach districts, have been a matter of surprise to all, as the sharpest competition was looked for in disposing of this fruit.

Plums have seemed to meet with especial favor, while pears have sold remarkably well considering the condition of most of them on arrival, because, as a result of the winter of '86-'87 having less than the usual rainfall, this, generally our best shipping fruit, has, in nearly all instances, arrived overripe; while the same cause tended to develop the best keeping qualities of the peach, plum and grape, and so rendered the year especially propitious for their shipment.

The work was undertaken of preparing a table showing precisely the total amount of each variety of fruit shipped to each market with the net results; but when it came to segregating the account sales as rendered by the various agents, the volume of work was much greater than had been anticipated, and the figures which are now given must necessarily be somewhat changed before they are absolutely correct, as the work is barely two-thirds complete. But by taking a portion of the earlier and later, as well as shipments during the height of the season, the result will be a very fair approximation.

This table shows that consignors have received an average net per pound in the various markets and for the following varieties of fruit the following prices:

	Chicago.	St. Louis.	New York.	Minneapolis.	N. W. Orleans.	Boston.	Omaha.	St. Paul.	Kansas City.	Philadelphia.
Apricots, boxes.....	\$2.70	\$2.88	\$3.05	\$3.22	\$3.40	\$3.57	\$3.75	\$3.92	\$4.10	\$4.27
Cherries, boxes.....	\$4.44	\$4.61	\$4.78	\$4.95	\$5.12	\$5.29	\$5.46	\$5.63	\$5.80	\$5.97
Plums.....	\$1.50	\$1.60	\$1.70	\$1.80	\$1.90	\$2.00	\$2.10	\$2.20	\$2.30	\$2.40
Peaches.....	\$3.05	\$3.22	\$3.40	\$3.57	\$3.75	\$3.92	\$4.10	\$4.27	\$4.44	\$4.61
Grapes.....	\$1.80	\$1.90	\$2.00	\$2.10	\$2.20	\$2.30	\$2.40	\$2.50	\$2.60	\$2.70
Nectarines.....	\$2.00	\$2.10	\$2.20	\$2.30	\$2.40	\$2.50	\$2.60	\$2.70	\$2.80	\$2.90
Pears.....	\$2.30	\$2.40	\$2.50	\$2.60	\$2.70	\$2.80	\$2.90	\$3.00	\$3.10	\$3.20
Figs.....	\$4.08	\$4.27	\$4.46	\$4.65	\$4.84	\$5.03	\$5.22	\$5.41	\$5.60	\$5.79

It is but just to explain that the cause of the low prices obtained in New Orleans has been chiefly the miserable condition of the fruit on arrival because of delays of from 2 to 10 days by reason of the washouts from which the Southern roads suffered during the summer.

We cannot close without saying a word regarding the

Existing Freight Tariff.

From the figures before given it is seen that four-fifths of the gross charges which have been paid come under the heading "Freight." While from the same table we learn that for every dollar the grower gets for taking all the chances of raising the fruit, the railroad company receives 83 cents for simply transporting it, and in the meantime runs no risk whatever, as all freight charges must be guaranteed before a wheel turns.

One of the Board of Trustees, in his address, which doubtless has been read by all, before the State Fruit-Growers' Convention at Santa Rosa, forcibly states our position and clearly

shows the different policies pursued by the roads east and west of Chicago.

What we must have in order to made fruit-raising a success is, schedule time given to fruit trains consisting of not less than ten cars—a \$400 passenger rate, a \$300 train rate and a \$200 slow freight rate to Chicago, with a corresponding tariff to Missouri river points; a \$500 passenger rate and a \$400 rate on the one or more cars of originally a 10-car train to New York, and finally, that the railroad companies make, as common points with New York, Buffalo, Binghamton, Newburg and Waverly, the three latter being points of divergence to Boston and Philadelphia. At all times keeping in mind the fact that time is the essence of fruit shipping.

When we can bring about this much-desired result then will fruit-growing and shipping become profitable and the enterprise will soon place itself in its proper position—at the head of the growing industries of our State.

H. A. FAIRBANK,
Secretary Cal. Fruit Union.

A DOG'S SCENT.—An investigator has discovered that, although dogs can follow a man's trail even after strong perfumes have been sprinkled along the track, yet if sheets of tissue paper are placed on the ground to be walked over and afterward removed, no trace of the scent will lie.

WARM WATER FOR CATTLE.—The Silver State says it has been proved by actual experiment that cattle can be fattened at Golconda, where they have water at a temperature of 75° to drink in winter, in one-half the time and with less feed than where they have to drink ice-water.

THROUGH THE FOREST.

The Old and Young Danced all Night—Our Hardy Ancestors.

Old men live in the past. Perhaps it would be better for the young men of the present if they lived a little bit more in the past and drew less on the future.

The log cabins of primitive times would seem very cheerful habitations to the people who live in the finely constructed, furnace-heated mansions of to-day. But our grandparents took a great deal of comfort in these rude homes.

They were rugged and healthy. The men had stalwart and hardy frames, and the women were free from the modern ailments that make the sex of to-day practically helpless slaves to hired foreign help.

White-haired grandsires frequently took their life partners and on horseback rode a score of miles through the forests to enjoy the lively pleasures of a frontier ball, danced till daylight, rode home again in the early morning, then put in a good day's work. Middle-aged folks of to-day couldn't stand that sort of a racket.

To these mud-chinked log cabins doctors' visits were a rarity. The inhabitants lived to a rugged and green old age.

Sometimes these log cabin old-timers were taken ill. They were not proof against all the exposures to which they were subjected. They found the effective remedies for these common ailments in the roots and herbs which grew in the neighboring forests and fields. They had learned that nature has a cure for every ill. These potent remedies assisted their sturdy frames to quickly throw off disease and left no poison in the system.

The unpleasant feature of modern practice with mineral medicines is the injurious after-effect on the system. May not modern physical degeneracy be due to this feature?

A drug-saturated system is not in a natural, consequently not in a healthy, state. If any of the main organs are clogged with traces of the mineral poisons used to drive out a particular disease, the whole machinery of life is deranged and early decay of natural powers is the inevitable result.

There can be no question that remedies from the laboratory of nature are the best. If they are as efficacious, they have the advantage of leaving no after-sting.

Their efficacy, if properly compounded, and the proper remedy applied to the proper disease, will not be doubted. The experience of ages proves it.

Their disuse has come about principally through the rapid congregation of people in cities and villages, rendering these natural remedies difficult to obtain. Progressive business enterprise has lately led to putting these old-time remedies within reach of all classes.

The proprietors of Warner's safe remedies, in the faith that the people of to-day would be benefited by using the simple remedies of log cabin days, have caused investigations to be made and secured the formulas of a number of those which long and successful use had proved to be most valuable.

They will, we learn, be known under the general title of "Warner's Log Cabin Remedies." Among these medicines will be a "Sarsaparilla" for the blood and liver, "Log Cabin Hops and Buchu Remedy," for the stomach, etc., "Log Cabin Cough and Consumption Remedy," a remedy called "Scalpine," for the hair, "Log Cabin Extract," for internal and external use, and an old valuable discovery for catarrh called "Log Cabin Rose Cream." Among the list is also a "Log Cabin Plaster" and a "Log Cabin Liver Pill."

A Seasonable Topic.

In our grandfathers' days they marked the flight of time by the "Old Farmer's Almanac." Now, the omniscient Calendar is a perpetual reminder of the fleeting seasons.

The days in a year do not outnumber the sizes, shapes and styles in which it appears; and alike in the merchant's counting room, or lady's boudoir, it seems to have become one of the necessities of the utilitarian age in which we live.

The artist's talent, the engraver's cunning, and the printer's skill, combine in this connection to blend the ornamental with the useful; and the result is calendars of every degree of excellence, good, better and best.

The latter includes the one issued by N. W. Ayer & Son, Philadelphia, which will be forwarded to any address, securely inclosed, on receipt of 25 cents.

3000 Engravings for Sale.

We have 3000 or more duplicate Engravings and Ectrotypes (which have appeared in this and other papers) for sale at very low prices when taken in considerable numbers. Address, DEWEY ENGRAVING CO., at the office of this paper

Placer County.

EDITORS PRESS:—Our Eastern friend has heard everything of Southern California that would tend to cause his locating in that portion of the State, while of the northern section but little has been written. What stray information reaches him may lead him to infer that the section as a whole differs but little, if any, from the cold, snow-laden sections of the East which he has left. So firmly has this opinion been instilled into his mind by interested parties that he is apt to look upon any statement to the contrary as fancy rather than fact. The late Citrus Fair of Placer county held in Los Angeles has done more than anything else to dispel the doubts and correct the misrepresentation under which this county and the whole northern citrus belt has so long labored. It is not the desire of the writer to disparage the southern section—far from it. She has set the State an example worthy of imitation and deserves nothing but praise for her pluck, perseverance, and success.

Placer county, extending from within a few miles of the Sacramento river to the summit of the Sierras, affords a variety of climate not attainable in the East, save in a scope of country reaching from Key West, Florida, on the south, to Canada on the north. All this is accessible in one day's travel. The Central Pacific may be said to enter Placer at Cisco. The altitudes are: Cisco, 5934 feet; Emigrant Gap, 5221; Blue Canyon, 4698; Towles, Alta, 3607; Dutch Flat, 3395; Colfax, 2422; Clipper Gap, 1759; Auburn, 1360; Newcastle, 956; Penryn, 621; Pino, Loomis, 402; Rocklin, 249; Roseville, 163 feet, and then the track strikes Sacramento county at Antelope.

Placer's resources are as varied as her climate, and the possessor of capital or muscle can be accommodated in almost any field he may desire. In drift mining it ranks with the three first, and is second to one or two in its wealth of gold-mining quartz, which fact has given the citrus fruit belt the appropriate name of the "Warm Gold Belt." Many fine fruit farms yield their owners a double income, and it is not an uncommon sight to see a quartz mill located in the center of a fruit orchard pounding out the yellow metal from the quartz extracted from beneath the trees.

Placer's Lumber Interests

Keep well up with the production of the precious metals. Towle Bros., at Towles, own 15,000 acres of timber lands in Placer and Nevada counties, which is traversed by their narrow-gauge railroad. At Towles is located their stores, pulp-mill, sash, door and box factory. Their pulp-mill turned out 4,000,000 pounds of pulp in the past season. This season they have operated three mills, cutting 13,500,000 feet. Geo. Geisendorfer and H. Carlin, old-time lumbermen, have in the past season been operating near Emigrant Gap, cutting 2,500,000 feet. The almost inexhaustible supply will insure the finest lumber at low prices for many years to come. Present rates are \$12 to \$15 a thousand feet at the mills. Sash and blind factories are located at Alta and Truckee. A box factory turning out 600,000 berry-boxes the past season is located at Clipper Gap. The box sales of Geo. D. Kellogg of Newcastle for the past season amount to \$15,132.04. In wool, the clip for this year amounts to over 150 tons, distributed as follows:

	Pounds.
J. Parker Whitney	100,000
Perry Richardson	36,000
J. Marriner	14,000
Niron Luce	3,500
Henry Noil	4,500
James French	12,000
Albert French	11,000
W. G. Brown	20,000
John Swears	20,000
J. Kaseburg	80,000

In grain no figures are attainable save from the Lincoln district. This district produced 202,000 bushels of wheat, 70,000 of barley, and 42,750 bushels of oats; the production of the foothill section would be as much more.

Other Interests.

Granite of fine quality is mined at Lincoln, Penryn, Pino, and Rocklin. From the quarries of G. Griffith, located at Penryn and Rocklin, there has been shipped in the past season 8000 tons. Healey & Co. at Pino furnish the granite for the dry-dock at Mare Island, while J. Taylor of Rocklin supplies the stone for the Courthouse at San Francisco. Byrne Bros. of Lincoln have shipped 300 carloads to San Francisco this season. Lime, sand, brick-clay and slate are plentiful. At Lincoln is conducted the most extensive pottery and tile factory in the State by Gladding, McBean & Co. Lignite coal is found near by. Iron deposits excelling in size and quality are found in various sections of the county.

The Fruit Interest.

Fruit canneries are located at Rocklin and Newcastle, and a large drier at Roseville. Placer county's green-fruit interest has grown from a mere experiment a few years since to the

rank of the producer of one-sixth of all the fruit shipped from the State in the past season. The first fruits to go East in the past season

VIEW OF AUBURN, COUNTY SEAT OF PLACER COUNTY, CALIFORNIA.

ing the amounts of different fruits shipped Jan. 1, 1887, to Dec. 20, 1887;

Kind of Fruit.	Pounds.
Strawberries	23,348
Raspberries	13,832
Cherries	23,500
Peaches	965,816
Plums	82,271
Apricots	57,952
Pears	255,350
Tomatoes	78,370
Grapes	372,750
Apples	120,848
Figs	10,010
Quinces	7,500
Blackberries	38,540
Nectarines	2,300

Vegetables	131,628
Dried fruits	10,820
Nuts	2,250
Lemons	1,000
Miscellaneous	650

Total.....2,215,983

Of the above, 73 carloads went East.

The Newcastle Fruit Co. shipped the first cherries to New York and Chicago on April 25th, which were the first to arrive from any quarter. This company shipped 83 full carloads of fruit East, containing 67,450 boxes. They also shipped by local freight to different points on the coast 1,900,000 pounds, or a total of 3,726,000 pounds for the season.

The Co-operative Fruit Co. of Newcastle shipped 251,360 pounds; W. J. Wilson & Son of Newcastle shipped 1,593,810 pounds, while the railroad freight shipments East show that 145 full carloads of fruit were shipped East from Newcastle in addition to an average of two carloads a day to local points during the fruit season, making a total of 353 full carloads for the fruit season, representing 7,787,153 pounds. In addition to this, Wells, Fargo & Co.'s Express shipped 49,562 boxes, or 945,321 pounds, so that Newcastle's fruit export for the past season foots up to nearly 9,000,000 pounds.

The shipments from Colfax this year have been 551,680 pounds. Auburn has shipped an average of 1500 pounds a day, or a total of 180,000 pounds. From Penryn the shipments have been 918,060 pounds. Deducting the fruit grown in Nevada county and forwarded to Placer for reshipment, and we have 8,786,468 pounds. These figures carry conviction with them, and are given to show not so much what Placer does do but the great possibilities that are in store when fruit culture shall extend to every portion of the county instead of but a few acres here and there as at present. Throughout the "warm gold belt" can be raised everything that can be produced in temperate or semi-tropical zones; upon the same acre of ground there can be raised oranges, lemons, olives, figs, pomegranates, peaches, pears, plums, prunes, grapes, apples, apricots, nectarines, persimmons, blackberries, raspberries, strawberries, gooseberries, currants, watermelons, cantaloupes, cherries, quinces, almonds, walnuts, chestnuts, barley, wheat, corn, oats, rye and all kinds of vegetables and grasses. Studies of records made here show that the average of temperature at Colfax, the highest fruit point in the county, compares very favorably with similar average at famous Southern points.

Land is cheap; good farms can be purchased at prices ranging from \$15 an acre upward.

How to See Placer.

To those contemplating locating in Placer I would say go direct to Auburn, and when you have satisfied the inner man at the excellent hotel call upon Messrs. Adams, Smith and Murphy, have them show you the attractions of Auburn and the surrounding country, which you will find a most pleasant surprise, for, without intending to disparage any portion of the county, Auburn, with its fine hotels and residences, balmy air and hospitable people, must impress the visitor favorably. Having looked the section over carefully, run down to Newcastle, and after a day spent in her fine fruit ranches, go on to Penryn, where Messrs. Bulter, Parker, Wood and Browning will kindly show you the advantages their section affords. At Pino and Loomis Messrs. Maslin, Morrison & Williams will be found ready to impart any desired information. Then on to Rocklin and Roseville. If you would prefer a higher altitude with very little change in temperature, run up to Weimer, Applegate and Colfax, but go where you will, the conviction will be forced upon you from your own observation, whether you are a resident of the county or, like the writer, but an inquirer, that the county has exceptional natural resources and is enjoying most satisfactory and promising development.

The writer in return for the many courtesies extended to him would suggest for the advancement of Placer that she form a county board of trade with auxiliary boards in each town, agree to sell all real estate, charging \$1 an acre, thus avoiding any tendency to high values for large commissions. With the fund thus realized and a liberal appropriation by the county, advertise the county in every legitimate way, bringing all visitors to Auburn direct and from this point distributing them to the different sections in charge of the home officers. In this way, by all working together for the county's good, by united action, funds to carry on the work, and the assurance to

visitors of kind reception and honest dealing, Placer would soon be put where she belongs—in the lead. E. H. SCHAEFFLE.

[In connection with our correspondent's letter we present a view of Auburn, the county seat of Placer county, for which we are indebted to the courtesy of the *Placer County Republican*, an enterprising journal published at Auburn by Millikan & Tufts. We are assured that the engraving is from a recent photograph and correctly represents one of California's most charming villages.—EDS. PRESS.]

TILLAGE LOSSES AND WOODLAND GAINS.—New Hampshire scientists are mooting whether the destruction of timber in Northern New England is not counterbalanced by the growth on abandoned homesteads. The number of such farms is said to be well-nigh incredible to one who has not actually seen them. It is not unusual to find hamlets which, half a century ago, were inhabited by prosperous Puritan yeomanry, almost entirely deserted, and the houses falling into decay. This wholesale abandonment of the agricultural regions has largely increased the acreage of woodland in certain localities, but the general belief is that timber is destroyed faster than it is growing.

THE NICARAGUA CANAL.—Engineer Menocal of the Nicaragua Canal Company is making arrangements to send out eight engineering parties to locate the canal. He expects the work of excavation will begin not later than July 1st. A syndicate of New York, Baltimore and Richmond gentlemen have the matter in charge. The total cost is estimated at \$65,000,000.

"It was suggested some time since that a successful paper must see its subscribers as often as once a year. Some are slow in shaking hands. An editor's possessions seldom assume such proportions as to assure opulence. His shakels are very scarce. Sabe?" The foregoing did not originate in this office, but it applies here just as well, and possibly it may apply to some of you, O readers.

LOOK at the address labeled on your paper, and if the date you are credited to at this or any other time is not correct, write us at once, mentioning time and circumstances of payment. We wish the credit to every name on the list to stand correct on our printed sheets, and that without delay, too, in case of any error or omission.

AGRICULTURAL SCIENCE.

Agricultural Experiment Work in California.

Since there has come a new bond of union between the Agricultural Experiment Stations of the country, through the immediate prospect of their being linked together under the auspices of the United States Department of Agriculture, there has been an effort to ascertain just what lines of work are of the greatest importance in the different States. Prof. Hilgard recently received a circular from a committee of Eastern managers of experiment stations asking a statement of this kind of work in California. As the points he makes will be an aid to our own people to understand better the work to be carried on in this State, we give below the points made by Prof. Hilgard in his statement:

1. In view of the great diversity of soils and climates in the State of California, it is of the utmost importance that the experiment station should be in possession of all the data needed to make intelligent recommendations in response to questions and inquiries of all kinds that are continually addressed to it, more especially in relation to the value and adaptation of lands to certain cultures. This necessity having been felt from the very beginning of its work, the original basis of the latter was that properly belonging to an agricultural survey, made with a view to the collection of data for a complete description and soil map of the State. This work is still kept steadily in view, but the pressing demand for special work in elucidation of questions of immediate practical importance has in a large degree overlaid it. Early in its history (1877) the station issued a bulletin giving directions for the taking of representative soil samples, accompanied by accurate descriptions of the natural features of the region concerned. The examination, and when desirable the analysis of samples so furnished (now amounting to over 1000), has served as the basis for the classification of the lands of the State. It is intended to continue and amplify this work as rapidly as the financial resources of the institution will permit, and to practically confirm the accuracy of the deductions so obtained by the establishment of outlying culture-experiment stations in the several climatic subdivisions of the State.

2. Parallel with the investigation of the soils, the examination and analysis of the waters of the State has been pursued with a view to ascertaining their qualities for irrigation as well as domestic and medicinal use.

3. In direct connection with the last subject the investigation of "alkali lands" requires continued attention, with respect to their composition, mode of reclamation and culture plants adapted to their conditions.

4. The examination of samples of rocks, marls, gypsum and other materials connected with agriculture also forms an important portion of this work, while on the other hand, the examination of artificial or commercial fertilizers is but little called for, since as yet these fertilizers are but sparingly used and no fertilizer-control is exercised by the State.

5. The examination (including analysis when necessary) of agricultural products of various kinds, such as sugar beets and the by-products of sugar-making therefrom, watermelons, oranges, lemons, etc., from different varieties and localities, has been, and will continue to be, part of the station-work as occasion may demand.

6. Because of the lack of a State Entomologist to undertake the identification of economic insects, to study the life-history of new insects and of known ones which show variation in life-history because of the different climatic conditions prevailing here.

7. To devise and test the efficacy of insecticides and to test preparations submitted for that purpose by their inventors.

8. To introduce and propagate for distribution fruit varieties and plants of economic value from the various sub-tropical countries of the world.

9. To keep accurate local meteorological records and to conduct investigations to determine the effects of the diverse meteorological conditions which prevail in this State upon the growth of fruits and economic plants.

10. To plant and maintain plantations of forest trees, and to note carefully the growth and character of all obtainable species thereof to determine their adaptations to different conditions of soil, rainfall and temperature, to the end that lists can be prepared which can be commended to planters in different regions of the State.

11. To make special investigation into the adaptation of forage plants and grasses to successful growth in our arid regions, and so far as possible to determine the food value thereof.

12. To determine diseases attacking livestock, and suggest remedies therefor.

13. To study fungoid diseases of plants and determine conditions which affect their growth, and to prescribe remedies therefor.

14. To aid in the identification or correct naming of fruit varieties, by the maintenance of a standard collection, and by the determination of samples sent in for the purpose by

producers. Of particular importance in respect to grapes.

15. To maintain a standard collection of seeds, and to conduct tests of commercial seeds as to purity and germinating power.

16. Of special cultures needing close and extended investigation, viticulture and wine-making is the most prominent. Between 300 and 400 varieties of grapes have been introduced into the State and planted quite indiscriminately; moreover, the processes of wine-making are but very imperfectly practiced. It is therefore necessary

17. To establish vine culture stations in the various distinct climatic regions of the State, with a view to testing their adaptation, bearing qualities and the character of the product.

18. To obtain from these stations, or from the vineyards of residents, samples of the various vines fruited, for experimental wine-making, so as to determine, from the composition and other characters of the must and wine, what varieties produce the most desirable results, in view of the commercial demand.

19. To make experiments upon the methods

Ladies' Costume.

The illustration on this page shows an elegant ladies' costume. The costume is commendable for rich and inexpensive textures, and is here shown developed in havane-brown craped-surfaced suiting, darker brown velvet and white Surah. The foundation of the gracefully hanging skirt is in the popular four-gored style, and the draperies are arranged upon it so as to completely conceal the gores, with the exception of a narrow V at the left side. Upon the front and sides of the skirt are disposed three flat panel draperies, the panel upon the right side gore being of velvet and overlapping the adjoining edge of the center panel at its hemmed front edge, and the panel upon the left side overlapping the adjoining edge of the center panel only at the top. Both side panels are included in the side-back skirt seams, as are also the front edges of the back drapery, the bouffant pose of which results from a gathering

LADIES' COSTUME.

of fermentation best adapted to the several varieties of grapes and (in view of climatic conditions) to the local conditions of each region and upon the after treatment of such wines.

20. To examine and report upon samples of wines submitted by producers and dealers, whether as to purity or the faults resulting from improper treatment, and to suggest remedies for the latter.

COAL OIL VS. WHALE OIL.—Whales were destroyed to such an extent before coal oil was discovered that they seemed destined to be utterly destroyed in all of the seas and waters on the globe where they were found. They were captured for whalebone as well as oil. Cheap coal oil has caused a great increase in the whales in all of the old whaling-grounds. Coal oil has run whale oil out of the market.

"J. H. F." WRITES OF THE RURAL PRESS: "I have taken it on the principle I would entertain an old friend, having started with its first publication and considered it indispensable to the farmer, as well as for its intrinsic worth and its high moral influence."

across its top, downward-turning plaits in its side edges near the top and tackings to the skirt breadth. White silk passementerie ornaments almost cover the front panel, and the brown-and-white combination is especially well brought out.

The fronts of the basque open upon a vest of white surah that is inserted between them in Breton style with buttons and buttonholes in a fly. Double bust darts, narrow under-arm and side-back gores and a well-curved center-back seam are employed in adjusting the body, the back skirt falling in postilion fashion in pleasing contrast with the high arching sides and the triple points of the front and vest. Upon the coat-shaped sleeves are an epaulette and wrist ornament of passementerie, and three passementerie ornaments of graduated sizes are placed upon the fronts above the bust. At the neck stands a high collar formed of two sections across the vest, one being of white surah and the other of velvet.

Braid passementeries are among the garnitures voted strictly a la mode, and are obtainable in an assortment of designs, including plaques, arabesques, pastilles, medallions and

disks. V-shaped portions, collar lengths, epaulettes and gore portions are shaped according to the positions they are to occupy. When gilt or silver passementeries are chosen, their effectiveness is enhanced by arranging them upon a velvet background, irrespective of the use of velvet in the remainder of the toilet. Costumes like this may be developed in any two varieties of dress goods, and sometimes the body will differ entirely from the skirt. Corduroy and velvet basques will accompany skirts of cloth or wool goods, or silk skirts will have dress bodies of fine habit cloth.

The hat is a variation of the Boulanger shape. Its brim is faced with velvet, and its garniture includes a ribbon bow, two wings and a fancy coq feather.

SAGACITY OF A GULL.—A curious incident occurred recently on one of the bridges crossing the river Limat, which flows through the city of Zurich, illustrating the sagacity of the gulls or terns frequenting some of the Swiss lakes. A gentleman who, for amusement, was in the habit of feeding these birds with the refuse of meat, which they are very fond of, had his hat knocked off into the rapid current below by one of the more eager gulls hovering around. The lookers-on laughed at the mishap, and a boat was about to be put out into the stream to secure the trophy, when, to the surprise of every one, a gull was noticed to dart down upon the floating hat, and, after several ineffectual attempts, succeeded at last in rising with it in its beak, and flying toward the bridge, to the astonishment of every one, dropped the well-soaked hat where the bystanders at once secured it for its owner.—Dumb Animals.

Mr. Burke's Belief in Holsteins and the Rural.

EDITORS PRESS:—My advertisement of Holsteins for sale in your stock columns having elicited a number of letters from breeders who thought that I had gone out of the business, and that my advertisement in your columns was merely forgetfulness on my part in not taking it out, I desire to state that I am still in the Holstein business, and have on hand a large recent addition of Netherland and Aaggie bulls.

As heretofore advertised in your columns, I held auction sales in Sacramento and Stockton, with a view of reducing my herd, as owing to the sale of 1050 acres, to Leland Stanford, of land formerly farmed by me, I had to reduce my stock. I have, however, over 80 head now on hand, and as they are calving at the rate of at least one a day, I feel it imperative to name an early date for another sale, which will take place some time during March and will be duly announced in your advertising columns.

I have during the past quarter sent a number of Holsteins, which are gradually becoming more popular with breeders, to men all over the coast, recently sending 4 head to British Columbia, 16 head to Oregon and 5 to Central America. My celebrated prize-winning cow, Lena Wit Menlo, went to Los Angeles, and I would not have parted with her at any figure had I not calves on hand out of her. I have to thank you for her sale, as the magnificent cut of her in your paper of some months ago undoubtedly called renewed attention to this wonderful cow.

Keep my advertisement in, and consider that it is a permanent fixture in your stock columns as long as I have a single hoof for sale. I have advertised extensively, both by letter and daily papers, but consider my few lines in the RURAL as paying me better interest than anything in which I have lately invested, not even excepting the Holsteins. In a few weeks I trust to be able to give you the yearly records of my Holstein cows, both in milk and butter.

Trusting that with the new year the good work of the RURAL may go on with as great vigor and profit to the stock-raiser as it has in the past, I remain, on the advertisement question, your debtor.

Menlo Park, Cal.

FRANK H. BURKE.

Ongerth's Tree Protector.

WOODIN & LITTLE, Agents, 509 and 511 Market St., San Francisco, Cal.—GENTLEMEN: In reply to yours of the 29th ult., as to effects of your Liquid Tree Protector on the tree you treated for me last April, I would say that where the wash was applied the insects of all sorts are certainly killed. The wash is still on the tree, and the bark under it shows a healthy and lively appearance. I was afraid for awhile that owing to its gummy feeling and appearance the pores of the bark might be closed to the great detriment of the tree, but so far I am glad to say there have been no indications of any ground for my fears. I am so well satisfied of this that I shall entirely paint the trunks and larger branches of all my trees with your preparation this winter.

I would add that your Grafting Compound is the best preparation I ever saw for covering wounds on trees, and it is apparently not affected by any sort of weather. Yours very truly,

R. D. FOX,

Proprietor Santa Clara Valley Nurseries, San Jose, Dec. 5, 1887.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

REASONS WHY THE CLIMAX HARROW IS THE BEST IN THE MARKET.

1. The driver is seated high up out of the dust.
2. The seat is adjustable and the main cross-beam affords a secure and convenient rest for the feet.
3. While the driver is on his seat the gangs can be adjusted to any angle desired, without the driver exerting any power.
4. The power of the horses in starting sets the gangs to any angle desired, so that a child that can drive can operate the machine as well as a man.
5. Either gang can be arranged to set at a greater or less angle than the other gang, so that any side draft upon the pole, caused by using three horses abreast, can be overcome.
6. The gangs are not connected, therefore vibrate independently.

REASONS WHY THE CLIMAX HARROW IS THE BEST IN THE MARKET.

7. It can be knocked down for transportation, in a few seconds, without loosening a bolt.
8. It has the only perfect automatic scraper.
9. It has the best three-horse equalizer attachment.
10. It is the strongest and most substantially built, and the best looking disc harrow in the market.
11. It has more good points than all the competing machines combined and none of their weak ones.
12. It is a perfect success, because it does the most work and the best work with the lightest labor on the team, which, at the will of the driver, use their power, and not his, to adjust the gangs.

Descriptive Price List of the Different Sizes of the Climax Harrow:

No. 7, width of cut 6 ft., No. of discs 12, size of discs 16 inches, price \$60.

No. 8, width of cut 8 ft., No. of discs 16, size of discs 16 inches, price \$75.

FARMERS!

If you have any fall land plowed that you wish to put in the very best condition for seeding, with the least possible expenditure of time, labor and money, don't fail to try the CLIMAX HARROW.

If you have any heavy clay soil that bakes into hard lumps, that you wish to pulverize and make as mellow as any ash heap, don't fail to try the CLIMAX HARROW.

If you have any heavy sod ground that you wish to have thoroughly pulverized without turning up the sod, don't fail to try the CLIMAX HARROW.

If you wish to put in grain without plowing, on corn stalk or stubble ground, thereby saving much time and labor, and securing a better seed-bed, don't fail to try the CLIMAX HARROW.

If you wish to work your summer fallow in one-half the time that you have done it heretofore, don't fail to try the CLIMAX HARROW.

If you wish to save wearisome miles of traveling after the old drag or cultivator, don't fail to take a ride on the CLIMAX HARROW.

THE SCIENTIFIC KIT OF TOOLS

Vineyardists, Orchardists & Farmers!

TAKE NOTICE OF THE

J.A. BILZ 2-Horse Gang & 1-Horse Plow

Which the Cuts Represent. Patented October 19, 1886.

First Premium Awarded at Mechanics' Fair, 1887.

These Plows have been in market for the past two seasons, and those that use them would not do without them at any price. All claim to save from \$2 to \$2.50 per day over any other plow. Not only for orchards and vineyards, but also for field plowing, where a two-horse single plow is used.

The Plow cuts 18 inches, weighs 160 pounds, and two horses will pull it as easily as a 12-inch plow, and does better work than a single plow. No trees are barked and sticks in vineyards pulled over where my Patent Double-trees and Singletrees are used. For Extra Shares send to me.

I ALSO MANUFACTURE ALL STYLES OF

CARTS, BUGGIES, SPRING WAGONS, CARRIAGES

AND ALL KINDS OF

VINEYARD AND AGRICULTURAL IMPLEMENTS.

Send for Testimonials and Circulars. Address

LIGHTNING HAY KNIFE

This OLD and RELIABLE KNIFE continues to gain in public estimation, and is POSITIVELY THE BEST

Hay Knife known for cutting HAY and SPOW from the Mow, Stack or Bundle. It is a rapid, easy cutter, the blade of the best quality of cast steel, spring tempered, and it is easily sharpened by grinding on the corner of a common grindstone. The invention patented by WEYMOUTH is a sword-shaped blade provided with operating handles, the edge of the sword blade being provided with knife-edged serrations or teeth. We hereby CAUTION all persons interested against buying or selling knives bearing above description, other than the genuine "Lightning," as we shall prosecute all infringements to the full extent of our ability and the law.

For sale by the Hardware trade generally.

THE HIRAM HOLT COMPANY,
EAST WILTON, ME.—Oct. 1, 1887.

Thermalito Colony Comp'ny

INCORPORATED DECEMBER 31, 1887.

THE HOME OF THE ORANGE, OLIVE, VINE & FIG.

— ONLY —

429 LOTS LEFT. 429 LOTS

In this famous Colony Tract out of 1440 lots offered for sale June 8, 1887, and but 250 lots remaining in the Association in which an investment of only \$360 is SURE to secure you an admirable town lot 50x150 feet, and may secure a HOTEL now being erected at a cost of \$20,000. Eleven chances to secure a cottage worth from \$875 to \$2500; ten chances for 10-acre lots; 90 chances for 5-acre lots; 50 chances for 2-acre lots; 50 chances for 1-acre lots; 100 chances for lots 90x160 feet, and 200 chances for lots 50x150 feet. Terms easy; \$30 cash and balance in monthly installments of \$15.00 per month.

THERMALITO

Offers the following advantages which no other Colony offers:

1. The most healthy location in Butte County, outside of the mountains. This is substantiated by the fact that a location for the Butte County Infirmary was selected there by prominent and well-posted citizens.
2. The soil cannot be surpassed for fruit culture, being a rich, red, gravelly loam, strongly impregnated with mineral and from 6 to 20 feet deep, and has 10,000 flourishing orange trees from one to ten years old on the tract.
3. Its water supply and facilities are unequalled, its supply being 3600 inches, and conducted in PIPES on the tract under a pressure of from 75 to 150 feet, which is sufficient not only for irrigation, but for fire and household purposes. This water is furnished FREE FOR THREE YEARS, and after that at the low rate of ten cents per inch (miners' measurement) for 24 hours.
4. The value of the land is rapidly increasing. It is now offered at \$100 per acre, while much of it has been resold at \$150. The owners of the tract cannot raise the price above \$100 without violating their promise made to the public six months ago, and they have steadfastly refused to break any promises, no matter how the boom may affect the land. Terms of sale: One-third cash, one-third in one year, and one-third in two years at 8 per cent per annum.
5. The Company is spending over \$100,000 in improvements of their own money, and hesitate at no outlay that will prove advantageous, and FURNISH LABOR on the tract for purchasers, and will plant and care for your groves at cost.
6. The location of the tract for scenery is unsurpassed. It has gained the name of "THE BEAUTIFUL," and justly so; it is also called "Wonderland."

All we ask is to COME AND SEE for yourselves. The Company is at all times ready to take you to the tract, and invites inspection. Address

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES
At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. Maps and further particulars of

AGENTS WANTED EVERYWHERE. Send at once for illustrated catalogue, price list and terms. Goods Guaranteed as Represented or Money Refunded. Address LEWIS & COWLES, Catskill, N. Y.

The American Horticulturists in California.

(Continued from page 68.)

building was in more gorgeous array than we ever saw it before, which is saying a good deal. In decorative art, in emblematic expressions of welcome and of California's glories and in the display of products, this year's Citrus Fair is a grand success. Of the features of the decoration and display we shall write in later issues.

During the formal reception the large seating capacity of the hall was inadequate, and throngs of people filled the aisles and overhung the gallery railing, presenting a scene as viewed from the stage of rare interest. The stage was filled with the guests and the officials of the city, and local organizations. Hon. Cyrus Jones, president of the Horticultural Hall Association, opened the exercises by announcing Hon. C. W. Breyfogle, Mayor of San Jose, who delivered an address of welcome. He was followed by Hon. Judge Myrick of the Supreme Court in a very appropriate address, continuing the welcome, and making many timely allusions which were duly appreciated. Responses on the part of the visitors were made by Prof. Ridpath of Indiana, and by President Earle, both of which were pointed and well received. After the formal exercises, the delegates became the guests of the people at large and were entertained in conversation and in viewing the exhibits until a late hour.

It must be a matter of general satisfaction that the meeting opens so well. It will be continued in like spirit by visit and excursion until the close at Riverside, which will be a grand finale, and the guests will depart, we doubt not, full of California and its prosperity and prospects, and ready to spread its fame as those only can do who have actually seen that of which they talk and write.

It is now probable that the visitors will pass Sunday at Del Monte, then to Santa Cruz, up the S. P. C. R. R. to San Francisco, thence through the Napa valley to Sacramento, Chico, Red Bluff, Redding, and the territory around Oroville. They will then go to Riverside, where the succeeding session will be held, Feb. 8th, 9th and 10th.

Our subsequent reports will contain the points in essays and discussions which will be of widest interest to California fruit-growers.

W.

Frost Effects in Butte and Yuba.

MARYSVILLE, Jan. 21.—In response to an inquiry, D. J. Perkins, a prominent merchant of Oroville, furnishes the Marysville Appeal the following statement:

OROVILLE, Jan. 20, 1888.

Confirming our promise of yesterday, a committee of three intelligent gentlemen was this morning selected to make a tour of the town and surroundings to ascertain the extent of the damage from frost, if any, to the young citrus-fruit trees recently set out in this locality. Their report is as follows: The young Washington Navel trees are uninjured, save to the extent of the nipping of the tops of the tender shoots of fall growth, and in no other way can the slightest damage be detected. The shoot or growth of the seedlings, the age of which varies from four to twelve months, is not in the least affected, so far as the stock is concerned, the foliage being but slightly wilted. The warm rain now prevailing seems to be drawing out the frost and the foliage is brightening up to its former beautiful green.

The committee report the leaves of lemon and lime trees considerably wilted, but that the body or the trunk of the trees is in no way affected.

The same committee, accompanied by other representative men of this section, this afternoon visited the grove of the Citrus Association and made a careful and critical examination, and report that in no case can they discover where trees have in the least been injured. The Superintendent of the Association confirms the opinion of the committee, and adds that the effect of the frost upon the last growth will be beneficial to the trees, claiming that when the sap rises, it being deprived of its new and natural channels, will go into the old growth and have a tendency to greatly augment the fructification of the trees.

We say unhesitatingly that so far as our examination has been made, we fail to discover any serious damage. Opinions are divided as to whether the fruit remaining on the trees is frozen. We are of the opinion that it is.

We are having numerous inquiries from all parts of the United States concerning our soil, climate, etc., and also have quite a number of strangers here who seem deeply and favorably impressed with our surroundings, and have made purchases of land during the frosted period.

D. J. PERKINS.

In Marysville and the surrounding country the damage to orange and lemon trees from the recent cold snap seems confined to the foliage and wood of last season's growth. Some trees lost many leaves, but in no case, so far as we have heard from, has the old wood been affected. In one orchard of 100 orange trees two years old, when planted last spring by Abbott & Phillips in Sutter county, no protection whatever was given against frost, but not a single tree was killed. The injury is confined to the foliage and new wood.

Thermalito, Butte County, The Western Wonder.

[WRITTEN BY M. C. B.]

On the north and west of Oroville, separated by the Feather river, lies the justly famous colony of Thermalito. The present extent of this grand enterprise is only partially known even to the people of Butte, but the great future of Thermalito is beyond the calculation of even the promoters whose skill, ability and perseverance should command the admiration and commendation of every one interested in the progress of American enterprise.

Here is a large tract of land on which Nature has unsparingly bestowed her choicest gifts, including the three principal elements calculated to enhance the value and desirability of any colony—water, soil and climate. The extent commences at the chief dams of the old Miocene and power ditches fully 35 miles due north, and about 75 miles of ditches carry over 4000 inches of pure mountain water around the base of Table mountain to the well-constructed reservoirs to meet the requirements of nearly 10,000 acres bounded by the hills and Feather river. When we visited the colony, plowmen were engaged in laying out 40 miles of streets and avenues and preparing the soil for a quarter million of orange trees. Active preparations for planting shade trees and erecting dwellings were being made, and on the bluff commanding a full view of Oroville a hotel on a magnificent scale is to be built. Already the work has assumed rapid proportions and must soon be completed and fit for occupation. Considering the location of this colony and the railway accommodation to its door, besides its immediate access to the principal northern railway, thus bringing convenience to the Oregon, Washington and Nevada markets, besides Chicago and the East generally, the importance and success of the colony can be easily imagined.

The soil is unquestionably adapted for citrus fruits, but doubtless other products can and will be raised. In some places we saw fine specimens of soil, and corn and vegetables are produced with less than the ordinary care and labor. The water supply is ample for 10,000 inhabitants, and the plan of placing it in every house and cottage well arranged.

The climate cannot be surpassed, never too hot and never too cold. On the 2d of January, when the storm swept over Mount Hamilton at the rate of 75 miles an hour, not an orange dropped from the trees in Thermalito on that memorable night, and early next morning the sun rose with majestic splendor, casting his golden rays on the oranges growing in profusion, reflecting back in beautiful vividness golden hues in the early morning where calmness, beauty and richness dwell in communion. On the 5th of January, when snow fell heavily in California generally and subsequent nipping frosts, the sun rose in Thermalito with his usual morning smile and warm recognition and set beneath the western sky with all the grandeur common to an Italian scene. Pen and pencil fail to describe this infant wonder, and in order to see and judge, a visit to the place is necessary, when the visitor will be amply repaid and find the half was not told.

The foregoing advantages stand not alone. As remarked, the Feather river only divides Thermalito from Oroville, where schools second to none are found. Churches sufficient for all creeds and denominations and accommodating banks with exchanges over the civilized world. We learned the principal promoters of the enterprise are: G. W. Fogg, manager of the bank, Major L. McLaughlin of New York, and Senator A. F. Jones of Oroville. These gentlemen are popular and deservedly so. With the prosperity of Oroville they have been largely identified, and command the respect and esteem not of the people of Butte only, but those far away beyond the Rockies. Evidence sufficient of this can be seen by the straightforward and manly course taken in the sales of property connected with the colony. Boom or no boom, the price from the beginning will be neither increased nor decreased, and a man with \$2000 has facilities of not only having a home by the generous offers held out, but also of earning a livelihood, according to his skill and labor, at from \$2.50 to \$4 per day. To illustrate this upon the statement of the affable manager, A. F. Jones, suppose a workingman with \$2000 comes and buys his tract of ten acres (quite enough for any home), pays down one-third of the price at \$100 per acre and the balance in one and two years. Workmen on the field in a few weeks will give him a house for \$600, thus leaving him over \$1000 to plant his ranch, etc. If he desires it, employment from the start can be procured, whether he be artisan or day-laborer. From all this can be learned the solid fact that Thermalito offers, in climate, soil and other ways, inducements which are not common even to the Golden State.

The Citrus Fair

Which has agreeably surprised so many, including the people of Oroville, had a faithful exhibit of the

fruit produced and raised in Thermalito. Some may think it strange that a colony of only eight months' existence should be capable of making one of the most remarkable exhibits at the citrus fair in Oroville. This, of course, had been explained to our satisfaction, thus: Forty acres were secured so far back as to give a practical proof that the theory then proposed should be practical, and since then to this day the growth of fruits, vegetables, etc., has been far beyond anticipation, so that before the colony scheme came into existence, the promoters were fully alive to the importance of their discovery, and equally prepared to stake their standing and reputation on the honesty and genuineness of the colony enterprise. Consequently, when the fair opened in Oroville, they were prepared to enter into competition with Butte from one extreme to the other, and from the following such might be easily inferred: In the center of the citrus fair tent might have been seen the Thermalito exhibit displayed under the magnificent plane tree, standing 20 feet in height and growing in full vigor. Under its tropical spread is suspended a hammock into which oranges were carelessly heaped; also lemons, pomegranates and other fruit. The nursery exhibit of about 5000 orange plants from seeds sown last spring was viewed with deep interest and fully appreciated. The citrus ladder erected alongside the palm tree was indeed a human contrivance which reflected marked tact and ability on the directors. There were cocoanut, banana, pepper, century plants, with others too numerous to name, and the general opinion of such men as A. T. Hatch, Hon. W. W. Cameron of Oakland, W. A. Rogers of Los Angeles, Byron Murray Jr. of California bank, Hon. A. Yell of Mendocino, with hundreds of others, was and is that Thermalito by nature's decree is the true home of the citrus fruit in its most indigenous form. To-day may be seen in Thermalito such fruits and plants similar to those exhibited, and a visit to the colony will be profitable—in every way desirable, long to be remembered—and productive of much good.

The Woolly Aphis.

WALNUT GROVE, CAL., Jan. 6, 1888.

Mr. Charles J. Woodbury, 123 California St., S. F., Cal.—DEAR SIR: Yours of the 3d inst. to hand last evening. In regard to the Woolly Aphis, I can only give you my experience. When I came here, my apple trees were badly infested with Aphis, so I washed them thoroughly to exterminate and have not seen any signs of the Aphis since, which has been over two years. Yours respectfully,

L. D. GREENE.

I will remark that I have known of no case where my tree-cleaner has not been perfectly successful as an antidote for the Woolly Aphis.

Full directions accompany its use. Price, 3 1/2 cents per pound in cases, 80 pounds in a case; in 8-pound cans same price, 15 cents extra for can. In barrels, 3 1/2 cents per pound, 10 per cent off, 400 pounds in a barrel. I also manufacture the fine Anti-Gumming Farm Machine Oils and General Lubricating Oils.

Address CHARLES J. WOODBURY, 123 California St., S. F., Cal.

Black Scale.

December 29, 1887.

Messrs. Woodin & Little, 509 and 511 Market St., S. F., Cal.—GENTLEMEN: Referring to Prof. Ongerth's Liquid Tree Protector, I desire to say that about two months ago I found quite a percentage of my olive trees infested with the black scale. In some instances the tree was entirely enveloped by a black smut, while the branches, to the very extreme tips of the tender shoots, were covered with the young scale. I sprayed my trees once only with the Tree Protector. The effect was wonderful. It not only completely and entirely destroyed the scale, but it seems to have invigorated the growth of the tree. It is all and more than all you claim for it.

Very respectfully,

THOMAS BECK, U. S. Appraiser.

Gabilan Rancho,

Containing 7665 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. HOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

Closing out Valuable Live-Stock

The Aurora (Ill.) Beacon says: Geo. E. Brown & Co. announce that it has been decided to close the present partnership under which they have been doing a most successful business for many years. The "Co.," Mr. Chas. Brown of Portland, Me., finding his large manufacturing interests in the East require his undivided attention, and the managing partner, Geo. E. Brown, not caring to continue the business on the immense scale the firm has been doing, they have decided to close out the large stock by April 1st; and to this end will quote very attractive prices to intending buyers. This firm is too well known to our readers to require extended comment from us. When it is considered that at the time Geo. E. Brown commenced this business 14 years ago, Cleveland Bay and English Shire horses and Holstein cattle were scarcely known in this country; that when locating at Elgin in 1875, one carload constituted his entire stock in trade; and that now the stables and yards of this firm occupy more than 10 acres of ground, and 800 acres of rich prairie afford but little more than pasture for their breeding and growing stock, it will be readily conceded that their selections must have been of the best, and that these now popular breeds have supplied a decided want in this country. Were anything further necessary to emphasize the success of Messrs. Brown & Co., it is found in the fact that their stock has always been at the front when exhibited at agricultural fairs, and in several instances nearly swept the board of prizes in spite of the strongest competition. Shrewd buyers wanting first-class stock will not let this opportunity to supply themselves go by. We advise them to send at once for illustrated pamphlet and full particulars. See their new advertisement.

HEAVY losses of cattle by exposure in the recent severe weather are reported from Idaho and Eastern Oregon.

Farmers and Fruit-Growers, Attention!

To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE!**FERTILIZE!****NITROGENOUS SUPERPHOSPHATE.**

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOWIG—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....12.90 per cent
Reverted Phosphoric Acid......95 "
Insoluble Phosphoric Acid.....2.83 "
Potash.....2.23 "
Ammonia.....1.87 "
Nitric Acid.....2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly, DR. E. A. SCHNEIDER.

University of California, College of Agriculture. BERKELEY, Nov. 20, 1886.

Dr. J. KOWIG, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade H. M. NEWHALL & CO., Agents, 309

fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully, E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. U. G. ROOT, M. C., 183 Pearl St., New York.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 25, 1888.

The long deferred and anxiously looked for rains and milder weather vouchsafed to put in an appearance on last Thursday, and have continued to this writing, although the last two days the sun has been playing bo-peep between showers. Outdoor work is very general and everything has a more cheerful appearance. Trading in farm products begins to show signs of revival as distant orders are coming in. The foreign cereal market shaded off, but closed, as reported by private cable, strong. The following is to-day's semi-public cable:

LIVERPOOL, January 25.—Wheat—Quiet but steady. California spot lots, 6s 6½d to 6s 9½d; off coast, 33s 6d; just shipped, 34s 3d; nearly due, 33s 9d; cargoes off coast, quiet; on passage, buyers hold off, hoping to obtain some concessions; wheat on passage to Continent, 142,000 qrs; wheat and flour on passage to U. K., 1,381,000 qrs; wheat and flour in Paris, quiet.

Eastern Grain Markets.

CHICAGO, Jan. 25.—P. M.—Wheat, easier; cash and Feb., 75 5-8c; May, 81 3/4c. Corn, easy; cash and Feb., 47 3-4c; May, 52 11-16c. Oats, steady; May, 33 3-16c. Barley, nothing doing.

NEW YORK, Jan. 25.—12 M.—Wheat, 90 3-4c for cash, 89 1/4c for Jan., 89 1/4c for Feb., 90 1/4c for March, 91 1/4c for April, and 92 1/4c for May.

Eastern Wool Markets.

NEW YORK, Jan. 24.—There is an active business in Boston and Philadelphia imports—an encouraging feeling to sellers here. Buyers at this point, however, do not seem to have large wants, and do not avail themselves of what all agree to be cheap, safe prices. The sales include 28,000 lbs of spring California at 10c; 100 at 10 1/4c; blood, 150,000 lbs washed combing at 37c; 20,000 lbs at 37 1/4c; unwashed combing, 28c; 1000, 28 1/4c; blood do, 24c; 25,000 XX, 31 3/4c; 5000, No. 1 scoured, 27c; 25,000 Oregon, 18 1/2c; 50,000 Territory, 19 1/2c; 20,000 fall Texas, 14 1/2c; 17,000 scoured do, 45c; 50c; 10,000 super pulled, 35c; 5000, super extra, 31c; 20,000 black pulled, 26c; 16,000 domestic mohair, 24,500 wool, including 34,000 scoured California and 113,000 Canadian, 30 bales foreign on private terms, and 150 bales East India, 13 1/2c to 14 1/2c.

Miscellaneous.

NEW YORK, Jan. 24.—Beeswax sold at 21 1/2c. The raisin market was quiet, but sales of the best marks were very firm.

Salmon sold at \$1.90 @ 2; Columbia, \$1.65 @ 1.75. Mustard seed was quiet at 3 1/2c @ 4 1/4c; Yellow, 4 1/4c @ 5c.

Hops seem to have got into chronic inactivity, and prices remain unchanged.

Some fine samples of crystallized sorghum have been shown, and confidence is expressed in future commercial values.

Local Markets.

BAGS—The pool and also those who are heavily loaded with bags are already crying up the crops so as to get higher prices for bags. The quantity in the country carried over from last season is very large. The pool asks 7 1/2c for June-July delivery, but outside operators ask 7 1/4c @ 7 3/4c.

BARLEY—The market for sample parcels of bright, choice feed and brewing is very strong. There is an overstock of poor which is pressing for sale; even this at the close is in better tone. On Call, trading in futures has been active. The bears hammered prices down, but on Tuesday the bulls turned the tide and the market closed very strong. The following are to-day's sales on Call:

Morning Session: Buyer season—200 tons, 87c; 200, 87 1-8c; 500, 86 1/2c; 700, 86 1/4c. Buyer 1888—500 tons, 91 1/2c @ 1. Afternoon Session: Buyer season—200 tons, 86 1/2c; 100, 86 5-8c; 200, 86 1/4c @ 1.

BUITER—Rains and milder weather have created an easier feeling. Receipts are no larger, but buyers are more offish.

CHEESE—New mild cheese continues scarce. For old, some shading is reported so as to work off stock.

EGGS—Under lighter receipts, prices stiffened some, but the higher range is thought to be only temporary or until receipts increase.

FLOUR—The market is fairly active at unchanged prices.

WHEAT—The sample market did not go below \$1.37 1/2 for fair No. 1, while choice sold higher throughout the week. The market has a strong tone, owing to the lower rates ruling for charters. In options, trading has been fairly active. Prices were hammered down by the bears, but recovered Tuesday, under heavy buying orders. The following are the sales reported on to-day's Call:

Morning Session: Buyer season—100 tons, \$1.42 1/2; 900, \$1.42 1-8; 1500, \$1.42 @ 1. Afternoon Session: Buyer season—100 tons, \$1.41 1/2; 200, \$1.41 1/2 @ 1.41 1/4 @ 1.41 1/2 @ 1.41 1/4.

Totals.....37,641,783 456,329,000
Average yield per acre, 12.12.

The yield of this State is placed fully 6,000,000 bu. too high. Referring to the estimate, the New York Produce Exchange Reporter says: We think the California crop was under 30,000,000 bu., and that of Ohio under 33,000,000 bu. The estimates of Indiana and Illinois are too high, also of Pennsylvania and States south of this parallel. Michigan, we think, did not exceed 20,000,000. Opinions from well-informed millers all over the winter wheat States most invariably are adverse to the Government estimates. It is not usual to find business men so generally take exceptions to the Government's crop reports, but a few weeks' time will very certainly settle the question. If the wheat is in the country, higher prices will draw it out freely. The movement at the Northwest this week has fallen off greatly; this is not due to the storms alone, but to the fact of farmers having sold the major part of their surplus in November and December, now hold moderate stocks.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Jan. 21, '87.	July 1, '87 to Jan. 21, '88.
Flour, qr. sks.....	2,741,510	2,106,981
Wheat, cts.....	9,471,318	5,377,371
Barley, cts.....	1,825,214	1,646,045
Oats, cts.....	109,303	132,845
Potatoes, sks.....	599,409	735,604
Corn, sks.....	58,361	137,807
Rye, sks.....	14,909	14,921
Buckwheat, sks.....	4,707	1,462
Beans, sks.....	372,763	339,297
Bran, sks.....	289,982	292,094
Hay, tons.....	64,631	74,151
Salt, tons.....	14,583	10,260
Wool, bls.....	45,096	38,967
Hides, No.....	65,996	57,712

Bran, sks.....	27,918	41,548
Hops, bales.....	753	290
Hides, No.....	19,634	19,682
Potatoes, sks.....	46,065	7,063

With cheaper money in Europe and at the East, it is not at all improbable that a speculative move will be made in wheat. The season is advanced, but still the light stocks the world over and large consumption are favorable.

The ice blockade in the Columbia river restricted wheat trading in Oregon, but now that it is raised, more activity is looked for. Holders in that State of choice grades are very set in their views.

In this State there is nothing new to report in the wheat situation. The stock of choice grades in the State is light, with the bulk taken for export. The free loading of ships is depleting stocks quite rapidly. Much of this is due to large holders who desire to get their wheat afloat before assessment day. It is also due to the very low charters ruling which have fallen more rapidly than the English wheat market. The daily press have been quoting prices too low by from 1 1/2 to 2 1/2c for shipping wheat. But there is nothing unusual on their part to work for buyers against farmers.

Advices report crop prospects of the most encouraging character, particularly in the counties south of this city. In parts of the central and northern counties alternating freezing and thawing weather did some damage, but how much it is hard to say, as it runs more in spots than otherwise. The clearer weather since the rain allows plowing in sections where the land had not been seeded.

The barley crop of the United States was short last year by over 5,000,000 bushels. The crop was not only short but of a poor average. In Oregon, rains at the wrong time turned the grain to yellow color, which is against it being used by buyers. The same grade was sent overland from Washington Territory to Chicago, but was discriminated against, owing to the off color. Although receipts are fair, yet stocks in this city are being reduced. The bulk here is held against Call Board sales and is virtually out of the market. The consumption in the State is large, while the supply of the better grades is scarce. Eastern advices report a strong market for choice grades, owing to light supplies.

Corn has eased off, under freer offerings and buyers being offish. Bradstreet's, just to hand, reports the Eastern market as follows: "The diminished production of corn in the United States in 1887, equal to 227,252,466 bu., has caused an advance from 44 1/2c in mid July to 62 1/2c at the end of December, with the general expectation of a still further advance. The advance of 18 1/2c per bu. has checked the export movement from the United States to Europe, and has not only diminished the hog packing, but also the weight of hogs and the yield of lard. The price of hog product has in consequence advanced. Glucose is dearer, lard oil is higher. There is also a deficiency in the Indian corn crops of Hungary, South Russia, Roumania and Turkey. The Argentine Republic has, however, a good corn crop, which is being quite freely exported to Europe. It is an unusual feature to have so many corn-producing countries deficient at the same time."

Oats are barely steady. Owing to the relative high price, dealers and lenders do not take them as freely as they do when the price of barley and oats are more nearly equal.

In rye and buckwheat, trading is light.

Feedstuff.

The rains caused an easier feeling in bran and middlings, which was followed by a decline. At the lower prices the market has a firmer tone. Ground barley continues to meet with a good demand at steady prices. Feed corn is fairly steady at quotations.

Choice hay continues scarce and commands full prices. Although the rains and milder weather give promise of better pasture soon, yet the length of time before next hay crop makes it quite certain that the supply will be very nearly exhausted before new comes in. The consumption is large, although buyers take as little as possible at a time.

Fruits.

Apples have met with better sales. The stock here is not large. Eastern continue to have a wide range, running from \$2 to \$5 per bbl.

Limes, lemons and oranges move slowly. Receipts are only fair. With warmer weather and an improvement in the quality of the fruit, a large call is expected to rule. Owing to the short time consumed in sending the fruit to Oregon by rail, that State will draw more freely from this city.

The recent cold weather did not injure the crop of citrus fruits.

In dried fruits there has been a little more doing on distant orders, but outside of this the market is dull. The stock is only fair, barely enough for the home trade.

In raisins there is nothing doing. The Eastern market is almost bare of good stock, as is our market, but buyers hold off and will not purchase until compelled so as to meet their trade call. It is very generally claimed that when the spring trade opens, better values will obtain.

Live-Stock.

The market holds strong for bullocks and mutton sheep that are in choice condition and that cut up well without wastage. The size of an animal has not so much to do with the price as the way in which it will cut up. The prospects of early feed cause less selling pressure. Stalled animals are offering only moderately fair. The loss of cattle and sheep, particularly of lambs, is thought by some to have been larger than claimed. Hogs continue scarce, and in good demand at full prices. Higher prices in the Western States help this market. In milk cows there is more inquiry. Some dairymen have sold off their poorer and older stock at low prices. In horses there is a continued good demand for general utility horses, matched teams, carriage and driving horses. Even for work animals there is a slightly better inquiry.

There are several orders on the market for matched teams, good steppers, well-matched and gentle. Horses going in from 3 to 3 1/2 minutes find ready sales at good prices.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 8 1/2 @ 9c; first grade, grass fed, 7 1/2 @ 8c 1/2 lb; second grade, 7c; third grade, 6c @ 6 1/2c.

MUTTON—Ewes, 7 @ 7 1/2c; wethers, 7 1/2 @ 8c. LAMB—Spring, 15c @ 1 lb.

VEAL—Large, 7 @ 9c; small, 8 @ 10c.

PORK—Live hogs, 5 1/2 @ 5 3/4c for heavy and medium; hard dressed, 7 1/2 @ 8 1/4c per lb; acorn fed, 5 @ 5 1/2c; dressed, 7 1/2 @ 7 3/4c; soft hogs, live, 4 @ 5c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

The extreme cold weather in this month is said to have frozen large quantities of potatoes, which has materially lessened the supply. The market for choice varieties is quite strong at full figures. The trade call is said to be improving.

Onions have been settling to a lower range of values. The decline is due to free receipts and only a fair call. Now that the weather is warmer, it is claimed that the demand will increase.

Cabbages are firm. With milder weather, distant shipments will be resumed, and as supplies are light, higher values will probably obtain.

In root vegetables, there is nothing new to report, the market being firm at quotations.

Reports from the southern counties state that garden truck is in an advanced state, considering the character of the winter. Some green peppers and tomatoes have been received from Los Angeles.

Miscellaneous.

Poultry has ruled at fairly steady prices during the week. Receipts were light, but an abundance of game kept prices down.

Turkeys, hens and roosters closed strong, with turkeys higher.

In hops there is more inquiry, but buyers want the more choice grades, which are in light supply. They command full prices when found. The market at the East is expected to advance after next month.

The stock of wool is very light. Fine grades, lively, clean, strong and fair length, are wanted, but coarse, defective wools are hard to sell. A leading Philadelphia wool firm says: "Notwithstanding the lack of demand for other Territorial wools, the fine clips of Nevada, which are particularly suited to the present wants of manufacturers in this market, owing to their softness of finish, are inquired for to-day, and command relatively better prices than any other fine Territorial wools. The market has been

cleared of these qualities, and much more could be placed immediately at full quotations."

Hog products are very firm, with an advancing tendency.

Seeds are strong, particularly flax, which are wanted at an advance, owing to short crops and an advance in linseed oils. Beans are steady at full prices. With the spring trade a higher range of values is looked for.

Honey is scarce and high.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.....	304,738	206,093
In port, disengaged.....	90,938	83,779
In port, engaged.....	39,444	35,728

Totals.....435,699 325,600

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, Jan. 25, 1888.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

DIVIDEND NOTICE.
THE CALIFORNIA FRUIT UNION.

At a meeting of the Board of Trustees of the California Fruit Union, held at its office, 507 Montgomery Street, San Francisco, January 17, 1888, a dividend of 6 per cent on all fully paid stock was declared, payable after February 1, 1888, at the above office.

Also a rebate of six-tenths of one per cent on the total gross receipts of their shipments through the Union was ordered to be made to shippers, payable same as above dividend.
H. A. FAIRBANK, Sec'y.

CHAMPION Sawing Machine.
Hundreds of times, greatly improved. Enables one man to do the work that heretofore required two. The weight of the operator does two-thirds of the work. GUARANTEED to be the lightest running, cheapest and only practical Sawing Machine made, or money refunded. Saw the tree down. Save an hour. Weighs but 25 lbs. Price complete only \$12. Introduce where we have no agent will prepay charges on one machine on receipt of price. Under at once direct from this ad, and secure agency for your section. Exclusive agent to first person ordering. Circulars free. Address: CHAMPION MFG CO., Quincy, Ill.

SEEDS 5 Pkts. Flower Seeds, 10c. Catalogue with a beautiful Colored Plate free. Address C. P. HIRSCHY, BERNE, IND.

WAKELEE'S
THE BEST
IS THE
CHEAPEST.
SQUIRREL AND GOPHER EXTERMINATOR!
IN 1-LB. AND 5-LB. CANS.

THE WOODBURY TREE CLEANSER
FOR WINTER AND SPRING.

After two years' experience, I have to announce that there has not a single case come to my knowledge where the Woodbury Tree Cleanser has not fully and satisfactorily accomplished everything that has been promised.

By reference to a late report from Prof. Klee, I observe he states that he has found very good results from it in almost every case, and that he has encountered no occurrence of any injury from its use. I am informed that it has his recommendation as a thorough-going, successful and cheap Winter Wash; and it is certainly indorsed by the leading orchardists in the State. [Please send for their published letters.]

It has had an unexampled success in exterminating Scale on all kinds of Fruit Trees. It is sent all ready for use, and instructions which are very simple, are furnished with every package.

Price 3 1/2 cents per pound in cases, 80 pounds in a case; in 8-pound cans, same price, 15 cents extra for can; 3 1/2 cents per pound (10 per cent off) in barrels; about 400 pounds in a barrel.

I also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly successful. This is the valuable remedy strongly recommended by Prof. Klee for the Cottony Cushion Scale or "Icerya." Price 1/2 cent per pound higher than the Woodbury Tree Cleanser. I also manufacture the fine Anti-gumming Farm Machine Oils and general Lubricating Oils. I respectfully solicit correspondence.

CHARLES J. WOODBURY,

DEWEY & CO.'S
Scientific Press Patent Agency.
ESTABLISHED 1863.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us offer to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St. S. F.

Warranted Seed.

I have founded my business on the belief that the public are anxious to get their seed directly from the grower. Having a large proportion of my seed enables me to warrant its freshness and purity, as seen by my Vegetable and Flower Seed Catalogue for 1888. FREE for every son and daughter of Adam. It is liberally illustrated with engravings of made directly from photographs of vegetables grown on my seed farms. Besides an immense variety of standard seed, you will find in it some valuable new vegetables not found in any other catalogue. As the original introducer of the Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard Squash, Deephead Cabbage, Cory Corn, and a score of other valuable vegetables, I invite the patronage of the public.

AGRICULTURAL IMPLEMENTS, BUGGIES AND HARNESS.

Our stock comprises a full line of FARM MACHINERY and complete assortment of BUGGIES, CARRIAGES, CARTS, and HARNESS. We are also Agents for the well-known

RACINE WAGON AND CARRIAGE CO'S

CELEBRATED SPRING WAGONS, which are everywhere recognized as the Standard of Merit, and include every style of Spring Wagon required for city use, by the country merchant, and on the ranch. The name of this concern on your Wagon is a guarantee that you have the very best that can be built for the money. Every detail of construction is attended to, and for general make-up, finish and durability there is no wagon made that will give you equal satisfaction. **INVESTIGATE THIS.**

THE FLINT ROAD CART

IS THE NEATEST, HANDIEST AND BEST.

THE PRINCIPLE OF THE FLINT consists in the spring being attached under the shafts, and connected with each seat arm by outwardly flaring shackles which entirely encircle the shafts and work independently of them.

WHAT THIS PRINCIPLE ACCOMPLISHES.—The weight of the driver in his seat causes no lateral or vertical motion of the shafts. It prevents any galling or chafing of a horse. The driver not only rides with perfect ease and comfort, but absolutely steady. The shafts always balance, regardless of the different weights of drivers, and are not affected by his weight when riding on uneven roads.

THE FOOT REST allows plenty of room and the most comfortable position. At the same time the horse may be hooked much nearer than in any other style of cart.

THE SHAFT ATTACHMENT.—By the use of our patent heel fastener, the shafts cannot slip or loosen. They are also clipped to the axle close to the hub, insuring strength. By attaching our patent adjustable stirrups to seat arms, and removing foot rest, our light three-quarter cart may be converted into a medium weight sulky for speeding purposes. The stirrups may be used with or without foot rest.

FOR MUDDY OR DUSTY ROADS.—We can furnish a twenty-six ounce rubber boot, which completely encloses the foot rest. Any purchaser of a cart will find this a very desirable article.

CONSTRUCTION, MATERIAL, ETC.—Shafts, Cross Bars, Seat Arms, etc., are of the very best selected, seasoned, second growth white ash. Wheels are of the finest quality Finney & Daniels compressed band. Springs, best Swedes steel and oil tempered. Axles, Liggett's double collar interchangeable steel axles. Cane Seats, tipped and leathered shafts, and the best finish and proportions of any cart manufactured.

625 to 631 Sixth St.
149 to 169 Bluxome Street,
SAN FRANCISCO.

BYRON JACKSON

IRRIGATING PUMPS AND
ENGINES
A SPECIALTY.

JACKSON'S Rotary Vineyard or Orchard HARROW.

PRICE, 5 feet diameter, \$25.

It has half-inch steel teeth, and is made to rotate either way by simply changing the cast-iron weight from one side to the other. The Harrow weighs 170 lbs., and can be taken down and packed closely for shipment.

THE JACKSON VINEYARD HARROW rotates either way, at the will of the driver, and by driving the SLOW side next to the vine or tree, there is no danger of hurting it, as the Harrow will roll gently around the tree or vine.

THE JACKSON VINEYARD HARROW was designed especially for vineyards and orchards, where very thorough and careful work is required, and was introduced to the orchardists in 1881, and perfected during that season. It is made of gas-pipe, bent round like a wheel and made perfectly smooth on the outer rim, and presents no sharp corners to the trees or vines to injure them as it revolves. It is provided with handles, so the operator can hold it to or from the row. Every farmer should have one for his garden, and to level any uneven land or to fill up dead furrows. Every vineyardist or orchard owner should have a sufficient number to go over the whole ground in a short time. When the surface is just in proper condition, one day's work is worth a week's out of season.

The Jackson Rotary Harrow is a perfect pulverizer, leveler, clod-crusher and weed-killer. It leaves the weeds on top of the ground—thoroughly shaken—to die.

ADDRESS

BYRON JACKSON,

625 SIXTH ST., SAN FRANCISCO.

Jackson's California Windmill

These mills are constructed from new patterns and first-class material, and there is no better mill made. If you compare my prices with those of other makers, please compare weights also, and notice how much heavier my mill is. The increased weight makes them stronger and cost more. Every added pound increases the cost of manufacture. It has been suggested I make them lighter and compete with cheap makes. I do not consider it desirable.

I own for this Coast, the patent on this now justly celebrated Windmill. Since designing and completing the mill as now offered, I have made and sold hundreds of them. It is the simplest constructed mill in the world, yet very strong, very durable, and very efficient. An experience of several years with a large number of them has failed to show the need of alteration or improvement, because they are built on correct mechanical principles, and no experiments embodied in their construction. They have large wearing surfaces, and ample and convenient oil reservoirs. All boxes are lined with babbit—steel pins for connecting rods.

PRICES:

10-ft. wheel	...\$75
Weights 650 lbs.	
12 ft. wheel	...\$85
Weights 700 lbs.	
14-ft. wheel	...\$100
Weights 930 lbs.	
16 ft. wheel	...\$120
Weights 960 lbs.	

The stroke is adjustable, the castings strong, heavy and smooth. The wheel is solid, dished like that of a wagon, and thoroughly braced in every direction. The whole circle is regularly filled with wings, and no place left out for spokes, they being behind and out of the wind. The turn-table is small and the vane large, insuring it to turn face to the first available wind. It is thrown out of the wind by a hand lever at base of tower or by a severe gale, presenting a wind surface of less than five inches to the diameter of the wheel and defying the fury of the storm.

This Mill is essentially Self-Regulating and will take care of itself in a storm.

Jackson Centrifugal Pumps.

For quantities of water not less than 100 gallons per minute, and for lifts not exceeding 100 feet, there is no better pump than that illustrated in the above engraving. It is very simple, durable and economical. I make them in sizes from 2-inch, 100 gallons per minute, to 24-inch, with a capacity of 14,000 gallons per minute, and am prepared to build larger sizes to order. They must be set within 20 feet of the water; will draw it that far and force it up 90 feet. They are very satisfactory in wells not over 100 feet deep.

JACKSON'S AUTOMATIC EXPANSION SELF-OILING ENGINES.

I make these very superior engines in ten sizes, and carry them in stock for immediate delivery. All working parts are covered, running in oil, insuring constant and perfect lubrication. No skill required to run them. Superior efficiency guaranteed.

TWENTY-FOUR PAGE EDITION.

SINGLE COPIES, 10 CTS.

The Horticulturists.

On another page of this issue we continue our report of the great meeting at San Jose, and in still another place may be found a sketch of the display spread out for the delectation of the Eastern visitors at the Horticultural hall in San Jose.

The people of Santa Clara county and many from other parts of the State who aided them are entitled to the thanks of the whole State for the generous and cordial treatment which they accorded to the distinguished guests of the State. The place of meeting was one of the most comfortable in which we have ever seen a horticultural body assembled, the hospitality of the people in receiving the delegates into their homes was a surprise and was appreciated. The banquet on the closing night of the session was one of the grandest spreads we have ever seen, something like 700 sittings being prepared with generous fare and elegant appointments. The ride through the orchards of Santa Clara on Friday of last week, and the hospitality of the people visited en route, left an enduring impression upon the minds of all.

This week the horticulturists are receiving a continuous ovation throughout the upper part of the State, of which our space will only allow a mere mention. Sunday at Monterey and Santa Cruz, Monday at Oakland and the State University, Tuesday in Napa county and Tuesday evening in the State Capitol at Sacramento, Wednesday and Thursday at Marysville, Chico, Oroville, Red Bluff and Redding and other points, Friday in Santa Rosa and the Sonoma Redwoods, Saturday at San Rafael—such is the record of days filled to the brim with good words and good sights and feastings beyond enumeration.

Next week will see the second grand meeting of the society at Riverside, beginning on Tuesday. No doubt the guests, in spite of all they have experienced, will find at this grand southern center new charms and surprises in the way of horticultural achievements and hospitable welcome. We have not the program for the Riverside meeting, but we know that the officers of the society reserved important papers to be read there and interesting topics for discussion, and all who attend will be edified. The citrus fair at Riverside is also being prepared upon an unusual scale of excellence, and our Eastern friends will depart with their eyes so filled with visions of the beauties of San Bernardino county that they will probably see fine towns and palatial mansions and fruit-laden orange groves all the way across the desert which they will traverse on their homeward way. May such sights and memories never leave their thoughts.

IRRECOGNIZABLE.—A San Rafael reader sends us a pupa of some moth which was found in an apple tree, and asks if it is a pest of some kind. The stamp of the postmaster fell upon the juicy object and the crushing of the case and the stain of the exuding juices rendered it impossible to determine the insect. It is not, however, a common pest, but probably a good-sized moth of which the larva came upon the apple from some other vegetable.

Twigs bearing several oranges and lemons, grown in the open air at F. Ludemann's nursery in this city, were brought into our office on the 19th.

One of the Newer Roses.

The cold weather has given our open-air roses a good rest, and they will probably show unusual vigor and bearing power when they come forward in the splendid growing weather which now prevails. We should like to hear more from our readers about their flowers.

PRINCESS BEATRICE—ONE OF THE NEWER TEA-ROSES.

We should like to have the newer roses and cyprianthems, etc., discussed as intelligently and enthusiastically as our fruit-growing readers descant upon their new varieties. There is something more in life than to sell or to eat, and we would like to show distant readers that California horticulture is not altogether upon a commercial basis. Of course, we shall show forth more of the esthetic and ennobling when we get farther away from the era of enterprise, but it will be just as well to let a little of the "beautiful for its own sake" crop out in our discussions and publications. Who believes in this enough to write us something about flowers—their growth and enjoyment? We could name a number who ought to do it, but we prefer to have them volunteer.

As a reminder we give herewith an engraving

of one of the newer roses which, perhaps, some of our readers have already tried and can report upon. It is the Princess Beatrice, and Hill & Co. of Richmond, Indiana, who are large growers of roses and other flowering stock, name it first in a list which they class as "the cream of two years' importations." They give also a beautiful colored plate upon the cover of

their catalogue, which should be in the hands of all our flower-lovers. They state that the strong points of the Beatrice are its rapid growth, handsome heavy foliage, and brilliantly blending colors. It is a pure tea coloring, after the style of the Perle des Jardines, flower stems stiff and upright, and bright red, carrying large buds of exquisite color, outer petals varying from canary to golden yellow, edged lightly with bright rose color. From its first opening the petals roll their edges backward, displaying the bright apricot center. The open rose is described as exquisitely beautiful, very double and lasting well when cut. It is strongly tea-scented.

Such is the Eastern grower's description. It is enough to make one very anxious to know what Princess Beatrice will do in California.

Our Future.

Mr. Mulhall, the well-known English statistician, says that this country is adding annually to its wealth, nearly as much as Great Britain, France and Germany combined. He sets down the annual increase of wealth in France at \$375,000,000, that of Great Britain at \$325,000,000, and that of Germany \$200,000,000, a total of \$900,000,000. The annual increase of wealth in the United States alone is set down at \$875,000,000, only \$25,000,000 short of the next three oldest and greatest nations of the world combined. These figures are most suggestive. They were made seven years ago. Since that time the proportional rate of improved, of wealth in this country has largely increased, so that it is safe to say that at the present day our annual increase is fully equal to that of the three countries named. Moreover, these results are realized while our people, both among the wealthy and the working classes, are advancing in luxurious expenditure and waste as well, more rapidly than either of the three great European powers named.

It fairly startles the observing and thinking man to realize that things can be as represented, and yet we have the best of authority for believing them. And there is no reason for doubting that this progressive increase will go on indefinitely. If so, what will be the financial standing of this country half a century hence? At our present rate of increase this country will hold a large portion of all the wealth of the world within 50 or 60 years. What then will be the standing of New York and San Francisco among the great commercial cities of the world?

When an attempt is made to base calculations of population and wealth upon our past history, the mind is completely lost in wonder and amazement at the results. Such has been the case for every decade during the last 50 years, and yet our most sanguine anticipations have been more than realized with every successive decade. The evidences of a continuance of our material progress from decade to decade during the next 50 years are fully if not more positive than in the past.

It is safe to say that the time is not far distant, as time is reckoned in the history of great cities, when New York and San Francisco must become the two largest and richest cities of the world. The position of the city of San Francisco is unequaled by any other in the possibilities of the future. Standing, as it does, directly upon the largest and best harbor in the world, and in the most central position for taking and holding the bulk of the immense commerce that is so rapidly growing between the eastern and western shores of the Pacific ocean, it has the advantage of all other locations as the future central metropolis of the world. The world's population and its great commercial centers have been continually moving westward from the earliest historical times. The emigration movement has now brought up upon the eastern coast of the Pacific ocean. It can move no farther west, but will cumulate and pile up here, until the Pacific States become as densely populated as any portion of the world. Our location, climate and resources all favor and point to such a result. The great and final movement of population has already commenced, with every evidence of a continuance, until the anticipated result is realized.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Strollings in Stanislaus.

EDITORS PRESS:—During the late "cold snap" I made quite an extended tour through the southern portion of San Joaquin county, and also traveled over a good part of Stanislaus county.

I left Stockton on the morning of January 9th, and after passing through the pleasant little villages of Linden, Peters and Farmington, at the end of the second day out arrived at the lively town of Oakdale, situated on the south side of the Stanislaus river, in the county of the same euphonious name. This is the present terminus of the Stockton & Oakdale R. R., but parties are now engaged in surveying an extension from this point, to connect with the S. P. R. R. at or near Merced.

From Oakdale I followed the course of the Stanislaus river 12 miles to the eastward, until I came to the picturesque village of Knight's Ferry. Here I found a fine flouring-mill, with all the latest improved machinery, patent rollers, etc., and as the water-power is almost unlimited, the milling business here must certainly be very remunerative to the gentlemen engaged in it.

The most of the town lies on the north side of the Stanislaus, and is of itself quite an attractive village, but the chief beauty of this "nice little, tight little" town is the orange groves with the luscious golden fruit, glistening among the dark evergreen foliage of these beautiful trees. It almost seems as if the golden sands of this once thriving mining camp had been turned, by some subtle process of nature, into apples of purest gold, and I could no longer wonder at the enthusiasm of the Eastern tourist over the orange groves of Los Angeles.

With the exception of an occasional one or two for ornamental purposes, these were the first orange trees in full bearing that I had ever inspected, and I must confess to being both surprised and delighted at this ocular proof of the orange-producing qualities of Central California. The oranges on these trees are large and smooth, and on sampling some of them I found the flavor quite equal to those from the Southern districts.

There are probably 500 bearing orange trees in this village, and several thousand more growing finely in the immediate vicinity, and as far as can be told at present, the severe weather has had no bad effect on either trees or fruit.

From Knight's Ferry I crossed the county in a southeasterly direction to the mining town of Lagrange, a name more suggestive of the farm than of gold-diggings. The mines in the near vicinity of this town are about worked out, but some two miles south of this point hydraulic mining is being carried on with great vigor, and, as near as I could ascertain, with satisfactory financial results. This camp is situated on the Tuolumne river, which is here a very rapid and beautiful stream, and as its crystal waters rush downward over its rocky bed it presents to the eye a series of wild and romantic pictures of mountain scenery well worth the journey to behold.

The next morning I took the river road down stream, and after fording the Tuolumne river several times I came to a belt in a small village on the north side called Waterford, 18 miles northwest from Lagrange. Here I found plenty of "water" but no "ford," and was obliged to keep on down the river for another mile to find a crossing. From here I traveled in a southwesterly course, and struck the S. P. R. R. at the growing town of Turlock, situated in the center of the biggest wheat-field in this portion of the State.

No trees, no fences, and but very few buildings meet the eye, as far as sight can reach. Nothing but a desert of plowed land from horizon to horizon. Here is where the curvature of the earth's surface can be seen similar to looking out on the ocean, and distant objects seem to be huddled down as you approach or leave them behind.

On the ranch of Mr. Clark, near Turlock, I saw 28 horses in one team driven by one man. He had 16 ten-inch plows gauged together, and cut a swath 14 feet wide as he went. This is what might well be called "doing things with a big auger." In several other places I saw from 7 to 10 "eight-horse teams" plowing on one land. Owing to the light rainfall the past year the wheat crop of Stanislaus county was very short, but, from present prospects, the next year's yield will be unprecedented, and this county will, as of yore, again become the banner wheat county of the State.

The long frosty spell of weather has kept the ground frozen, so that many of the farmers here have been delayed in completing their seeding, but for the last week the weather has been more favorable, and the fields are literally alive with men and teams, and the wheat is going into the ground at a lively rate.

I now turned my face toward the "setting sun," and crossed the San Joaquin river, at a point known as "Crow's Landing." There is a splendid bridge at this place, costing about \$40,000 to erect, and it is not only a great convenience to the traveling public, but a credit to Stanislaus county as well.

I am now on the much abused west side,

noted as the region of lightest rainfall of this part of California. Here is a body of land, as rich as any under the sun, level as a floor, and only needing water to render it capable of supporting as dense a population as any territory on the globe.

This part of Stanislaus county is but the continuation of that vast tract of level land stretching from Antioch at the head of the bay to Tulare lake, over 200 miles in length, and from 10 to 20 miles in width, and every acre capable of being irrigated and brought under cultivation.

The S. P. R. R. is already completed from Tracy to Hill's Ferry, and the time is near when this part of the county will be one of the most prosperous sections of the State. After visiting the towns of Grayson and Hill's Ferry, I crossed to the east side again by fording the San Joaquin river just above the Merced, which landed me in the northern portion of Merced county. Not wishing to tarry here, I forded the Merced river also, and passing through Turlock again, took a "bee-line" for Modesto, the county seat of Stanislaus, where I shall take up my headquarters for a few days, and when I have had an opportunity to become somewhat better acquainted with the surroundings, I may, perhaps, give the readers of the RURAL a few of the impressions made upon me in regard to this beautiful and prosperous capital city of Stanislaus county. W. W.

ENTOMOLOGICAL.

Insect Chat.

EDITORS PRESS:—The following extract of an interview of an Eastern agricultural paper with a Mr. L. H. Bailey of Paw Paw, Michigan, is of interest to the apple-growers of this coast, and I would like to hear what Californians think of it:

"In this same talk Mr. Bailey told how he drove all the codlin moths into his neighbor's orchards. He mixed half a tumblerful of ammonia with a pail of water and sprayed his orchard at night while his neighbors were asleep. He did this two or three times during the summer, and was wholly exempt from the depredations of the codlin moth."

If the above is true the method possesses many advantages over the different arsenical preparations at present employed. Arsenic in any form is objected to because it is poison; it is not safe to have it on the premises, and when the fruit is sprayed with it some look with fear upon the apples so treated. The spray that reaches the ground poisons the grass and any fruit on the ground, causing risk of stock eating the same. Now this ammonia spray has no objectionable features, but, on the contrary, is a benefit to the trees, grass and soil underneath, it being a prime fertilizer. Can it be relied on? If so, then our apple orchards will stand. As it now is, many will cut out their apple orchards and plant the other fruits.

A Foe of the Woolly Aphis.

In this connection allow me to call attention to an ant that Mr. T. T. Rodda of Grass Valley is the discoverer of and the only owner that I know of. The ant in question is of medium size, striped, and in color resembling the Italian bee. This ant Mr. Rodda has bred by dividing the colonies until his place is now completely protected. Mr. Rodda discovered that the trails of these anted to his apple trees infested with woolly aphis, and an examination showed that the ants were cleaning the trees of the pest. He carried a part of the colony to an old stump in another part of the orchard where the aphis was very bad, and these ants immediately attacked the aphis. At the close of the season they had completely eradicated the pest. I don't think Mr. Rodda is in the ant business, but I would like you to give us the ant's antecedents that all apple-growers may be on the lookout for it on their premises.

Pear Slugs.

I called upon a pear-grower to-day who said: "My pear crop was ruined last season by the slug. Can you tell me what to do for them?" I gave him the following experience, which he requested me to write out for the RURAL:

When but a boy I killed the snails in my father's garden by sprinkling salt on their trails, the salt dissolving the snails. Noticing one day that my father's pear trees were covered with slugs, I thought of the salt, and by spraying the trees with salt water dissolved and so killed all of the slugs. I could not now give the strength I used, but would advise a weak solution to experiment with, say two pounds of rock salt to five gallons of water. Spray one tree and watch the effect; if not strong enough, increase the quantity of salt. Should the salt affect the foliage, follow an hour after using the salt solution with a spray of clear water, which will effectually dissolve and carry off the salt.

I had the pleasure of visiting the fine fruit orchard of Mr. Geo. Trelkel of Newcastle. He informed me that after a complete failure in removing the scale by all the washes known, the lime, sulphur and salt wash published in the RURAL did the work most effectually. Long live the RURAL! E. H. SCHAEFFLE.

Murphys, Cal.

[These notes are interesting. We should like to have specimens of the insect used so effectively by Mr. Rodda, that we may have it named, etc.—EDS. PRESS.]

THE DAIRY.

Marketing Cheese and Butter in San Francisco.

We find in the *Grocer and Country Merchant* a statement of suggestions concerning preparing dairy goods for this market. As the journal named is the exponent of receivers' views in these matters, it will interest producers to know them. We quote as follows:

Cheese.

In regard to cheese, very much depends on its "style," but very poor cheese cannot be made to present an attractive appearance. Thousands of cheese are sent to this city annually, which, on account of not being properly made, have to be sold at from six to eight cents per pound less than choice qualities. Sales of poor cheese are not uncommon at one-third to one-half the price of a first-class article. Do not attempt economy by employing low-priced cheese-makers. Men who can make an extra article of cheese are very scarce, but whatever you do, get a good cheese-maker, if you have to send abroad to get him. Aim to have your cheese uniform in quality, appearance and weight, and let the shape and general appearance be as nearly perfect as possible.

Cheese should be always shipped in cases, this being the most economical and safest way. Shipped in sacks, cheese are very liable to damage while in transit.

Butter.

Too much stress cannot be laid on the importance of having all dairy produce in an attractive and presentable condition when ready to be offered for sale. The article in and of itself may be unexceptionable as to flavor, color, etc., and yet be slighted by purchasers because of not presenting an attractive appearance to the eye. Assuming that your butter is all it should be in quality, it is essential that it be molded into full edge, clean cut, circular rolls, and that just the right quality of muslin should be used. Much starch or stiffening matter in butter cloths is injurious to butter. Be careful to use cloths containing very little or no starch. Such portions of muslin as have marks of any sort, as, for instance, the manufacturer's brand or trademark, should not be used, as any mark or stain on a butter cloth will certainly injure the butter and reduce its value. For moistening butter cloths, never use anything but sweet, strong brine. In wrapping, the cloth should always fully cover the side and bottom of the roll, leaving no part of the side or bottom of the roll bare; not cut too short nor too long, and folded just enough over the top so as to give the roll a "dressy" appearance. About three-eighths of an inch is the proper length to be folded, and that in regular plaits, equidistant and neatly done. It is very desirable to have a cloth on the bottom of the box, and also a cloth on top, and it is a good idea to tack the top cloth, so as to keep it from shifting. Always have a box well filled, not too tight, but tight enough to prevent the rolls from moving back and forth while the box is being handled.

These minor details may look like small matters, but they are much more important than dairymen are generally aware of. Much of the butter damaged by "melting down" would have been in order had the rolls been properly protected with the cloth—indeed, it is rare to see a box of butter melted down where the rolls are properly packed. Neatness and cleanliness—scrupulous and exact—are indispensable. Butter should be kept entirely away from all foreign odors, especially those of a disagreeable and unwholesome nature.

If a stamp is used, avoid one that gives a roll a "flat" appearance. The stamp should enhance the appearance of the butter. The box should also look bright and clean, especially on the inside. Redwood boxes are not desirable, for besides being liable, when new, to stain the butter, the boards of which they are made split easily, and the dust is certain to find its way through the smallest crack. Boxes should be scoured thoroughly immediately before use as well as immediately after. To give the box a neat appearance, paint it as often as occasion requires, if not made of maple or ash.

Never use a poor box, as the bottom is liable to fall out in handling. Be very careful never to send a box to market that has the slightest crack on the cover, as in transporting boxes are piled five or six high, and should the upper boxes leak, the brine will be sure to find its way into every crack in the cover and leave a dirty streak on the top of the butter.

In preparing butter for pickling, it is a great mistake that it must be made extra salty; if your brine is right, your butter will keep. All pickled roll butter should have a clean, white, unstained muslin sack lining the barrel, and should have a neat frame of suitable wood with galvanized nails to hold the butter down in place and keep the top layer always under brine and in good shape. Never put loose oak or sticks on top to keep the butter down, as they are almost sure to deface the butter. Never put rolls on their sides, as such rolls get mashed and give a poor appearance to butter where the best looks are needed. Make your frame to hold butter in place, even if space seems to be wasted.

Put in your rolls so that they will be tight, but not mashed out of shape. Particularly is

it necessary when butter is pickled in rolls that the cloths should cover all the butter, except the space required for the small stamp on top. A cloth well doubled over sides and bottom will keep on in the brine, while a scant cloth will float off, greatly injuring the appearance of the butter. When the butter is stamped, it is best to put the stamped end down. Be sure you place a cloth over each layer of butter, as it goes into the barrel, so as to prevent rolls from "floating;" this also prevents the top of one roll and the bottom of the other from sticking. Never leave the barrel with the plug out, as it admits dust into the barrel when refilling with brine; if dust settles on the tops of the rolls and cannot be removed, it causes a loss and often prevents a sale that might otherwise have been effected.

Butter which is soft, or anywise injured by weather, should never be put under brine in rolls. The quicker such butter is used the better, as age affects it rapidly.

Firkins should be clean and smooth on the inside in particular, and should be well packed, so that when the firkin is stripped off it may present a neat appearance, with no spaces left in the sides. A space of one-half to three-quarters of an inch should be left between the butter and the head of the keg for brine.

It is not generally known that it is very important that the dairymen should keep his salt in a clean and pure place. Salt absorbs moisture, and with it any bad flavors which it may have acquired. Use only the very best salt obtainable, and never guess at the quantity used. The usual proportion for fresh is 1 pound of salt to 20 pounds of butter; in pickled roll and firkin 1 pound of salt to 16 pounds of butter.

Store packers should very carefully assort the butter that comes to them, so as to have but one color and quality in a package. Butter uneven in quality always sells badly; do not mix new and old, or white and yellow, when avoidable. In packing butter in kegs or barrels, the packages should be numbered or dated by proper marks as they are put down by dairymen, so that the seller may qualify, color, etc., wanted. Use no fresh water to wash your butter or wet your cloths with. It tends to soften it; it extracts the flavor. In fact, it takes out qualities that cannot be replaced. Use only the strongest and sweetest brine you can get.

Finally, send by a conveyance where your butter will be handled carefully and kept out of the sun. Equally as much care should be taken in preparing firkin butter and pickled roll as in preparing fresh butter; and anything that can possibly give a stain or a soiled appearance should be avoided. If you pack poor butter, it will not have improved by keeping, and it will not be reasonable to expect a good price for it when sold.

THE VETERINARIAN.

Medicating the Cow.

EDITORS PRESS:—In answer to the request about how a cow should be treated that was not able to discharge the after-birth, etc., I will tell you how it can be most easily done. Take the cow by the horn, put a rope around them both, open her mouth, put the rope in it, taking a half-hitch around her upper jaw; draw her up to a tree, the fence or any suitable place; stand above, and from a bottle filled with three fourths of a pound of Epsom salts well dissolved in water, let the dose run into her stomach. Do this twice and the cow will be all right in less than a week. One day apart is long enough between times of administration. Few people realize how easily it can be done until they do it. Not one man in 25 will get the rope around the upper jaw. J. T. HOYT.

San Mateo.

Ear Trouble in Horses.

EDITORS PRESS:—Please advise me how to treat the following disease: One of my mares has a very sensitive ear, and will not allow a bride on her head in consequence. The inside of the ear is covered with white granulations, diamond shaped. They cover the inside surface of the ear very closely, resembling, except in color, a mass of cabbage lice as they cling to a cabbage leaf. Granulations rub off easily. It is new to all the horsemen in this vicinity. Shingle Springs, Cal. D. T. HALL.

[Who can explain the trouble and give a remedy?]

ABORTING COWS AGAIN.—A writer in the *Farm Journal* tells how he prevented abortion among his cows, with which he had before been much troubled: I procured some bone-meal and fed a tablespoonful to each cow every other day, and continued to do so until very recently. I now feed two spoonfuls twice a week to each cow.

FOR CAKED UDDER OF COWS an exchange claims that application of warm water, combined with persistent gentle rubbing and kneading, is effectual and not dangerous.

OUTWARD SWINGING DOORS, ETC.—The Wisconsin Senate has concurred in a bill to provide for the punishment of any architect, by a fine of not over \$100, who shall design any public building or factory and neglect to design outward swinging doors or fire-escapes.

THE STABLE.

The Percherons a Distinct Breed.

EDITORS PRESS:—Herewith I hand you marked article in the Chicago Times under the caption "Percherons Triumphant." It contains a synopsis of the report of the special committee appointed by the Illinois State Board of Agriculture, to investigate the French breeds of draft horses, together with the proceedings before that body, and its action in settling the question of distinction of French draft breeds and sustaining a separate class for Percheron horses. As the matter is of great interest to a very large number of your readers, and to every horse-breeder, I ask that you republish this article in your paper, in vindication of the rightful claims for the Percherons, as a distinct breed, to a separate class in fair rings.—M. W. DUNHAM, Wayne, Ill.

Percherons Triumphant.

A committee was appointed by the Illinois State Board of Agriculture in March last to investigate the question of the French breed of draft horses. The object was, if possible, to settle beyond controversy a question which, with each returning year for years past, has been brought up before the board, and which seems to have perplexed the editors of many agricultural and live-stock papers as well.

One party has claimed that the Percheron was a distinct and well-recognized breed in France, possessing a type peculiar to itself; that it had long been established and was recognized throughout France as the leading draft breed of that country; that it has been kept pure for very many years; that there was no great difficulty in procuring good and pure-bred specimens of this breed on the part of American importers if they were only disposed to pay the price asked for them. Those who have taken this view of the question have alleged that the reason their views had been opposed was mainly because of self-interest on the part of importers, who could buy miscellaneous bred draft horses in France, or horses of other breeds than Percheron, at very much lower prices than that at which genuine Percherons could be obtained, and that consequently if they could induce the American public to believe that these horses were just as good as Percherons—that they were in fact substantially the same as Percherons—they could succeed in selling them to American buyers at the same prices as could be obtained for genuine Percherons, for which very much higher prices had been paid.

On the other hand, it has been alleged that all the draft horses of France were substantially of the same breed. Some of those who took this view alleged that French authors in using the term "breed" or "race" used it synonymously with our term "family," and that while there might be separate families of draft horses in France, yet they were all substantially of the same breed, and that whoever bought a draft horse in France, no matter what he might be called there, bought a horse substantially the same in blood as the so-called Percheron.

It was to settle this question and present the State Board of Illinois with authoritative utterances from disinterested persons who were supposed to be able to speak intelligently that this committee was appointed; and to get this information at first hands, without the intervention of interested parties on either side, Mr. Dysart, the president of the board and chairman of the committee, decided to go to France in person and pursue the investigation there.

The questions prepared by the committee were framed with a view to bringing out answers to the controverted points; and the parties to whom they were addressed were Hon. Eugene Tisserand, director-general of agriculture of France; Marquis de Dampierre, president of the Societe des Agriculteurs de France; Viscount de la Mott Rouge, inspector-general of the government studs of France, and Charles du Hays, formerly master of the horse to Louis Napoleon, and at present editor of the government stud-book for thoroughbred horses.

In the questions addressed to M. Tisserand the whole ground of the controversy was minutely and thoroughly set forth, and the positions taken by the various parties in this country were clearly stated, and he was asked to make distinct replies to each inquiry. This distinguished gentleman in his reply thoroughly met every point in the inquiry. After giving at considerable length his definition of the term "breed" or "race," as used in France when applied to horses, and showing conclusively that the term "race" as used there was substantially the same as understood in this country by the word "breed," he proceeds to answer the question as to whether there were distinct breeds of draft horses clearly defined and recognized as such in France by an emphatic yes; and adds that "the two most important breeds are the Boulonnais and the Percheron." Of the Percheron he says: "This breed is one of the most firmly fixed and well-established. It is as much so as the Clydesdale and Suffolk Punch;" and he proceeds at some length to give some account of its antiquity, and to describe its peculiarities. After doing this he adds: "It is the model draft horse; it was formerly the stage-coach horse and the horse used on diligences. The Percheron is active, energetic, and a quick mover. It is the type of draft horse for carrying weight with great rapidity." And in winding up his description of the Per-

cheron M. Tisserand refers to the stud-book Percheronne of France as "a great guarantee for buyers." And he adds: "It is therefore in the country of the origin of the Percheron and Boulonnais breeds that you must go in order to procure reproducers, pure, and possessing guarantees. You must keep away from the doubtful producing districts. Trust to our older experience. It is by selection, by always procuring reproducers pure and guaranteed from the districts of origin, that you establish in your country draft breeds on which you can depend both for the present and the future."

Questions of a similar import, but involving some other points, were addressed to Viscount de la Mott Rouge, Inspector-General of the Government studs, who from his official capacity may fairly be assumed to speak authoritatively upon such matters. The answer received from this gentleman was equally as strong as that of M. Tisserand, and, fairly summarized, is to the effect that there are two distinct types of draft horses in France—to wit, the Boulonnais and the Percheron—although, to quote his exact words, he says: "We have in France three principal breeds of draft horses, easy to recognize by a practiced eye—the Percheron, the Boulonnais and the Breton." But he adds, in parentheses: "When this latter is not crossed by Percheron blood"—he having previously alluded to the fact that it has been the policy of the French Government and the French people to introduce Percheron stallions largely for several years past, for the purpose of crossing upon the Breton to effect improvement in the latter. Speaking of the Percherons the viscount says: "The most popular breed in France—the breed to which the French people have always given the supremacy—is the Percheron;" and further on he says: "The Percheron horse has been at all times considered our best breed; therefore Percheron stallions have been introduced in many other districts of our country for the purpose of improving the draft horses of the locality." He further says: "The Percheron, as compared with the Boulonnais, has more style and finish in form, more bone, stronger limbs, and a better color. The Boulonnais is more square in his hind quarters," and he adds: "I will say that in my opinion it is a fair thing to give the supremacy to the Percheron breed." He also states that "it is the policy of the Government to encourage the distinction of breeds," and "that none but registered Percheron stallions are bought by the Government to be used in the Percheron breeding districts." In reply to a question as to the relative value of the various breeds, he states explicitly: "The Percheron stallion is sold at a much higher price;" and he says: "The best Percherons registered in the Percheron stud-book will sell very easy for double the price realized by the best Boulonnais registered in the Boulonnais stud-book."

The reply received from the veteran historian Charles du Hays, if possible, still more strongly maintains the position of the partisans of the Percheron. He is even more emphatic in his expressions in favor of the Percheron than either of the other authors quoted, and says: "For me, since you have asked me to express my sentiments, the Percheron is the king of draft horses, and you should enact strict rules in America to preserve this breed pure from any foreign admixture."

The report of the committee concludes with a letter from the Marquis de Dampierre, president of the Societe des Agriculteurs de France, and copious extracts from a recently published work by Prof. Andre Sanson on "The Origin of the French Races of Horses." This letter and the extracts from Prof. Sanson are substantially of the same tenor as the letters previously referred to. The report states that these letters and the extracts accompanying them from Prof. Sanson's work include all the reliable information which the committee has been able to obtain upon the subject.

It will be seen that every claim made by the Percheron party has been fully substantiated by the eminent authorities from whom testimony has been sought, not only as to purity of breeding and fixity of race, but as to comparative value in that country. The champions of the other side to the controversy are driven to the necessity of "pleading the baby act" of ignorance, or else must stand convicted of a deliberate attempt at deceiving American buyers and American boards of agriculture to further their own selfish ends. One or the other of these horns of the dilemma must be taken or else they must impeach and overthrow the positive testimony of M. Tisserand, Viscount de la Mott Rouge, Charles du Hays and Prof. Sanson, a task which they will not dare to undertake.

When this report came before the board, the fact that it so thoroughly sustained all that had been claimed by the Percheron party brought out the "Norman" or "French" draft-horse party in force. In fact, all their "talent," whether in this State or elsewhere, was brought into requisition to combat, and, if possible, break the force of the report. But their efforts were promptly met at every point by Messrs. Elwood, Dunham, Thompson and Sanders on the part of the Percheron association, and the result is a triumphant vindication of the position taken by the Percheron party and the establishment of a special class for Percherons by a decisive vote of the State Board. The result has settled, so far as this State is concerned, the purity, as well as the superiority, of the Percheron breed over all other breeds of French draft horses.

HORTICULTURE.

Strawberry Culture.

EDITORS PRESS:—Select a rich, loamy piece of land if you possess it, or, if not so fortunate, the best that you have. See to it that it is free from shade and that it can be thoroughly soaked by irrigation, avoiding land that is wet, cold and boggy. Cover the ground to a depth of six inches with well-rotted manure, and plow or spade it under. If your neighbors grow strawberries, ascertain who has the greatest success and engage your plants from them, as in this way your expense in setting out the patch will be less, your percentage of plants that live greater, and the variety is apt to prove that best adapted to your locality. With a garden trowel lift out the runners and as much soil as the trowel will bring with it, placing the plants in a shallow box, handling carefully, that the dirt may not be detached from the roots, exercising due care to get the runners only, as the old plants have outlived their usefulness. Carry the plants to your prepared patch, with the trowel dig a hole the size of your plant roots and adhering earth. Place the plant in the hole carefully, draw the dirt up around the plant and with the feet press the soil down all around the plant. If the precaution is taken to plant out in the evening, few, if any, plants will be lost.

For convenience in working, make the rows two feet apart, with the plants 18 inches apart in the row. Should the ground be dry at the time of transplanting, or the heat cause the plants to wilt, irrigate, or, if not convenient to do so at the time, give each plant a good wetting at sundown. Cultivate the ground every ten days and irrigate as often, never allowing the ground to become baked. Soon the plants will begin to form crowns and throw out runners. The latter must be pinched off as fast as they appear, that all the growth may be kept in the plant.

The after-culture will depend upon the time when the plants were set out. If at the proper time (July), they will require but little additional care in our open winters, until the following spring, when the ground should be spaded and all the stray runners that escaped your attention the past season removed. Cultivate as in the past season, every ten days, and do not allow the ground to become dry. Pinch off all runners as fast as they appear, which will be found to require as much labor as all else combined.

When the berries are well formed, and before their weight causes the stems to droop and allow the berries to rest on the ground, place straw beneath the bunches for them to rest upon and so keep them out of the soil. A week after, surprise your neighbors and yourself with the size, flavor and quantity of your berries.

It is a mistake to set berries out in the spring or late fall. Those set out in the spring require to be cultivated and irrigated all summer, the blossoms and runners kept down that they may bear well the following season. Plants set out in the fall do not have time to mature their crowns sufficiently for the next season, and bear an indifferent crop in consequence. Where they are transplanted in July or August, a crop of early vegetables can first be raised on the ground, and when cleared off the strawberries set out, and as soon as the berries are done bearing, the following spring, the berry plants may be dug up and some late vegetables planted. The largest returns of berries to the acre, and much the largest berries, grow on plants in their first season. To secure plants for the succeeding year, allow a sufficient number of plants to put out runners, covering the first joint with earth to cause it to root. Select the plants that bear the largest amount of big berries to propagate from. E. H. SCHAEFFLE.

Murphys, Cal.

Canneries and Driers Wanted.

EDITORS PRESS:—Having been requested so to do, I inclose the following for the RURAL PRESS:

Ventura county has many needs, and among the most pressing at present is the establishment of canneries and driers to preserve the large quantities of fruit raised here.

At a rough estimate, in the Santa Clara valley alone, there are from 1500 to 2000 acres in orchard, much of it in full bearing. A large percentage of these are prunes and apricots.

With one or two exceptions there are no canneries or driers here that make a business of buying fruit outside the owner's raising. These small establishments for curing fruit give so little for it when delivered that it hardly pays expense of handling.

The excess of fruit, with such inadequate means of caring for it, causes much to be wasted.

If some one with means and enterprise would locate canning and drying-houses here in this county, and would pay the prices that are paid in the other counties of this State for fruit, it would be a profitable investment for all concerned.

San Buenaventura.

POULTRY YARD.

Ostriches in California.

The January Cackler has an article by E. C. Clapp of Pasadena, on ostrich-farming, from which we quote:

The first ostriches brought into California were from Cape Town, via Buenos Ayres and New York. In 1883 200 birds were started; 22 arrived safe at Anaheim. This farm is owned by a San Francisco firm, and is under the management of Dr. Sketchley. This is the oldest and perhaps the most successful farm on the coast at the present time. A second shipment of 33 birds from Africa has been added to the first installment, also quite a number of home-reared birds.

A second ranch was started at San Diego by Mr. Johnson, with a paddock of 24 birds, and I understand has been quite successful.

Perhaps I should say just here that Mr. Sketchley has divided his flock, and taken a part of them out to the Los Felez ranch, about seven miles northeast of Los Angeles.

In July, 1886, Messrs. Cawston & Fox leased Washington gardens, Los Angeles, for a term of years. Mr. Cawston at once went to Africa and selected 44 fine birds, coming in a sailing vessel via St. Helena, Barbadoes and Galveston, thence by S. P. R. R., landing 40 birds in good shape; these birds are from three to eight years old, just the age to use for breeding, though it is said an ostrich will live a hundred years. A good long life in which to produce feathers and fill the pockets of their lucky owners with coin.

In November, 1884, the Cape Town Government imposed an export duty of \$500 on every ostrich taken out of its domain, so by the time a bird arrives in the United States it is worth a small fortune, but then there is some hope for good returns from the investment when we remember that this country takes half the product of feathers from Africa, paying an import duty of 25 per cent on raw, and 50 per cent on those that are dressed, and it is also said that the California produced feathers are very fine, owing to the abundance of green feed to be had during all times of the year.

Perhaps, at the present time, the most attractive part of Messrs. Cawston & Fox's yards are the nine little two-months-old babies, a sight seen by few Americans, and well worth going a long way to see. The writer saw them when a day or two old, and will long remember their quaint ways and looks, tumbling around like little chicks, but nearly the size of grown hens, with gray down on their backs.

These little ones were hatched by an ostrich hen, but more eggs were at work in an incubator, 27 of them in a 300-egg machine. Messrs. Cawston & Fox expect to do quite a lively business in ostrich chicks for a few months.

There are six places in Southern California where ostriches can be seen; four of them are trying their hand at breeding them. Who can tell what a future may be before us in this line of poultry-raising? What next? Eggs that will feed four persons to the egg; ostrich feathers grown at home.

Feeding for Eggs.

There is little doubt that the production of eggs may be largely increased by a systematic, scientific plan of feeding; and the average poultry-keeper should give this matter a deal of study and attention. The scientific part of it need not frighten any one who is willing to read, study and put into practice what he learns.

Those who are recognized authorities assert that the egg product of a hen in her prime is about three times her own weight yearly, and in view of this fact the importance of supplying her with food rich in all the elements that make the egg is at once apparent. An egg contains all the elements of a living chick—flesh, bone, sinew, blood and feather—besides the shell matter, which is mostly lime. The principal elements in the egg are sulphur, oil, phosphorus, lime and nitrogen. The food that is given the hen should contain all the elements that exist in the egg. These are found in wheat, oats, corn, bran, linseed, crushed bone, mustard seed, sunflower seed, and vegetable matter. A reasonable mixture of all these, varied more or less, with the aid of crushed limestone or gypsum, would afford every element called for to produce a constant yield of eggs.

But there is another point. A prominent writer on the subject rightly remarks that one of the greatest mistakes in feeding fowls is over-feeding. When persons get the chicken fever they get enthusiastic in the cause and stuff their fowls instead of feeding them. If the hens are allowed to run to grain in the barn they eat twice as much as they should, and the result is a short supply of eggs. Where they are confined to yards they are too frequently gorged with food which makes fat instead of providing those elements which go to make up the egg. As a general thing corn is fed to the exclusion of everything else, and while it is fattening, it is a poor one if fed exclusively. No one food contains all the elements, and some sort of variety must be provided.—Texas Farm and Ranch.

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

The Postal Telegraph.

At the session of the National Board of Trade in Washington, Jan. 19th, the subject of postal telegraphy was taken up. Mr. Thurber submitted the answers to questions he had sent to Kenrick B. Murray, Secretary of the London Chamber of Commerce. Mr. Murray said in substance that the purchase and operation of telegraphs by the British Government had proved successful, so far as service was concerned, but not financially. The quickness, certainty and secrecy of the service were improved under Postoffice management. The increase of employees in the P. O. service had not been productive of political evils. The inducements to invent new devices in telegraphy was not so great under a Government system as in private hands. The recent reductions in tolls have been of great benefit to the public, the number of messages sent having increased 33 per cent, but the revenue increased only six per cent. The almost universal popular sentiment is against a return to private management of the wires.

Mr. Thurber said the British Government had paid for large additions in plant out of the current receipts, and if the telegraphs had not each year paid interest on the bonds issued for their purchase, if they had been credited with these betterments and with the free service of the Government departments, they would have been able to show a credit sufficient to pay the interest on the bonds, and if they were credited with the increased service given the public beyond what private companies were giving at the time the telegraphs were taken over, it would show an enormous balance on the credit side.

Erastus Wyman of N. Y. spoke in opposition to Government control of telegraph wires, claiming that the British reports showed a steady deficit, and to meet it the whole population was taxed, while but few could use the service, which, moreover, was tardy and uncertain, with no redress for gross negligence. If the British telegraph system in a circumscribed area showed \$2,300,000 a year deficit, in the United States, with its great area, the same system would show a deficit of \$10,000,000. If the United States adopted the system it would increase the employees 100,000, and these employees would feel bound to work in the interest of their immediate employers.

A resolution was adopted asserting that the usefulness of the Postoffice Department should be extended in the direction of telegraphic communication, and Congress was urged to favorably consider the question as early as possible.

On the morning of the 20th, Dr. Norvin Green, president of the Western Union, addressed the Senate Postoffice Committee in opposition to the Government telegraph bills. He quoted a decision of the Supreme Court to the effect that the telegraph business is in itself commerce. He touched upon this constitutional point, he said, merely because he did not wish the committee to understand that the company waived it. He claimed that no people on earth enjoyed so perfect a system of telegraph as the Americans. He then compared the telegraph systems of England and the United States, and asserted that the long-distance rates of the Western Union were cheaper than any other long-distance rate in the world. He said the Western Union enjoyed no exclusive franchises nor legislative grants, and that the field was open to everybody who might choose to enter it. He said that rates would be further reduced the present year. The Western Union had to pay from \$100,000 to \$200,000 a year for mistakes.

If the Government did run a telegraph system, it must take the existing lines. No private enterprise could run against the National Treasury setting out to do business for nothing. He wished to say concerning the Western Union that its value as stated by the press would not buy wire at the factory, and the company's other equipments amounted to three or four times the value of the wire. The property of the Western Union could not be duplicated to-day for its capitalization. "I am told," the doctor continued, "that a petition bearing 500,000 signatures is to be sent to the committee in favor of the Government system. The signatures will come by command, originating in spite against one man with whom Powderly had quarreled. Not one in a hundred of the signers ever used the telegraph, yet they were asking to be taxed for the benefit of the rich brokers, bankers, merchants, commercial operators and speculators."

Gardner G. Hubbard addressed the committee in favor of the postal telegraph system proposed in the bill introduced by Senator Dawes. He gave it as his opinion that of \$86,000,000 capital stock of the Western Union Company, \$8,000,000 or \$10,000,000 had been paid in cash by the stockholders, and probably as much more by the stockholders of other telegraph companies, which had become bankrupt and been bought up by the Western Union, and that the rest of it had been taken from the public in the shape of telegraph tolls. It was true

the present value of the property was very large. He did not believe it possible to duplicate its 600,000 miles of wire for less than \$60,000,000. Over and above this property were other large values. He had always regarded the right of way over the railroads of the country as being nearly as valuable as the other franchises of the company. There was then this capital of \$86,000,000, nearly three-eighths of which was held by the directors of the company. They, therefore, had virtually a monopoly. There was practically no competition in the telegraph business, and there could be none, for it was a business which could be managed more easily and cheaply by one company than by a number; but the question arose whether the Government could not manage a system more cheaply than the Western Union, and whether the Western Union itself could not manage it more cheaply than it does. This question should be answered in the affirmative.

Mr. Hubbard then gave his well-known views on the subject of a postal telegraph system at great length. At the conclusion of his remarks, the committee adjourned indefinitely.

Merced Grange Festivities.

Some one who enjoyed the Harvest Feast at Merced, the 25th ultimo, wrote enthusiastically about it next day in the *S. J. V. Argus*. We quote most of the report:

A meeting of the Grangers took place yesterday in their hall at the Pythian Castle. The day was lovely and there was a full attendance. The meeting was called to order soon after ten. The interesting part was that Mr. Flint, the State Grange Lecturer, was present.

The morning session was somewhat lengthy, and when it was declared adjourned to meet at 2 o'clock, there was a grand rush for the banquet-hall, where was spread a feast composed of most delicious edibles. There was the usual turkey, chicken and ham, accompanied with such wonderful salads, sauces, pickles, jellies, and chow-chow, mince and other pies. We counted six varieties of cake and old-fashioned ginger-bread. The fresh ranch butter and excellent biscuit, and the delightful coffee, with pure cream, made one feel that life was worth living. After the feast ceremonies were over, the click of silver knives and forks commenced, and with the cheerful sound of voices and mirthful laughter the banquet-hall was filled with music which made the hearts glad and we felt like shouting:

Who would not be a Granger:
And with the Grangers stand
In our bright California;
This glorious sunny land,
The land of milk and honey
With its fruit and flowers fair,
And birds' song sweet and lively,
Mingling with the balmy air.

We believe that there is more harmony of action and true social enjoyment among the Grangers than any other organization in the country. Long may it gain and flourish.

Taxing Liquors and Tobacco.

At a meeting of Santa Rosa Grange, held Saturday, Jan. 28th, the following preamble and resolutions were adopted:

WHEREAS, Both of the great political parties during the last Presidential campaign pledged themselves to reduce the revenue of the Federal Government, which is so far in excess of its legitimate requirements; and

Whereas, The President, in his late annual message, reminded Congress of the constantly increasing surplus in the Treasury, and the pledges that had been made, and the great wrong of continuing to burden the people with needless taxation; and

Whereas, It has been suggested to make the proposed reduction by abolishing the internal tax on spirituous and malt liquors and tobacco; and

Whereas, We regard these as luxuries not at all necessary, and exceedingly pernicious in their effect, being productive of crime, ignorance, pauperism, insanity and filthiness, and greatly increasing taxation; therefore, be it

Resolved, That Santa Rosa Grange, No. 17, Patrons of Husbandry of California, hereby enters its solemn protest against any reduction of the internal tax on spirituous and malt liquors and tobacco, and articles manufactured from tobacco.

Resolved, That the Master and Secretary be, and they are hereby directed to forward to each of the Senators and Representatives in Congress from California, copies of these resolutions, over the official seal of the Grange.

POSTAL TELEGRAPHY.—Bro. Geo. Wilson of Enterprise Grange circulated petitions some time since in favor of postal telegraphy, and after obtaining signatures thereon, forwarded the same to Congressman J. McKenna, asking him, in the name of the petitioners, to use his influence in aid of the measure. Bro. Wilson has received the following answer to the petition:

Geo. Wilson, Esq.—DEAR SIR: Received yours and petitions. I presented the latter and they were referred to Committee on Postoffices and Post-Roads. The matter is of growing interest, and several bills have been introduced already. Yours truly, J. MCKENNA.

Washington, D. C., Jan. 16, 1888.

LEONARD STONE, a well-known and respected member of Eden Grange, died at San Lorenzo, Jan. 23d, aged nearly 63 years. Bro. Stone was a native of Gardner, Mass., but has resided in this State since 1851. He leaves a valuable farm property to his widow and six children.

Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

Much as it has been misrepresented and misunderstood, the Grange has never asked anything unfair in the way of legislation, but only "justly distributed burdens and equally distributed power." It is the unequal laws, the class legislation, the discriminations of these later years that, more than all else, have reduced the profits of the farm and taken from it its once boasted claim that it was the safest and surest business one could engage in. The vast increase in farm mortgages, the hindrances and uncertainties that now surround the occupation, can only be removed by a return to wise, equal laws, "a fair field and no favors" for all. The National Grange at its last session plainly said: "We demand that our National and State Governments should be economical, that the burdens of Government should be equal and just to all our people, and that taxation of all kinds of value and incomes should be rendered certain and conclusive, by the enactment and enforcement of suitable laws, thus offering the greatest relief from the oppression which hangs on the agricultural interest of the nation."

We are aware that the world moves, and that progress will rule the destiny of the great future, although it is sometimes slow in bringing out great results. Agriculture, as has been many times said, is the prime source of the nation's wealth, and is the basis of the prosperity of all other industrial pursuits. In a great measure it has had to fight its own battles for proper recognition and claim for public support. An intelligent agriculture has always in the history of the world been considered the chief promoter and the certain index of an advancing civilization, and therefore is entitled to the foremost place for public and private effort and protection. It should be placed first on the calendar of business in our legislative and congressional assemblies. The many important measures which affect its interests, as has been shown by the experiences of the past several years, have only been secured by persistent and continued effort.

THE GRANGE MOVEMENT in this State is remarkable for its suddenly developed energy and growth. Its value to the agricultural interest has been fully demonstrated, and the fostering of this interest is beneficial all around. Success to the Grange!—Woonsocket, R. I., Reporter.

DISTINCTIVE among the glorious achievements of the latter half of the nineteenth century stands the uplift it has given to woman. She has been crowned queen in a hundred realms, where she had only ventured as an alien. Puissant century of steam and electricity, thou hast wrought more grandly yet! Woman is disenthralled. One great factor in this noble work has been the Order of Patrons of Husbandry. It was first among the secret organizations to admit her on equality, and her presence has done more to preserve the high character and enlarge the usefulness of the Grange than any other fact. For this one reason then, if for no other, we pay tribute to the Patrons of Husbandry.—Penn. Farmer.

MEMBERS of dormant Granges, with but few exceptions, will say: "We used to have good times in our Grange; I wish we might now." The ready response is, What is to hinder? There are thousands of Granges that are in the full tide of prosperity and, with added experience, making their meetings of greater value to the members than was possible in the early days of the organization. What is possible for one Grange is, in a measure, possible for all. The steps for reorganization are so plain, and the benefits to be derived are so apparent, that dormant Granges everywhere should not fail to stir themselves to renewed life and activity.—A. Messer, W. M. Vermont S. G.

THE GRANGE is one of the few organizations which admits woman on equal terms with man, and on this account I expect great benefit will accrue to my brother Patron through the quicker perceptions of his better half. Unfortunately is the man who has not a good, true wife to stand shoulder to shoulder with him in the battle of life. He might as well throw up his hands and acknowledge himself beaten.—E. M. G., Connecticut.

It is encouraging to note that children's meetings are increasing in the plan of Grange work, that ladies' night is becoming more prominent, and woman's work in our organization shows greater development each year. Harvest festivals and Grange agricultural fairs are also increasing in number. Thus the more than 2000 meetings held each year by the Granges in Massachusetts are proving a most important factor in securing a proper recognition of the important position that agriculture holds among the various commercial and industrial interests of the Commonwealth.—James Draper, P. M., Mass. S. Gr.

PROGRESS.—A member of the Grange at Marquez, Texas, writes: "Our Grange is on a boom. Calls at the gate each meeting. Our number is steadily increasing, and its increase is of the best material of the country."... Merrimac Co., N. H., Pomona Grange had 65 applications for membership at its last meeting, and now has 375 members.... A. E. Page, Secretary of the Missouri State Grange, reports the organization of Salt River Grange in Ralls county, Marble Hill in Bollinger county, and Model in Bates county, "with good prospects for several more this winter."

HYDRAULICKER MULCTED FOR CONTEMPT.—On the 30th of January Owen Gowell, a hydraulic miner, one of the defendants in the debris case of Woodruff against the North Bloomfield Gold Mining Co., in which Judge Sawyer issued his famous restraining order January, 1884, was fined \$1500 and costs upon the master's report adjudging him guilty of contempt in violating the injunction against the deposit of slickens in the Sacramento river.

SACRAMENTO GRANGE had an interesting meeting Saturday, January 28th. Several of the officers-elect who were absent from the installation held the first meeting in January, were installed by Past Master Chas. A. Hall, assisted by Sister Alice Greenlaw.

DANVILLE'S INSTALLATION was impressively conducted by D. N. Sherburne, Hon. Chas. Wood assisting. The officers this year are mostly young members, with enough of the older ones to serve as balance-wheel.

In the Patron this week the Worthy State Lecturer fills one column with a very readable account of his recent visit to Merced Grange and the hospitable Atwaters.

State Agricultural Society.

The annual meeting of this body was held in Sacramento on January 28th, L. U. Shippee in the chair, and present, Directors Boggs, Chase, LaRue, Green, McM. Shafter, Hancock, Cox, Rose, Singletary and Shippee. Absent, Carr.

Dana Perkins, who was appointed to take the place of P. A. Finigan, presented his commission and oath of office, and was admitted to membership, though for a time Mr. Finigan contested his admission.

The annual report of the board to the Governor of the State was then read and adopted.

The Committee on Park reported that they had leased the same for one year from December 1st to Messrs. Gardner & Craig.

The next thing in order was the election of officers for the ensuing term. Director Green placed in nomination for president the present incumbent, L. U. Shippee of Stockton, and there being no opposition, Mr. Shippee was elected by acclamation.

H. M. LaRue was re-elected superintendent of the Pavilion, and G. W. Hancock re-elected superintendent of the Park.

It was decided by all votes save one that hereafter no pools be sold on wheat.

Mr. LaRue was elected judge of all the racing events, and was also recommended as a superior judge to the District Societies.

It was resolved that hereafter all judging of animals at the State Fair shall be by a schedule of points.

It was agreed that at the next fair \$2500 shall be distributed for county exhibits.

The following committee on speed program was appointed: Shippee, Rose, Chase, Green and Singletary. The date of closing the two, three and four-year-old trotting stakes was changed to March 15th.

The division of the stakes and added money in the great stallion stake is to be as follows: Stakes to be divided into three moneys—four-sevenths to first horse, two-sevenths to second, one-seventh to third; added money divided in four moneys—50 per cent to first, 25 per cent to second, 15 per cent to third, 10 per cent to fourth. If but two starters, stakes to be divided five-sevenths and two-sevenths. If a walk-over, no added money.

The secretary was instructed to prepare a circular letter to the various Boards of Supervisors, urging upon them the importance of having their counties make exhibits at the fair.

Arranging Dates.

At a meeting of district directors called to assemble in Sacramento on the same day, the dates for the fairs were finally fixed as follows:

Los Angeles—August 6th to 11th.
Santa Rosa—August 13th to 18th.
Petaluma—August 20th to 25th.
El Dorado—August 20th to 25th.
Chico—August 20th to 25th.
Oakland—August 27th to September 1st.
California State Fair, at Sacramento—September 3d to 15th.
Stockton—September 18th to 22d.
San Jose—September 24th to 29th.
District No. 14, Quincy—September 24th to 29th.
Salinas—October 1st to 6th.
Marysville—August 27th to September 1st.

The dates for Ione and Vallejo were not fixed, being left to the directors of those districts.

Messrs. LaRue, Shafter, Chase, Hancock, Green and Rose spoke very forcibly in favor of county exhibits, and urged the delegates present to make arrangements to have their counties represented at the coming State exhibition.

PERSONAL.—We had the pleasure of meeting at San Jose Mr. Nelson Bogue of the Batavia Nurseries, Batavia, N. Y. Mr. Bogue is a brother of J. T. Bogue, who came to California a few years ago and has become well known as an importer of grafting and budding stock and general nurseryman. The Bagues are evidently thorough horticulturists, and we hope Mr. Nelson Bogue will be able to extend his business connections in this State, even if he do not succeed in capturing him for a resident.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

ITEMS FROM MT. EDEN.—Haywards Journal, Jan. 28: Plowing is in full blast and seeding is also in progress. . . . Some of the early sowed grain is a foot above ground. . . . Mushrooms are plentiful around the hamlet. A number of the boys gathered basketsful this week. . . . The Hess Bros. continue to kill the bulk of the ducks shipped from this station. In one week they slaughtered just 500 ducks.

Butte.

EDITORS PRESS:—Our great blizzard has come and gone, and now we have had three or four days of delightful rain; everybody will rejoice. I said our "blizzard" for such it seemed to an old Californian. I live at an altitude of 1800 feet above the sea. I am trying to grow all kinds of deciduous fruits, and French walnuts, French chestnuts, and the American black walnut. I have a few orange trees, from one to four years old, and lo and behold the mercury got scared and ran down to 17°, 14°, 8° and 6°, but the Eastern visitor might laugh at us for calling that cold. My citrus trees look rather sorrowful, but I think that some of them are all right, or will come out all right in another season. It seems to me that the winter of 1861-2 was just as cold up here, though we had more snow then—16 or 18 inches—this time only six inches, but the heavy norther drifted it terribly. Well, I think the cold will be hard on the insect pests, though I have had nothing of the kind yet, as my trees are all young. Apples bore some last year. Although my neighbors have the codlin moth in their apples, I hope this cold snap will get away with them for awhile at least. I see by the Bulletin that the settlers in Lane county, Oregon, have too many Chinese pheasants. Now why cannot some of our sporting clubs get some of them down this way? I am sure they would do well here in the foothills and mountains, and they would not destroy the wheat either. Our Government ought to procure a stock of them and distribute them as they do the fish.—W. H. MULLEN, Big Bend, Butte Co., Jan. 23d.

Contra Costa.

COSTLY FIREWOOD.—Antioch Ledger, Jan. 28: N. W. Smith of Lone Tree valley planted the seed for his almond orchard nine years ago in the orchard rows, and budded them when they had made sufficient growth. Two years ago he top-grafted several acres of the almond trees to prune. This season those trees were heavily fruited with a delicious prune which returned a large profit. The almond orchard has now attained a growth which requires the removal of alternate trees to give sufficient space for the best results in fruitage. These handsome trees, 20 feet in height and two feet in circumference, Mr. Smith has recently been engaged in digging up and transferring to the woodpile. It seems almost an act of vandalism to make such a disposition of these fine, thrifty trees. About 12 acres of orchard has received this treatment.

Kern.

DISPOSING OF THE SURPLUS HARES.—A California Associated Press telegram says that at the rabbit-drive, which took place near Bakersfield, Jan. 29th, about 7000 of the pests were corralled and killed, but many thousands escaped because of the impossibility of maintaining the line of drivers unbroken where tracts of bushy ground were encountered. W. B. Carr treated the crowd to a grand barbecue after the drive was over. Thus far, at the different drives which have taken place, about 17,000 rabbits have been killed. The sport is liked very much, and one or more drives will be had every week.

Lake.

CAUGHT THE COUGARS.—Clear Lake Press, Jan. 28: D. Weiss of High valley, who lately, in company with N. E. Hanson, Chas. and Will Gillette, captured a panther, while two others escaped, has succeeded in taking the remaining two. He found where they had made a descent upon the sheep-fold and killed several, and, putting strychnine in the carcasses, he drove the sheep all off and left the poisoned bait. The cold weather and hunger drove the old mother and cub out of their den, and, being unable to find fresh meat, they ate of the poisoned sheep. Next morning Weiss found their bodies within a few yards of where they took their fatal dose.

Lassen.

WINTERING STOCK.—Susanville Mail, Jan. 25: From F. O. Alexander, who arrived from Secret Valley last Saturday, we learn that Jno. B. McKissick is feeding about 200 head of beeves on his place. H. McKissick drove 450 head of cattle to Brown's place, in Honey Lake valley, where they will be fed during the winter. Cattle are doing well, there being no sign of blackleg among them. The weather has been fearfully severe, but no loss of stock is reported.

Los Angeles.

RETURNS PER ACRE.—Westminster Cor. Times: Mr. S. Lyman had a crop of 20 tons of apples in his orchard of eight acres, most of which was sold before Christmas at \$1.50 per 100 pounds, shipped to San Bernardino and San Diego. This amounts to \$600, or \$75 per acre, and he valued his beets, grown between the rows of apple trees, at \$25 per acre. The fat pea lands grow steadily in estimation as they are cultivated. Much attention will be given to cabbages as a fall and winter crop,

with potatoes to follow in May. The cabbages are estimated to yield at the rate of 12 to 15 tons, worth \$15 for Eastern shipment, giving a net return of at least \$150 per acre for early shipment East, and the potato crop will average 125 sacks at \$1. This combination will fairly bring in \$250 to \$300 per acre. We are informed that over 200,000 cabbage plants have been set out under a contract to pay \$15 per ton, free on board cars at Santa Ana. A report of results will be in order in April.

LUCRATIVE LEMONS.—Anaheim Gazette, Jan. 26: R. H. Gilman, of the Semi-Tropic Fruit Co., received returns the other day from a large lot of lemons which he recently shipped to S. F. They were sold at \$6 per box—a rate which, if maintained, would make the owner of a ten-acre lemon grove vastly rich in a very few years. The lemons sent by Mr. Gilman were not better than the average grown on the company's place, but the average is unsurpassably good.

Mendocino.

FIGS FROM THE FOOTHILLS.—Dispatch & Democrat, Jan. 27: T. C. B. Finney has our thanks for a quantity of dried figs, which were grown on his mountain ranch between Ukiah and Boonville. They gave sufficient evidence that good figs can be raised in this county on land several hundred feet higher than the Ukiah valley.

Napa.

PRUNE TREES IN DEMAND.—Calistogian: Frank McDonald, the Knight's valley nurseryman, says the demand for some kinds of fruit trees is unprecedented the present year. Among these the French prune stands first. He says he might make a small fortune this winter if he had prune trees to meet the demands.

VINES GIVING PLACE TO TREES.—Register, Jan. 27: From a vineyardist who lives in the St. Helena district we learn that, with many other vine-growers in St. Helena and Calistoga districts, he is pulling up the poorer class of his vines and in their place is planting fruit and nut trees. Olives and prunes, walnuts and almonds, seem to be the favorites. The poorer class of grapes bring such low prices there is little profit in raising them.

Nevada.

GRAIN PROMISING.—Grass Valley Union, Jan. 25: The last few days of warm rain has shown the farmers that their grain-fields were not injured by the frosts, as the young grain has taken a remarkable start and gives a promise of making excellent crops.

Sacramento.

ORANGE-TREE PLANTING.—Record-Union, Jan. 28: W. R. Strong & Co. have just sold 20,000 budded orange trees, 6000 large sour Florida seedlings for avenue planting, and 10,000 sour seedlings for nursery purposes—all for the Palermo Colony tract, near Oroville. The cold weather does not seem to have discouraged citrus planting in this section. The above budded stock is intended to plant an orchard of 175 acres, which it is thought will be the largest orange orchard in the State.

San Bernardino.

HEAVY ORANGES.—Citrograph: A Navel orange grown at Dr. Stillman's place was weighed last week and pulled down a plump 25 ounces avoirdupois. A half-dozen gathered at the same place required six pounds and nine ounces to balance them. These may not be so large as somebody else has grown, but they are big enough for anybody to brag about.

San Joaquin.

MUSKMELONS IN JANUARY.—Lodi Sentinel, Jan. 28: Monday morning D. P. Burr placed upon our table half a muskmelon, which was grown in Woodbridge last season. Mr. Burr obtained the fruit from Samuel Woodruff, who stored a number in his cellar last fall. The rind of the melon is somewhat shriveled, but the meat is as solid and apparently as fresh as the day it was picked from the vine. Mr. Woodruff took no particular care in keeping the melons and thinks if he had packed them in sawdust they would have presented a fresh appearance on the exterior.

Shasta.

COLORADO IMMIGRANTS.—Record-Union, Jan. 30: Twenty-five colored people from the Southern States passed through Sacramento one day last week, en route to Anderson, in Shasta county, and they report that many more of their race will follow. These people are settling on Government lands. Many of them have found employment at preparing and planting lands in that vicinity for vines and trees, and they are supplanting Chinese where domestic help is required. One family of 12 are now located on the Sparks place, 2½ miles south of Anderson, the father of the flock having purchased the tract.

Santa Cruz.

CORRALITOS VALLEY.—Courier-Item: An important tributary of the Pajaro river is Corralitos creek, but the greater portion of the valley through which the creek meanders is known as the Pajaro valley. A strip of only four or five miles in length by about a mile in width, as it emerges from the canyons and foothills of the Santa Cruz range, is known as the valley of the Corralitos. While the celebrity of the Pajaro is world-wide for its fertile soil and never-failing harvests, the Little Corralitos is entitled to an equal fame for those desirable elements of prosperity. Recognizing these advantages at an early day in the settlement of our county, these lands were located upon, and to-day are fine properties and the well-improved homes of

a prosperous community. From its favorably sheltered inland location, together with its melon, warm soil, the valley of the Corralitos and the adjoining foothills have proved by actual trial to be favored spots for the successful cultivation of vines and fruit. Farmers here have embarked extensively in orchards, and the trees that have come into bearing reward the cultivator with abundant yields of Pomona's offerings. On summing up we have a total of 54,550 fruit trees in the district of which we have written, the greater portion of which are hardly beginning to bear. Looking for a market for the half-million boxes of fruit that in a few years will be the product of these trees, it is evident the cannery and fruit-drier will form an important factor in preparing the fruit for market. The field for these enterprises is a large one, and it is well for those interested in saving such valuable crops to commence even now to call attention to the feasibility of establishing a profitable industry in either, or both, of the towns of Santa Cruz and Watsonville.

Stanislaus.

IRRIGATION SCHEME.—Oakdale Cor. Modesto Herald, Jan. 26: Richard Threlfall, one of Stanislaus' oldest land-holders, is making preparations for irrigating on an extensive scale. He is going to put into the Stanislaus river a centrifugal pump with a capacity of 15,000,000 gallons per day. In this way he counts on irrigating 150 acres daily. He is also constructing two immense reservoirs that will contain an ample supply of water to irrigate 1000 acres each per annum. This supply of water is for production of diversified crops.

INCORPORATED.—Modesto News, Jan. 27: The San Joaquin Land and Water Co. Wednesday filed articles of incorporation with the county clerk of this county. The purposes for which the company is formed as set forth are for procuring water rights on one or more rivers or streams running through the counties of Calaveras, Tuolumne, Stanislaus and San Joaquin, to purchase, erect and construct dams, reservoirs, canals, aqueducts and waterways, in and by which the water so procured from said rivers or any of the same can be utilized for general purposes; to secure and impound springs, streams and other water of said counties, and lead the water so secured to any of such canals and waterways; to supply farmers, miners, cities, towns and villages with any of said waters, for mining, farming, drinking, irrigation and other purposes; to negotiate for, buy, sell, let, improve and cultivate lands and town lots in said State, lay out town lots and colony tracts. The principal place of business will be at Stockton. The term for which the corporation is to exist is 50 years, with a capital stock of \$1,000,000, divided into 10,000 shares, at a par value of \$100. The directors are: L. U. Shippee, George Gray, Lafayette Finck, N. S. Harold, J. D. McDougald, Louis Gerlach, Dr. A. Clark, Levi B. Holt and J. L. Beecher.

Sutter.

ENLARGING THE CANNERY.—Farmer, Jan. 27: At a recent meeting of the directors of the Sutter Canning and Packing Co., a Building Committee was appointed, consisting of J. C. Gray, R. C. Kells and B. F. Walton, whose duty it is to make all necessary arrangements to have the enlargement effected in season for the new crop. The cannery, it is understood, is to have thrice the present capacity, and will be in condition to handle all the fruit grown in this section. It is also contemplated to add a large drier to the establishment and in this way to meet all demands upon the institution by our fruit-growers. The company has purchased two more acres of ground adjoining their lot on the south, where comfortable quarters are to be erected for the operatives, where board and lodging can be secured at bare cost. This step has been rendered necessary in consequence of the lack of the local supply of help during the busy season, when it becomes necessary to bring help from a distance, which can thus be housed and fed on the grounds as economically as at home.

LADYBUG VERSUS SCALE.—Marysville Appeal, Jan. 27: A few days since we announced the appearance of the "red-spotted" or "twice-stabbed" ladybug in the old Tee-garden orchard near Yuba City, with the remark that its arrival was hailed with much satisfaction by the fruit-growers, as the bug is considered a formidable foe to scale insects, which inflict so much damage upon fruit trees. Yesterday P. L. Bunce, whose home is also near Yuba City, informed the Appeal that the ladybug mentioned has inhabited his orchard for six years past. It lived on his trees side by side with the San Jose scale, and subsisted on the latter, but did not exterminate the pest. In fact, the scale multiplied in spite of the attacks of the ladybug, and he was compelled to resort to spraying to keep down the scale. The spraying was also bad for the ladybugs, and their number has been kept reduced by the annual applications to the trees, but they are still to be found in the orchard. He is convinced that the San Jose scale cannot be exterminated in any orchard in which it has once established itself, and that it must be fought from year to year, but may be kept in subjection. He regards the ladybug as a useful friend to the fruit-grower, but says, as a result of his experience, that it would be very unwise to rely upon its labors to keep down the scale. He has found the scale on the trunks of his trees to a depth of six inches below the surface of the ground, and when he sprays again he means to draw away the earth from the

trees so as to expose the stem to that depth, and in this way hopes to make the application of the wash more destructive to the pests than it has proved hitherto.

Ventura.

EDITORS PRESS:—We had a regular "down-pour," followed by unusually cold weather for this section of the State. A gentleman living in an exposed part of the town told me that ice had formed at his place nearly half an inch in thickness. There has just been a warm, bountiful rain, and the grass and grain are growing responsive to the magic influence of the sun's rays.—O. F. S., San Buenaventura, Jan. 23d.

Yolo.

SHEEP DOING WELL.—Woodland Mail, Jan. 28: We are told by some of the sheep-raisers of Yolo county that the recent cold snap was not very damaging to their interests further than to retard the growth of grass. The sheep being in good order, stood the weather well, and there were very few losses. The continued spell of wet weather, they say, is more damaging to sheep than the cold weather was, but sheep that have plenty of feed are doing well.

AMBITIOUS VINES.—J. M. Garoutte called at the Mail office yesterday morning with a couple of "boom" grapevines grown here in Woodland. One of them measured 27½ feet and the other 24 feet in length, both being this year's growth.

Patent-Medicine Reading Notices.

We are glad that the Calistogian is waking up to the truth about patent medicines, and is getting around to our platform, and we trust there will be a good many others who will follow suit, if they stop to consider. The following appeared in its columns a week or two since:

Our patrons will see that the local page of the Calistogian is entirely free from the very numerous medical reading notices found in all, or nearly all, other country papers. We have refused to renew contracts for the continuance of such notices, because the publishing of them is a fraud on the readers, and because the foreign advertisers will pay comparatively little for the work. The local columns of nearly all country papers, while presenting a fair appearance, are to a great extent filled with merely patent-medicine notices, to the exclusion of local news. Patent-medicine men have learned that by sending a special agent through the country they can secure the insertion of such notices among the locals at a lower rate than is charged the local merchant for the same amount of space in the advertising columns.

Publishers have permitted this sort of work to go on till nearly all of the patent-medicine men advertising on the coast sneer at the idea of buying any space outside the local columns. Publishers will, in fact, give them space among locals cheaper than in the advertising columns. It is high time for a reform in this business. We cannot right the wrong outside the Calistogian office, but we can at least set the example. The agent of a patent-medicine firm was so indignant the other day because we would not contract to let him have space among locals at a much lower price than town patrons pay for space in the advertising columns that he threatened to send "a friend" here to publish an opposition paper. We merely told him that he should have mercy on his friend, but that if he had an enemy he wished to punish severely, to send him here by all means.

THE RURAL IN THE SOUTH SEAS.—The Rural has many subscribers in Australia, New Zealand and elsewhere in that quarter of the globe. Practical notes on California cultures are found of more value there than the contents of our contemporaries on the Atlantic Coast. One of our readers writes on this subject as follows: "I do not wish to say anything against the papers from your Eastern States, for we get a good deal of information from them, but we have not the wintering problem that so interests the farmers in cold climates, but I find the Rural Press just the paper I have been wanting." Some parts of the great island continent of the South are pursuing much the same line of products as California, and, therefore, our experience is of much value there. Perhaps some of our California readers can mention this fact of the Rural's value to friends they may have in that part of the world.

TARIFF ON GRAPE PRODUCTS.—Clarence J. Wetmore, secretary of the State Board of Viticultural Commissioners, is sending out blank forms for petitions to Congress against reduction of tariff on wines, brandies and raisins; also relating to bonding brandies and the passage of the Green Pure-Wine bill. It is the design to have these petitions signed and sent on to Congress. All of the measures prayed for in the petition have been already introduced in the present Congress, and it is thought that by keeping the matter alive in the minds of Congressmen, as may best be accomplished by this means, those interested will be able more speedily to obtain the relief asked for. Copies of the blank petitions may be obtained by addressing Mr. Wetmore at the office of the Commission, 204 Montgomery St., S. F.

CENTS, NOT DOLLARS.—On page 71 of last week's PRESS there was a table giving the average net receipts per pound for several varieties of fruits in Eastern markets. The proceeds should have been given as cents and decimal fractions of a cent, and not as dollars and cents.

A Country Parson.

A man of generous breadth and height,
Expert with plow or pen,
And skilled to curb a restive steed
Or sway the minds of men.

A face that's gentle with the grace
Of manhood strong and brave;
A voice that borrows melody
From deep-toned ocean wave.

And, though not over-quick to smile,
He frowns on naught save sin,
The while he stretches helping hand
The wanderer back to win.

Though taught in theologic lore,
He's not confined to books,
He reads the wondrous thoughts of God
In wildest woodland nooks.

For every bird or bush or brake
Adds treasure to his mind,
In lowliest lichen of the rocks,
He can a lesson find.

I ask not what his creed may be,
Enough for me to know
To serve his God and fellow-men
Is all he seeks below.

Memoirs of John C. Fremont.

[Written for the RURAL PRESS by JOAQUIN MILLER.]

I have just received a huge square book of nearly 700 pages, written by, and about, some people from South Carolina. And if this letter is a dull one, attribute it, I beg you, to fascination of this big book; for I have not been able to lay it down for hours and so have to write with weary eyes and my mind full of the plains, the mountains, in all sorts of wild and pleasant confusion.

This book is called the Memoirs of John C. Fremont, and it takes in the life of that earlier South Carolinian, Col. Thomas H. Benton, as well as that of his illustrious daughter Jessie.

We find Fremont at school in Charleston, a fine Greek and Latin scholar at 16. His first employment is on the deck of a ship coasting down the Caribbean sea in the interests of science. Then he is a surveyor, an Indian "Inspector," if I may use the term, and finally, and at a very early age, an explorer. And I think I read right easily, and between the lines—for he says nothing about it—why he, later on in life, did not entirely please the early settlers while holding the cheap and ungrateful position of Governor of Arizona; he was a humane man, a just and a kind man. You read this all through his big book. Without meaning to say it, you find it set down all through that John C. Fremont always was and always is a gentleman.

To go back to the days of his precocious manhood, we find him, after several expeditions to the West, the protégé of Senator Benton.

"This is the way to Constantinople." So reads an inscription which points down from out the snows of St. Petersburg. England set her face eastward a century ago, saying, "This is the way to India." But Thomas H. Benton on the Senate floor of the United States 50 years ago, pointing his prophetic finger to the West, cried, "There lies the road to India!"

And we, we all out here by the great sea, have got thus far on the road which he pointed out and which the author of this book first traveled and made possible.

The beauty of this book, by Fremont, the strength, the purity, the quiet humanity of this great book, to say nothing of the importance of it as history, has made me ashamed of myself. Here I have been reading one book of nonsense after another, by alleged American humorists, from which I have learned nothing, nothing but bad language and slang, while such colossal characters in our history as Jefferson, Benton and Fremont were slowly fading away in the distance. We need more books like this. We can spare the American humorist for a season. Let him go abroad, and never come back.

The stern and sober features of this history make a substantial background for this sweet episode in his early life at Washington where he first met his future wife, then at school there. He says:

"I went with the eldest of the sisters to a school concert at Georgetown, where I first saw her. She made the effect that a rose of rare color or a beautiful picture would have done. Months passed before, in the vacation time, I saw her again, at her father's house, which already I had come to frequent.

*** There are features which convey to us a soul so white that they impress with instant pleasure; and of this kind were hers."

This manly tenderness obtains all through the book. You miss the hardness and severity of the bloody duelist and fierce debater Thomas H. Benton entirely from these Memoirs as set down by Fremont. He is equally kind to the memory of his dead friends as to the wife of his bosom who has grown gray at his side. Here is the quiet, sweet way in which he takes us into his confidence in such matters:

"I find that in undertaking to write a life-history which shall truly give the complexion of the minds and events of which I know, I have set for myself a difficult task. To speak of friends who have been dear to me in the intimate relations of life; of events in which I had part, and of the persons concerned in them with me—and it is precisely of these that I have undertaken to write—is hedged with difficulties that oppose my pen at every line. And the occurrences in even a few lines through 50 years are long to give, though the very details, which for various reasons are forced from the page, are just what might prove interesting as making up our human life. Still, I console myself with thinking that this, perhaps, would be a life-picture that no living man might draw. And yet I thought to do it."

This tone of sweet simplicity, of dignified familiarity, of half-confidential talks outside of the great historical events, runs on through all his work. This old man of threescore and ten, once so nearly President of the United States, is a boy again in this book—a lover now and now a friend, but all the time a most courteous gentleman. And so I say the book is a good book and a great book, and few can afford to miss reading it.

No, Fremont did not send me his book. I scarcely know the man; never met him but once in my life, and never yet saw his wife. Nor did his publishers send me the book. It came to me through an artist friend, Truman Williams, who once illustrated something of mine, and who is now here in Oakland. It is not only due to myself to say this, but it is most especially due to General Fremont and his family, who are now in California.

And giving this civilian his military title, which he surely laid aside a quarter of a century since, brings me to speak of a very unpleasant feature which stares you in the face on the very first page. This gentle scholar, this traveler, has gone and put on shoulder-straps. Here he stands fronting his title-page in the uniform to which he has not the ghost of right now, and to which only a weak and overgrown schoolboy could cling. Well, it will serve to keep in mind that John C. Fremont is only very human, after all.

While writing the last paragraph, a friend, an old Californian, one of those good old pioneers who thinks he knows all about everybody, and of course knows really but little about anybody, came in and took up my book, and, without opening the lids of the book, opened his lips in a tremendous tirade of abuse, much of which I had read in the campaign papers here in California more than 30 years ago, when Fremont was running for President.

And now let me tell one or two facts. A man by the name of Wilcox, living on the Mariposa Grant, once told me that Fremont never paid his debts and that he could buy his notes for five cents on the dollar. I doubted this and told Wilcox I would give him one hundred cents on the dollar for the first note he could find with Fremont's name to it. He said he could send me enough to make a book, and would surely send me enough to convince any one that my hero was not an honest man. This was seventeen years ago. I now repeat the offer. Wilcox was a member of the Legislature at the time, and I think has since been in Congress. But whatever he was then or has been since, he was certainly a great liar; for I never got my promised autograph.

One thing more. It was but natural that the man who had made the first path across the plains, and had given the best years of his life to the widening out of the work, should seek to have some share in the building of the railroads over these grassy reaches of space. And so we find Fremont in Paris at the head of an enterprise as grand and worthy in conception as it proved disastrous.

I do not take the account of this dreadful piece of ill fortune from Fremont, for that portion of his life is as yet unpublished. I take it from a French capitalist who told me the story in Paris not long after the disaster. Briefly, Fremont had floated bonds in Paris on promises which had not been kept at Washington; the French flew into a panic and Fremont suddenly left Paris, covered with shame and disgrace. I believe that one member of his family, who was con-

cerned with him in the very laudable and entirely honest endeavor to build a Pacific railroad, was convicted and sent to the galleys. And yet the Government of France afterward set this aside and declared Fremont innocent of blame! The disaster, as I was informed, was due to a sudden panic induced by certain telegrams from America; which said telegrams were sent by the leaders and manipulators of rival enterprises. And that is all, and possibly more than all, there is of this matter as I had it from the lips of one of those who claims to have lost most heavily by an enterprise which has since made so many millions for others and opened up so many thousands of miles for settlement.

It would really seem that some men were born with a star, as Napoleon the Great believed, and that star not always a good one.

Take Fremont for example. He began to work early; and he has certainly worked late. And yet at no time has he ever had more than his daily bread; frequently not that. Look at his great railroad enterprise. It nearly cost him a life-sentence to the galleys of France. And yet the very next day, as it were, other men step in and are made millionaires by taking up the thread where it had snapped like the thread of fate in his hands!

And then when he sat in the Senate of the United States by the side of his illustrious father-in-law and friend, why did sinister destiny cut off the thread of his great employment and turn it over to ignorant and unknown men?

And then when stepping toward the highest place in the land, how curious that California, of all other States, could not lay her solid block of granite to help him onward as well as the great State of New York!

And yet all these things are merely detail now as we near the great "round-up." A few more terms in the Senate, a term or two of the Presidency—the Presidency of a Pacific railroad—any or even all of these things together could add nothing to the naive charm of those pages of travel in the untracked lands. They could add but little if anything to the dignity and that great respect which attaches, and must continually attach, to the name of John C. Fremont as the years sweep forward.

Let him go on and finish his book as he began, simple, earnest, sincere. Let him take the world into his confidence. This is a great, good world, full of heart, full of admiration for its heroes in the loftier ways of life. This man has a right to make a book. He has something to say. And well he knows how to say it. He has seen the world, seen it as not another man in all our fifty millions has seen it. He has suffered, suffered hunger on these Pacific shores of plenty. He has toiled, toiled hard and continually from boyhood up to within sight of his game. Let him rest with us; feast with us.

It has been the good fortune of but few men in history to be united, soul and body, with such a woman as Jessie Benton Fremont. Give this superb woman all the honor that is due her; but give her not entirely too much.

It has been the fashion, we all know, for nearly 40 years, to say that "Fremont owes everything to his wife; Mrs. Fremont is the man of the two." Let us see: is this true? No! So far from this being the cold, clear truth, the facts are, Fremont had done his most daring work before this woman came on the scene. His victories came to him before she came conspicuously to the front; his defeats came after she came.

And I say this not at all in disparagement of her; I say it not at all because she once turned aside to pour a whole bottle of wrath on my head for writing a poem called "Kit Carson's Ride"—a poem that at least secured some respect for his lonely grave, and revived the memory of a live, good man. I repeat, I have no other motive in the matter than a willingness to let the serene and lovable figure of John C. Fremont stand out alone, conspicuous and splendid, in the history and the fashioning of States.

JOAQUIN MILLER.

Oakland Heights, Oakland, Cal., Jan., '88.

"THE CIGARETTE MUST GO."—At a special meeting of the Santa Rosa City Council, held Jan. 13th, an ordinance was passed making it a criminal offense to sell cigarettes to boys under 16 years; also the smoking of cigarettes by boys under that age. The penalty is a fine of \$20 or imprisonment of 20 days, or both. It is the intention of the officers to strictly enforce the ordinance.

A NEW VARIETY.—SHE: Have you seen the chimpanzees up at the park?

HE: No. Are they in bloom now?

SHE: Are what in bloom?

HE: Why, the Jim pansies.—Life.

An Old Conclusion Newly Drawn.

[Written for the RURAL PRESS by MAID-OF-ALL-WORK.]

I do not know of any more satisfactory and comfortable occupation for women than house-keeping. It is not supposed that such an avocation is going to be vigorously denied or triumphantly disproved, but I know many persons and people who are wrestling with fate and themselves to find occupations for women exclusive of house-keeping. This is not to be a talk on the California help problem or on servants, and servant-making, but an attempt to look into an opening of thought on the independence of women as home-keepers and home-makers. There is so much said about women in all kinds of new and special places and positions as professionals and office-holders, and latterly about women as agriculturists, that one wearies of all these distinctions and differences, and wonders if it is really necessary to be any more or less of a woman to become a wage-earner.

I accept any occupation for an individual woman that she has the capacity to accomplish, just as we measure men by their special abilities, but the world refuses to consider a woman a success whose sole claim to distinction is that she manages to get along some way without living in a home as a housekeeper or homeward, just as men, whatever their special distinctions, are more perfect men as husbands (house-bands) or heads of household.

I enjoy talented women who have received the highest privileges of education, but their slightest approach in manners and conduct to an attitude of elevation above other women is an ugly blemish. And we measure men in the same way. All occupations are open to men, because they are no less men in responsibilities. If the world has placed a check upon women, it is because it could not afford to lose them as women. But my thought is, that woman is after all unwilling to surrender her position as home-maker and home-keeper, even after she has successfully proven her ability to successfully fill most all departments of mental and manual labor. Or, I feel that women enjoy most happy and perfect lives in positions inseparable from home lives, just as successful men are enlarged by happy domestic lives. Let there be Portias and Portias, if they turn their steps homeward with the evening sun.

The world will learn after awhile that the greatest independence in mind, spirit and occupation cannot change that spirit in woman which causes her to seek her happiest condition.

It seems to me that the majority of women, with their delicate, sensitive, shrinking spirits, should be made to feel as free and independent as possible, in order to stamp a natural courage and spirit upon future generations. Impose upon woman any misery you will, grant her any freedom you will, she will carry that slavery or that elevation of spirit directly to the altar of her own home, and from that home will emanate the effect upon her soul. As freer agents, as more acknowledged equals of men in powers and attainments, women would be grander home-keepers and more capable and respected mothers. From the standpoint of what she is, and wants to be, she should be judged. I think a close research would show that the upward movement of women has not been with a desire to separate themselves from their natural instincts, but to seek to strengthen and adorn that instinct with the achievements of a free spirit.

I cannot see any occupation for women (or men) that will preserve them in content and satisfaction unless it be one that does not interfere with a home-life. They will ultimately break from an isolated occupation calling for a single life and pass their declining years enshrined among kindred and friends.

I always liked Betsy Trotwood because she had a cottage of her own and lived in it. The grand things she did for Mr. Dick and David could not have been done in any other way. Betsy was a successful woman. She might have had a degree to her name and been a success in the same way and many others. But I love Betsy as she was.

One of our most notable examples of a toiling, aggressive public career, and a sweet and enviable private life, is Frances E. Willard, now of world-wide fame. She is constantly before the public in her unprecedented work as a reformer, and never yet has there fallen from her shoulders the sweet mantle of lovable womanhood that can best be worn by her who lives an unpolluted and sacred home-life. She is priestess of a home where altars are open to her most loved. This is what the world reveres in its honored ones—a reserved and sacred home-life, which is to its possessor a treasure-house of reserved riches. It is this that the world has feared to lose in womanhood. I would fear its loss as much in any one who goes out to domestic service as in one who sits in an office and searches law for anxious inquirers. One who contaminates life by constant exposure to what is rude and unsympathetic to it ultimately suffers loss. Sometimes, however, there is a great loss of delicacy and refinement in some woman who has been highly educated in a false spirit. She becomes strong-willed and overbearing, claiming that as the right of progressive woman. As if she would say, "I know that I know, because I have had superior advantages." Among people who are not her peers in such matters, she becomes offensive and loses a reverence that she ought to obtain. As a rule, the more a man really

knows, the more quiet and kind he is about asserting himself. Time and experience, of course, cause women to bear knowledge more gracefully, for the world calls daily for the grace and graces of womankind.

If Alice wishes to be a lawyer, let her be learned but gentle, keen but kind, slow to wrath, but sensitive, prompt and diligent in business, but capable of idling in the love joys of home. We must apply the same rule to her that we do to her brother. She must close the house door against the forms and worries of business, and preside at her hearth with all the warm and joyous attributes of her nature. This is not so easy to do, it is only the strong who can do this; and if the individual woman be strong, let her undertake what she wishes. This is my new conclusion that my sister may have a business or profession but she *must* have a home.

In considering the new subject of agriculture for women, it seems strange that this has not been made the central thought. The culture of land implies a home, and a home being assured, many of the ends of life would be enjoyed simultaneously with the production of an income. Few women can have positions as teachers, scribes or clerks, yet keep with them close at hand the infirm parents, invalid sisters, or young brothers they desire to support. But a successful small farm in easy distance of a good town solves the problem. She can keep with her those she loves and enjoy the refined protection of their presence.

The matter-of-fact widow with growing boys naturally seeks a farm, and why not the enterprising maiden lady? The cities always have plenty of homeless boys to spare, and many mothers in the country are only too glad to lend their daughters to educated women who will give them, in return for company and services, general culture and gentle training.

The question of company and help could be easier solved than the problem of learning how to manage land to a profit.

This is what every one who loves the country desires to learn, and one woman has as good a chance as any other man or woman. Success in agriculture presupposes a natural adaptability to such pursuits. One must love mother earth to receive her love in return. One must be willing to study her wants and labor for her seemingly sometimes without reward. In these days where small undeveloped tracts are within the reach of small capital, and it having been so well demonstrated that such tracts can be made profitable, it should be an opportunity whereby many women could begin the making of independent and retired homes.

In roaming about the great San Joaquin valley this summer, I met several single ladies who had acquired land from the Government by the homestead law, one of whom expected to found a home by bringing a mother and aunt from the "frozen East" (as they say in Southern California). In such ways as these independent womanhood is grand and consistent.

A young lady is a station-keeper and telegraph operator, in which there is nothing unwomanly provided she is qualified to do the work; but she wanders from station to station, boarding at all kinds of hotels, exposed to all kinds of associations, without the comforts, hopes and blessings of a home. Another lady who has a landoffice suffers none of these disadvantages, and another who practices medicine has a beautiful home and office combined. Not what a woman does in this new age, but how she *lives* is the safer standpoint. The girl who leaves the safety and pleasures of her father's farm for an uncertain shop-life in the city does a more questionable thing than she who could develop a raisin or flower or other industry on some neglected corner of her father's farm.

Why could not the mistress of a successful flower-garden enlarge into a successful mistress of a field? In this line the subject widens indefinitely. Herein is included toil, care, sacrifice, economy and a quick eye to detect the elements of success in others. Women will learn that true independence consists not so much in having opinions as in knowing how to catch and assimilate the best opinions of others.

Let woman's ambition wander where it will, it will return to the hearthstone with its laurels and its offerings; and it seems best that it should not go into ways where the heart will harden to modesty, piety, charity, and the humble homely graces of home.

GIRLS' PLEDGE OF ABSTINENCE.—An exchange publishing the "ironclad" pledge which has been signed by many young ladies at White Cloud, Kansas, remarks: One cannot help admiring the courage of the girls who are willing to bind themselves to strict rules of living, and dare demand the same standard of morality in their gentleman friends that the latter demand of them. When there ceases to be a double standard of morality, and men and women are judged alike for the same crimes against society, then that body will have fewer stories of broken hearts and blasted lives to whisper about from one member to another. We honor the girls of White Cloud and the young Irish-Americans, farther east, who have the courage of their convictions and dare stand firmly by what they believe to be right. Here is the card: "I, the undersigned, do solemnly promise, God helping me, to abstain from the use of chewing-gum and slang; and also abstain from, and use my influence against, the use of tobacco and intoxicating liquors. I further promise that I will not keep regular company with any one whom I know uses tobacco, strong drink or profane language."

YOUNG FOLKS' COLUMN.

Hannah Ann's Beads.

[Written for the RURAL PRESS by MARGARET DAVIS BURTON.]

Away down where the wild raspberries grew thick around the pond the children were busy. Two little white sunbonnets and a straw hat appearing here and there among the leafy brambles showed where they were, and their busy hands with pink-stained fingers culled the glowing berries in playful rivalry. The bright tin basin was nearly full, so many times had the three tiny baskets contributed their loads, when a thunder-cloud began to unroll its somber folds and frighten the wild birds to silence.

"Come, we must hurry home," called Maggie, the eldest of the three, lifting up the big basin, which made a load for her, since she was but a slip of a girl, rounded and slender as the stalk of a lily, with a fair, flower-like face looking out from the little frilled sunbonnet. Will and May tripped over the deep grasses in her train, and they all hurried toward the rail fence that divided the pasture-land from the road. Along the smooth carriage-drive they could hasten and easily reach home before the storm should begin. Maggie was cautiously handing the basin over the topmost rail to Will, who had already climbed the fence, and May was perched unsteadily upon a corner, when they were all startled by a scream. Looking down the slope, they saw not far away the Perkins children, who had been berrying, too. Now they were climbing the fence and Hannah Ann was crying.

"I know Mar will whip me, boo-hoo! boo-hoo!" she was whimpering as she bent down, searching for something that the long grass concealed.

"Say, Maggie Bell," called Charlie Perkins, "come over here and help us. Hannah Ann has broke her beads."

A thrill of feminine sympathy went to Maggie's little heart as she clutched her own precious necklace of sparkling crystals, strung on pink twine that shone so prettily through the clear glass. She led the way to where her playmates were in distress, and after due explanations, helped to gather up the scattered beads. Each little warm palm held close some of the lost treasures, but as they were bright-blue and smooth as pearls, it was difficult to see them in the shadowy grass. Still they looked eagerly until a few mutterings of thunder and splashes of rain gave warning that the storm was upon them.

"We will all go in to Mr. Wescott's," said Maggie. That was the nearest house, and they ran over a hill and rapped loudly with the brass knocker upon the heavy nail-studded door which was opened to them with a welcome.

During the thunder-storm that was soon raging without, Hannah Ann and Maggie sat near the window trying to thread the beads again upon the broken string which had been tied with a knot. Maggie held one end of the stout wool thread and Hannah Ann the other, but it was so limp that they could scarcely string a bead. Julia Wescott offered them her needlebook, but every needle was either too large for the beads or too small for their thread, and so they sat at their vain endeavor until the afternoon sun gleamed clear and bright over the fresh woodlands.

Maggie, Willie and May hurried home with their berries and ate some of them with sweetened cream for dessert at dinner-time, while Hannah Ann's broken necklace was forgotten.

The string of beads had been scattered by pure accident in Hannah Ann's hurry to get to some shelter before the thunder-storm should burst; and yet she dared not tell her mother this, because she knew from bitter experience that a severe punishment would be her reward. When she could not get the beads restrung, and thus escape questioning altogether, she consulted with her little brother as to what she had better do.

"Tell her Wescott's dog jumped up and broke 'em," suggested Charlie.

"She'd whip just the same, you know; she'd say I was careless. Oh, dear, oh, dear, what shall I do!"

"Indeed, that child has a shock of hair," remarked Mrs. Perkins, as she sat rocking comfortably in Mrs. Bell's morning-room. Maggie was sitting upon a low stool by her mother's knee, while her mother was combing and arranging her heavy brown tresses that Maggie felt were such a trial.

"Hannah Ann's hair is no care at all. You ought to trim hers out in the back, and then you would not have any trouble either."

Mrs. Perkins was tall and dark and thin, and spoke with a high, grieving voice that was especially exasperating to Maggie when she offered such advice. Mrs. Perkins' own hair was dull and straight and long in harmony with her other features, and Hannah Ann's locks would have been like her mother's if they had not been cut off square across the back of her neck.

"Mrs. Bell, I have something to tell you about your little girl," Mrs. Perkins began again, formally, as if she had quite forgotten all about the subject. "My Hannah Ann came home the other day in great distress. She said Maggie Bell had broken her beads, and six of them were lost. Of course it would not

matter if those very beads had not belonged to Hannah Ann's dead aunt, and besides, they were imported from London. I thought you ought to know, and that most likely your little girl would not say anything to you about it," she concluded, looking at the supposed culprit with an expression that was meant to show a sort of lofty pity.

Maggie glanced with surprise at Hannah Ann. There she sat by the window, her head bent, and her thin, dark features glowing until even her eyes seemed full of the warm color, while her hands were clasped nervously in her lap.

"She looks just as mean as I should feel if I had told such a story as that," thought Maggie, and she looked up at her mother. In that kind face was an expression of pain and surprise that grieved her and took away all feelings of scorn.

"I did not break Hannah Ann's beads," she protested earnestly, but Mrs. Perkins interrupted. "There is no doubt about it. If my Hannah Ann's word is not sufficient, you can take Mrs. Wescott's, for the children were there, and she will confirm what my Hannah Ann has said."

"Well, the least Maggie can do is to beg your pardon. So, my dear, ask Mrs. Perkins' pardon in the best manner you can."

Burning with a sense of injustice, this the child refused to do. "I did not break the string of the beads, or do anything but try to help her save them, and —"

"That is enough, Maggie; do as I tell you."

"Hannah Ann, did I break your string of beads?" she said, turning fiercely to her playmate. Hannah Ann felt all her courage flee, and putting her hands to her eyes began to cry. This aggravated Mrs. Perkins' grievances, and Maggie, getting a stern glance from her mother, kneeled and begged Mrs. Perkins' forgiveness for meddling with Hannah Ann's beads.

Soon after Mrs. Perkins took her leave, feeling quite pacified. "Well, well!" she observed to Hannah Ann, "what a little spitfire that Maggie Bell is. I am glad you are so different in disposition."

Hannah Ann heaved a great sigh of relief, and at the same time inwardly shrank from the whipping she had so narrowly escaped. "Anyhow, I got off this time," was her self-congratulation, and she resolved to "get off" in the same way the next time her skin should be in danger, if she could.

Mrs. Bell, who had striven by all means of kindness and gentle sympathy to win the entire confidence of her children, was more grieved at the implied want of faith on the part of her daughter than by any other feature of the unpleasantness. She questioned Maggie closely, but could obtain only protestations of innocence.

"Well, my dear child," she concluded tenderly, "I am very sorry about the whole affair, still you did right to ask Mrs. Perkins' pardon, for you owe obedience to me."

"And I do always try to mind you, mamma," added the girl, giving her mother a hearty kiss, and bounding merrily out into the sunshine, which made her luxuriant curls look like gold.

The next time Mrs. Bell called on Mrs. Wescott she took pains to inquire all about the beads, but as she could find nothing that confirmed Hannah Ann's story, she dismissed the matter entirely from her mind.

Yet Maggie never forgot it, and although she forgave Hannah Ann's unkindness, she would never again associate with her. Long years have flown since those childhood days, and poor Mrs. Perkins' hair has been made gray and "brought down in sorrow to the grave" through the deceit and willfulness of her children, while Maggie Bell, acting in perfect contrast to Hannah Ann, has passed through all the vicissitudes of life with honor and success.

In telling the quaint little story, she says: "When tempted by the glitter and allurements of false friends, or undesirable company, I have always thought of Hannah Ann's beads, and the memory of the little blue baubles has ever proved a charm."

Temperance in the Schools.

EDITORS PRESS:—I am extremely glad to see that the people are beginning to realize the necessity of educating the rising generation as to the evil effects of alcoholic stimulants as a beverage, and also the evil effects of tobacco. I think it is one of the greatest subjects that has ever been introduced into our public schools. If the boys would only think that these habits are the most filthy and disgusting that ever a boy or young man contracted. Take warning, you will never amount to anything, you cannot get employment in any good place nor go into good company if you get into such evil habits.

Big Bend, Cal.

WM. H. MULLEN.

THE FOUR ELEMENTS.—The evolution of chaos into earth, air, fire and water can be represented in the following manner: In a narrow vial or glass tube, pour mercury to the height of one-fourth of its capacity; for the next fourth, add a saturated solution of subcarbonate of potash; next fourth, methylated or pure spirits of wine, tinted blue; and lastly, turpentine, tinted red. On shaking this mixture together, you will have a representation of chaos; but soon, on resting, the elements will separate themselves, and the mercury will represent earth, the blue spirit air, the red turpentine fire, and the colorless potash solution water.

DOMESTIC ECONOMY.

Washing Glassware.

After gathering all the glassware together, empty all the glasses, and if any have had milk in them, rinse well in cold water before washing. If glasses that have had milk in them are washed in hot water, without being rinsed first in cold, they will surely be cloudy, no matter how well they are washed, and they will also spoil the water for the rest of the glasses. Have ready a pan of hot water, into which put a few drops of ammonia. The addition of ammonia to water, besides softening it, will give the glass a nice polish. Use a soft wash-cloth, and for this purpose there is nothing better than an old napkin. Wash each glass separately, and put aside to drain. Never, if it can be avoided, wash anything besides glassware in the same pan at the one time. When all are washed, begin at the first one drained to dry. Use the checkered towels that are purposely for this kind of work. Usually the glasses drain so dry that the towel is only used for polishing, and takes the place of the chamois skin generally used for this purpose. Newspapers will be found excellent, if used, with which to give a nice polish to glassware. If soap is used in the wash-water, the glass should be wiped immediately out of the suds, or rinsed in clear hot water if left to drain; for if not rinsed, but put to drain from the suds, it is sure to be streaky, and will require a great deal of labor to make it at all presentable.

An old toothbrush, kept for the purpose, will aid greatly in cleaning cut or pressed glassware. To clean glass bottles, fill with ammonia water, put in some small shot, about a teaspoonful to a medium-sized bottle, and shake rapidly until the bottle is clean. Where the shot is not convenient, small pebbles or cinders will answer the same purpose, although they are not as clean to use as the shot. To be sure, where a fine glass bottle is to be cleaned, none of these things should be used, as they are sure to scratch and deface the glass. Fill the bottle two-thirds full of ammonia water, put a soft swab on the point of a fine bent wire and clean the bottle with the swab. If the whole cannot be cleaned in this way, after cleaning as much as possible remove the wire, put in the bottle an egg-shell broken fine, and shake well. This will clean the bottle and will not deface the glass. When putting ice in fragile glasses be very careful that you do not drop it in, which is the usual custom, or you will be wondering why the bottoms of the glasses fall out so easily.—*American Cultivator.*

MOCK LEMON PIE.—One-half cup of sugar, yolks of two eggs, one-half cup of sweet milk and one-half cup water; beat the eggs, add the rest, beat all together, and place in a crust the same as for a custard pie. When done, beat the whites of the eggs to a stiff froth, add a tablespoonful of sugar and one teaspoonful of extract of lemon, spread over the pie, return to the oven and brown. This makes a small pie.

CHICKEN FRITTERS.—Cold chicken, salt and pepper, lemon juice, batter. Cut the cold chicken in small pieces, put in a dish, season with salt, pepper and juice of a lemon. Let this stand one hour. Then make a batter of two eggs to a pint of milk, a little salt, and flour enough to make a batter not too stiff. Stir the chicken in this, and drop it by spoonfuls in boiling fat. Fry brown, drain and serve.

APPLE CAKE.—Take light bread dough and shorten it, or make a crust just as you would for soda biscuits, and roll out about one half inch thick, then cut good sour apples into quarters and again into eighths, and place in rows on the crust, sprinkle with sugar and spice to the taste, and bake, or you need not season but just a very little, and make a sauce of butter, sugar and water and pour over it.

PARKER HOUSE ROLLS.—One cup each of warm new milk and yeast, two tablespoonfuls each of sugar and melted lard, one quart of flour, or enough to mold firm; let it rise till light, then mold, roll out about one-half inch thick, cut with biscuit cutter, butter the tops, fold up, let it rise until light, and bake in a quick oven.

SAGO PUDDING.—Boil three tablespoonfuls of sago in a quart of milk, add a pinch of salt. When cooked, set it to cool, stirring it occasionally. Beat four eggs very light with three tablespoonfuls of sugar, and stir it into the sago and milk; add a small piece of butter and flavor with nutmeg. Bake 40 minutes.

OYSTER PIE.—Grease a deep tin plate and cover the bottom with puff d paste; lay on it a dozen good-sized oysters; season with butter, pepper and salt; spread over this an egg batter and cover with a crust of the paste, making small openings in it with a fork; bake about 25 minutes.

SODA BISCUIT.—One quart of sifted flour, one teaspoonful of soda, two teaspoonfuls of cream tartar, one teaspoonful of salt; mix thoroughly and rub in two tablespoonfuls of butter and wet with one pint of sweet milk; bake in a quick oven.

POTATO CAKES.—Two pounds of mashed potatoes, four ounces of butter and a little salt, two pounds of flour, and milk enough to make a batter, one-half cup of yeast; set to rise, and when light bake in cakes the size of muffins.

The Week.

Since our last the weather has been in a decided melting mood, and the downpour has been most generous, even to the measure of four inches in 24 hours at one point in the upper end of the Sacramento valley. The temperature has been for the most part delightfully mild, and plants are responding with alacrity to the gentle beckoning of the moist warm air. Grain and forage plants are coming forward splendidly and the characteristic beauties of the California winter, the vernal green in unbroken outline and soon to be starred with winter bloom, are a most grateful change from the unusual frost reign of last month. The rainfall, with the latest additions, amounts on the average to about twice the fall to this date last year, and all the present indications are for a year of exceptional growth and bearing of plant and vine and tree.

It would please many just now to have a few days of sunshine for the later plowing and sowing, and to push orchard work before the buds break forth anew.

Orchard planting this year amounts almost to a furor. Long ago the nurseries completely surrendered on the most popular varieties, and again we find nursery stock arriving from the East by carloads. Other lines of development are correspondingly active. We old Californians must rub our eyes well to keep pace with the constant changes in the landscape.

Experiment Stations Provided For.

Telegrams from Washington announce that the faithful agricultural investigators of the United States and the great body of enterprising and progressive farmers who approve their work, have secured a signal favor from the National Legislature, for a bill has passed both houses of Congress and is now in the hands of the President, which will render immediately available the funds for carrying on the experiment station work, which was ordered but not provided for by the last Congress.

The regular reader of the RURAL is already well informed on the subject and will understand just what this announcement signifies, but still, as the matter now comes up for definite action, it will be well to recapitulate briefly. In effect Congress has agreed to pay \$15,000 annually for agricultural experiment stations in all States which are prepared to maintain them, and, if we are correctly informed, all the States, and one at least of the Territories, have qualified themselves to discharge this work. The law which was passed March 21, 1887, prescribes as follows:

1. That agricultural experiment stations shall be established and maintained under direction of the college or colleges established in accordance with the law of July 2, 1862, known as the Morrill law, granting public land for founding colleges of agriculture and mechanic arts.

2. That such stations shall conduct original researches, or verify experiments upon all subjects bearing directly upon the agricultural industry of the United States, having due regard to varying conditions and needs of the respective States or Territories.

3. That these stations shall report to the U. S. Commissioner of Agriculture as well as to the Governors of the several States.

4. That out of the money (\$15,000 per year) there shall be the first year but one-third spent upon buildings or repairs and after that but five per cent for such uses.

The other provisions of the law relate to matters of detail or to meet conditions which do not exist in this State.

By this law this Government money will be devoted to carrying on and extending the work of the College of Agriculture of the University of California, and the central or home station will be on the University grounds at Berkeley. Prof. Hilgard, who is at the head of this college, and becomes by virtue of his position and merit director of the experiment station work in California, has already on several occasions declared that it will be his policy to localize the experimental work as far as possible in different regions of the State, because there are so many different conditions of soil, climate, etc., that satisfactory results cannot be gained by experiments at any single point. Prof. Hilgard has virtually decided upon the establishment of a branch station south of the Sierra Madre mountains, another which shall properly represent a vast area in the San Joaquin valley, and a number of other points have been under consideration either for general agricultural stations or for special stations devoted to viticulture. As a matter of fact, there are three of the latter already in operation: one at Cupertino, Santa Clara county, one at Mission San Jose, in Alameda county, and another in the great Fresno grape region. As we have said, Prof. Hilgard believes in establishing and maintaining as many outlying stations as possible, provided they are so located that their results may be considered as representative for a considerable area of the State. In this work, however, he will be obliged to proceed with care, because of the amount of appropriation and the conditions governing its expenditure. We are aware that some regions are preparing to meet these difficulties by deeding suitable land in trust to

the Regents of the University for experimental work, and by raising sums of money for the erection of suitable buildings thereon. It goes without the saying that as the desire is to extend this work as far as possible, because of the need of local work in this State, those sections will secure stations which provide lands and funds for their establishment, provided of course that the sections are representative and the lands suitable. No such declaration has been officially made, but such it would seem would naturally be the case where it is obviously desirable to have so many outlying stations as in California. We have heard that one section at least has declared that it will offer to the Board of Regents the land and money enough to erect suitable buildings. These buildings are to be of moderate cost, probably a house for the local foreman or superintendent, a barn for the horses, wagons and tools, and perhaps a small glass house for propagation. Under the law which declares that only \$3000 can be spent for building, it will of course be impossible to fit out many stations in this way unless the people in sections desiring stations co-operate with the University authorities in providing the place and accommodations for the carrying on of the work. We give this unofficial announcement in order that our friends in different parts of the State who may contemplate moving in this direction may place themselves in communication with Prof. Hilgard. The Regents of the University will no doubt be largely influenced by his recommendation in the premises.

In the RURAL of last week we gave a statement by Prof. Hilgard concerning the lines of work which it is contemplated to pursue in this State, but, of course, changes will be made therein as conditions demand. The work will consist largely in extending the investigations and researches which were begun by Prof. Hilgard when he came to California 13 years ago. This work has already commended itself to Californians, and has won wide recognition at the East and abroad for our experiment station as a leading institution of this kind. So far as has been possible the work has been localized by interesting volunteer experimenters in all parts of the State. Last year there were upward of 600 parties furnished with plants and seeds for trial, and Prof. Hilgard's report for 1887, issued last summer, gives full evidence of the valuable information reported by such volunteer experimenters. With outlying stations there will also be a great extension of this volunteer work, as each station will serve as a center of distribution of growths found specially suitable for the region in which the station is located.

It certainly looks as though we were now on the eve of realizing great benefits from systematic research and experimentation in all parts of the State. To do this, however, to the extent of the possibilities, it will be necessary for the fullest co-operation of enterprising land-owners and residents in all parts of the State, and to such we commend the subject for consideration and action.

The Tariff Issue.

The contention over the maintenance of existing import duties on agricultural products continues to rage at Washington and in the parts of the country where local products are assailed. The woolmen are making a valiant fight and have some of their strongest men at Washington doing their best to stem the tide of free trade and political influence which is running to sustain the President in his views and policies, as announced in his message. It does not yet appear what the issue will be, but it behooves all to exert whatever influence they may possess to sustain the hands of those in Congress who are struggling for the maintenance of this important industry. A word or a letter or a resolution may turn the tide of some member's thought, and it should not be withheld.

Our great fruit industries must still be considered in danger, though their position has been notably strengthened during the last few weeks. To offset the action of the importers at the Atlantic seaboard cities, who, of course, cry for free import of all foreign fruit and fruit products, there are coming forward day by day most emphatic declarations by growers and manufacturers of fruit products, which open the eyes of Congressmen to the facts, and cause

them to hesitate before sacrificing the interest of thousands of American producers to the profit of foreign growers and a small coterie of importers, who will quickly transfer to their own pockets the duty which now goes to the Government, and wholly forget the consumer of whose interests the free-trade advocates profess to be so tender. The action at San Jose by a large gathering of fruitmen from all parts of the country must carry great weight in Washington. Comments upon these resolutions and the resolutions themselves are given on another page of this issue.

State Board of Forestry.

The California State Board of Forestry met January 23d in its new quarters in the Flood building, at Market and Fourth streets. There were present Chairman Kinney, Sec'y Forman, and James Bettner and John D. Spreckels, the newly appointed commissioners, as well as H. S. Davidson, the engineer who is making up the forest map of the State, E. L. Collins, the evidence expert, R. H. Lee, the forester in charge of the stations at Santa Monica and Pasadena, and W. G. Klee, Inspector of Fruit Pests.

Inspector Klee addressed the board in reference to preventing the introduction of the cottony cushion scale, and was promised assistance in the matter.

R. H. Lee reported that the experimental forest station at Santa Monica, established in December, consists of a tract of six acres, well watered and adapted as to soil and climate for the purpose in view. Gophers and squirrels abound, and are at present a great nuisance, but it is hoped they will finally be exterminated. Great encouragement has been given him by influential people in the vicinity of the station, and great success may be anticipated. The expenses of the plantation for the first month were rather large but would be reduced hereafter. The outlay for wages and seeds for December was \$391.25. He estimated that the monthly expenses of the experimental station would reach \$400.

Mr. Lee concluded by recommending for cultivation certain varieties of eucalyptus and acacia, the wood of the former being equal in texture to the best bird's-eye maple.

A communication was read from the commissioner's agent in Trinity county, calling attention to the wholesale stealing of Government timber in that county by dealers in firewood. This matter was referred to E. L. Collins, the Government officer whose duty it is to look after and prevent such trespassing. Mr. Collins reported on the destruction and appropriation of State forests throughout California, and said that in two cases where he had tried to obtain convictions, the laws had been framed in such a manner that the offender easily evaded justice. He mentioned that some 100,000 feet of timber had been cut in Mariposa county, and that he had obtained an admission of the fact from Mr. Snyder, a sawmiller who had cut half that amount.

H. S. Davidson, the engineer who is engaged in making up the forest map of the State, stated that since August 8th he had gone through six of the northern counties and had found among the people much interest in the work of the board, and all were anxious that it should increase its usefulness. He had posted hundreds of notices against fire. The great difficulty in getting evidence was that people were afraid to report. As to depredations, he found that it was generally held that Government timber land was the property of the first man to discover it. The shake-makers did nearly as much damage as the great fires. They were criminally wasteful and should be looked after. He referred to the wholesale entries of timber-land, and said that in a few years there would be no public timber-land left. He thought the board should take some means to make the timber in the vicinity of Mount Shasta a national park, or to secure Federal legislation looking to that end.

In reference to the protection of forests, Secretary Forman said that Senator Stanford, in reply to a telegram, had stated that he was introducing a bill similar to that proposed by the board, only differing in detail.

On the 30th the board held another meeting to urge our Congressmen to endeavor to secure the passage of a bill for the withdrawal of all Government timber-land in the State from sale and placing it under control of the Board. The Secretary was instructed to write to the California delegation, showing how Senator Stanford's bill can be amended with advantage.

Mr. Collins was directed to proceed at once to gather information as to the extent of the redwood reserve in San Mateo county, and the probable cost of purchasing it for a State or National park.

Mr. Kinney, who with Claus Spreckels and John D. Spreckels went to Chico to inspect the tract offered for an experimental tree-planting station, reported that the land was especially adapted for the purpose, and recommended that it be accepted.

Two Giant Trees in Portugal.

As we are growing both cork oaks and Spanish chestnuts in this State, it may be interesting to look forward and see what coming centuries may behold in California. The engravings on this page and the following description by M. Charles Joly of two giant trees in Portugal, will give suggestions for such a forecast. M. Joly kindly sends us a little pamphlet containing an extract from the *Journal de la Société Nationale d'Horticulture* of France. A translation for the *RURAL* is prepared by our obliging polyglot M. N. M.

Among the curiosities deserving the attention of the botanists and travelers are the colossal trees found in certain regions where people have respected the work of nature. Of these giants I will mention a cork oak (Fig. 1) and a chestnut (Fig. 2), the photographs of which were sent to me by my friend M. Duarte de Oliveira of Oporto.

It is a well-known fact that the coast of the Mediterranean is specially favorable to the growth of the cork oak (*Quercus Suber* L.). It requires a climate, which, if not hot, must be, at least, but little exposed to sudden changes of temperature and to rigorous cold.

When the tree is virginal, that is to say, has not yet been stripped of its bark, it can easily resist the inclement seasons; but when it has been denuded, the cold air and the excessive heat are equally prejudicial. In former times cork was used only for stoppers, but now it is used by builders, hatters and for machinery. From it are made cartes de visite, and of etiquette, carpets, life-preservers, buoys, etc., and the residue is ground by machinery for packing purposes. Algeria, like Tunis and Morocco, possesses wonderful forests of cork-oaks. They are likewise found in Catalonia and Andalusia.

France has forests of them in Provence, Gascony, the Landes and in Corsica. In Portugal there are very extensive forests in the provinces of Estremadura, Alemtejo and Algarva. The latter country exports to England a considerable quantity of cork, which is returned to Portugal in the form of stoppers for the famous wine of Oporto so esteemed by our neighbors. Cork is to-day a very important object of commerce in Portugal, and day by day its value increases. In 1867 it was 0.15 fr. the kilogr.; now it is 0.25 fr. In the provinces of Alemtejo and Algarva the acorns are gathered to be fed to the hogs, the superiority of which animal is attributed to this alimentation.

It is in Portugal that the colossal oak, the subject of this notice, is seen. It is on the property of M. le Vicomte de Roboredo, and is called in that country Herdade de Torre. It is 500 meters north of the chapel of St. Goncalo, upon the Palmella road, and 15 kilometers south of Lisbon. It measures nine meters (nearly 30 feet) in circumference at one meter from the ground; is 18 meters (nearly 60 feet) high, and its diameter at the top is 20 meters (about 66 feet).

The tree is regarded by the people of the vicinity with a kind of veneration, and they respect it as the Druids did their forests. It has still a great part of its first bark, which, at certain points, exceeds 20 centimeters (about seven inches) in thickness. The exterior of the trunk does not present any cavity. Sometimes the yearly yield is abundant and a product of 800 liters (about 22 bushels) of acorns is not unusual. M. Carlos Pimental, a learned Portuguese sylviculturist, thinks that this oak is the dean of the forest, and that it must be at least 400 years old. There are in the vicinity other oaks of from four to six meters in circumference.

The second colossal tree (Fig. 2) is the chestnut of Alcongoeta, which is upon the northern declivity of the Gardunha mountain, near Fundao, at an altitude of 800 meters (about 3600 feet). At that place are found trunks of con-

siderable diameter. Unfortunately, however, their branches have been cut off for use in building. The most colossal tree among them is on the road from Fundao to Alcongoeta. Since it was lopped about 20 enormous branches have grown out. The trunk is six meters (about 20 feet) in height and 14 meters (about 46 feet) in circumference at one meter from the ground. An opening on the north side, three meters in width, gives access to the interior of the trunk. When it had all its branches its diameter was 20 meters, and its shade covered a

The Citrus Fair at San Jose.

It was a happy arrangement to have the Central California Citrus Fair at San Jose open as it did on Tuesday evening of last week, with the hospitable welcome to the members of the American Horticultural Society briefly described in the *PRESS* for Jan. 28th.

We visited Horticultural hall on Thursday evening, after the fair was fully under way, and spent two or three pleasant but all too scanty hours in noting the varied and elegant

the valley advertised in charming fashion Hansen, Plath & Co.'s nursery at Ocean View.

Beyond, in the center of the hall, the gilded booth of the "Golden West." On a base of ivy-bedight rocks, two or three feet high, was a raised platform, about 20 feet square, inclosed with a light railing, supported on slender uprights from whose tops festoons of pepper-foliage were strung to a higher central pole. Railing and uprights were covered with magnolia leaves, fruit, ears of corn, pine cones, etc., all which—festoons included—were

brightly gilded, making a most beautiful reception bower for the visitors who were requested to register their names within and were presented with souvenirs in the shape of olive cuttings. A stuffed bear-cub stood on the apex of the structure, over the sign "Golden West." This pretty retreat was designed, as we understood, by Mrs. E. O. Smith, and constructed by Mrs. Georgiana West of Santa Cruz, Mrs. Smith, Mrs. Inscoe and other ladies of San Jose.

Over the stage at the further end of the hall was the legend, "Northern and Central California Winter Products," in letters fancifully formed of apples.

On the left of the central aisle near the door was the Oroville table, where handsome oranges and lemons were neatly displayed, the oranges predominating.

Then came the "Sacramento County Exhibit," comprising pyramids of oranges, some

Navels among them, plates of lemons and several varieties of apples, bundles of licorice root from I. Lea's Florin ranch, big ears of yellow corn "raised on the Cosumnes river, 20 miles southeast of Sacramento; planted in May; never had rain nor irrigation; would go about 75 bushels to the acre, there being about 150 acres"—so said Wm. H. Dixon. Here were English and black walnuts, chestnuts, ripe olives, raisins and prunes, giant squash and other vegetables.

On the same table, beyond the Sacramento exhibit, Geo. F. Hooper of Sonoma showed pickled olives and olive oil, a few oranges and lemons, and samples of pecans, black and English walnuts, Italian chestnuts and French prunes from his Sobre Vista ranch.

Juan Gallego, Mission San Jose, had a small collection of oranges, lemons, walnuts and almonds, Japanese persimmons and very fine-looking olive oil.

Jas. Shinn of Niles contributed a box of large Navel oranges, twigs of almonds and loquats in bloom, Persian walnuts, carob sprays and pods.

To the right of the entrance was a handsome stack of goods in glass and tin, put up by the San Jose Packing Co. Next a large table of oranges, contributed by I. Cunningham of Saratoga, J. W. Fuller and other growers. They were abundant in quantity, but evidently affected by recent frosts. Here, too, were lemons from Milpitas, walnuts from Evergreen, elegant prunes from Wm. Warren's evaporator, and fresh grapes, both white and purple, from H. C. Morrell's place in the Santa Cruz mountains.

Beyond shone Stanislaus' lavish output of golden fruit, mostly from the orchard of K. Vogt at Knight's Ferry, although Geo. A. Goodell of the same place had quite a number. In the middle of the table was a pyramid of oranges 16 shelves in height, capped with the contents of a small wire basket. This display from Vogt's orchard, embracing Navels, Malta Bloods, Mediterranean Sweets, and other oranges, clean, bright-hued and heavy with juice, was by far the finest citrus feature of the Fair—no other exhibit approached it.

Around the sides of the pavilion, beginning to the left of the entrance, came first the Angora Robe and Glove Company's showy and pleasing display. Then there were cocoons raised by Leon Straus and by Mrs. E. Glover of San Jose—the former arranged on strings and the latter as they were spun on twigs—with reeled silk from the State Board's filature, and specimens of

Fig. 1.—VIEW OF AN ANCIENT CORK-OAK IN PORTUGAL.

Fig. 2.—VIEW OF A GIANT CHESTNUT IN PORTUGAL.

surface of 150 square meters, or about 1600 square feet of area.

A SAN JOSE correspondent writes us Jan. 27th: "Please send me the seeds due me according to the following numbers," etc., but omits to sign his letter. As we have several subscribers at San Jose to whom seeds are due, we are obliged to wait until our unknown friend writes again and gives his name.

A DAYTON (NEV.) farmer shipped two car-loads of potatoes to Los Angeles last week.

exhibits. The interior of the pavilion was tastefully festooned with greenery, and the walls were liberally adorned with ivy. Directly in front of the entering visitor, and almost the first thing to catch his eye, stood a great crimson arch, framed in closely-set oranges, with the greeting "Welcome Horticulturists" in letters wrought of leaves and berries. Around stood olive trees in bearing, the finest being from the "Quito Olive Farm," with orange, loquat, magnolia and native forest-trees in boxes of earth. A dozen little pots of lovely fragrant lilies of

manufactured silk from the establishment of H. X. Van de Castele.

A. R. Woodhams and other Santa Clara growers united in making a display of grains, both in sheaf and thrashed, and in long array beneath the gallery stood the potables of the Paul O. Burns Wine Company.

Under the placard "From Oregon" lay a lot of superb apples, some of which at least came from Dr. Plummer's orchard at Portland, with evaporated prunes in cubical canisters, put up by Mark Levy of Portland, mountain honey from D. Kauffman, Needy, and in boxes attractively packed by Chauncey Ball, Mt. Tabor, noble specimens of evaporated Bradshaw plums, Coe's Golden Drop, Italian prunes, Lawton blackberries, and Lewelling and Royal Ann cherries.

The Santa Clara table bore heaps and plates of Easter Beurre, Winter Nelis, Doyenne d'Alencon and Lawrence pears, all from David Parker, San Jose; other big pears, unticketed; singularly fine Newtown pippins, by L. D. Woodruff, Willows district, and W. Oliver, who had besides ruddy Spitzenbergs and Nickajacks. Fine White Winter Pearmain, Nickajacks and Newtown pippins were also shown by O. J. Albee of Lawrence Station. Easter Beurre pears and several varieties of apples were exhibited by E. M. Hines; fine Japanese persimmons by I. Cunningham of Saratoga. Mrs. J. M. Britton, beside big winter pears, showed a bunch of last year's quinces, which were deliciously fragrant. Passing a double-faced sign which stood like a long tent across this table, we came upon a charming surprise—a most elegant display of apples, mainly Newtown pippins, pears, Winter Nelis and other varieties, Japanese persimmons and grapes, contributed by D. C. Feely, C. T. Settle, J. A. Gist, E. M. Thomas and others, which were not only fine in themselves, but also admirably disposed. This end of the Santa Clara table was one of the choicest spots in the pavilion, and deserves more notice than we are now able to give to it.

On the opposite side of the hall, beneath the gallery, were choice dried fruits in variety, and jellies in glass attractively set on a little winding stairway by Mrs. N. A. Sanders. Then came a collection of products of Gilroy and vicinity, "as packed for shipment and not for display," among which the ordinary boxes of extraordinary dried apricots, prunes and plums in great variety, Bartlett pears and peaches, by P. H. Cordes, were particularly noteworthy; also green apples and grapes, as well as evaporated fruits, by several other parties.

One of the most artistic and brilliant single exhibits in the hall was that of the dried and evaporated fruit, in show cases and glass jars, surmounted by a row of variously tinted jellies, made by Geo. A. Fleming & Co. Alongside of these were arranged numerous small boxes of dried and jars of canned fruit by Mrs. S. T. Ingalls of Willow Glen, F. A. Werts of San Jose, O. J. Albee of Lawrence Station and many others.

The Japanese Tree Importing Co. had a considerable exhibition of citrus stock, including dwarf orange trees hung with fruit.

In an out-of-the-way corner, easily overlooked, were 18 boxes of fresh Late Red Sweet St. Martin prunes, picked about Christmas, from the Deer Ridge Farm of our friend S. H. Herring, near the summit of the Santa Cruz mountains, accompanied by Bell Flower, Newtown pippins and White Winter Pearmain apples, tinged with the morning blush of the hilltops.

Lastly, close by the door, to the right of the entrance, was a stupendous pile of squashes (160 to 170 lbs. apiece) and huge beets, chinked with "spuds," carrots, and other vegetables to the height of a dozen feet. This was a dazer to the sight-seers from beyond the Rockies.

The briefness of our visit to the pavilion forbade our going into details of exhibits and exhibitors as largely as we felt inclined. We would have liked more than a few passing glances at the cabinet of shells, native woods and minerals, loaned by the Normal School and private individuals; and the table of curios, Fiji weapons, etc., looked very interesting, if one had time to scrutinize.

The courteous reception given us by Pres. Jones, Sec'y Dunn and ladies of the committee, and the friendly attentions of D. C. Feely, enhanced the pleasure with which we hurriedly viewed this splendid demonstration of what be grown in Central California.

The American Horticulturists.

Annual Address by President Earle.

Our correspondence last week brought the meeting of the American Horticultural Society at San Jose to the close of the first day's session. Though we intend to refer more at length in the future to some of the events of the first, we proceed now with the first event on the morning of the second day, and this was the annual address by President Parker Earle of Cobden, Illinois. It is one of the most notable papers ever presented at a horticultural gathering, whether it be judged by its breadth of thought or style of expression, or by its wealth of practical suggestions for the growth of the horticultural interests of the country. For this reason we desire to place it upon record in our columns in full, and would advise its preservation for future reference:

President Earle's Address.

It was nearly 50 years ago that I had my first dream of a horticultural paradise as I read, in the good old Bible story, the report of that exploring committee which Moses sent out to search the land of Canaan, and spy out its resources and "to bring back the fruit of the land." Now, Moses being the wisest of his race, and the greatest leader of men, did not ask his committee to bring back samples of the grain, the merino wool, the short staple cotton, or the best breeds of live-stock, Shorthorns or Jerseys, but simply to bring back the fruit of the land. For Moses seemed to know that the country which could grow the best fruits was the very best country for the chosen people of the Lord to emigrate to. And when this first horticultural deputation returned laden with the figs, the pomegranates, and the great cluster of grapes from the banks of the brook of Eschol, that the two men bore on a staff between them—and I know that that cluster of grapes reached from the staff on the men's shoulders nearly to the ground, for my mother's great Bible pictured it that way—then Moses and Aaron and Caleb and the few wise men of Israel wanted to go up and possess the land notwithstanding the sons of Anak dwelt there and the other tribes of the great stature. But the mass of the people of Israel were ignorant and did not appreciate this horticultural exhibition and the promise of the better life that was possible in a fruit-growing country, but they grumbled and rebelled, and they all suffered the righteous penalty for their neglect of such a noble opportunity. But I well remember the longing with which I considered that enormous bunch of grapes and the impulse I had to go and find a country where they grow grapes in big clusters. Now I think that there are many thousands of men and women who were little boys and girls a little while back like myself—only a half-century or so—who have been carrying visions of the great grapes of Eschol in their brains ever since those early Bible readings. And we have all been wanting to come to the land of Canaan—ever since we found out where it was—that we might see its fabulous fruits hanging in the golden sunshine and taste the perfumed air of its happy valleys while we strolled along the banks of the wonderful brook of Eschol, and, perchance, find opportunity to lift some of those big grape clusters that are not wholly of the imagination.

The Earthly Paradise.

And so a few of us horticultural dreamers have come over the great fertile plains and across the thirty deserts and have climbed the gigantic walls which fortify you against invasion, to test for ourselves the climate and the fruits of this earthly paradise. We think we like the land and the fruits thereof and shall make a good report of them to all the chosen people of Israel.

My friends of the land of Canaan, we are glad that we came. We are glad to be with you and to see the welcome which shines in all your faces. We come as fruit-growers, and gardeners, and forest planters, and builders of homes, to greet our brethren in a land whose conditions of culture we have long envied. We have come to study these new conditions for ourselves; to gain new ideas which we may apply where our surroundings are less favorable; to compare views as to many questions regarding which we have a common interest; and to drink with you at the fountains of enthusiasm which have inspired you to so many brilliant enterprises all along this golden coast.

Horticulture.

Horticulture is a broad term. It covers almost everything that makes our country beautiful and sweet to live in. It embraces the operations of the fruit-grower, the skillful manipulator of the garden, the arts of the landscape builder, and all that relates to the planting of forests in a land that perishes without them. Every horticulturist should be a missionary. He should be an educator of the public taste as regards trees and flowers and lawn plantings and fruit gardens. He should be an enthusiast for the beauty of his town. He should stimulate the making of parks; the adorning of cemeteries and schoolhouse yards; the planting of groups of roadside trees. The true horticulturist will make his mark in the community in which he lives. I think that one of the great needs of the time is a generous enthusiasm for horticultural improvement.

We want tree-planting associations in every town in the land. Every man should not only make his own home beautiful, but should find some stimulus for his neighbor whose grounds are lean and bare.

The work that has been done by horticultural agencies in redeeming this great country, its towns and its farms, from the nakedness of forty years ago is something to rejoice in. The land is blossoming with beauty in thousands of parks and lawns and cottage door-yards; but many leagues of barrenness still stretch along almost all of our railways and highways—a vast field for the preacher of this new gospel of beauty and home comfort; and until every farmhouse and cottage in all the length and breadth of this magnificent country shall be blessed by sheltering trees and blooming bed or climbing vine, or some sweet spot of green turf which shows the outbursting longing of the immortal spirit for beauty; until every American farm shall have its garden for vegetables and fruits, and every village lot its fruit-bearing tree or vine, will the duty of the horticulturist as a teacher and a missionary be partly undone.

Narrow Discussions.

I think it has often been a fault of our horticultural societies that their range of discussion has been too narrow. They have been given too much to the special interests which affected the business of the majority of members and too little to those relating to the public welfare. In fact we are often simply pomological societies or nurserymen's clubs. We come together with our great problems of culture, of insect management, of the cures for mildews and blights, and our whole business success is often involved in finding answers to these vexing questions, and we are prone to neglect the sweet influences which make for beauty alone, and the refinement of the home.

I hope for an extension of all horticultural influences, for more societies, for more horticultural columns in the press, for social rural clubs and tree-planting associations, because I believe that the great horticultural movement of this age is doing far more for the higher civilization than all the factories and forges and trade guilds in the land. Let us labor generously toward that millennial day when every cottage shall shine with some of the beauty and every laborer's table carry some of the fruits of our art.

Fruit-Growing.

But while I would exhort everybody to grow trees and vines and plants for beauty and fruits for home supply, I do not by any means seek to influence any large increase of fruit-growing for commercial purposes, for I believe that fruit-growing as a business is increasing quite as fast as our facilities for distribution, and rather more rapidly than profitable to the growers. It appears to me that there is no subject of more immediate practicable interest to the commercial fruit-grower than this one of the means for a wide distribution. You are all well aware that our most important and stable fruits often sell at ruinous prices in our leading markets not only on particular days, but for long periods. The shippers of pears from California, of peaches from Delaware, of apples from Michigan, of strawberries from Illinois, and of oranges from Florida, can all testify to this. Yet I do not think too many of either of these fruits of good quality have ever been grown in any of these States, nor enough for the markets that were within practical reach of them, or the mouths that were hungry for them. The fault is with our transportation and our lack of means for reaching an elaborate system of distribution. I think I have known good oranges to sell at not much over one cent apiece at wholesale in Chicago, the market being overloaded, when there were a thousand towns within a day's ride of that city in which you could not buy an orange for less than five cents, and not many at that, and millions of mouths within the same radius which did not taste an orange in the whole winter. Yet the fruit distribution from Chicago is more closely worked than from any other American city.

Distant Markets.

There have been many winters in which the price of winter apples has paid the producer very lean profits, and paid the larger dealers more losses than gains, while at that same time an apple was a rarity, if not an absolute stranger, in half the farmers' homes and laborers' cottages in America. The delicious apricots of your Pacific Coast are often left to decay in the luxuriant orchards that bear them for want of a market, while not one-tenth of the people of the United States ever tasted an apricot in their lives. Yet, by using the best modern means of transportation, your most delicate varieties, picked ripe from the trees and full of excellence—and not as they are now, mostly for long shipment, too green to be of high quality—can be laid down in all of our great Eastern markets in very perfect condition.

The same difficulty exists with most of our fruits. So many of our available markets are not reached, and the fruit-grower suffers from an apparent over-production, when half the people go hungry for fruits which they need and cannot obtain. This condition of trade is not found in the case of staple goods of other kinds and manufactured articles. For all these goods are handled according to a more thorough business system. The more perishable nature of our fruits must of necessity modify and limit the same system of thorough commercial canvassing by which more durable products are placed constantly in every town and hamlet in

the country; but I feel sure that regular fruit markets can be built up in thousands of towns that now get no supplies except in the most irregular way, by an energetic system of canvassing. This subject demands serious attention of our growers and dealers.

Tricks of Trade.

This leads me to notice one grave reason why the building up of a regular fruit trade is more difficult than it should be. This reason is the irregular quality and serious imperfections of a majority of the fruits sent to market. Both the dealers and consumers soon get disgusted when they find half the peaches in a basket, or half the apples in a barrel, wormy; and in the case of the peaches, find all of them green, hard and unedible below the top layer; and even the top course seeming ripe and well-colored only when seen through the delusive taretan which is bound tight over them. A basket of green peaches with a goodly supply of wormy, and with sizable specimens placed on top and then all covered tightly and beyond examination by a colored netting, which makes them all appear blushing with ripeness, is a cheat and a fraud so contemptible and disgusting that it should consign the perpetrator of such a swindle to the tender couch of the county jail. It is only equaled by a barrel of apples that is faced up handsomely at both ends and is filled with scabby and wormy scrubs through the middle.

I regret to say that such baskets of peaches and such barrels of apples are forced off upon an innocent buying public by hundreds of thousands every year. I think and hope that the most abused fruit market in the world in this respect is that best of all fruit markets of the world, the city of Chicago. I will venture the guess here of all the millions of people that have this year bought peaches coming through the Chicago market, not one in four has had occasion to bless the grower of the fruit, and in most cases has been obfuscated if not cured. I dwell particularly upon this kind of fruit and this kind of package because it is the most notable kind of example of a widespread attempt to deceive the buyer to be found in all our fruit-marketing history. It will not be a good excuse to say that red taretan is necessary to hold the fruit in place in the baskets because white netting with a very open mesh will serve that purpose equally well and will not obscure the real color. And no well-colored peach can be made more beautiful by any kind of covering. Is it any wonder that respectable grocers dislike to trade in our fresh fruits, and that the people get sick and weary of buying them, when the opening of every new package is the unveiling of a new deception?

An Earnest Protest.

I am a fruit-grower, a fruit-packer and a fruit-buyer, and I stand here in all three capacities to protest in all the earnestness of my soul against all kinds of deception in fruit-packing. It is impolitic in the highest degree and it is unworthy of all decent men. A large dealer not long since said to me that the whole business of fruit-packing, East and West, North and South, with now and then an exception, is worm-eaten and rotten with dishonesty. My friends, I hope his denunciation was unjust, and I believe it is far too sweeping, but severe criticism is called for.

Let us away with all stuffings and facings, with all deceptive coverings, with all under-size packages, with the packing of all green, half-grown, gnarly and worm-eaten fruit in any kind of packages. If we must pack it, put it on top where it will tell its own story. Let us do this, and we shall find it will pay in money, pay in the plaudits we shall win from all men and in our own self-respect and integrity of soul. I should say here, and I cheerfully do say, that I believe that the Californian fruit-packers are generally far less open to criticism in this matter of straight packing than are the majority of Eastern growers. You cannot afford to pay freight on trash 2000 or 3000 miles. Yet there is some room for improvement in the selection and grading of fruits from this pre-eminent horticultural State. It cannot be too often or too earnestly impressed upon fruitmen everywhere that to secure the best results the most scrupulous pains must be taken not only in growing fruit properly, but in careful handling, thorough grading and unflinching honesty in packing. The man with a high standard, well worked up to, is the man who will come out best in the race.

Fruit Production.

The business of fruit production is growing to be so vast a one in many sections of this country that the time has fully come for giving it more thorough organization than it has had before. There are many considerable sections of the country where it is already the overshadowing industrial interest, and it seems to me probable that in your great and glorious State of California it will soon overtop every other producing interest. For you, as for Florida and Delaware and large sections of New York, Michigan, Illinois, Missouri, Georgia, Arkansas and other States, these questions of transportation, distribution, a high standard of packing, and a high standard of quality of fruits, are subjects of overwhelming business importance. The United States is the great fruit country of the world. There is no limit to the possibility of our fruit production, when insect and fungoid troubles are handled by energy guided by science. There will be no limit to it, except that of pecuniary profit. We can furnish the nations of the Old World

with fruit, as we do with bread and meat and cotton. There is no reason why the peaches of California and Mississippi and Michigan and Georgia should not be laid down in the European markets. I speak temperately, and my conclusions are based upon my own experience as a shipper of fruit. The facilities for producing this do not at present exist, but they are known and within the reach of a properly organized effort. Hence I see a future for the horticultural interest of this country that is glorious and vast as the blue canopy of a summer sky. To reach any grand and rewarding results every step must be taken with care and thoroughness.

Microscopic Fungi.

Among the many obstacles to success in fruit-growing, the most destructive and most difficult to overcome are the myriad tribes of microscopic fungi which assail plant and tree and vine and fruit. There is no branch of our business which does not suffer serious annual losses from these obscure enemies, and no climate or section so fortunate as to long escape their attacks. The discouraged fruit-grower who has lost his pear trees by the omnipresent blight; his peach trees by the insidious yellows; his grapevines by the mildew, whose white shroud extinguishes all hope for fruit; his apple crop having become scabby and his strawberry plants have burned by the rust as by a consuming fire, turns his face away from the old homestead upon which all these horticultural curses have fallen, and travels to some new fair land, where smiling skies and sweet winds promise him immunity from all these evils. For a few years these promises are kept and his virgin crops are fair as the golden apples of Hesperides. But his obscure enemies follow him with the certainty of an avenging fate, and they will follow him the wide world over, even within the gates of Eden itself, if he does not wage an exterminating warfare upon them.

You cannot probably name a fruit that we grow which is not preyed upon by four or five or more of the lilliputian foes. The number that affect the interests of horticulture cannot be stated, but it is certainly counted by hundreds, a single one of which, like the scab on pears and apples, costs the American fruit-growers millions of dollars annually. I think it safe to say that the quantity of fruits entirely destroyed or so seriously defaced as to lose their market value in this country by these low forms of vegetable life is far greater than all that escapes their attack. This difficulty grows greater year by year, in all fruit-growing neighborhoods. That this is a situation which demands the serious attention of all horticultural people, I need not suggest.

Lack of Knowledge.

Our definite scientific knowledge of the nature this vast underworld of microscopic life which pervades and attacks and overwhelms all the higher and nobler forms of vegetable organism, is as yet very incomplete and is all very modern. It is the most obscure domain of physical research. The botanists who have thoroughly studied the fungology in this country and done something to master its elusive problems, can be almost numbered on the fingers of the two hands. We have thousands of scientific men and hundreds of specialists who are making plain paths through the intricacies of scientific obscurity, but this great and universal realm of the infinite little things which attack all superior creations and assail the integrity of every structure which enters into our civilization has received little investigation.

What we need is more workers in this field. We must have more knowledge, and that we may have investigation, we must provide in some definite way for the support of it. Is there any more important kind of work for our Agricultural College and for our State experimental stations? I urge this matter upon your thoughtful consideration.

A Noble Occupation.

The business of fruit-growing is one of the noblest occupations of the world, if carried on with a faithful spirit. The results of our work contribute directly and powerfully to the betterment of mankind. We minister to the health and position and moral stature of the community. I would have every horticulturist regard his vocation with a becoming pride. We work with the great force of nature. We form alliances with the sunshine and the rain, and the secret affinities of the soil. We manipulate the occult energies of chemistry. We join hands with Providence to produce our harvests. The American fruit-grower, like the American farmer, should hold his head proudly but reverently as the best man of the world. As I look at it there is no man on earth that outranks the well-equipped and competent American farmer and American fruit-farmer. But equipment of knowledge and intellectual competency mean a great deal.

Technical Training.

The successful and ideal farmer must be a man of culture and of science, must have a wide knowledge of the world, its great industries, its history, its commercial needs. He must be a power in the community and in the State. Are we taking the necessary educational steps to produce such farmers? There is no question which a convention of horticulturists representing every section of our country can more appropriately consider than that of the facilities we are providing for the education of the American farmer as he should be. We have the foundation for the best educational system

of any nation in the world, and we have a more earnest general desire to find the best kind of education. Our farmers and our agricultural writers are more widely imbued with this desire than this same class in any other country.

Yet I fear that the present tendency is to place our standard too low. I am greatly in sympathy with our agricultural colleges and with the industrial departments of our universities, but I cannot join in the general criticism of those institutions which attempt to give a generous literary culture as well as a good technical training. In fact, I feel like protesting earnestly against the general trend of the discussion in the agricultural press toward a purely technical, manual, industrial education.

The American farmer should be the most liberally educated and broadly cultured man in the American state. The farmers, as a class, far outnumber the class of manufacturers, or of merchants, or of professional men, or of all these classes together, and yet they have less influence in molding the industrial and political policies that govern us than either one of these other classes. Why is this except that the farmer has learned how to plow, and to mow, and dig ditches better than he has learned how to think? His education has been so generally confined to those rudiments necessary to give him practical success as a farmer in a narrow sphere. And here come the doctrinaires of the new industrial education and propose the same policy for our agricultural colleges only in a larger degree.

This widespread sentiment is, it seems to me, one of the saddest mistakes of the age. It proposes an education as deficient in general mental culture as the old classical schools are in scientific and technical training. The true education that will make broad-minded, forceful men of our bright boys—must embrace all that is best and all that is possible of both the old and the new systems. Let us, by all means, shed all the light of science on the difficult problem of agriculture—let us teach engineering and drainage, and stock management and veterinary practice; but let us not try to eliminate the Latin from the nomenclature of science, or go into editorial spasms at the sight of a pile of Greek roots.

Credo.

I believe that the farmer will never take his proper place as a director in great affairs of economy and statesmanship until he is educated as the lawyer and minister, the physician, manufacturer, merchant and statesman are educated; until he becomes a student, if not a master, in all lines of classical, literary, esthetic and scientific culture, as have the controlling men who gauge our politics and direct our affairs. The plea so earnestly and frequently made against classical and literary teaching in our agricultural colleges is a plea for mental narrowness and intellectual incapacity. The technically educated farmer may guide the plow to turn the truest furrow, but he may not be able to do much good in holding the helm of State—facility in forging plowshares, in turning the parts of an engine, in grafting and training fruit trees, in the economical care of stock and the treatment of sick animals—all these accomplishments so essential to the artisan and the farmers as such—nevertheless fail to qualify him for the higher social duties and the solemn responsibility of the citizen who should be foremost of men in controlling the great policies of the commonwealth. In fact, a well-trained faculty for tile drainage is not a liberal education. Cincinnatus was called from the plow to the chieftaincy of a people, not because his hand could hold the plow well, but because his educated brain could master the great problems of the State. The men who have made farming and horticulture a noble occupation, who have given dignity to labor and who have voiced the needs of agriculture and the longings of industry, are not the men who have had simply a dextrous manual skill, but they are men whose minds have had that training and culture in all the learning of the ages, as well as the science of the day, which have given them a masterful position among the best men of the time.

Forestry.

I should be recreant to the duty of this hour if I did not call your attention once more, as I have often done before, to the commanding question of forestry. To one who has watched the deforesting work of one generation of men in all the woodland portions of this country and noted the gradual change of climate from one of mild conditions to one of extremes as the great conserve forests have disappeared, it would seem that no appeal should be necessary to arouse every class of thinking men to take some immediate action to arrest this threatening waste and to rebuild these faithful guardians of climate and soil. There is nothing better established in physical science than that a good proportion of forest is necessary to maintain equability of climate. It is conceded by scientific men and sustained by practical experience in many countries that as much as one-fifth or one-fourth of the land should be in forests to secure the greatest aggregate of agricultural crops. I cannot stop to discuss the philosophy of this statement, but the fact will scarcely be questioned. There are several of our States that have passed the limit of safety in timber waste. But the work of woodland destruction goes on with remorseless energy. I can name you States where nearly or quite one-half of the total area of land has been laid bare of forest growth in about a quarter of a century. Some of them have not five per cent of their valuable timber left. And

so far neither the nation nor any State has made any serious attempt to stop the waste or to promote forest culture. The Governments of other countries show much more wisdom than we. The European Governments live in the immediate presence of the ruin and national decay that has come to once fertile and populous lands. The institutions of civilization have never declined in a country that has maintained its forests—I think I can safely say that it has never been maintained in any country that has wasted its woodland heritage without repair. Hence these enlightened Governments have been long taking the most vigorous measures to conserve and to restore the great protective agency of the green and glorious woods.

It is the clear duty of our General Government to absolutely prohibit the further slaughter of the timber on its domain and to withdraw all forest lands from sale except to meet the pressing needs of settlers. And why should not this Government take similar measures to those taken in the Old World to establish forests on treeless public lands—and cannot State Governments encourage timber planting by a judicious system of bounties and arrest its waste by a very heavy tax on timber cutting? By some such plan or by some plan the States should take prompt action for the building of forestry, and no graver responsibility rests upon our Legislature than this.

Those Gone Before.

There is one sad duty remaining to me on this occasion—to announce the names of two friends who have passed onward beyond the reach of mortal vision. This society had no more zealous member, and horticulture no warmer friend, than O. C. Kendall of Cleveland, Ohio, who died during the last autumn. Many of our members mourn his loss as that of a brother. Mr. Kendall was one of our largest and most useful fruit merchants and was one of the class whose faithfulness and integrity all men praised. He was the affectionate head of a devoted family; he was active in every good work for helping his fellow men; he was in all places a gentleman, and in all the relations of life the soul of honor. In the death of such men in the maturity of their powers society suffers a great loss. We who knew him well will never know a better man. The death of Col. Marshall P. Wilder, the venerable president of the American Pomological Society, although not unexpected—for he was 88 years old—cast a certain sorrow over the entire horticultural world. For half a century he had been at the head of American pomology. His fame was world-wide. Boston has been the home of many great men, but she had few citizens of such stately presence as our noble friend. President Wilder had a kingly aspect and bearing, but he had a queenly heart—as gentle and true as your own mother's. None knew him but to admire him and to love him. He lived out a great and well-rounded life here, and he has gone forward to those happy uplands where frosts neither rot nor blights destroy the immortal fruitage on the heavenly hills.

"A FRIEND OF MINE."

The Law Which Encircles the Entire Globe.

Travelers who have gone "far countries for to see" say that they find human nature pretty much the same all the world over.

They find wide variance in color of skin, in physical contour, in mental characteristics, but in the essential elements that control social conduct, the human family is a brotherhood.

The law, unwritten, found in no statute-book, enforced by no court decrees, but having an influence circumscribed only by the limits of earthly space, is the law of kindness.

Among peoples where cruelty to human kind is almost a fixed habit, who are relentless foes, and as friends scarcely less to be dreaded, whose savage natures revel in fiendish atrocities, there yet lingers the spark of divinity which lifts man above the beasts.

Sorrow melts the human heart wherever found, and sympathy mingles its tears with grief all the world over. Where pity does not dwell, there lives no thing of human kind. It is "the touch of nature that makes the whole world kin."

What a terrible world this would be to live in were it not for the sympathy and loving kindness shown us when sorrow comes, for it is decreed that in all lives "some days must be dark and dreary."

The 10,000 and more voluntary testimonials the proprietors of Warner's safe cure have received in regard to the efficacy of that remedy, reveal "this touch of nature" in a peculiar manner. The great majority of them acknowledge that it was through some kind friend who, in pity for their suffering, had made known to them the wonderful merits of this great remedy.

The testimonial of Capt. G. B. Wiltbank of Philadelphia is a fair sample. He was put ashore from his ship to die of a fever resulting from kidney and liver trouble, and as physicians could not help him there seemed no hope for him. But he says: "A friend of mine, who happened into port, came to see me and urged me to begin the use of Warner's safe cure." He began to use it as his friend advised and was cured in a very short time.

How many men there are to-day in the world, rounding out lives of usefulness, making the world happier and better, who would have long since passed to the other shore had it not been for the loving kindness of friends, shown in this practical way, as these testimonials from all quarters of the globe afford ample evidence.

AGRICULTURAL DIRECTORS.—The Governor has appointed Agricultural Directors as follows: J. W. Wilson of Sacramento, and Charles F. Reed of Yolo, District 13; James B. Iverson and Jesse D. Carr, District 7.

FRUIT SHIPPING.

Annual Meeting of California Fruit Union.

[Official report prepared for the PACIFIC RURAL PRESS.]

The Third Annual Meeting of the California Fruit Union assembled at 1 P. M., Jan. 18, 1888, in Irving hall, Post street, S. F.

Pres. Hatch called the meeting to order and appointed B. C. Brown of Glenwood, assistant secretary.

The minutes of the last annual meeting were read and approved, whereupon the secretary read the annual report of the past year. [This report was printed in last week's RURAL PRESS.]

It was also stated by the secretary during the reading, that at a session of the Board of Trustees the previous day, a dividend of six per cent had been declared on all paid-up stock, a reserve fund of 2 per cent on the net profits had been set aside, and a division of about \$4500 had been ordered to be made to the actual shippers through the Union on a basis of six-tenths of one per cent on the gross sales. Both of the above disbursements to be payable at the office of the Union, 507 Montgomery street, after Feb. 1, 1888.

On motion of A. Block of Santa Clara county, the report was received and ordered placed on file.

R. J. Trumbull of San Francisco moved that the report be referred to a special committee of three to be appointed by the chair, with instructions to report tomorrow on the several suggestions and recommendations embodied in said report. Motion being seconded, was put and carried, and the president appointed as such committee: Eugene Gregory of Sacramento, A. P. Hall of Peorin, and G. M. Gray of Chico.

B. C. Brown of Santa Cruz county moved the appointment of a committee of three on order of business, with instructions to report forthwith. The motion having prevailed, the Chair appointed B. C. Brown of Santa Cruz, P. E. Platt of Sacramento, and R. B. Blowers of Yolo county.

W. C. Blackwood of Alameda county moved that a committee of three be appointed by the Chair to meet the committee appointed at the Santa Rosa convention and unite with a like committee from the State Board of Trade who shall confer with the railroad authorities with regard to the freight rates which shall be made this year, and after such meeting report the result to Board of Trustees of the California Fruit Union.

The motion was seconded by J. W. Cassidy of Sonoma county, and on being put by the Chair was carried unanimously.

B. C. Brown, chairman, reported for the committee on Order of Business that they would suggest the following program:

1st. Reports of committees.

2d. Election of officers.

3d. General discussion of packing for shipment, shipping facilities and any other matters pertaining to the general good of the Union.

The president announced the appointment of the following gentlemen to form the committee to meet and act with the other two committees as before stated: R. B. Blowers of Woodland, J. Z. Anderson of San Jose, P. E. Platt of Sacramento.

As the hall was very cold, on motion the meeting adjourned to meet to-morrow at 10 A. M., at the State Board of Horticulture rooms, 220 Sutter street, the use of the same having been kindly offered the Union.

Second Day.

The stockholders met pursuant to adjournment, President Hatch in the chair. The minutes of the preceding day were read and approved.

A. P. Hall, chairman of the special committee to whom was referred the annual report of the secretary, made a verbal report of progress. He stated that inasmuch as the majority of the recommendations in the report were with regard to freight matters and that a special committee had been appointed on this very point, they found little if anything to recommend. The report was, on motion, received and the committee discharged.

Election of officers being in order, R. B. Blowers of Yolo county moved the appointment by the chair of a committee of five to make nominations for the Board of Trustees for the ensuing year. Carried.

The president appointed as such committee

R. B. Blowers, Woodland, G. M. Gray, Chico, P. H. Buck, Vacaville, J. C. Boggs, Newcastle, H. C. Morrell, Wrights.

The committee retired and in the interim Mr. Frank L. Ripley of the firm of Blake & Ripley of Boston, who had acted as agents of the Union in that city the past season, addressed the meeting on the Eastern market outlook and the result of the efforts of last season. Mr. Ripley answered clearly and concisely all questions put to him and showed his thorough knowledge of the needs and possibilities of the Boston market at least. He said that up to the 15th of August they could handle five cars per day of our fruits with profit to the producer. That after that date the shipments should be largely cut off, and by no means to send after that our pears, but that their market would take our fine, large plums at any time at fancy figures, and that limited quantities of our best peaches could continue to be sent them. That Tokay grapes in carload lots would sell well at any time, provided, of course, that they were in good condition on arrival. But that Muscats were a failure and that he would not advise putting more than 50 crates in a carload. Answering the question as to whether black grapes would do well, he replied that as they had never had but few, and they were long scraggly bunches with a great many berries off, he could not say positively, but his opinion was that they could safely be put in about the same proportion as Muscats, and if they were large and firm he did not doubt they would sell well, his main point being at all times to send nothing but our finest fruit and to take unusual pains in the packing.

Mr. Markley of Sonoma county moved the adoption of the following:

Resolved, That the Board of Trustees be requested to make arrangements with their Eastern agents to handle dried fruits and nuts.

Mr. Hibberd moved an amendment to include all fruit products.

Mr. Markley accepted the amendment and the motion was carried unanimously.

W. C. Blackwood of Alameda county moved the adoption of the following:

Resolved, That it is the sense of this meeting that the Board of Trustees should adopt the auction plan of disposing of our fruits in Chicago.

Carried unanimously.

John Markley of Sonoma county moved the adoption of the following:

Resolved, That it is the sense of the meeting that the Board of Trustees employ a general agent in the East to look after the general interests of the Union.

The motion received a second and was carried.

L. W. Buck of Solano county moved a vote of thanks be tendered the State Board of Horticulture for so kindly allowing the Union the use of their rooms. Carried unanimously.

John Markley moved a vote of thanks be tendered Mr. Ripley for protracting his stay here and giving us the great amount of valuable information.

The motion having received seconds from all sides was unanimously carried.

No further business appearing, the meeting adjourned sine die.

H. A. FAIRBANK,
Secretary.

KILLING BEEVES WITHOUT CRUELTY.—The U.

Humboldt County Lumber.

Humboldt, the most northerly, save Del Norte, of California's coast counties, contains nearly 3600 square miles, or about 2,300,000 acres. This area includes somewhat over 920,000 acres of timber land, which come under the head of redwood, pine, fir, spruce and cedar. Of this, about one-half is redwood land proper, the rest divided between the last varieties named, but chiefly pine and spruce. Two hundred thousand acres are of madrone, black oak, white oak, live oak and laurel, the madrone and black oak predominating.

The timber runs through the county from north to south in an irregular belt, 10 to 15 miles in width, leaving an open margin along the coast of from two to ten miles, though at some points it reaches quite down to the ocean, while to the eastward lies what is known as the Bald Hill country—an open, mountainous region, well adapted for stock-raising. In the *Eureka Mail*, a few months since, John W. Cooper says:

"The forest of the middle division of the county is chiefly composed of the redwood, a timber becoming widely known for the enormous size of the trees, and the excellent quality of its wood for house-building, fences, railroad ties, shingles, doors, windows and furniture. The manufacture of this timber ready for its various uses and its shipment to market is the chief and ruling industry of the county—over 100,000,000 feet of lumber being now shipped from it in a single season. Thousands of men are employed in its various processes, and millions of capital are invested in timber lands, mills, railroads and vessels, in connection with this business. The skill and intelligence required in felling this timber—often on rough, broken, and steep places—so as to break it as little as possible, in getting the logs out of such rough places, and cutting them up to the best advantage in the mills, together with the great danger to life attending the handling of such timber (often used up to 10 and 12 feet in diameter) through these processes, commands the highest wages paid for labor in any portion of the United States.

"There are also large quantities of timber in this forest belt, called Oregon pine. It resembles the Virginia pine, and is most valuable for frames and floors of buildings, bridges, ship-building, and masts, being very tough, strong, and durable. It frequently grows to 8 and 10 feet in diameter, and nearly 300 feet high, and the finest vessels in our lumber-carrying trade are built of this timber on Humboldt bay, near the city of Eureka, the capital and chief seaport town of the county. Fine spruce and white fir, excellent for coopering and other purposes, are also found in great abundance in this belt, and also several kinds of valuable hard woods, particularly laurel or pepperwood, which makes a most beautiful light-colored furniture. In the eastern and highest portion of this timber belt are large quantities of tanbark oak, and quite a business is growing up in preparing and shipping it to market."

In the pamphlet carefully prepared last summer under joint direction of the County Commissioners to the State and Mechanics' Fairs, and of the Eureka Chamber of Commerce, it is stated that the redwood will cut on an average 100,000 feet to the acre. The pine and spruce will average from 50,000 to 60,000 feet to the acre. This shows the county's reserve of building timber to aggregate 73,296,000,000—greater than the whole timber reserve of Michigan, Minnesota and Wisconsin put together. Besides which, the 200,000 acres of madrone, oak and laurel afford an almost exhaustless supply of wood unexcelled for furniture and woodenware manufacture.

The total output of lumber products from 21 out of 24 mills in the county for the year ending July 31, 1887, according to figures furnished the Board of Commissioners above-mentioned, embraced 104,519,726 feet of lumber, 203,700,985 M. shingles, 17,240,523 M. shakes, 82,153 M. posts, 234,726 M. pickets, besides 927 cords of stove bolts, 39,550 hoop-poles, 35,520 ties, and 8000 fruit-boxes.

Our illustration (for the use of which we are indebted to the courtesy of Mr. Fred W. Bell, Secretary of the Commission) represents a trainload of 16 logs floating 88,568 feet, from the woods of John Vance on Mad river—a stream of over 100 miles in length, which crosses the county in a northwesterly course and empties into the Pacific ocean just north of Humboldt bay. The group of persons standing on the nearest section gives the eye an easy standard by which to measure the fallen timber.

TRAIN-LOAD OF REDWOOD LOGS, FROM HUMBOLDT COUNTY WOODS.

He said: "Boston will pay more than any other city in the Union for fancy fruit, but is one of the poorest markets for second or third grade fruit."

His words made a strong impression on the assembly and caused many to decide to experiment with the Boston market another season.

R. B. Blowers, chairman of the Committee on Nomination of Board of Trustees, reported, recommending the following named gentlemen for the position: A. T. Hatch of Suisun, Solano Co.; L. W. Buck of Vacaville, Solano Co.; J. Z. Anderson of San Jose, Santa Clara Co.; H. W. Meek of San Lorenzo, Alameda Co.; Webster Treat of Davisville, Yolo Co.; A. Moger of Newcastle, Placer Co.; E. Gregory, H. Weinstock and P. E. Platt, all of Sacramento.

H. C. Morrell of Santa Clara Co. moved that the secretary cast the ballot for the stockholders. The motion, being seconded and put to vote, was lost, as two dissenting votes were cast. On motion, the meeting adjourned to 1:30 P. M.

Reassembled at 1:30 P. M.

Mr. Blowers, chairman of the Nominating Committee, stated that at the request of Mr. Meek they would substitute the name of John Markley of Sonoma county in place of Mr. Meek.

On motion of A. P. Hall, who had cast a dissenting vote, seconded by Wm. Barter, who had also voted in the negative, a reconsideration of the vote authorizing the secretary to cast ballot was had, which resulted in the motion being carried instructing the secretary to so cast a ballot. The ballot having been cast, the president announced the election of the following named gentlemen as the Board of Trustees for the following year: A. T. Hatch, L. W. Buck, John Markley, Webster Treat, P. E. Platt, H. Weinstock, J. Z. Anderson, E. Gregory, and A. Moger.

Mr. Parsons of Flushing, N. Y., was called on and addressed the meeting on the Eastern market. A general discussion on the same subject followed.

S. Consular report on cattle and dairy farming tells how cattle are slaughtered at Basle, Switzerland. A large abattoir has been built by the Government on the bank of the Rhine, just below the city, and put under the control of an accomplished veterinary surgeon, who controls all the operations of killing the animals and preparing the meat. This man has invented an instrument for killing the animals. It consists of a mask or plate, which has a short steel gun fastened to it. This is fastened to the horns by straps, and the cartridge in the end is fired by tapping the iron pin in the end of the gun and driving it against the cartridge. The bullet pierces the center of the brain and is buried in the spinal marrow, causing instantaneous and painless death. The ox walks without fear to the shambles, a touch is given to the fatal needle, and the huge creature drops utterly dead and incapable of suffering. The bleeding is perfect.

LOUR FOR ASIA.—On the night of Jan. 28th the steamer Premier took from Tacoma for Vancouver 14,400 sacks, or 375 tons of flour, the largest cargo she has carried since she has been on the route. This flour is for shipment to China and Japan by Canadian Pacific steamers.

ELSINORE COAL.—The coal famine in many Southern Californian towns, says the *Riverside Press*, makes Elsinoreans thoroughly appreciate their location. While coal is selling at other points at from \$20 to \$30 per ton, it is selling there at \$5 per ton, and there is no discount on the quality.

"TRUST" CONSPIRACIES.—A bill was introduced in the N. Y. Legislature on the 30th ult., making it a felony to form trusts or combinations to control or withhold from the people or to raise the prices of any article of food, coal or necessary of life.

THERE is some talk in Dixon of organizing a joint stock company to manufacture combined barvesters.

THE WOODBURY TREE CLEANSER

FOR WINTER AND SPRING.

After two years' experience, I have to announce that there has
not a single case come to my knowledge where the Woodbury Tree
Cleanser has not fully and satisfactorily accomplished everything
that has been promised.

By reference to a late report from Prof. Klee, I observe he
states that he has found very good results from it in almost every
case, and that he has encountered no occurrence of any injury from its
use. I am informed that it has his recommendation as a thorough-
going, successful and cheap Winter Wash; and it is certainly in-
dorsed by the leading orchardists in the State. [Please send for
their published letters.]

It has had an unexampled success in exterminating Scale on
all kinds of Fruit Trees. It is sent all ready for use, and instruc-
tions which are very simple, are furnished with every package.

Price $3\frac{1}{2}$ cents per pound in cases, 80 pounds in a case; in
8-pound cans, same price, 15 cents extra for can; $3\frac{1}{2}$ cents per
pound (10 per cent off) in barrels; about 400 pounds in a barrel.

I also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly suc-
cessful. This is the valuable remedy strongly recommended by
Prof. Klee for the Cottony Cushion Scale or "Icerya." Price $\frac{1}{2}$
cent per pound higher than the Woodbury Tree Cleanser. I also
manufacture the fine Anti-gumming Farm Machine Oils and gen-
eral Lubricating Oils. I respectfully solicit correspondence.

Now is the Time to Apply
WHEELER'S CARBON BISULPHIDE.
REDUCED PRICES CONTINUE.

READ WHAT YOUR NEIGHBOR SAYS ABOUT IT.

It is thorough in its work and is not dangerous to any-
thing but the vermin it is intended to destroy, and it
will do all you claim for it as a rodent poison.

L. L. ROBINSON,
Los Medanos, Contra Costa Co.

Your Carbon Bisulphide has been a perfect success,
and it is the only poison I have ever used that was

GEORGE WEST, Stockton.

I have used it with unfailing success, the holes doc-
tored have never since reopened.

JOHN T. DOYLE, Menlo Park.

It is a dead sure thing, and any one who will give it a
trial, will never again fool away his time with common
preparations of strychnine, phosphorus, etc.

H. W. CRABB, Oakville, Napa Co.

It is the most economical and efficient agent yet
offered to the public.

H. G. ELLSWORTH,
Niles, Alameda Co.

I used it and not a squirrel escaped.
K. T. WALKER,
Paso Robles, S. L. Obispo Co.

As a means of killing squirrels, gophers, etc., it is un-
questionably the best now in use, and I believe will be
universally adopted.

J. De BARTH SHORB,
San Gabriel, Los Angeles Co.

I find it certain death and never had occasion to apply
it a second time.

JAMES K. VERNON,
San Luis Obispo.

It is the cheapest and most effective agent that I have
ever used in the destruction of squirrels and gophers.

W. S. MANLOVE,
Brighton, Sacramento Co.

I know of nothing equal to it.

D. C. TWOGOOD, Riverside.

Not one hole has been reopened, and I feel disposed to
bless Prof. Hilgard and Mr. Wheeler.

EDW. BERWICK,
in PACIFIC RURAL PRESS.

Nothing so cheap and effective as Bisulphide.
CHARLES S. COUSIN,
Pinole, Contra Costa Co.

Sold by the Trade and
by the manufacturer,

PUBLIC AFFAIRS.

Tariff Resolutions.

EDITORS PRESS:—The resolution of the American Horticultural Society against the reduction of the tariff on fruits is gratifying to California fruit-growers, and will aid in securing the continuance of the present tariff. The voice and sentiment of our people in conventions assembled has ever been for protection. No industrial convention in California has adopted a free-trade resolution. No political party in the State has ever dared go before the people with a solid free-trade plank in its platform, so free trade has not been a political question and will not become one unless some future convention make the issue squarely against American industries. If belief in free-trade doctrines is prevalent, why have not free-traders spoken out in meeting and adopted resolutions? Is it because they have not the courage of their convictions, or because they have not honor in their own country?

Society needs protection against so-called free-traders who tramp about the country and congregate in cities, living in ignorance and in defiance of law and good government and crying out against "the tax which with relentless grasp is fastened upon their clothing," of which the average of these wears scarce enough to wad a shotgun. The want of suitable clothing cannot be charged to the tariff, as domestic cloths are cheaper than foreign, and imported cloths, sufficient for a year's wear, would be increased in cost by the tariff but 70 cents.

There are men of personal wealth and good standing who advocate free trade. One of them stated before the American Horticultural Society that, as a fruit-grower, he did not want protection; if he could not compete without it he would not compete at all. A man of his ability and wealth could grow fruit at a loss or abandon the business without serious consequences to himself, while the average fruit-grower must continue to compete for his living.

The question is, can he compete with free trade fruits at present cost, paying one dollar per day more for labor than is paid for the same labor in Europe, and freight increased in the same proportion?

The present tariff makes it possible for him to continue and prosper in an enterprise of great importance to the State and country.

The increase in price of fruits, owing to the tariff, is small and is not seriously felt by Eastern consumers, who are themselves directly protected in their own industries, or indirectly in good home markets for their products.

Our countrymen, as a class, are not so selfish and short-sighted as to prize pennies saved in the purchase of foreign products, leaving their neighbors without work or bread and their own people without an honest independence through steady and sure employment.

The United States is great and rich to-day because it has cared for the welfare of its citizens more than for dollars, and dollars have not been gained by its people at the sacrifice of manhood. These are the glorious results of a wise, sagacious and unselfish protective policy inaugurated by the first Congress of the United States and continued until the present time.

As a coincidence, the first Territorial Government of California, established by Commodore Stockton at Los Angeles on the 15th of September, 1846, prescribed duties on imports.

The sooner we learn the better for us, that patient toil and sacrifice in establishing and developing our varied industries is the only way to obtain cheap goods, make a home market for our products and become a prosperous and independent people.

W. H. AIKEN.
Wrights, Santa Clara Co., Cal.

The Resolutions.

The resolutions which were adopted at San Jose, to which our correspondent refers, and which were adopted almost without a dissenting vote, are as follows:

Resolved, By the American Horticultural Society assembled at San Jose, Cal., that any reduction by Congress of the existing tariff on green and dried fruits, oranges, nuts, raisins, prunes, wines and other horticultural and agricultural products would injure all and destroy many of these industries.

Resolved, That a copy of this resolution be forwarded to each Senator and member of Congress, and that a printed copy be sent to each member of Congress, with the request that the subject of the above resolution be urged upon the attention of the Senators and members from each of their respective States.

Gabilan Rancho,

Containing 7665 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. BOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

WAGON-SPRING BRACE.—Frank H. Mason, Saucelito, assignor of one-half to Geo. V. Kennedy. No. 375,826. Dated Jan. 3, 1888. This is an improvement in the braces of wagons by which the springs are kept in position. The spring brace is connected by a lever operated by the bed, so the brace is kept tight at all times. In the construction patented the brace is kept tight under all circumstances and will not rattle.

SIDE HILL PLOW AND ROAD-GRADER.—Elisha Clark, Felton, Santa Cruz Co. No. 375,802. Dated Jan. 3, 1888. This reversible plow may be also used as a road-grader. It consists of a plow-beam united to a land-side or shoe at the bottom by means of a vertical post or posts, and having the mold-board and plow-share supported in front of the post by a vertical shaft or spindle, about which it may turn to stand upon either side of the plow-beam, and with either point toward the front to correspond with the plow point, the latter being formed upon the stationary shoe.

ANIMAL TRAP.—Bertie P. Jolly, Soledad, Monterey Co. No. 375,822. Dated Jan. 3, 1888. The trap is specially designed for gophers and other burrowing animals. It is one of those made of spring wire arms held in position by a trigger, which is operated automatically by the throwing of the earth against it. The invention consists in a single piece of spring wire, having its ends bent at an angle and curved in opposite directions through approximately 180 degrees, said ends crossing or interlocking, and in a trigger formed by a single piece of wire, the ends of which are bent at right angles, one end being provided with a notch for engaging one side of the main spring wire, and the other being broadened or flattened out to receive the impact of the earth. This trap is of very cheap and simple form.

GRAIN SEPARATOR.—John Grider, Stockton, assignor of one-half to Geo. Chestnutwood and Thos. N. Moore. No. 375,486. Dated Dec. 27, 1887. This is a new and useful improvement in grain separators, the object of which is to prevent the riddle or shoe from becoming clogged with the weeds and short straws discharged upon it by the grain belt, and at the same time to more effectually clean the grain, so that but a small proportion is returned to the cylinder, whereby the elevator and conveyor are never choked. The racks not only have a forward and backward movement, but a lifting movement as well, which tosses up the material and thus gives the fan-blast such power and direction that the separator is more complete and most of the grain is saved at the forward end.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Rural Seed Offering—1888.

Great Inducements for New Subscriptions

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

VEGETABLE SEEDS.		33 Antirrhinum Majus, fine mixed.		5
In Papers, postpaid.		34 Cactalia coccinea (Tas- set flower).		5
1 Early Blood Turnip.	10	35 Ca. pumila Speculum, (Veget. Liking Glass).	5	5
2 Early Extra Bassano.	10	36 Candytuft, white fragrant Centaurea Cyanus (Bach- man's Button).	5	5
3 White Sugar.	10	37 Mangold, 4th French.	5	5
4 Yellow Sugar.	10	38 Clarkia, fine mixed.	5	5
5 Early Long Dark Blood CABBAGE.	10	39 Convolvulus (Morning Glory) mixed.	5	5
6 Early York.	10	40 Foxglove, mixed.	5	5
7 Early Dutch.	10	41 Foxglove, mixed.	5	5
8 Early Wakeful.	10	42 Foxglove, mixed.	5	5
9 Early French Oxheart.	10	43 Foxglove, mixed.	5	5
10 Large Late Drumhead.	10	44 Foxglove, mixed.	5	5
11 Large Late Drumhead.	10	45 Foxglove, mixed.	5	5
12 Red Dutch (pickling).	10	46 Foxglove, mixed.	5	5
13 White Dutch (pickling).	10	47 Foxglove, mixed.	5	5
14 White Dutch (pickling).	10	48 Foxglove, mixed.	5	5
15 Extra Early Forcing.	10	49 Foxglove, mixed.	5	5
16 Long Orange.	10	50 Foxglove, mixed.	5	5
17 Early Horn.	10	51 Foxglove, mixed.	5	5
18 White Belg.	10	52 Foxglove, mixed.	5	5
19 Early Long Daughters.	10	53 Foxglove, mixed.	5	5
20 White Spine.	10	54 Foxglove, mixed.	5	5
21 Early Cluster.	10	55 Foxglove, mixed.	5	5
22 Early Frame.	10	56 Foxglove, mixed.	5	5
23 Long Green.	10	57 Foxglove, mixed.	5	5
24 King of the Hill, Pickles.	10	58 Foxglove, mixed.	5	5
25 Early Curled Silene.	10	59 Foxglove, mixed.	5	5
26 Ice Drumhead.	10	60 Foxglove, mixed.	5	5
27 Simpson's Early Curd.	10	61 Foxglove, mixed.	5	5
28 Prize Head.	10	62 Foxglove, mixed.	5	5
29 White Paris Cabbage.	10	63 Foxglove, mixed.	5	5
30 Hanson.	10	64 Foxglove, mixed.	5	5
31 Boston Mainstem.	10	65 Foxglove, mixed.	5	5
32 Large Yel. Canteloupe.	10	66 Foxglove, mixed.	5	5
33 Extra Fine Nutmeg.	10	67 Foxglove, mixed.	5	5
34 Casaba (new).	10	68 Foxglove, mixed.	5	5
35 Montreal Nutmeg.	10	69 Foxglove, mixed.	5	5
36 Queen of Wines.	10	70 Foxglove, mixed.	5	5
37 Sweet Watermelon.	10	71 Foxglove, mixed.	5	5
38 Iron Clad Watermelon.	10	72 Foxglove, mixed.	5	5
39 Early Bask.	10	73 Foxglove, mixed.	5	5
40 Black Spanish do.	10	74 Foxglove, mixed.	5	5
41 White Imp.	10	75 Foxglove, mixed.	5	5
42 Georgia Kattlehead do.	10	76 Foxglove, mixed.	5	5
43 Early Red.	10	77 Foxglove, mixed.	5	5
44 Red Water field.	10	78 Foxglove, mixed.	5	5
45 Yellow Danvers.	10	79 Foxglove, mixed.	5	5
46 W. Portugal or Sil. Skin PARSNIP.	10	80 Foxglove, mixed.	5	5
47 White Dutch.	10	81 Foxglove, mixed.	5	5
48 Mammoth California.	10	82 Foxglove, mixed.	5	5
49 Olive Shaped Radish.	10	83 Foxglove, mixed.	5	5
50 Early Scarlet Turnip.	10	84 Foxglove, mixed.	5	5
51 Black S. and W. Turnip.	10	85 Foxglove, mixed.	5	5
52 Long Scarlet.	10	86 Foxglove, mixed.	5	5
53 Early Seedling Bush.	10	87 Foxglove, mixed.	5	5
54 Early Seedling Bush.	10	88 Foxglove, mixed.	5	5
55 California Ficus.	10	89 Foxglove, mixed.	5	5
56 Ma. blanch.	10	90 Foxglove, mixed.	5	5
57 Boston Marrow Winter.	10	91 Foxglove, mixed.	5	5

Refer to Nos. in latest issue when ordering

For \$1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and \$1.00 worth of the above seeds. For \$1.75 the RURAL six months and \$1.00 worth of seeds. For \$3.25 the RURAL 12 months, and \$1.00 worth of seeds. (When preferred, a due bill for seeds to be furnished at any time within 12 months will be given.) The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

Thermalito Colony Comp'ny

INCORPORATED DECEMBER 31, 1887.

THE HOME OF THE ORANGE, OLIVE, VINE & FIG.

— ONLY —

429 LOTS LEFT. 429 LOTS

In this famous Colony Tract out of 1440 lots offered for sale June 8, 1887, and but 250 lots remaining in the Association in which an investment of only \$360 is SURE to secure you an admirable town lot 50x150 feet, and may secure a HOTEL now being erected at a cost of \$20,000. Eleven chances to secure a cottage worth from \$875 to \$2500; ten chances for 10-acre lots; 90 chances for 5-acre lots; 50 chances for 2-acre lots; 50 chances for 1-acre lots; 100 chances for lots 90x160 feet, and 200 chances for lots 50x150 feet. Terms easy; \$30 cash and balance in monthly installments of \$15.00 per month.

THERMALITO

Offers the following advantages which no other Colony offers:

1. The most healthy location in Butte County, outside of the mountains. This is substantiated by the fact that a location for the Butte County Infirmary was selected there by prominent and well-posted citizens.
2. The soil cannot be surpassed for fruit culture, being a rich, red gravelly loam, strongly impregnated with mineral and from 6 to 20 feet deep, and has 10,000 flourishing orange trees from one to ten years old on the tract.
3. Its water supply and facilities are unequalled, its supply being 3600 inches, and conducted in PIPES on the tract under a pressure of from 75 to 150 feet, which is sufficient not only for irrigation, but for fire and household purposes. This water is furnished FREE FOR THREE YEARS, and after that at the low rate of ten cents per inch (miners' measurement) for 24 hours.

4. The value of the land is rapidly increasing. It is now offered at \$100 per acre, while much of it has been resold at \$150. The owners of the tract cannot raise the price above \$100 without violating their promise made to the public six months ago, and they have steadfastly refused to break any promises, no matter how the boom may affect the land. Terms of sale: One-third cash, one third in one year, and one-third in two years at 8 per cent per annum.
5. The Company is spending over \$100,000 in improvements of their own money, and hesitate at no outlay that will prove advantageous, and FURNISH LABOR on the tract for purchasers, and will plant and care for your groves at cost.
6. The location of the tract for scenery is unsurpassed. It has gained the name of "THE BEAUTIFUL," and justly so; it is also called "Wonderland."

All we ask is to COME AND SEE for yourselves. The Company is at all times ready to take you to the tract, and invites inspection. Address

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES

At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and promises the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. Maps and further particulars of

Elevator 12 Front St.

Santa Barbara County Notes.

EDITORS PRESS:—The recent exceedingly cold weather (for California) is still exciting comment. The cold did not injure anything here except bananas, early potatoes and some varieties of flowers. Roses are blooming as usual in the open air, and strawberries are ripening with no signs of Jack Frost on their features. The grasses have been retarded, but are now growing finely and pastures will soon be good. From present appearances grazing will be much better than in average seasons. The orange crop is large, and on account of the cold weather the fruit is not sweet as usual at this season, but with some warm weather now the fruit is rapidly sweetening up. No orange trees were injured in the least by the cold snap. Early potatoes that were cut down are now up again, looking not much the worse for their tussle with the frost.

Many walnut trees are being set out. The business received an unusual impetus by the extraordinary large crop and good prices of last season.

Olives are being set out in great numbers in the Santa Ynez valley. All reports from there as to the olive business are of the most satisfying character. Orchards of deciduous fruits are being planted to a considerable extent in the western end of the county. Not many orchards are being set in the vicinity of Santa Barbara, as the market has been very limited because there was no cannery or drier, and shipping facilities have been very uncertain until the completion of the railroad. This being a new mode of transportation, and being put through to Santa Barbara at a rather late date for fruit, the people have not taken the advantage of the convenience as they will hereafter. As it was, however, several thousand boxes of apples have been sent out and the attention of buyers brought to the fact that much fine fruit is grown here. So many apples were shipped out that the local market is nearly bare of choice fruit.

Lima beans, walnuts, fruit and flax will continue to be the articles of export from Santa Barbara and vicinity, and wheat, barley, beans, flax, mustard and dairy products from the west end of the county for the present year. Asphaltum, too, is an important article of export from Carpinteria. A large force of men are now engaged in mining for this material a short distance from the railroad depot. A spur has been laid from the main track of the railroad for the convenient loading of cars; much of this asphaltum is being used in Los Angeles.

Although there is no boom in Santa Barbara real estate, the city and county are both gaining in solid prosperity. The pavement which is being put down on State street at cost of \$160,000 is going to make a fine thoroughfare of that street, and will be a better advertisement for the town than all the "booms" that could be gotten up. Another improvement now being prosecuted is the numbering of the houses. A number of schemes for the purpose of securing an abundant supply of water for the city are being investigated and some works are being built.

The S. B. Lumber Co. have built an extensive addition to Stearns' wharf at an expense of \$100,000, with railroad connections, on which they are storing lumber for wholesale distribution throughout this section. They have, in fact, already secured quite an extensive trade in that line. The harbor at Santa Barbara is so commodious and free from storms that vessels can unload at all seasons and almost every day in the year. It is no unusual sight to see three large lumber schooners unloading at one time.

Lompoc wants to be incorporated. She is quite an important town in the midst of a fine farming country, and is growing some excellent fruit in addition to immense crops of grain, beans, flax, mustard and other crops.

L. B. CADWELL.

"Pomona's Retreat," Carpinteria.

POLLED ANGUS.—It will interest our stockmen to know of the arrival in this city of A. B. Matthews, the well-known importer and breeder of Angus cattle, whose headquarters are in Kansas City, Mo. Mr. Matthews brings with him a fine band of these animals, which can now be seen at the Telegraph stables on New Montgomery St., near the Palace hotel, S. F. We make at this time this brief announcement to call attention to the cattle that stockmen may examine them. We intend to make fuller reference to them hereafter.

HOARBOUND HONEY A DECADE OLD.—In 1878 10 barrels of honey were shipped from Ventura to London. It proved unsalable, as the bees had fed upon some bitter substance, which also darkened the honey. The barrels were put in warehouse and remained till a few months ago, when a scientific man found the product was pure hoarbound honey.

DAIRY CATTLE must be cheap in Yolo county. The Democrat advertises: "A milch cow for sale. See 50-cent column."

Cook Stock Farm.

The Stallion Steinway.

During the winter of 1879, Mr. Daniel Cook, the late proprietor of what is already quite well known as the Cook Stock Farm, Danville, Contra Costa county, Cal., one of the most beautifully located and conveniently and superbly equipped stock farms in the United States, conceived the idea of founding a breeding farm. When Mr. Daniel Cook first ventured into the business of raising trotters and gentlemen's fine horses, he was taught, and believed it wise, to place at the head of the stud a son or grandson of the old hero of Chester Rysdyk's Hambletonian, 10, whose dam was by a thoroughbred, who could trot, and a producer of uniform speed, and therefore purchased Steinway, with a three-year-old record (fourth heat) of 2:25½. His record of 2:25½ was made under what must be considered not the very best circumstances. He was speedy, and in his trials proved that he was capable of putting to his credit a mile of 2:15, having been driven a half-mile in 1:07½, and a quarter in 32 seconds to wagon. He sired at least nine animals that will make themselves famous names. He has given ample evidence of his superiority as a sire, and all who have purchased his colts are better pleased than on the day they were bought. The following is his pedigree:

Steinway, by Strathmore, sire of Santa Claus, 2:17½; Tucker, 2:19; Skylight Pilot, 2:19; Secret, 2:20¼; a son of Rysdyk's Hambletonian, first dam

IMPORTED FRENCH DRAFT STALLION, SIR BENJAMIN.

Abbess, dam of Solo, 2:28½, and Soprano, three-year-old record of 2:33, dam of C. F. Clay, five-year-old record, 2:18, and Eminence, three-year-old record, 2:27. Solo and Soprano are full sisters to Steinway; Abbess, also, the dam of Jersey Lily, which trotted a quarter in 34, and showed ability to beat 2:30 at a two-year-old, sold for \$7500 (afterward burned at W. H. Wilson's Cynthia Ky., fire), by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; 2d dam by Marshal Ney, thoroughbred; 3d dam by Bertrand, son of Sir Archy, a thoroughbred. Abbess sold with a filly by her side, full sister to Jersey Lily, for \$4500; for a brood mare to Elizar Smith, Esq., owner of Alcantara, Lee, Mass.

In addition to his individual merits, his blood lines are such as to make him worthy of the position of honor in any breeding establishment in the whole country. His sire Strathmore, certainly one of the greatest sons of Rysdyk's Hambletonian, having placed to his credit with limited opportunities, 23 2:30 horses, including Santa Claus 2:17½, Tucker 2:19, Skylight Pilot 2:19, Secret 2:20½, and of the dams of two 2:30 horses, including C. F. Clay's four-year-old record 2:23, five-year-old 2:18, and certainly his grandsons are showing great merit as sires. Sydney, pacing record 2:28, is certainly a phenomenal sire of early speed.

Steinway is considered by all leading breeders as one of Strathmore's best sons, and his full sister Soprano, dam of C. F. Clay, five-year-old stallion, record 2:18, and Eminence three-year-old, record third heat 2:27, is most noted daughter of Strathmore, and Steinway daughters are proving that they are phenomenal as brood mares. He is now coming to the right age to produce speed, and he has convinced his owners and friends that he will produce speed both ways.

Steinway's first public performance was at Lexington, Ky., in the fall 1878, at a two years' race with Memento and others, which three heats were trotted 2:38, 2:32½, 2:31½, Memento

winning the first heat, Steinway the last two. His next race was July, 1879, at Sharpsburg, Ky., when he beat a field of colts in slow time, 2:41, 2:39, 2:34. His next race was at the same place, July, 1879, in the free-for-all with aged horses. Bushwhacker's record is 2:27. Blackwood Jr.'s record is 2:22½. Steinway in five heats, 2:37, 2:34, 2:38, 2:34, 2:35, Steinway winning second, fourth and fifth heats. This was over a miserable half-mile track. His next was at Lexington, August 15, 1879. He beat a field of three-year-olds, such as Jewett, Catchfly and others in six heats, 2:38, 2:34, 2:30, 2:25½, 2:30½, 2:30½, Steinway second in first, second and third heats and winning fourth, fifth and sixth heats, showing his ability of trotting in 2:20.

His next race was at Lexington, Oct. 15, 1879, he was beaten in three heats by Jewett; time, 2:26½, 2:23½, 2:26½. Steinway was lame in this race and really was not fit to trot, and he was timed 2:27, 2:22½, 2:27. This was his last race at a three-year-old. At a four-year-old he showed a mile in 2:51, last half, in 1:08. After this, owing to the injury he received while serving a mare, he was not trained until 1885. He was driven a half mile in 1:07½, and a quarter in 32, and owing to the old injury it was impossible to prepare him for a race. His owner would not allow him to go alone on mud-hill plan for a whip for a fast record. If his owner would believe in this go alone record plan, he could have placed four of his get inside the 2:30 list, from a two-year-old to a four-year-old. The merit of the trotter can only be determined by public performance. Many

horses can show a mile privately in 2:30, and could not win a heat with other horses in 2:40.

Steinway is a long-bodied, rather plain, bright bay, two white heels, 15½ hands high, weight 1200 pounds. His disposition and that of his colts is kind, and he imparts to his get beauty and style. Like many other royally bred stallions, he has had his powers overshadowed by cold-blooded mares; the few high ones that he has mated have demonstrated by their offspring his ability to transmit great speed, size and endurance.

Ongerth's Tree Protector.

WOODIN & LITTLE, Agents, 509 and 511 Market St., San Francisco, Cal.—GENTLEMEN: In reply to yours of the 29th ult., as to effects of your Liquid Tree Protector on the tree you treated for me last April, I would say that where the wash was applied the insects of all sorts are certainly killed. The wash is still on the tree, and the bark under it shows a healthy and lively appearance. I was afraid for awhile that owing to its gummy feeling and appearance the pores of the bark might be closed to the great detriment of the tree, but so far I am glad to say there have been no indications of any ground for my fears. I am so well satisfied of this that I shall entirely paint the trunks and larger branches of all my trees with your preparation this winter.

I would add that your Grafting Compound is the best preparation I ever saw for covering wounds on trees, and it is apparently not affected by any sort of weather. Yours very truly, R. D. FOX, Proprietor Santa Clara Valley Nurseries, San Jose, Dec. 5, 1887.

WINTER NELIS PEARS, picked from the tree four months ago, and since then kept in storage under the Allegratti system, are to be seen at 409 Montgomery street. There are boxes and boxes of them, and, judging by the one we ate, they are as good as if gathered but last week.

A Famous French Draft Horse.

We give herewith a portrait of Sir Benjamin 2995, a famous French draft stallion, owned by James A. Perry of the Riverside Stock Farm, Wilmington, Ill. The portrait faithfully presents the outline of the animal, and will commend itself to lovers of this sort of horse-flesh.

Mr. James A. Perry was among the first importers of French horses to the Pacific Coast, as he brought as early as 1876 such famous stallions as the Duke de Chartres, Old Rollin and many others. Mr. Perry claims that he has brought to this coast the very best French draft stallions that ever landed in the State of California. He has now on hand for sale at the Petaluma stables in Petaluma, a very fine collection of French draft stallions.

Mr. Perry has been importing French horses for the last 18 years, using his best endeavors to procure the best specimens of the draft horse that could be obtained in Europe. He spent a long time in England and on the continent examining the different brands of horses, with a view to their adaptability to the wants of the people of the United States. He became satisfied that the French draft horse is the best suited to the wants of a large class of our people. He believes he has accumulated a stud worthy the attention of the most critical horseman, more for quality than for its numbers. Catalogues will be sent on application. Parties should, however, see Mr. Perry's horses for themselves and thus judge of their value.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

The Woolly Aphis.

WALNUT GROVE, CAL., Jan. 6, 1888.

Mr. Charles J. Woodbury, 123 California St., S. F., Cal.—DEAR SIR: Yours of the 3d inst. to hand last evening. In regard to the Woolly Aphis, I can only give you my experience. When I came here, my apple trees were badly infested with Aphis, so I washed them thoroughly to exterminate and have not seen any signs of the Aphis since, which has been over two years. Yours respectfully,

L. D. GREENE.

I will remark that I have known of no case where my tree-cleaner has not been perfectly successful as an antidote for the Woolly Aphis.

Full directions accompany its use. Price, 3½ cents per pound in cases, 80 pounds in a case; in 8 pound cans same price, 15 cents extra for can. In barrels, 3½ cents per pound, 10 per cent off, 400 pounds in a barrel. I also manufacture the fine Anti-Gumming Farm Machine Oils and General Lubricating Oils.

Address CHARLES J. WOODBURY, 123 California St., S. F., Cal.

Buena Vista Rancho.

This fertile tract of land, containing 77½ acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Farmers and Fruit-Growers, Attention!
To grow large and profitable crops and at the same time to make the farm better each year, is the problem for the farmer.

FERTILIZE! FERTILIZE!
NITROGENOUS SUPERPHOSPHATE.

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. KOBES—Dear Sir: I have analyzed your sample of "Nitrogenous Superphosphate," with the following result:

Soluble Phosphoric Acid.....	12.90 per cent
Reverted Phosphoric Acid.....	.95 "
Insoluble Phosphoric Acid.....	2.83 "
Pota-h.....	2.23 "
Ammonia.....	1.87 "
Nitric Acid.....	2.95 "

The above amount of Nitric Acid is equal to 0.85 per cent Ammonia, therefore, total of Nitrogen calculated as Ammonia, 2.72 per cent.

This Fertilizer is a Valuable Manure for vineyards, orchards, gardens, farms, and I recommend its use by the cultivators of the soil generally, in California. Yours truly,
DR. E. A. SCHNEIDER.

University of California, College of Agriculture.
BERKELEY, Nov. 20, 1886.

Dr. J. KOBES, San Francisco—Dear Sir: I take pleasure in adding my testimony to that of Dr. Schneider as to the high quality of the "Nitrogenous Superphosphate" Fertilizer, analyzed by him at your request. It is a high-grade article, and as such returns the user a better money value than a low-grade fertilizer. It is especially well adapted to use in California, on account of the predominance in it of Phosphoric Acid, which is generally in small supply in our soils. Yet it is desirable that "complete" fertilizers be used in our orchards and vineyards, and yours is of that character in furnishing Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.

The value of this Fertilizer consists in the large percentage it contains of Phosphoric Acid—the chief element of all plant food—in combination with the necessary quantities of Potash and Ammonia, and the ease and cheapness with which it can be applied.

In ordinary soils the following quantities will be found sufficient: For Wheat, Barley, Corn and Oats, 300 to 350 pounds per acre. For Grass, Sugar Beets and Vegetables, 250 to 300 pounds per acre. For Vines, Fruit Trees, from 1/2 pound to 5 pounds each. For Flower Gardens, Lawns, House Plants, etc., a light top dressing, applied at any time, will be found very beneficial.

FOR SALE IN LOTS TO SUIT,
On board cars at Sbranto, Station of the C. P. R. R., 20 miles north of San Francisco, at \$30 per ton, by the MEXICAN PHOSPHATE & SULPHUR CO. H. DUTARD, President, room 7, Safe Deposit Building, or
H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.

Booth's Sure Death Squirrel Poison
For Squirrels, Gophers, Birds, Mice, Etc.

Endorsed by the Grange and Farmers wherever used.

The Cheapest and Best.
Put up in 1-pound, 5-pound, and 5-gallon Tins.
Every Can Warranted.

This Poison has been on the market less than two years, yet in this short time it has gained a reputation of "Sure Death," equaled by none. By its merits alone, with very little advertising, it is now used extensively all over the Pacific Coast, as well as in Australia and New Zealand.

S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 1, 1888.

General rains up to to-day have given the agricultural districts all the moisture required for two or three weeks to come, and with clear weather in the interior plowing and other outdoor work will be pushed forward. In farm products trading the past week was light, owing to rains, but with more settled weather more business is looked for. European and Eastern wheat markets have fluctuated slightly, closing generally firm. The following are to-day's quotations:

LIVERPOOL, Feb. 1.—Wheat—Holders offer freely; new No. 2 winter, 6s 8½d, and steady; do, spring, 6s 8d, and steady. Flour—Holders offer freely at 9s 2d, and steady. Corn—Holders offer freely, spot, 4s 11d, and dull; February, March and April, 4s 10½d, and dull.

Eastern Wool Markets.

NEW YORK, Jan. 30.—The stocks of domestic wool are not oppressive, and though trade is yet comparatively quiet the present sales have cleared out many parcels that have been presented. The bulk of holders of prime lots express more confidence, and are aided therein by the attention of good buyers, and prices for desirable grades, if not buoyant, are fairly steady. The sales include 10,000 lbs of California's prime at 13@18c; 28,000 do scoured, 37@45c; 20,000 Oregon, 18@22c; 50,000 Territory, 20@22c; 10,000 spring Texas, 19@21c; 12,000 fall do, 13@15c; 38,000 do, 14½@16c; 40,000 No. 1½ blood, 37c; 10,000 ¼ blood, 36½@37c; 12,000 fine ½ blood, 35½c; 10,000 fine delaine, 34c; 10,000 XXX and above, 34c; 20,000 X and XX, 31@32½c; 20,000 one-half unwashed, 26c; 18,000 common unwashed, 23c; 10,000 super pulled, 36c; 400 scoured, 48@50c, and 257,000, 30,000 nols, 180 bales foreign, 325,000 Mediterranean Carpet were sold at private terms; also June sales of Donskoi.

Philadelphia reports a quiet trade, with a tendency among manufacturers to cheapen stock with common foreign.

Boston mentions an active trade, including 235,000 of California fall at 12@14c.

Foreign Review.

LONDON, Jan. 30.—The *Mark Lane Express* says there is no demand for native wheats, and it is impossible to sell except at a decline. Foreign wheat values are only nominal. Flour is greatly depressed. Foreign has declined sixpence per sack.

California Products in Chicago.

CHICAGO, Jan. 28.—So far as values are concerned, the dried fruit market remains about steady, but the demand is not resuming any to speak of, and the market is for this reason still ruling very quiet. Peaches, sun-dried, in sacks, ½ lb, 11½@12½c; peaches, evaporated, unpeeled, in sacks, ½ lb, 14½@16c; do, boxes, ½ lb, 15@17c; do, peeled, in sacks, ½ lb, 22½c; do, in boxes, ½ lb, 25@28c; apricots, sun-dried, in sacks, ½ lb, 12½@13c; do, evaporated, in sacks, ½ lb, 14½@16c; plums, pitted, in sacks, ½ lb, 12½@13c; prunes, small, ½ lb, 8@11c; do, fancy large, ½ lb, 14@14½c; nectarines, according to quality, in sacks, ½ lb, 16@18c; raisins, loose Muscatels, ½ box, \$1.60@1.90; raisins, London layers, ½ box, \$2@2.40.

Beans—There are a good many beans selling every day. The sales are usually from second hands, and for this reason do not appear on the market. A firm feeling prevails and very few consignments are received. Prices range as follows: California, according to quality, \$2.40@2.50.

Hops—A fair demand exists for choice grades. These are steady and in fair demand. Off grades ruled dull and slow, and of these there are fair stocks. Choice Pacifics, 12@14c; common to prime, 8@12c.

California strained honey, 7@8c.

An Advance in Olive Oil.

NEW YORK, Jan. 28.—It is reported that the foreign supply of olive oil will be smaller than usual. There has already been an advance in this market in price on standard brands.

Eastern Wheat Markets.

NEW YORK, Jan. 29.—The movement of wheat has been light at the interior, amounting to only about 800,000 bushels. On the small movement a decrease of 500,000 bushels is estimated in the visible supply.

Exports of flour are also decreasing somewhat. Exports for the week ended Thursday, from both coasts have been about 1,640,080 bushels, and from Jan. 1st to date, about 81,766,000 bushels. The exports of corn were about 480,000 bushels, and from Jan. 1st about 12,908,000 bushels.

Eastern Grain Markets.

CHICAGO, Feb. 1.—P. M.—Wheat, steady; cash, 76½c; March, 81 11-16c; May, 82½c. Corn, firm; cash, 47 7-8c; March, 48½c; May, 52 7-8c. Oats, steady; May, 33c. Barley, nothing doing.

Miscellaneous.

NEW YORK, Jan. 30.—Raisins are quiet, but exceptionally strong at last rates.

Hops have crumbled some, the best rate being 12@14c; others, 5@12c; Pacific Coast, 8@12c for new and 6@8c for old.

More movement in the latter is reported from England, the receipts for the season being 63,400 lbs; imports, 25,250.

Local Markets.

BAGS—The pool is reported to be asking 7½c for June-July delivery. The market is being talked and written up. June-July delivery is quoted at 7½@7¾c, although it is claimed by some that a shading on the lower quotations can be obtained.

BARLEY—The market has held strong throughout the week for all kinds of bright choice grades, with free sales of brewing and chevalier for shipping. On call the bears have been hammering away at futures, with but little success. At to-day's call the sales reported are as follows:

Morning Session: Buyer season—500 tons, 85½c; 400, 85½c; 800, 85½c. Buyer 1888—300 tons, 91½c; 400, 91½c. Buyer season—400 tons, 85½c; 200, 85½c. Seller season—100 tons, 79½c @ ctl.

BUTTER—Warmer weather, heavy rains and improving pasture created an easier tone, and with

freer receipts prices are lower and weak at the decline. Some Utah and Eastern are near at hand.

CHEESE—The market has an easier tone but is not quoted lower.

EGGS—The market is higher, due to bad weather preventing receipts. With more settled weather, receipts are expected to increase and the market ease off. Considerable of the Eastern received came in frozen.

FLOUR—The market is steady, with a good demand ruling.

WHEAT—The market for sample parcels has been quiet but strong, with holders not offering. The stock shows a continued decrease. The tonnage loading will take in about 75,000 tons. On call the bears did not send futures as low as they expected, although buyer season did touch \$1.40, but in the next call sold at \$1.41. At to-day's call the sales reported are as follows:

Morning Session: Buyer season—100 tons, \$1.41; 300, \$1.41½ @ ctl. Afternoon Session: Buyer season—100 tons, \$1.42; 1100, \$1.42½ @ ctl.

(COMMUNICATED.)

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Jan. 29, '87.	July 1, '87 to Jan. 28, '88.
Flour, qr. sks.	2,865,878	2,158,448
Wheat, ctls.	9,828,878	5,519,149
Barley, ctls.	1,843,267	1,072,325
Oats, ctls.	109,388	134,788
Potatoes, sks.	617,918	753,919
Corn, sks.	61,281	141,693
Rye, sks.	16,164	15,031
Buckwheat, sks.	4,707	2,172
Beans, sks.	375,112	341,385
Bran, sks.	301,564	302,685
Hay, tons.	65,570	75,837
Salt, tons.	14,843	10,440
Wool, bls.	45,100	39,107
Hides, No.	67,343	61,121
Raisins, 20-lb boxes.	130,747	99,574
Quicksilver, flasks.	10,007	18,649
Hops, bls.	12,470	14,517

The receipts of certain articles of produce from Oregon, Washington Territory and other distant points, for the same period, compare as follows:

	July 1 '86 to Jan. 29, '87.	July 1, '87 to Jan. 28, '88.
Flour, sks.	66,379	148,346
Wheat, ctls.	340,537	604,702
Barley, ctls.	1,775	75
Oats, ctls.	236,825	146,490
Corn, cts.	60,997	12,590
Wool, bales.	9,660	7,254
Bran, sks.	27,918	41,548
Hops, bales.	753	321
Hides, No.	27,194	20,556
Potatoes, sks.	54,185	7,063

Cereals.

The London *Farmer's and Chamber of Agriculture Journal* says: The wheat price of the bygone year has only once, and that was in 1886, been outstripped in badness. Nowhere in the records of 100 years can any such spectacle be met with as the mean of three successive years yielding as do 1885-6-7, an average wheat value of no more than 32s 1d. Nor are the low prices of the past and immediately preceding years the result of extreme or violent fluctuations. In the 12 months just ended, wheat did, indeed, touch 36s 4d on the one side and 28s 5d on the other. The margin is thus nearly double what it was in 1886, when there was but 4s 2d between the highest and the lowest values. The fact is noteworthy, however, and not without its lesson when we recognize the modern tendency to an equalization of price, due, of course, to the continuous and uninterrupted flow of supplies from one part of the globe or another to meet the wants of our dense population. This is but a development of those transport facilities which have wrought such striking changes in the values of our corn. The year 1877 was the last which saw any violent fluctuations and big margin. They were 22s 7d that season between the 68s 9d once received, and the 46s 2d which was the minimum record. Between 1853 and 1861 the margin of fluctuation was never under 11s, and, in the days of Crimean memories, 1854 had quotations of wheat varying from 83s 3d to 52s 2d, or a margin of no less than 31s 1d.

Mail advices from Europe are of an interesting character. Crop weather in England and also on the Continent was favorable. The stocks of wheat held by the leading consumption countries were very materially reduced the first two weeks in January.

The French wheat crop last year is officially given at 295,039,475 bu.

Eastern advices report light export shipments of both wheat and flour. They are also confirmatory of a continued heavy consumption with a rapid depletion in stocks. It is very generally conceded that there will be a much lighter carryover in July next than last year in that month. Taking the prices of futures in Chicago and New York as a basis, the conviction is forced on all that operators in those markets believe in higher prices later on, owing to the wide difference between cash wheat and May wheat.

Oregon advices report more activity in wheat, due to the raising of the ice blockade and 12 vessels on the berth loading at Portland and two at Tacoma on Puget Sound. Holders of the better grades of wheat express confidence in the future. In this State wheat-holders are offering more sparingly, due to lessened available supplies and a stronger market abroad and low charters. The rate ruling for charters continues to recede owing to the heavy tonnage here to arrive, and a better freight market reported abroad. Choice grades of wheat are held very strongly. Some exporters pay an advance so as to bring their shipments up to our average. Exporters are taking advantage of the rainy weather, and are in the market only for odd parcels obtainable under quotations.

The Eastern market for bright, plump brewing barley is in light supply, and a much higher range of value is looked for. In anticipation of better prices free purchases have been made here for shipment to

the East. Free purchases have also been made of Chevalier for Australia. Some very choice is said to have been placed at \$1.37½. Feed barley, if bright and of good quality, finds ready buyers, at quotations, but poor is hard to sell. The market is overstocked with the latter. Advances from the interior report more outdoor work, and a consequent larger consumption of barley. Up to three years ago it was estimated that six sacks of barley were consumed in the interior to one in this city, but now the best informed place the consumption larger. Railroad building is taking larger quantities than in any former season. Although the stock in the State was large on Jan. 1, yet by July it will be greatly reduced, owing to the heavy consumption. The acreage that has been so far seeded to barley is less than last year to like time.

Corn is stronger, with the more choice grades fetching a slight advance. Eastern advices continue to note a strong market for the better grades.

Oats have ruled steady the past week, with a firm tone, due to lessened receipts. Choice grades are in light supply. The demand for all kinds is only fair.

Rye is firmer, under light offerings. The market is of such a character that free offerings send prices down, and free-buying orders send prices up.

Buckwheat is firm, under light offerings.

Feedstuff.

Hay continues to hold to strong prices, notwithstanding the rains and improving pasture. The consumption is reported to still be large, with a light supply to draw from. About all being received is coarse and otherwise poor. Extra choice, if obtainable, can be placed at \$20.

Bran and middlings, under lessened receipts and a fair demand, rule steady. Ground barley is steady; the consumption demand is said to show signs of falling off. Oilcake meal is without change.

Fruits.

Apples are in good supply. The loss during the cold snap was very heavy. Receipts from Oregon are light, as they are from the East. Choice apples fetch good prices.

Oranges make a better showing, and as the quality is good and weather warmer, the demand is tree, but prices are no better.

Limes and lemons are in good supply, with a good demand at quotations.

In dried fruits more inquiry from the East is noted. The call is for all kinds but bright color, dark being discriminated against. Although the market is shaded on November quotations, still large dealers think a higher range will rule later on. The stock at the East is light, and demand improving.

In raisins there is nothing absolutely new to report. The market is very strong, owing to light stocks both here and at the East. It is generally claimed that the stock will barely meet the trade call up to September next.

Live-Stock.

Choice bullocks are scarce and fetch an advance. Medium-sized sell better than the large, owing to less wastage; in some instances they are placed as much as one-half cent higher than those that cut up badly. The supply of poor to fair cattle is quite free, necessitating concessions. Mutton sheep are higher, with a strong market at the close for choice, owing to light offerings. Milch cows are being inquired for, but no price is named, still for good milkers good prices are obtainable. Hogs continue scarce. On Friday last the price was marked up one-fourth cent, and to-day a further advance is obtainable. In horses, there is nothing new to report, the rainy weather having interfered with trading. Leading horse-brokers report a good inquiry for carriage, general utility and driving animals.

The following are the wholesale rates of slaughterers to butchers:

BEEF—Extra, 9@9½c; first grade, grass fed, 8@8½c; ½ lb.; second grade, 7@7½c; third grade, 6@6½c.

MUTTON—Ewes, 9c; wethers, 8½c.

LAMB—Spring, 15c @ 1½ lb.

VEAL—Large, 7@9c; small, 8@10c.

PORK—Live hogs, 6½@6¾c for heavy and medium; hard dressed, 9@10c per lb; acorn fed, 5½@6c; dressed, 7½@8c; soft hogs, live, 4@5c. On foot, one-third less for grain or stall fed, and one-half less for stock running out.

Vegetables.

Cabbages are in good demand for more distant orders, but only choice, hard heads fetch outside quotations. Cauliflower comes in sparingly, and show more or less the severity of the past cold snap. Mushrooms are in good supply.

Outdoor gardening is being vigorously pushed forward. With clear skies and warmer weather, quite a start will be made by plants.

The market is about cleaned up of feed potatoes. The loss by the cold was much larger than first estimated. Choice, good-conditioned potatoes find ready buyers. Considerable quantities have been taken for seed.

Onions show more strength, as the warmer weather allows more shipping on distant and near-by orders.

Miscellaneous.

Hog products are higher; particularly salt pork. Grass seeds have met with a better inquiry at unchanged quotations.

In poultry the week held steady, the demand and supply being about equal.

Wild ducks and geese have ruled low under liberal supplies.

Beans are very strong in sympathy with another advance at the East and light supplies on this coast. Seven thousand sacks of Lima were taken on Eastern account at \$2.65@2.75.

Hops are quiet but firm for choice, which are in light stock. Brewers are not well stocked, but are quietly picking up all odd lots of the better grades. In wools there is nothing new to report. The finer grades will be in good demand at relatively higher prices than either coarse or medium.

The tonnage movement compares with last year at this date as follows:

	1887.	1888.
On the way.....	286,395	211,377
In port, disengaged.....	93,983	87,273
In port, engaged.....	41,306	25,572

Totals..... 420,684 324,222

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, Feb. 1, 1888.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

Practical Teaching.

A very sensible course with regard to manual training is to be put in practice at once in several N. Y. grammar schools. In one school a room is being fitted up for a cooking department for girls, another will be fitted up as a workshop for boys, and it is expected that both rooms and equipments will be ready for use the coming week.

The changes involved in this new departure, late dispatches state, affect every grade, from the lowest in the primary to the highest in the grammar schools. The new manual training is not an annex or special study. It respects the present studies and involves a modification of methods throughout. Children are to make maps in geography and build dirt mountains and make rivers between them of real water. They are to have weights and measures in their arithmetic and actual blocks of wood to prove their geometrical theorems. It is not intended to qualify the boys for carpenters or iron-workers or plumbers, but to train their eyes and hands to exactness and judgment, to the practical affairs of every-day life by use of tools.

NEWCASTLE FRUIT DISTRICT.—We have received a copy of a very interesting compilation by J. F. Madden, entitled "The Newcastle Fruit District." It gives a great deal of information about this famous region, and can be had by addressing J. F. Madden, Newcastle, Cal. Mr. Madden has done good service during recent years in connection with displays of Placer county products, and is well informed on the resources of the region.

THE "RURAL" READ IN ILLINOIS.—A subscriber in Chicago, inclosing \$3, adds: "Your paper comes to me regularly, and being interested in a ranch at San Miguel and another in the Santa Clara valley, I read it with much interest and derive a great deal of benefit from the perusal."

THE death of Asa Gray, the famous botanist, is announced by telegraph. We hope at an early day to allude to his life and distinguished services.

THE land in Monterey county, advertised for lease in this issue, at a rental exceptionally low, offers an opportunity to those who wish to engage in stock-raising, as feed promises to be excellent the coming season. Mr. Atherton, 331 Montgomery street, is the agent.

Black Scale.

December 29, 1887.

Messrs. Woodin & Little, 509 and 511 Market St., S. F., Cal.—GENTLEMEN: Referring to Prof. Ongerth's Liquid Tree Protector, I desire to say that about two months ago I found quite a percentage of my olive trees infested with the black scale. In some instances the tree was entirely enveloped by a black smut, while the branches, to the very extreme tips of the tender shoots, were covered with the young scale. I sprayed my trees once only with the Tree Protector. The effect was wonderful. It not only completely and entirely destroyed the scale, but it seems to have invigorated the growth of the tree. It is all and more than all you claim for it.

Very respectfully,
THOMAS BECK, U. S. Appraiser.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

F. B. LOGAN—Santa Clara Co.
JOHN G. H. LANPADIUS—San Benito Co.
G. W. INGALLS—Arizona Territory.
WM. WILKINSON—San Joaquin and Stanislaus Co.'s.
A. F. JEWETT—Tulare Co.
E. H. SCHAEFFLE—El Dorado and Amador Co.'s.
C. E. WILLIAMS—Yuba and Sutter Co.'s.
R. G. HUSTON—Montana Territory.

THE catalogues of hardy northern-grown seeds advertised and for sale by Westcott Bros. of this city, are now ready and can be had on application to them at 406 Sansome St., S. F.

THE Innesfallen greenhouses at Springfield, Ohio, are owned by Chas. A. Reeser, whose advertisement is of interest to those who love splendid flowers.

FORCE PUMP AND SYRINGE.—The claims set forth in the advertisement of Lewis' Combination Force Pump and Potato-Bug Exterminator may seem large, but from personal trial we do not think them to be overstated.—*The Cultivator and Country Gentleman*, Albany, N. Y.

HAVE you read Tokology? 99,000 copies already sold. No work more popular among women. Written by Dr. Alice B. Stockham and sold by agents.

Sacramento, February 4, 1888.

TO THE PUBLIC: Having withdrawn the "New Becker" Improved Washer from Wholesalers and Jobbers, we now offer them, for 30 days, to the first applicant at Agents' prices. We desire to introduce the "N. B." only through County Agents, to whom we will allow Special Terms.

Yours, very truly,
INSTALLMENT SUPPLY CO.,
E. W. MELVIN, Manager.

LOW RENT AND FREE WATER!

160 Acres Rich, Level Land.

To some one who will cultivate well, will be furnished free water and use of 160 acres of good land (S. E. Sec. 13, T. 21, R. 23) with 9 miles of Tulare, S. W., for one-tenth of crop. Forty acres formerly plowed. Land on all sides cultivated and pastured. Water for irrigation, if needed, free. For particulars call on E. M. DEWEY, 7 miles S. W. of Tulare, or A. T. DEWEY, 220 Market St., San Francisco.

DIVIDEND NOTICE.

THE CALIFORNIA FRUIT UNION.

At a meeting of the Board of Trustees of the California Fruit Union, held at its office, 507 Montgomery Street, San Francisco, January 17, 1888, a dividend of 6 per cent on all fully paid stock was declared, payable after February 1, 1888, at the above office.

Also a rebate of six-tenths of one per cent on the total gross receipts of their shipments through the Union was ordered to be made to shippers, payable same as above dividend.

GOULD'S SPRAY PUMP

—WITH—

Bamboo Extension all fitted up, Complete with Hose, Barrel and Spray Nozzle.

This cut shows in faithful operation our Gould's Spray Pump; they are utilized for spraying Fruit Trees, Orange Groves, Vines, and in fact, all trees or shrubbery infested with the destructive insects which infest and do so much injury in Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and handle, and are strong and heavy; the valves being made entirely of metal, will not be affected by the corrosive solutions such as Caustic Soda, Acids, Lye, or any other solution that may be used to kill the destructive insect.

Send for Special Circular and Prices.

No More Scale!

ONGERTH'S LIQUID TREE PROTECTOR FOR SPRAYING TREES

(PATENT APPLIED FOR)

Is to be applied by means of a spray-pump; it kills and destroys all fungoid growth and spores, and all kinds of insects and their eggs, such as Red Scale, Black Scale, Oystershell Scale, White Cushion Cottony Scale, San Jose Scale, etc.

It is not poisonous and does not injure the tree, but on the contrary will give it new life and strength, so that it will produce better fruit; therefore its use is also recommended on perfectly healthy trees that have not yet been infested by any insect or fungoid parasite; leaves and blossoms may drop off, but soon new, vigorous ones will spring forth in their stead; one thorough application will protect the tree for years; especially if the wounds and cuts are protected by ONGERTH'S GRAFTING COMPOUND.

As this liquid adheres to the bark and imparts to it a soft dark color it is easy to detect the parts which have not been touched by it.

This liquid can be used in any kind of weather, hot or cold, windy or calm, as neither the heat nor the wind dries it up as is the case with other washes.

It is not affected by rain, even if it should rain immediately after application to the tree. In the fall of the year remove the soil from trees attacked by woolly aphids, so as to expose the neck of the root and apply to the same the undiluted liquid. Wash your trees as soon as the leaves have fallen off; the best time to spray evergreen trees is after blossoming season; oranges, lemons, limes, etc., at the time when the fruit has attained the size of a hazel nut. Game thares and deers will not browse upon trees which have been washed with Ongerth's Liquid Tree Protector. To secure the growth of trees which are to be transplanted or to be shipped, wash them (but not the roots) with Ongerth's Liquid Tree Protector, thus preventing them from drying up and the bark from shrivelling. Ongerth's Liquid Tree Protector must be diluted in order to be sprayed. A dilution in equal parts is the best to spray the trunk with; for spraying leaves, a dilution from four to eight or ten parts of prepared water to one part of Ongerth's Liquid Tree Protector is recommended. For spraying black smut (capnodium) and green lice, take four to eight parts prepared water to one part of Ongerth's Liquid. Send for one gallon for sample.

ONGERTH'S IMPROVED GRAFTING COMPOUND.

(PATENT APPLIED FOR.)

This Compound protects all wounds or cuts on trees and vines from the influence of the atmosphere and water; it increases the formation of Cambium, thereby producing a rapid healing of the wound, and is therefore a perfect substitute for bark. It further keeps all animal and vegetable parasites from the wound, and prevents the decay and molding of the wood. Grafting is made absolutely successful by the use of Ongerth's Compound. Special attention is drawn to the fact that it is absolutely necessary to protect the grafting wounds on grapes.

THE NEW BRADLEY SQUARE CORNER GANG & SULKY PLOWS

Are, Without Any Exception.

THE BEST PLOW MANUFACTURED.

SENT ON TRIAL!

EVERY ONE GUARANTEED.

If not satisfactory we pay all freight

You Run no Risk in Ordering.

They are used by the largest farmers on the Coast. The Shares are 5-16 inch STEEL, not pot metal. This cut does not show shifting clevis.

No. 4c.—NEW BRADLEY 4 GANG WALKING PLOW. 10 INCH.

BEFORE YOU BUY ELSEWHERE

NOTE THE POINTS OF SUPERIORITY:

1. Extra hardened soft center steel molds.
2. Lightness of draft—Plow is carried on wheels.
3. They are Steel Beams, stiff and strong, don't bend.
4. They will plow from 2 to 12 inches deep.
5. They will turn a square corner without taking out of ground.
6. We give you Cast Steel Shares 5-16 inches thick.
7. They work with or without a pole.
8. They are used by all the best farmers.

Our Square Corner Sulky is the best Plow manufactured for the vineyard. It will plow from 14 to 16 inches deep. It is a fact that the BRADLEY SQUARE CORNER GANG PLOW Runs Lighter, is Handled Easier, and that the Shares last longer than any other Gang Plow sold on the Coast. All the Bradley Plows have the extra hardened Soft Center Steel Molds. WRITE FOR PRICES.

GRAND ISLAND, COLUSA COUNTY, CAL., December 22, 1887.

Messrs. Truman, Hooker & Co., San Francisco.—GENTLEMEN: I received through Messrs. Clare Brothers, one of your 4 gang 'Square Corner' Plows on trial, and in order to give it a thorough test as compared with other plows, I placed it in the field where three other 4-gangs were working, of different patterns. I found that for lightness of draft and perfection of work it far excelled the other plows, and all who witnessed the test, joined with me in my opinion that the plow was unequalled. I cannot commend too high the wheel attached behind as a requisite for lightness of draft. By way of experiment the rear wheel was taken off, and we found that with a team of 8 horses, by having the rear wheel on it rendered it one span of horses lighter. I do not hesitate to recommend it to farmers as a plow that will give entire satisfaction. Yours, very truly,

JAMES BALSDON.

We have the finest Carriage Repository on the Pacific Coast. Agents for David Bradley Manufacturing Co. A full stock of Garden City Plows, Harrows and Cultivators on hand; also a full line of extras. Agents for the celebrated Milburn Hollow Iron Axle Wagon, McCormick Mowers, Reapers and Twine Binders, and Randolph Headers. If you have not our Catalogue, send for it. Mailed free to any address. The Visiting Horticulturists.

The members of the American Horticultural Society did not arrive in San Francisco in a body, but by installments. The president and secretary were both detained and did not ar-

San Jose, we secured portraits of the president and secretary, whom we shall introduce to our readers at another time.

First in official position in the society is T. V. Munson of Texas, vice-president. He is a thoroughly scientific horticulturist as well as a

readers from the frequent mention which we have made of his excellent work. He is a resident of Kansas and has made a lifelong study of fruit matters.

Mr. T. S. Hubbard of Fredonia, N. Y., is widely known as an extensive cultivator of

largely engaged in fruit growing, and is a valued member of the society.

Mr. J. B. Durand of Prairie City, Mo., is one of the leading practical horticulturists of his State. He is largely interested in orchards, giving especial attention to apples.

Evans. Pepper. Ohmer. Smith. Hubbard. Budd. Bubach. Munson. Van Deman. Rudisill. Durand.

A GROUP OF THE MEMBERS OF THE AMERICAN HORTICULTURAL SOCIETY.

Taber Photo, S. F.

rive until the opening of the meeting in San Jose. There were other members not included in the first party to reach the city. For this reason we were not able to carry out our idea of giving our readers a large group of those whose presence in the State has been the occasion of such demonstrations of welcome. Our representative succeeded, however, in capturing a group from the early arrivals, and by the aid of Taber's kindly lenses fixed their form so that our engravers could prepare the photoplate presented on this page. Afterward, at

practical fruit-grower. He is an authority on American species of the grapevine, and his classification was published in the *RURAL* a few years ago.

Mr. J. C. Evans of Harlem, Mo., is the treasurer of the society, and is also president of the Missouri Horticultural Society. He is one of the leading fruit-growers of his State.

Prof. H. E. Van Deman, Chief of the Division of Pomology of the Department of Agriculture at Washington, is already known to our

grapevines, being one of the most prominent growers of the East. Mr. Hubbard is also a noted horticultural writer.

Mr. N. Ohmer of Dayton, Ohio, is the ex-president of the Ohio Horticultural Society. The soundness of his judgment and his wide experience have made him famous.

Mr. J. M. Smith of Green Bay, Wis. is the president of the Wisconsin State Horticultural Society, and is one of the foremost cultivators of small fruits and vegetables.

Mr. H. J. Budd of Mount Holly, N. J., is

Mr. Geo. P. Pfeffer of Pewaukee, Wis., is one of the pioneers of horticulture in the Northwest and is especially prominent in Wisconsin. He has originated several excellent varieties of fruit.

Mr. J. G. Bubach of Princeton, Ill., has made a name as a cultivator of strawberries, and originator of new varieties.

Mr. M. B. Rudisill of Greencastle, Ind., is not a practical fruit-grower, but seemed to enjoy the California visit just as well notwithstanding.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Progress and Profits at Lucerne.

EDITORS PRESS:—The two liberal showers we received about Christmas, with the nice rain we had last week, together with the damp morning fogs that we are now daily receiving, have brought about a most agreeable change in the outlook for a year of prosperity with the farmers of Lucerne.

Within the last decade, with but one exception there has not been a better prospect for a really good season than we have at present writing.

Last year was with us a very dry one, as scarcely enough rain fell to sprout wheat sown outside our irrigation districts. But from present indications we will have good wheat crops throughout the entire valley this year.

Lucerne, for 15 years known as one of the best wheat-producing countries of its size in the world, is fast changing its staple productions from wheat to fruit and stock. It has been discovered that land which formerly yielded about 15 sacks of wheat to the acre yearly, worth about \$20, can in every instance, with a little more labor, be made to return an annual income of from \$200 to \$400 per acre, if devoted to fruit culture. Or if stock-raising be preferred it will yield double the return, with half the labor required, than if devoted to wheat culture.

From present indications another decade will witness all our large wheat-fields of the present planted to fruit trees and vines or sown to alfalfa.

Though all kinds and varieties of fruits grown upon the Pacific Slope can be cultivated here with profit, yet it is the writer's opinion that the apricot, peach and grape are best adapted to the soil and climate of Lucerne.

Most of our orchards and vineyards now in bearing were planted either for family use or for experiment, and are therefore not large, but we have several large ones which will come into bearing this season or next, and I can confidently say that the whole area of orchards and vineyards of Lucerne will be doubled in size this year.

That your readers may know something of what we are doing here, I will give you a brief statement of the returns some of our fruit-growers received from their products last year, which as I have already stated was a very dry season, and therefore by no means a fair test of the productiveness of the country.

C. M. Blowers of Grangeville took from his 20-acre orchard of peaches and apricots a few hundred pounds over 200 tons of green fruit, besides a considerable amount wasted in gathering and from ripening too fast for the force occupied in handling, etc. His orchard is a comparatively young one, and the yield of peaches and apricots about the same number of pounds to the acre. Mr. Blowers' vineyard of six acres yielded him a little more than 60 tons of Muscatel grapes, which he does not consider an average return.

O. C. Brown of Lemoore received for the product of his 20-acre orchard and vineyard, much of which has but recently come into bearing, \$4700.

The orchard and vineyard of J. T. Woodward, which adjoins that of Mr. Brown, did about as well.

W. R. Maschmeyer, whose place is also near Lemoore, gathered and cured 18 tons of raisins from 5000 vines of the Muscat of Alexandria variety. The vines are, I think, eight years old, and are planted six feet apart.

From 5½ acres set to vines Peter Seazighim of Grangeville received a return of 13 tons of Muscatel raisins. This year we expect to do better.

Hanford, Cal.

A. F. JEWETT.

Yolo Industries.

EDITORS PRESS:—Yolo county is making rapid strides toward success, and if the increase of fruit-raising continues she will rank in a few years among the banner fruit counties. It will be found, by referring to those valuable statistics published in your last issue, that the notion that all or nearly all the fruit shipped East is sent from the southern portion of the State is a mistaken one. The figures show that Central California is the largest shipper, and the amount of Southern California's exports falls far behind.

Grain-raising is still the main industry in this county, but it will soon be supplanted by the more remunerative occupation of fruit-raising. Here, it is claimed by many, orchards need no irrigation, but others assert that we need irrigation to secure perfection in the crop. The former claim that with careful and thorough cultivation only fruit trees will bear a good paying crop. The only reason to be assigned for the fruit-growing industry remaining behind is that the farmers followed grain-growing before fruit-raising was known to be a success in this locality, and now they very naturally "stick to the rut."

Stock-breeding is also a very important occupation here, and the Yolo breeders generally rank high in their respective lines. Sheep, cattle, mule, horse and hog raising are extensively carried on by their devotees, and those who pursue these callings to the exclusion of

all others win handsome revenues; they even claim that it is more profitable than horticulture. But, notwithstanding the objections, I think the fruit industry will soon lead in Yolo. Davisville, Jan. 29, 1888. W. O. R.

Hawks' Corners.

EDITORS PRESS:—Regarding the above popular name for the town of Elliott, mentioned by your correspondent, "W. W." in the PRESS of Jan. 14th—Hawks' Corners would have been a corner but for John Hickey. He owned quarter of a mile on both sides of the half-section line to Dry creek, where the best crossing was, and where a free bridge could have been had, making a direct line from Staples' ferry. I owned and controlled 1½ miles, and secured the right of way for a road from the "corner" to the vacant land near the ferry.

Hawks of Sacramento was about to fail and started Walt Estes in a branch store, and parties in and about the store gave it the name. As there was at that time a strong probability of a road from Staples' ferry to Dry creek on the half-section line, I had the name of the postoffice changed from "Orr's Ranch" to Elliott.

I agitated the taking of water of the Mokelumne river till they talked of taking me to Stockton for irrigation on the brain.

Cambria, Jan. 17, 1888. G. W. PROCTOR.

THE VETERINARIAN.

Anthrax in the Bay Counties.

The epidemic among horses and cattle now and for some time raging along the shores of Contra Costa and Solano counties, opposite the smelting works, has caused considerable alarm and controversy as to origin and cause. The farmers and losers of horses and cattle by death have made a strong claim to the theory that their loss is caused by poisonous substances being deposited from the fumes of the smelting works on the pastures surrounding, even to a radius of ten miles, while the proprietors of the works, backed up by the opinions of veterinarians and chemists, deny it in toto, and attribute it entirely to a very dangerous disease in horses and cattle and properly called anthrax. To further investigate the difficulty and differences of opinions, a Call reporter yesterday interviewed some of the leading veterinarians and chemists on the subject.

Dr. W. H. Carpenter of the firm of Dr. Carpenter & Sons was the first seen.

"Yes, I have not only heard of the epidemic over there, but was sent for by Mr. Johnson of Benicia to visit some valuable horses of his in the neighborhood that had been stricken with a locally unknown malady that was carrying them off to an alarming extent.

"They intimated that it was from being poisoned by gases and deleterious acids deposited on the surrounding pastures from the smelting works, which, when eaten by either horses or cattle, caused their death, and in substantiation of this theory claimed that horses fed and watered in the stable, and not pastured with the others, were entirely free from the disease.

"On cursory examination of the first cases shown me I admit I was puzzled, as I had never seen a case of anthrax in a horse on this coast, and before passing my opinion desired to make a more thorough examination. There was a gray mare tied with a hay rope adjoining Mr. Johnson's stable apparently in the last stages of the disease. Mr. Johnson and myself on our return from a visit to the surrounding farms found she had broken the rope and gone out of town about a mile, where she had dropped dead.

"I took the lungs, coccum or large intestine, stomach and spleen, and after securely sealing them sent them to this city, at Mr. Johnson's request, for a chemical analysis by Prof. W. T. Wenzell.

"I then informed Mr. Johnson that I was satisfied there would be no poison found, but gave him my opinion that the disease was anthrax. Although new to this coast, it is well known by all veterinarians. It has taken epidemic form in several foreign countries to an alarming extent, taking off in some instances 100,000 horses and cattle."

The reporter was then referred to his son,

Dr. H. E. Carpenter.

He was found at his residence and at once interested himself in the subject, as he had assisted in the chemical analysis made by Professor Wenzell of the stomach and lungs of animals afflicted with the disease not only in this neighborhood but in other sections of the State.

"In the chemical analysis made by Professor Wenzell and myself," said he, "no traces of any poison whatsoever were found, and Mr. Johnson, who came down and saw Mr. Wenzell, was so informed. I then notified him that if desired I would make a microscopical examination of the lungs, and associated myself with Professor Wenzell in such examination to verify my theory.

"After two hours' investigation bacteria in the blood was found to be very large and numerous, thus establishing beyond a doubt the fallacy of acid poisoning and the absurdity of the claim for the epidemic from any source other than anthrax, which is a contagious but

not infectious disease, and in its most malignant form.

Contagion and Infection.

"Another point I would like to state is with regard to the erroneous construction put on these two terms. This disease is admitted by all to be contagious, but I claim, like glanders, is not infectious. For instance, a horse with the glanders may be worked side by side or in the same stable with well horses for months and they will never contract the disease, unless they are inoculated in some way with the virus of the glandered horse, as the disease is not transmitted through the air. In this case, horses not inoculated with the virus will escape.

"There is no cure after it has once taken a hold on an animal, and the best authorities state that a human being is susceptible. There is no doubt in my mind of the importance that farmers and cattle-buyers should make a thorough investigation and examination of animals similarly afflicted, and at once remove and isolate the first and every case brought to their attention from contact in any way with their own or neighbors' stock."

Professor W. T. Wenzell.

Professor Wenzell was next seen by the Call reporter, at his laboratory on Market street, and corroborated everything said by Dr. H. E. Carpenter as to the analysis of the parts of animals brought to him, and further stated that it would be impossible for the metallic vapors to be carried even so far as a mile, as by their own weight they would descend sooner, and that it was an utter impossibility for them to be carried as far across water as claimed (three miles to the Contra Costa shore), for the water would immediately precipitate their descent.

Dr. A. De Labrousse.

The reporter next visited Dr. de Labrousse, who had not personally investigated any case, but judging from what Dr. Wenzell said he had found in blood, the doctor expressed the opinion that it was anthrax, a disease of the throat similar to putrid sore throat, and that it was incurable. He thought it could be prevented by inoculation. He said that in other countries the disease was always discovered by tumors in the lungs, and he had never seen a case without eruptions of the body or lungs. If bacteria had been found in the blood it was a disease of the spleen, or properly named anthrax.—Call.

Treatment for Cows.

EDITORS PRESS:—The after birth or "cleansing" of cows and other animals occasionally causes trouble by its retention, and sometimes the death of the animal occurs in consequence of want of knowledge on the part of the owners. Cows that have given birth to their offspring at the usual and proper time seldom have much difficulty in ridding themselves of this placenta or "cleansing." It is hardly necessary to state that the material consists of the membranes in which the fetus was enveloped. It is not unusual for a cow to retain them for three days and then expel them without any assistance. There are two criterions to guide a man in making some interference. Firstly, premature birth will almost invariably call for artificial aid. The reason for this must be evident. In such cases the arm of the operator should be carefully inserted into the uterus and all the after-birth removed. It will be found that it adheres to some button-like elevations on the mucous membrane of the womb. These are "cotyledons" and their function is to supply nutrition from the dam to the offspring. It is very important that the "cleansing" should be removed from these vascular bodies in a proper manner, i. e., by very gradual traction, as, if they, the membranes, are carelessly torn off, internal bleeding is the consequence. Secondly, surgical aid is necessary when a peculiar and most characteristic odor is perceived. This, of course, indicates that decomposition has commenced, and this may be communicated to the general blood circulation and produce blood poisoning and death. A method often adopted and much to be commended is to tie a brick or something of a similar weight to the protruded mass, and allow it by its weight to gradually detach the membranes from the womb. After the whole has been removed it is good policy to thoroughly wash or syringe out the uterus with warm water. Some also use a mild weak solution of some disinfectant. This is good practice, but it should be remembered that the solution must not be too strong. Medicines are sometimes recommended internally. Purgatives are good to assist in getting the system into a healthy condition. Tonics also, such as sulphate of iron and gentian, are to be commended. But, if any real local benefit is to be expected, it is necessary to use such medicines as are known to act directly upon the uterus or womb, causing that organ to contract and thereby expel the offending material. Such medicines are useful, but they ought only to be used by those who have had a proper medical education. Ergot of rye comes under this heading. Some cows as soon as they have discharged their after-birth will turn round and immediately consume it. Some say that on this account it should be at once removed, because it may occasion an impediment in the folds of the stomach. But with this doctrine I do not agree. If instinct prompts them so to do, she is not likely to be wrong. It surely must be nourishing to the system, although not of the same nature as her general food—herbivorous—she becomes for the time carnivorous.

ROBERT J. DAWSON, Veterinary Surgeon.
Willard's Brick Stable, San Diego.

ENTOMOLOGICAL.

The Fluted Scale.

Representative Felton has received the following letter in regard to the white scale:

Hon. C. N. Felton—MY DEAR SIR: Your letter of the 24th inst., referring to a memorial presented by you to Congress concerning the investigation of *icerya* or white scale, has been received and referred to the entomologist, who reports that the natural history of and remedies for this scale insect have been under investigation for some time, and that a full consideration of the subject will be found in the annual report of this department for 1886. He has forwarded to you by to-day's mail a copy of the author's edition of this report. Supplementary facts are published in Bulletin 15 of the Division of Entomology, a marked copy of which is also sent you by accompanying mail. He has satisfied himself since the publication of this bulletin, by an examination of types in Paris and by correspondence with naturalists in New Zealand, Australia, South Africa, Mauritius, and the island of Bourbon, that the *icerya purchasi*, common to California and to the first three countries mentioned, is specifically distinct from the *icerya sacchari* mentioned in the second article in the bulletin sent. The result of this conclusion is to render still stronger the hope of a practical outcome from the investigation of the parasites and other natural enemies of the species in these and other countries, and more particularly in Australia, where two important enemies of the scale have already been discovered.

You will see from the documents forwarded that much has already been accomplished in discovering the full life history of the species in California, and particularly in contending with it. I am happy also to state that as the entomologist informs me, the experimentation by the agents of the department the present year, the results of which are not published, has been very satisfactory, and the method of fumigating has been rendered feasible and practicable and the washes improved practically in the direction in which he has suggested in the bulletin. The history of all such cases of the destruction of insects introduced from other countries goes to show, however, that the introduction of these natural enemies that keep the white scale in check in its native countries will prove more effective than any other methods in subduing the pest, and at the same time relieve the fruit-growers of the large expense attending the employment of even the most satisfactory remedies. I am, therefore, heartily in sympathy with the purport of the memorial to which you refer, and shall be pleased to do anything to bring about a favorable consideration of it.

In conclusion I would say that there is nothing to prevent my carrying out the wishes of the fruit-growers of California in this particular regard as expressed by the resolution and by the memorial to which you refer, except the clause restricting traveling expenses for the Division of Entomology to travel in the United States. This restrictive clause has always seemed to me entirely unnecessary, as the Commissioner might, in his judgment and discretion, be left to decide on the advantage or the necessity of sending an agent to a foreign country when any emergency may arise to justify it. I believe that with the exclusion of this limitation the appropriation, even as it now stands, would justify the sending of an agent for the purpose indicated, though I should be still better pleased to have a special appropriation and special authorization made for that purpose. It would be particularly appropriate to make an effort in this direction the present year, because of the International Exposition at Melbourne, in which, by a resolution already passed, the Government is to take part. This exposition in many ways would further the investigation referred to in your memorial. In the hope that this information may meet your wishes, I remain with respect, your obedient servant.

NORMAN J. COLMAN, Commissioner.

THE SCALE EATER.—Dr. J. J. Shaner of Los Gatos writes to the San Jose Herald as follows: I find that the two-spot ladybug is playing havoc with the orange scale and red spider. I find the two-spot out in the brush working on the orange scale as well as in the orchard. While I was pruning my plum trees I found one tree with a few scales on it, and on examining the tree I found the two-spot. The two-spot's cousin has left. There are none of them to be found this year where there were millions last year. The striped bug has almost disappeared. Still, the fruit-grower must watch his enemies or they will overcome him, as they do not consist of bugs alone, but numerous bipeds that walk about in fine silk hats with kids on the hands. The San Jose scale is not giving much trouble. The white small scale on the Yerba Santa is giving but little trouble. I hope that the two-spot will find it as it has found the others. The two-spot is a very pretty little creature, but is very slow; still, it does good work, just as Professor Norton said it would nine years ago while I was attending the State Normal School. The cottony scale is not here as far as I know. The codlin moth is still with us and will be found even in the manzanita berries—at least, if it is not the genuine, it is a cousin.

THE GARDEN.

Potatoes at the East.

EDITORS PRESS:—We note your remarks on "Potatoes at the East" in your issue of January 7th, suggested by our New York contemporaries. We beg to object to "the best of potatoes coming from Scotland, having grown on light soils and very attractive in appearance." On the contrary the best of those varieties, the Magnums, don't begin to equal in quality or appearance the American Rose, Burbanks, Peerless or White Star, and the Regents and Champion grade, and sell rather below our second grade native stock mixed varieties. Why, first-class native and Nova Scotia potatoes command 80 cents to 85 cents per 60 pounds firm in New York, Philadelphia, Baltimore and Boston right along, and have for some time past, while Scotch Magnums reshipped from New York are unsteady at \$2 to \$2 20, Regents and Champions dull at \$1.70 to \$1 80 per 168 pounds. The latter are mostly dark and dirty, appearing to have all been grown on heavy, dark soil.

There seems to us to be some uncertainty about any continued higher prices ruling. See our letter circular. The situation may be strained and the charm broken, but "it is one of those things what no fellow can tell" certain. First-class new potatoes always sell high here early, \$10 down to \$5 per barrel wholesale, as to the season, etc. They frequently hold \$6 per bbl. for a couple of months, sometimes until June. PANCOAST & GRIFFITHS.

Philadelphia.

The Circular.

The following is the circular to which our correspondents allude, dated Philadelphia, Jan. 12th:

Potato Outlook.—Mid-winter and spring supplies, etc. We have canvassed the situation among holders, dealers and growers of potatoes, as searching and as far as possible to reach, which we present to you for what you find it worth.

In New York State and through the West it seems as though "everybody was confident that the crop would be light" everywhere, and most everybody put away a considerable quantity "without letting anybody know anything about it," and consequently in many instances there has been held an excess over previous years.

Ice-bound in the Canadian Provinces, our patrons tell us, there are great quantities held for spring shipping.

In the British islands the crop is large, and to catch the cream of our American markets (besides the numerous smaller shipments made already in January) much heavier shipments than usual are contemplated. Two steamers, on the way and loading now, are to bring 40,000 sacks each from London and Liverpool to New York, as a commencement only of the Scotch exports.

Our German correspondents say there is an immense stock of Dutch potatoes promised to America as soon as the weather permits.

It is evident that all—all—are holding for "big prices" in the spring, and it is equally apparent that there are "big lots" held.

It seems to us reasonable to repeat our good rule: *The best time to market any produce is while it is at its best quality and when it is in good demand at paying prices.* With us, first-class potatoes of desirable varieties are scarce and firm at 80 and 85 cents per bushel (60 pounds), and we are dubious about any higher ruling being maintained.

Potatoes in Chicago.

In addition to the foregoing we give the following dispatch recently sent out from Chicago:

Since the great crop failure of 1881 potatoes have not been scarcer nor dearer over the country than they now are. The crop last year in Michigan, Southern Wisconsin and New York, the three greatest potato producing States, was a total failure. The Illinois and Indiana crop was far below the average, and Missouri, Iowa and Ohio did not fare much better. During the early fall and winter the scarcity was not felt so badly, but since the railroads have been blocked by storms in the Northwest the scarcity has grown daily and prices have gone up. Since January 1st foreign consignments of potatoes direct from Scotland, Germany and Denmark have been made to this city. Other great distributing points, St. Louis and Kansas City, have been in a measure supplied with Colorado and Utah potatoes, but the supply has given out, and calls are being made upon this city which it will be difficult to fill, at least until the weather moderates.

The largest consignment made direct from Europe to any firm in this city was that which arrived Thursday to a local commission firm. It consisted of 8000 bushels from Rotterdam. The head of the firm said to a reporter to-day that until the recent blizzard set in, Manitoba had shipped a large quantity to this country, but since then the supply from there had been cut off and they are compelled to send to Europe. The potatoes cost in Europe 10 to 15 cents a bushel. In Chicago they are now bringing 90 cents, with a prospect of going higher. Chicago consumers use between 9000 and 10,000 bushels a day, and very little of the importations have been shipped away.

A Potato Trust.

The Lewiston, Maine, *Journal* has the following: The six largest potato dealers in Boston have combined in a trust known as the

Consolidated Produce Company, lately organized at Portland under the laws of this State, with a capital stock of \$400,000, of which \$100,000 is preferred. The object of this trust is said to be to regulate the price of potatoes, which for the past few years has been subject to so much competition and price-cutting as to take away all the profits of the business. The members of the company disclaim all intention of creating a monopoly, but the ten smaller dealers in Boston are not reassured by the report that the directors of the new concern are to meet daily to regulate and make prices for potatoes. It is expected to have things in working order by next month. Dividends are restricted to seven per cent per annum on either the preferred or the common stock, but the whole seven will have to be paid on the preferred before any on the common is due. This new movement is of no less interest to Maine farmers than to the smaller Boston dealers. It is in their power to break it up if they see fit.

HORTICULTURE.

Figs in Southern California.

The following paragraphs are taken from an essay on the fig written by John C. McCoy in the Orange (Los Angeles county) *Tribune* of recent date:

The fig is the coming fruit for profit in Southern California. There is no fruit that is attracting so much attention as the fig. Progressive and far-sighted fruit-raisers are planting largely of the new, but well-tested variety, White Adriatic. The failure heretofore to produce a first-class dried fig has been owing to the lack of the right variety, but the introduction some years ago of the White Adriatic has filled the long-felt want of the fig-producer.

There is but a small portion of the earth's surface where the fig can be successfully grown and cured, and we, in Southern California, have a lion's share of that small area. Are we not blind to our best interests if we do not improve our golden opportunities?

It is a thoroughly demonstrated fact that the fig tree will grow most luxuriantly, thrive and bear great crops on any of the land around Orange. The warm, dry, gravelly soil seems peculiarly adapted to its successful culture and curing. It will grow and bear good crops on land too dry to mature other fruits. There is no fruit that can be grown with so little care and risk, or that is more profitable in the end, provided the right variety is planted and the fruit is handled properly. A few trees will not amount to anything. We must have 5-acre, 10-acre and 20-acre orchards in order to make a market for the productions. In recommending the White Adriatic as one that will cure and when properly handled will be equal to our imported figs, I do so with samples before me that were grown and dried in California. This fig was imported from Dalmatia by a former resident, Mr. Milco. The native soil and climate closely resembles Los Angeles county, and this fig leads all others in commercial value. The fig has no insect enemies, begins to bear second year, grows rapidly, attains a great size and lives to advanced age, yielding larger and finer crops as it increases in size and age. I know of an orchard six years old that produces in one year 150 pounds of dried fruit to the tree. There is a small orchard 25 years old that yields from 600 to 1000 pounds of dried fruit per tree each year, while the ones spoken of above are the common purple variety. I am assured by those who have tested all varieties that the White Adriatic is the most prolific of them all. Aside from the commercial value of figs for drying, there is a rapidly growing demand for the White Adriatic and Brown Smyrna for crystallizing, canning, jamming and pickling. The establishments for crystallizing figs cannot get one-fifth as many figs as the business demands. I know of one such establishment offering to contract to pay \$40 per ton for all the figs that could be raised for 10 years on 20 acres of White Adriatic and Brown Smyrna. The present price is \$50 per ton, and it is not likely the price will be less for years, as the demand for figs, preserved in different ways, is increasing more rapidly than orchards are being planted.

The Brown Smyrna fig is excellent for crystallizing, preserving and pickling, but the skin is too thick for drying. For all purposes, especially drying, the White Adriatic fig leads all other kinds in California. The fruit-raisers of Orange would do well to carefully consider the advisability of planting figs for profit. One hundred acres in White Adriatic figs would be the means of bringing a crystallizing establishment to Orange; the nearer the orchard to the establishment the more easily can the fruit be handled. The demand for preserved figs is so great that any community that plants largely of fig trees will soon become the commercial center of fig industry. Are there not many persons who will plant five acres, and some perhaps ten acres, enough altogether to have 100 acres of figs in Orange? In a few years they would have an income larger than has been produced by any other fruit—and with less expense for cultivation. A tree four years old will yield 200 pounds of ripe fruit, and it sold at present price, 2½ cents per pound, would amount to \$5 per tree, and as 80 trees can be planted to an acre (for first six to eight years) you will see that one acre would give the enormous yield of \$400 with a very small outlay for cultivating and picking. You could

make a fortune at one-half the present price. The dried fruit will pay equally well, and the process of curing is simple and inexpensive. A tree six years old will produce 100 pounds of dried figs, at 10 cents per pound would be \$10 per tree (present price is 15 cents per pound). Can any other fruit equal the above in productions and pay a larger profit? I have a few samples of White Adriatic and Black Smyrna on exhibition at my new office (just west of Hotel Palmyra). I am not an agent for any nursery, or in any way connected with the business. Investigation of the subject for past year has produced the convictions that I have written above.

POULTRY YARD.

Roup and Its Preventive.

Thos. B. Geffrey of Lodi writes to the *Cackler* as follows:

Opinion is so divided as to what constitutes roup that it is difficult to say what is and what is not roup. It is, I believe, the most common form of disease among fowls kept in numbers, as there is apt to be a lack of attention to all the requirements of fowls to enable them to keep healthy and productive; and, although there are many *sure cures* advertised, and many believe in and use them, I think that if they notice closely they will find that it invariably shows itself again in the same fowl, even when there is no apparent cause, and my experience with roup fowls leads me to say that I do not believe that a fowl once sick with it is ever free from it after, although she may be relieved and apparently cured for a time. And so my cure for roup is hatchet and block, or, if not handy, to kill the fowl at once by the best means at hand, and either burn or bury the carcass deeply somewhere off the poultry range.

I do not believe that there is any cure for roup once a fowl has it, but I do believe that it can be prevented—perhaps not entirely where many fowls are kept together, but so that only an occasional case shall show itself, to be disposed of as above as soon as it shows itself, in order to not only save useless care and expense, but to prevent its being conveyed to healthy fowls from contact with them.

The best and only reliable way in which to prevent fowls from having it is to look with unremitting care to the cleanliness of their food and water, and of the vessels in which they are fed and watered, as well as to the thorough cleanliness, and proper ventilation of their houses, and that they be not crowded in their houses, or have a wet floor under them. Then, of course, in confinement or on limited range, one must supply them with what they would find for themselves if they were allowed to, or as nearly so as may be. A dust bath, part ashes and part dirt, with a little sulphur; with ground shells and bones, with very coarse, sharp sand or very fine gravel (sand the best); meat of some kind two or three times a week, or perhaps tallow will do as well cooked in with vegetables and shorts or bran, as preferred (I use bran, shorts and middlings mixed), and two or three times a week cayenne or red peppers broken finely; onions, also, and a supply of charcoal broken up for them, and a constant daily supply of vegetables or green stuff of some kind. Young corn, when about a foot or so high, is excellent, and eaten greedily when chopped for them; sugar beets, carrots, cabbage, young grain, and in fact almost any kind of fresh, tender vegetables. I throw a load of raw beets, carrots or cabbage to my fowls every day, as much as they will eat, and they eat a lot of it and pay me liberally in eggs, especially the larger breeds, with which vegetables, either raw or cooked, seem to supply the place of more solid food, more than with the smaller ones. My Langshans, with such care, have laid constantly summer and winter, and have been my principal reliance for eggs through hot and cold weather above my other breeds—Leghorns, P. Rocks and Wyandottes—and are my favorites.

Champion Pullet.

EDITORS PRESS:—I noticed in your valuable paper of January 7th the record of a Wyandotte pullet belonging to J. G. Warner. I have a Plymouth Rock of three-fourths blood that can cast J. G.'s into the shade. She was hatched April 13, 1887, and the 13th of September she laid her first egg. Began to set December 21, 1887; hatched nine chickens Jan. 11, 1888. At 7 months old she had laid 40 eggs, and at 8 months and 5 days old, 66 eggs. I think our folks call our hen Lib. O. E. NOBLE.

Gera, Washington Territory, Jan. 27th.

LINING EGGS.—An Iowa farmer says: "I quit two years ago selling my eggs for eight cents a dozen to speculators to be preserved and sold in the winter for 20 and 25c a dozen. For two years I have done my preserving and have pocketed that 20c a dozen myself. About the first of June I prepared a brine as follows: To a pailful of water I added two pints of fresh slacked lime and one pint of salt, thoroughly dissolved and well mixed. With a fluid prepared in these proportions I fill a barrel half full, then place my surplus eggs in it, and when eggs get up to 20 and 25c in the winter—they always do—I take them to market and they go for fresh eggs every time."

THE VINEYARD.

The Coming Grape-Growers' Convention.

J. H. Wheeler, Chief Executive Viticultural Officer, has issued a circular relating to the Sixth Annual Viticultural Convention, to be held at Pioneer hall, San Francisco, March 7th to 10th, 1888. There will be special attention paid to exhibits of grape products, and Mr. Wheeler's circular gives explicit information relating thereto. We quote such paragraphs as we can find room for in this issue:

The exhibits of wines and brandies for the coming convention will comprise two classes, viz., instructive and competitive. The instructive exhibit will be similar to that of former conventions and includes wines and brandies contributed for examination and study. Samples for this purpose must be accompanied by labels plainly expressing the varieties of grapes from which the same was made, with the proportions of each grape, if a blend; also the age of the sample with the maker's name and address. The examination of these samples, duly catalogued for study and comparison, will occupy the morning sessions of the convention.

The competitive exhibit will be made up of duplicate wines and brandies which growers, desirous of entering for competition, will forward, accompanying and labeled as the samples for instructive exhibition. On their arrival at this office such bottles will have their contents placed in two pint bottles, thus removing all marks of recognition and providing sample material for two committees. They will then be duly numbered, classed and catalogued by the secretary of the Viticultural Commission, who will preserve this record apart from the knowledge of any other person until the report of the final committee is rendered.

The samples from each county will be kept separate, and on the first day of the convention one set from each county will be turned over to a committee of wine-makers appointed from the particular county producing these wines. This committee will proceed to choose from the samples so offered those which they are willing to submit for competition, with samples similarly chosen from other counties. Thus the choice will be made without the committees having any knowledge of the producer or part of the county from which the sample originated.

The samples thus selected from the wines furnished by each county will be in turn submitted to a final committee for the State at large, who will, without any knowledge of the county from which the samples came, compare them and render a final judgment of them in accordance with their absolute merit. By this means, and this means only, it is thought that a true, unprejudiced determination of the relative value of various wines and districts may be arrived at.

One of the great troubles attending former efforts at competition has been the multiplicity of samples, in all cases so great as to place the matter of careful examination beyond the reach of any one committee. It is thought, however, that the above plan will so divide up the work among the committees as to give to each a simple task and one they can perform with accuracy and precision. The work will be particularly arranged in view of eliminating all possibility of prejudice.

The circular also gives explicit details concerning the classification of the exhibits. The following relates to sending specimens:

Samples for instructive examination should be sent in quart bottles—one bottle of each kind; the same being plainly labeled with the age, variety from which produced, and proportions of each, if including several varieties. They should be carefully packed in straw or tulle and sent by Wells, Fargo & Co.'s express, marked "State Viticultural Commission, Pioneer hall, Fourth street, near Market, S. F., Cal."

Samples for competition should be sent in a manner similar to the above marked for competition, being duplicates of those sent for the instructive exhibit.

Raisins.—Special attention this year will be devoted to the subject of raisins and raisin-growing. A committee will be appointed of competent and disinterested persons to pronounce on the relative merits of the products exhibited. All sections are invited to contribute samples, which should also be forwarded by express, marked as directed above for wines.

All samples should be sent to arrive in San Francisco not later than the 31st of March, that ample time may be had to classify them and prepare catalogue.

Miscellaneous Exhibits.—Manufacturers and inventors of wine making machinery, tools for working in the vineyard, or other viticultural appliances, are invited to be present at the convention and exhibit the same or models thereof. No special committees have been appointed to solicit or obtain sample products for exhibition, but each and every viticulturist is requested to forward samples as for former conventions, of whatever is likely to prove interesting to the vine growing or wine-making public.

Wines designed for exhibition should be drawn into bottles immediately, that they (new wines especially) may be decanted previous to sending, and thus be relieved of any sediment at the time they are examined. Nothing should be done to new wines, settling, alone, being sufficient. J. H. WHEELER, Chief Executive Viticultural Officer.

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Dr. Loring on Protection.

At the annual meeting of the Massachusetts Agricultural Society on the 7th instant, Hon. George B. Loring, Ex-Commissioner of Agriculture, delivered an address, of which an abstract has been telegraphed from Boston as follows:

"The value of the farmer's land and crops is vastly increased by neighboring manufactures—diversified industry being the law. The home market is the farmer's reliance, both for his staples and his local crops. A protective tariff develops the home market. An unprotected industry cannot succeed in this or in any other country. The reduction of the tariff below the point of protection has been fatal to the industries to which it has been applied. The American producer can sell dearest and buy cheapest in the markets of his own country, and the foreign market is to him unimportant. A policy which depresses labor destroys the farmer's market."

Following the outline of the argument pursued by Mr. Blaine in his famous letter, Dr. Loring showed that tariff taxes fall upon the foreign producer and not on the American consumer; they are the prices the foreign manufacturer is obliged to pay for the privilege of occupying our market. So declare the British manufacturers in their complaint of the tax which they have to pay for the admission of their goods into foreign countries. "And so the orators in Canada are clamoring for a reciprocity treaty. In view of the fact that the producer of grain gets more for his supply in the United States than in Liverpool, and more for his cotton in Lowell than in Manchester, it will be hard to convince the American farmer that he could save a large sum annually by transferring his trade to our English competitor."

"The argument that a duty on articles produced in this country enhances the price to the consumer, not only of what is imported, but of the whole domestic production, to an amount of which the duty is the measure, has been so often refuted that no refinement of free-trade reasoning can possibly revive it to a mind schooled in those business methods which have built up American manufactures and supplied a market to American agriculture. The practical mind of the English manufacturer would reject it at once if applied to his own business."

The doctor's audience of New England farmers received his speech with great enthusiasm.

Farmers' Petition to Congress.

The New York *Tribune* some time since invited an expression of opinion by individual farmers, agricultural societies and Granges regarding the influence of the tariff upon the agricultural industry and the changes in the tariff desired by farmers.

This drew out several thousand letters, which were handed to a committee consisting of Warner Miller, C. C. Carpenter, J. T. Rich, W. C. Morse, Edward Burroughs, J. D. Lyman, W. M. Grosvenor, J. H. Hale and Jas. Wilson. They were charged with the work of making up a consensus of the views of the farmers of the country as shown by the letters, and their report is accompanied by the following petition, which embodies the findings of the committee, and which farmers and farmers' organizations, who favor its propositions, are requested to sign and transmit:

To the Speaker of the House of Representatives: The undersigned respectfully pray that agriculture may be more effectually protected by preventing fraudulent importation of cattle on pretense that they are for breeding only; by a duty of 20 cents per bushel on barley, with a proportionate increase of the duty on malt; by duties of 25 cents per bushel on potatoes and onions, \$2 per 100 on cabbages, \$3 per ton on hay, 10 cents per pound on hops, 20 per cent on beans and peas, 5 cents per dozen on eggs, 30 per cent on fowls and poultry and on vegetables in their natural state, or in salt or brine, not otherwise provided for, with no removal or reduction of duties on market-garden products now dutiable; by such increased duties on flax and on woolen goods as will effectually encourage the preparation of the fiber and the manufacture of goods; by abolishing all duties on sugar, with a bounty to home producers; by permitting the imports of leaf tobacco suitable for wrappers at the duty imposed on other leaf tobacco and repealing all internal taxes on tobacco, and by restoring to wool-growers the substantial protection enjoyed under the tariff of 1867, modified so as to meet later forms of foreign competition and of invasion.

ENFORCED IDLENESS.—A dispatch from Sing Sing, N. Y., the 31st of last month, ran thus: "To-morrow 1200 men will become idle in the State prison here, and will be locked in their cells. The same condition will be that of 350 convicts in the Clinton prison. They will be confined in their cells for 22 hours daily, until the Senate passes the bill making an appropriation for manufacturing in prisons." This is a sad result of legislative laches; for the effect upon the convicts can hardly be other than demoralizing. And this enforced idleness of the prisoners is none the less to be regretted, on account of \$1,000,000 having been turned into the N. Y. State treasury from prison industries since July 1st.

Stockton Grange.

EDITORS PRESS:—Stockton Grange has removed to Pioneer hall, El Dorado street, near Levee, and nearer the postoffice. Several of our members are pioneers, and we feel very near the hardy settlers of our State. In the presence of a better attendance than usual, the accomplished niece of W. S. M., Overhiser was received and greeted in full membership after an absence of several years. The Grange was then highly pleased with a piano solo by Sisters Alling and Root; song by Bro. Barber, with much feeling, accompanied by his little daughter Lottie; recitations by Sister Merrill, who has a large class in elocution, and one of her pupils, Miss Kate Utt; readings by Sisters Cora Beecher and W. Lecturer Stowe; song by Sister Alling; and fine closing piece on the piano, Lizzie Root and Mrs. Alling. In two weeks the favored audience are to turn entertainers and return the compliment. We regret that some of our ablest members are too diffident to take part, but appreciative listeners are needed.

SISTER W. D. A.

Stockton, Feb. 6, 1888.

AMERICAN RIVER GRANGE conferred the third and fourth degrees upon four sisters at its last regular meeting and installed the following officers: W. H. Giffen, M.; A. A. Harris, O.; J. E. Beach, L.; F. F. Taylor, S.; Mont. Pike, A. S.; Martha Criswell, C.; W. F. Bryan, T.; Mary Cox, Sec.; Mrs. W. Oriswell, Ceres; Mrs. W. E. Kane, F.; Maggie Cox, P.; Josie Kane, L. A. S. After these ceremonies came feasting, music and pleasant social converse—so Sister Mary Cox writes the *Patron*.

LODI GRANGE discussed the tariff question for several hours last week, and came to the conclusion that jute should come into the United States free. Bro. J. D. Huffman, who writes the *Patron* about it, thinks the San Quentin directors ought to put standard bags at six or seven cents apiece, and sell them direct to farmers and to no one else; so that no syndicate could cinch the producing class on grain sacks.

THE TARIFF QUESTION continues to be earnestly debated. Bro. I. A. Wilcox of Santa Clara, in this week's *Patron*, combats the positions lately taken by Bro. S. T. Coulter, and the latter has another article on the subject in our "Public Affairs" department on page 118.

NORTH BUTTE GRANGE installed officers on the 28th ult. P. M., Otis Clark conducted the exercises, with Bro. W. T. Spillman as assistant. With 52 members and revived enthusiasm, this Grange appears to be very prosperous and hopeful.

MRS. HANNAH P. FLEXMAN, who died suddenly at Courtland early in January, was a faithful and honored member of Franklin Grange, which passed memorial resolutions last Saturday.

SOUTH SUTTER GRANGE had installation exercises January 28th, W. P. M., J. M. Jones officiating.

Mechanics' Institute Fair.

At a meeting of the trustees of the Mechanics' Institute on Tuesday evening, the Printing Committee submitted a draft of the preliminary announcement of the Twenty-third Annual Fair, setting forth that the fair will open on Tuesday, August 7, 1888, and close Saturday evening, September 15, 1888.

The Committee on Rules, Regulations and Awards presented a report proposing that a handsome certificate of merit be substituted for the medals and diplomas heretofore distributed, the certificates to contain space sufficient to inscribe briefly the merits of the articles for which they are given. It is not to displace the gold medals, but only those of silver and bronze, and it is believed that such certificates would be more satisfactory to exhibitors. The committee do not recommend any decrease on the schedule of cash premiums, which last year aggregated \$3855. After some discussion, the report was referred back to the committee for a more definite statement of the plan proposed.

General Agent Stout states that efforts are being made to interest the State Board of Trade in the fair, and committees of conference from both organizations are likely to meet in the course of the current month.

GREAT STOCK-GROWERS' MEETING IN DENVER.—President R. G. Head and Secretary Leary of the International Range Association have issued a call to members of the association for the annual meeting in Denver on March 28th, and make an earnest request for a large attendance, as the desire is to take some decisive steps to procure legislation for absolute immunity from contagious diseases and to prevent unjust discrimination against the beef industry, as well as other laws necessary for the success of the cattle business.

RETURNING GOOD BLOOD TO GEORGIA.—Col. Peters of Georgia sold the first Angora goat to a California breeder in 1861. Recently Col. Peters purchased of C. P. Bailey of San Jose the well-known Angora breeder, four choice bucks, and, after seeing them, purchased 16 more, making 20 in all which have been shipped to Georgia and for which it is said \$1000 or \$50 each was paid.

AGRICULTURAL NOTES.

CALIFORNIA.

Colusa.

FLOODING ALFALFA.—*Sun*, Feb. 4: All the alfalfa-fields in the vicinity of Colusa have been flooded this week and the gophers drowned out. This one flooding raises a good crop of grass, at least ten tons to the acre, either in hay or its equivalent of pasture. This could be greatly increased, of course, by flooding after the cutting of the first crop—increased so that the difference in one year would pay for the river branch of the Central canal. The difference between the product of the land flooded this week and the land that gets no water is more than double.

CROP OUTLOOK.—We have been from the north to the south of Colusa county in the last few days, we have seen every character of land, and everywhere it looks as though every grain of wheat had sprouted. Never before have we seen such a magnificent prospect for every class of soil. And there are more acres in wheat in this county this season than ever before.

Fresno.

BRISK BUSINESS IN THE NURSERIES.—*Republican*, Feb. 3: Trees and vines are being shipped from the Fresno nurseries to points in Kern, Tulare and the southern part of this county by the carload. The area of raisin grapevines in this and adjoining counties is being very largely increased the present season, and most of the acreage is being planted with rooted vines. In this planters show good judgment, for the saving of one year's growth more than makes up the difference in the cost of rooted vines over cuttings.

Humboldt.

COUNTY DOTS.—*Eureka Standard*, Feb. 2: Those diminutive feathered vagabonds, the English sparrows, have taken possession of the new courthouse. There they indulge in a love feast daily, from daylight till twilight, and such a chattering can't be listened to anywhere else.... Hog-cholera has caused a loss of over \$800 worth of fine porkers to J. C. Bull, Jr., since November. The mortality seems to have been kept very quiet.... Well-authenticated reports say that many sheep (or lambs) have died of late on the upper South Fork ranges.... On the 22d of January, Levi Wheat and Brady of Upper El river killed the largest brown bear which that section has afforded for many years. It was a monster, weighing, when killed, 700 pounds, and 600 pounds when dressed. The dogs followed bruin all day, and as he was too fat to climb a tree, bayed him until the hunters came up.... In two days A. P. Campton of Rohnerville had about 150 fruit trees girdled by jack-rabbits which were, no doubt, driven by high water from the lowlands along the river.

Kern.

HEALTHIER HERDS.—*Bakersfield Echo*: We learn that the disease among cattle, that caused a heavy mortality during the fall and early winter, is not so bad now. Stockmen generally report fewer deaths in their herds. The exact nature of the complaint has never been determined to the satisfaction of all. Some think it was caused from keeping the stock on alfalfa alone for a long time, which created a disease of the blood, while others think it came from changing them from green alfalfa to dry grass, thus producing indigestion and constipation. In some cases the liver was diseased. Carr & Haggin estimate their loss at several thousand.

SOWING AND PLANTING.—An unusually large amount of grain is being planted in the northern part of the county this year. A number of fields of several hundred acres each are being put in in what is popularly termed the Delano country. We are informed, also, that in that vicinity many of the farmers are planting out a portion of their land to fruit trees and vines.

Mendocino.

SHEEP ON THE RANGES.—*Mendocino Beacon*, Feb. 4: Abraham Kiser of Bear Harbor reports that the snowstorm a few weeks ago did not do so much damage to sheep on the immediate coast ranges, but back on the high ranges the loss is very large. Sheep around Garberville suffered terribly and a great many died. Feed, he says, is looking very well around Bear Harbor.

Nevada.

WELL PLANTED.—*Grass Valley Tidings*: Of 1400 fruit trees set out by John Rodda, on a hillside east of town, and within sight of this office, fully 98 per cent have rooted strongly and are shooting up in a manner warming to the orchardist's heart. Of 10,000 trees planted last season on Jos. Thomas' tract of land on Town Talk Ridge, only two per cent have failed to grow. Similar reports are made by many who have been questioned.

PRUNES AND PEARS COMING.—Wm. Loutzenheiser is engaged in setting out 400 trees on his Forest Springs place, 100 of the number being French prunes. This tree will do well here and its product always commands top prices. Penn Valley and Indian Springs farmers are preparing ground for the reception of Bartlett pear trees. A large acreage will be devoted to this remunerative product.

Placer.

FINE FIGS.—*Newcastle News*: J. W. De Lamater, who resides a mile and a half northwest of Newcastle, has about 100 genuine Smyrna fig trees, just coming into bearing. The

trees are about three years old, and give great promise both as to bearing and as to the quality of the fruit. We have been shown some of the figs from these trees that have been dried in the sun and dipped in salt water, and they will compare favorably with the best imported figs. They are very sweet and rich, and as white and transparent as any figs we have ever seen. We believe Mr. De Lamater and Mr. H. E. Parker of Penryn are the only growers of the genuine Smyrna figs in this county, and they have a bonanza if they only knew it.

Sacramento.

QUINCES.—*Record-Union*, Feb. 1: Perhaps there is no place where fairer and finer quinces are grown than in this section of California. The soil and climate here appear to conspire to bring the quince to its greatest perfection, and its flavor and beauty are even excelled by its productiveness. If the demand for this fruit was greater, its cultivation would become extensive, and there is little doubt that its consumption will increase. The quinces grown here are excellent keepers, and would bear transportation to almost any distance. Even the recent cold weather has not seemed to injure those of last season's crop which happen to remain upon the trees. There were to be seen this week, in the grounds of N. M. McCormick, in this city, fine large quinces, entirely sound and fresh, uninjured by the cold and still strongly possessing the aroma peculiar to the fruit.

HUGE WILD BOAR KILLED.—*Galt Gazette*, Feb. 4: On Sunday last Elmer Smith and Gerton Ferton succeeded in killing a mammoth wild boar that has for years past lived on calves, sheep, etc., down in the Pocket. The citizens of that locality for some time past have been trying to kill his hogship, and many shots have been fired into his carcass without effect. He was ready for the battle at any time, and only a short time since chased a man on horseback out of an open field. He was known and feared by all the settlers of the vicinity, and when the news of his death was confirmed last Sunday, three rousing cheers were offered for his captors. The men were in a wagon when they met him, and the boar showed fight right off. They peppered him with shotguns, which had no effect whatever, and clubs were effectually used over the animal's head. Two well-directed shots from a revolver finished him, and his captors hauled his carcass in triumph to a place of safety, where they skinned him and divided pieces of the hide among their neighbors. The skin and membranes, a piece of which can be seen at this office, measured from two to three inches in thickness.

San Diego.

COUNTY FAIR—APPLES AND ALFALFA.—*San Diego Sun*: At the meeting of the County Horticultural Society, held recently at Elsinore, it was decided to hold a fair at San Diego in the fall for the purpose of exhibiting all the products of the county, including fruits, vegetables, minerals, live-stock and manufactured articles.... Major Emely spoke of the fruit grown in Southern California and the market for it. He said the apples were the finest he ever saw, except those raised in Southern Arkansas, and the oranges were as fine as he ever saw anywhere. He compared the prices paid for hay and grain with those received for fruit, and claimed that the land was too valuable to be devoted to the raising of cereals.... Mr. Kuhns said he calculated that alfalfa could be made to pay 10 per cent on an investment of \$1000 per acre. He had six and eight crops out in the course of a year. L. Gates said alfalfa paid better than vegetables because it did not require so much labor.

POINTS FROM PEREIS.—*Cor. San Diego Union*, Jan. 23: The recent cold spell did no injury here. The orange trees, though only three years old, are full of nice oranges and fruit and trees were not damaged. The early sown barley and wheat are looking finely, and there is a larger acreage than any previous year. It is really a pleasure to look at our lovely grain-fields. A company is now forming in San Diego to put in a warehouse here for handling grain. The warehouse is to be built in the Y, where the road branches to San Jacinto on Blethen's addition. In addition to the increased grain interests here the farmers are all putting in a small orchard and vineyard, and later on this will be the place for the raisin grape, on account of our high altitude.

San Bernardino.

GOOD FOR THE EASTER BEURRE.—*Valley Echo*, Feb. 2: The Easter Beurre pear is a valuable variety and a splendid keeper. Capt. C. T. Hartley of Colton has this year sold 30,000 pounds from three-fourths of an acre, receiving for it \$600. A. R. Rockhill of Arlington sold this fall 1500 pounds, which had been picked three months, for six cents per pound. They were retailed by the purchaser at 10 cents. C. O. Perrine took East with him, in December, half a bushel of the same variety, and had some left in February, none having spoiled on his hands, though kept in a temperature of 60 degrees.

Santa Barbara.

FRUIT TREES IN DEMAND.—*Santa Maria Times*, Feb. 4: Jones, Maulsby & Co. inform us that they have ordered over 80,000 trees for this section, and find that they will not have near enough to supply our local demand; that more trees are being put out this season than in any two or three previous years combined. However, if it is possible, they intend to furnish all the trees needed, and O. W. Maulsby

left on Tuesday last to visit every nursery of consequence in the State, in order to select and purchase stock.

San Luis Obispo.

THRIVING GRAIN.—S. L. O. *Tribune*, Feb. 3: B. B. Pierce was in town the other day from the Estrella, where, he says, with a very little more rain toward the latter part of the season, large crops will be assured. All the early sown grain is up several inches and doing nicely. Nearly all the plowing is finished, and a much larger acreage is being sown than ever before.

Shasta.

TREE-PLANTING LIVELY.—*Cottonwood Index*, Feb. 2: Isaac Bird, agent for Strong & Co., has filled the following orders for trees for this neighborhood: T. J. McCabe, 500 peach and 500 Bartlett pears; John Korman, 57 apples, 200 pear, 120 peach, 25 apricots, 55 plums and prunes, 1000 grapes, cherries, blackberries, oranges, etc.; H. E. Clark, 250 French prunes; W. Schmieterer, 250 peach, 50 nectarines, 100 Bartlett pears and a few apricots, French prunes and almonds. Geo. P. Wright, 100 French prunes and a few cherries, peaches, olives, quince, chestnuts, oranges and lemons. E. Quirman, 200 French prunes, 50 almonds, 60 apples, 50 pears and 100 figs. J. H. Alford, 100 varieties. Rev. J. E. Jones, 100 peaches, 100 grapes, 25 pears, 10 apricots, nectarines, oranges, lemons, etc. A great many trees from other nurseries have been planted, which altogether foot up the largest number of trees ever planted in one season in this neighborhood. A great many people are not prepared to set out orchards and vineyards this season, who will plant extensively next, and so the good work will go on increasing year by year.

Sonoma.

PROFITS OF A YOUNG ORCHARD.—W. N. Gladden in *Healdsburg Enterprise*: I have not quite 25 acres of orchard in full bearing, consisting principally of peaches, prunes, Bartlett pears, apples and cherries. Ten acres of peaches and Bartlett pears are just coming into bearing, and five acres of orange and lemon-clings were planted a year ago. I also raise a few apricots, nectarines and several varieties of nuts. . . . Peaches, French prunes and Bartlett pears I depend upon principally for profit. Our soil and climate appear to be especially adapted to the production of these fruits, superb in size and of the very highest quality. Russian river and Dry Creek valley peaches for canning and drying are not excelled by any in the State, and our French prunes, for size and quality, stand at the head of the list, according to the principal purchasers and handlers of this fruit in S. F. My gross receipts in cash for fruit sold the past season were something over \$4000. I had a little over 100 tons of peaches, about half of which were sold to the cannery, the rest dried. They were bleached with sulphur and then sun-dried. Pitted plums were sun-dried without bleaching. My prune orchards are young, only 200 trees in partial bearing, producing a little over two tons of cured fruit. Altogether I feel satisfied with the result for the year, and, believing the prospects good for the future, I shall continue planting trees.

HARD ON SHEEP.—During the cold snap all the mountain men lost a good many sheep, the feed being unusually short before the cold weather set in, and the sheep in consequent poor condition to weather the hardship. The late copious and warm rains, however, have started the grass a "booming," and henceforth stock will pick up.

Tehama.

ORANGES.—*Record-Union*: The Central and Northern California Immigration Association Monday received from M. L. Higgins, at Red Bluff, a box of fine oranges which were picked from the trees in gardens in that flourishing town on Saturday last. Red Bluff is nearly 150 miles north of this city, and as much of the fruit was on branches, on which was bright green foliage, it would appear that the "cold spell" did but little harm in that vicinity.

COLD FROK ITEMS.—*Cor. People's Cause*, Feb. 4: The freezing weather is over, and the rains have begun again. The grass is starting fresh and green. Cold Fork was frozen over; one of the farmers walked across on the ice. . . . The coyotes and wildcats are making away with a great many sheep in this vicinity. The other morning as the schoolteacher was on the road to school he killed a wildcat with stones.

Tulare.

FEED COMING FORWARD.—*Visalia Delta*, Feb. 2: Wild feed is growing rapidly and in the foothills will soon be long enough for cattle to crop. For several weeks stock of all kinds have had slim picking, and the recent cold weather told severely upon those that were not fed hay or some other kind of fodder. In some places a number of cattle died. But the transformation of the brown, barren hills into verdant pastures is sudden in this genial climate, and in a very few days stock will be able to fill themselves with the nutritious wild grasses, which are always more forward in the lower hills than on the plain, although the valley, too, is being carpeted with green.

CITRUS TREES AT PORTERVILLE.—The late cold spell did not injure the orange trees in this vicinity, although some of the fruit was spoiled. A few trees in the bottom-land where the frosts were most severe were slightly injured. It was anticipated that all the lemon trees would be destroyed, but fortunately they were not damaged. On the higher and warmer ground

none of the citrus trees were injured in the least.

GRAIN OUTLOOK.—*Visalia Times*: The prospect for a good cereal crop was never before so good. The dry-sown grain was not damaged to any extent by the late freezing weather, though there may be here and there small parcels of ground where the wheat was frozen; but even this land can be resown at any time within the next six weeks and a fair yield expected. A large acreage had been put in previous to the first rains, and so far none of it is reported as having rotted, but, on the contrary, is springing out of the ground rapidly under the influence of the warm weather now prevailing. The soil in all parts of the county is now thoroughly soaked with water, and there is none that cannot be cultivated. This will stimulate plowing and seeding to a larger extent than heretofore, and with reasonable showers during the next two months, Tulare may expect to reap a more bounteous harvest next summer than was ever credited to her

Hon. Horace Davis.

On Tuesday of this week, Hon. Horace Davis of San Francisco was, by unanimous vote of the Board of Regents, elected president of the University of California. This is an auspicious beginning for an administration which we believe will be of exceptional importance and significance in the educational history of California, for Mr. Davis is a man of such culture that the advocates of the higher education will trust him, and of such wide experience in mercantile and industrial affairs that the classes enlisted in these pursuits will have confidence in him. It seems to us that the choice of Mr. Davis is singularly fortunate and wise, and so far as we have learned, public opinion, as expressed in conversation and through the pub-

he matriculated at Harvard college, from which institution he graduated with honors in 1849. Having selected the law as a profession, he entered the Dane Law school and commenced his studies, but failing health soon admonished him to forbear, and he was finally compelled to abandon professional pursuits and seek a more active occupation. He went to sea before the mast, gained a knowledge of the art of navigation and derived much benefit from change of air and exercise.

Mr. Davis arrived in San Francisco on the first day of April, 1853. Soon after his arrival, Mr. Davis entered the employ of the Pacific Mail Steamship Company, and for a time commanded one of the steamships running on this coast; but this occupation not being congenial to his tastes, he severed his connection with the company, and in 1860 established the Golden Gate Flouring-Mills, a manufacturing establishment which has since acquired a high reputation for the excellence of its product, for which there is an extensive demand, both foreign and domestic. The firm of Horace Davis & Co. is the oldest in the State in their line of manufacture, and its commercial standing is second to none. When the war broke out Mr. Davis was a staunch Unionist, exerting his influence to the utmost to induce California to stand loyal and true to the Government, and was a member of the Sanitary Commission.

Up to 1876 Mr. Davis had never entered the political arena, but preferred rather to serve the State in a private capacity, by adding to its material wealth and prosperity and developing its commercial and mercantile interests. In that year, however, he was nominated for Congress by the Republican party and elected. His course as a representative of the people gave such unqualified satisfaction that at the end of his term he was triumphantly re-elected. In February, 1875, Mr. Davis was united in marriage to Miss Edith S. King, daughter of the lamented Thomas Starr King, whose untimely death was mourned by every patriot and lover of liberty throughout the land.

Notwithstanding the engrossing cares of a large and constantly increasing business, Mr. Davis has found time to administer the affairs of several important institutions in this community. In 1864 he was president of the Mercantile Library Association; from 1866 to 1876, 10 years, he was president of the Produce Exchange; in 1883-84 he was president of the Chamber of Commerce, and he is now president of the Savings and Loan Society, one of the oldest and most reliable banking institutions in San Francisco.

Though so widely engaged in active business affairs, Mr. Davis never has lost sight of the interests of learning and of culture. He has always been prominent in literary circles, and his papers and addresses have been marked by deep and careful thought and graceful style of expression. He has long been a member of the California Academy of Sciences, of the Geographical Society, and on the organization of the California Historical Society he was chosen president. He is also a trustee of the Leland Stanford Jr. University.

Mr. Davis is in the prime of life and in the full vigor of his physical and mental powers. He is easy in address, accomplished in manner, exceedingly cordial and genuine in his sympathies. While his record entitles him to the confidence of the people, his accomplishments, added to his personal character and qualities, will win him the respect and loyalty of the students, and thus doubly endow him for success in the new field to which he will give his full time and most zealous labors.

INTERSTATE COMMERCE.—Late Washington dispatches say that, in response to a communication sent out in October by the Interstate Commerce Commission respecting compliance with the law, a large number of replies have been received, representing a majority of roads. Officers of some roads claim that if they strictly observe the law it will force them into insolvency. The Burlington & Missouri admits that it does not respect the long-and-short-haul clause in its California business. The California Southern Co. says that it respects the law as to rates, except where there is competition with water carriers, and in those cases there has been some deviation.

BUYING A BIG CATTLE RANCH.—It is announced that Charles Goodnight of Palo Alto, Texas, and L. R. Moore of Kansas City, Missouri, have bought the Quit a Qua ranch in the panhandle of Texas for \$7,000,000. The purchase was made of Lady Adair of Ireland and others, and embraces 150,000 acres of deed land. Besides this there are 295,000 acres of leased lands, making the whole ranch 445,000 acres, all under good fence. It is stocked with over 30,000 head of high-grade cattle, all of which were carefully counted before being received.

HON. HORACE DAVIS, PRESIDENT OF THE STATE UNIVERSITY.

previously, notwithstanding the fact that she has heretofore been the banner wheat county.

Ventura.

EDITORS PRESS:—The heavy fog of the past two weeks has at last ended in a good rain, beginning yesterday at noon and continuing part of the night. This morning the sun is bright and clear, but there are threatening clouds hanging over the hills which in all probability will gather again and give us a shower before night. The rainfall for this season up to yesterday is estimated at 13 inches—more than enough to insure a good crop. Jack Frost, during his late tour through the State, gave Ventura a call, even stopping long enough to freeze ice a quarter of an inch thick, such a thing not having been known before for several years. The cold weather retarded growth of early sown grain and vegetation; but the last two weeks everything has been pushing forward as if trying to make up for lost time.—D., *Ventura*, Feb. 1, 1888.

Yuba.

AFTER THE FROST.—*Marysville*, Feb. 4: In Marysville and the surrounding country no loss to orange trees has occurred, and there are thousands of orange and lemon trees whose present condition is proof that they were not materially injured by the cold. The people here are adding to their orange orchards, and there never was so much confidence felt in the future citrus-fruit industry as at present.

lic press, is as unanimous in approving the election as the Regents were in making it. This being the case, we believe that a portrait of the new president and a brief sketch of his life will be of much interest to our readers.

The ancestors of Horace Davis came to Massachusetts from England as early as 1630, and the records show that many of the name have occupied high positions of honor and trust in the old commonwealth. John Davis, father of Horace, was a lawyer of distinction, and took an active part in public affairs. In 1840, he was elected Governor of Massachusetts, which position he occupied four years. He was a man in whom the people of Massachusetts placed the most implicit confidence. He was chosen to represent them in the councils of the nation for a period of 26 years—10 years in the House of Representatives and 16 years in the United States Senate. He married Miss Eliza Bancroft, daughter of Rev. Aaron Bancroft, and sister of George Bancroft, the celebrated historian. Their son, Horace, was born in Worcester, Massachusetts, in 1831, and received his early education in the excellent public schools of that town. After completing a preparatory course at the Worcester Academy,

Horticulture—Practical and Theoretical.

At an entertainment in honor of the visiting horticulturists, in response to the toast, "Horticulture—Practical and Theoretical," Prof. J. C. Ridpath of Indiana read the following verses:

To study much a fact called chemistry,
To learn earths, acids, alkalis and all,
To know all seeds, and name all bugs you see—
Is Horticulture Theoretical.

To reason much about the cause of things,
To make analyses and classify
All buds and bodies, leaves, legs, scales and wings,
And give them titles that may pass for high.

To talk for weeks how much of this and that
Is necessary that a plant may grow;
What rainfall, dewfall, sun, wind, cloud are pat,
And then tell others what you do not know.

To raise within a busy cranium
At least six crops before you plant at all;
To write long letters and for papers some,
Is Horticultural Theoretical.

To feel the sunshine and the morning dew;
To smell the ground in the first days of spring;
To have for company yourself and you;
To hear the robins and the bluebirds sing.

To hoe and harrow, and to put plain dirt
On living seeds, and then to wait awhile;
To be afieid in democratic shirt,
And use your muscles in plebeian style.

To take all nature in your hardened hands,
Train trees, train vines, plant, prune, protect and pluck,
Believe in self and in your fertile lands,
And have more faith in living than in luck.

And then at last to sit in welcome style,
With golden fruits heaped up in royal state,
Offered by beauty, with a gracious smile,
To strangers dwelling in the city gate.

To taste, to eat, to feel the throb of pride,
To rise rejoicing from the festival,
To clasp new friends with old ones by your side,
This, this is Horticulture Practical.

Margaret's Valentine.

[Written for the RURAL PRESS by FANNIE ISABEL SHERRICK.]

"Come in."

She looked so weary as she stood there on the doorstep that Mrs. Lynn had not the heart to send her away. She was only a book-cannasser, but she looked like a true woman and a lady in the fullest sense of that much misused word, and she seemed so young, too, too young to bear the burden of care that seemed written upon her fair face.

So kind Mrs. Lynn invited her in and placed a chair for her near the pleasant grate fire in the parlor.

The girl sank down in the easy-chair with a stifed sigh of weariness. All day long she had canvassed the city from early morn until the gathering dusk, and she was so tired. Indeed, no one knew how tired, nor how the heart ached in her throbbing young breast. Struggling for life in a great city! Who knows what this means to those who are lonely and poor?

"You are very kind," she said, her lips quivering a little as she looked up into Mrs. Lynn's motherly face; "few people are so kind. I have been denied admittance this day in many a fine home. Sometimes I do not meet with courtesy, much less encouragement, in my work."

"Poor girl!"

Something in her sweet, sad face reminded Mrs. Lynn of her lost Ethel. If Ethel had lived she would have been about this girl's age. It was three years, though, since the grass had grown over that cherished grave.

Mrs. Lynn turned away to hide the tears. Three years! And the house was as lonely as ever, with the sweet girl-voice hushed forever. She wondered why this girl had come to her door to remind her of that bright face that had made the whole world seem full of sunshine.

"What are you selling?" she asked presently. "It might be possible that I could buy."

The girl showed her the book she was canvassing. It was the life of somebody or other, a book that Mrs. Lynn did not care two straws for, but out of the kindness of her heart she brought forth her pocket-book and paid for one.

"Thank you," the girl said. "It is the only one I have sold to-day. I thank God for it, else the children might have gone supperless to bed."

"Why, my dear child!" exclaimed Mrs. Lynn, "do you mean to say that you have any family depending upon you for support?"

"There are four of us," the girl replied simply. "I am the eldest. My mother died a few years ago; last year, father—here the girl's voice choked a little, "father died and left us quite destitute. Brother James is now 16; he does all that he can, but last week he was thrown out of employment, and all that

we have to live on is what I make and the few dollars he had laid by. It is a hard struggle, this fighting for bread."

Something in the girl's face drew Mrs. Lynn right toward her. She went up to her and kissed her right on the forehead.

"Poor dear," she said softly, thinking of her own lost darling. What if her Ethel had had to struggle for life like this! And this girl looked very refined, too, and well-bred, as if she had not always been used to poverty or hard knocks. Her speech, too, was that of one well educated.

While the girl was putting on her wraps, which she had partially thrown aside, Mrs. Lynn slipped out of the room. She came back presently with a tray upon which was a cup of hot tea and some home-made cookies.

"Drink this," she said; "it will warm you and strengthen you for the walk home, and when you have eaten what you wish, slip the rest of the cakes into your satchel for the children."

"Thank you, thank you!" The girl took Mrs. Lynn's hand and placed it almost reverently to her lips. Here was a woman who might indeed be called a follower of Christ. Her hand had been reached forth to help the fatherless.

Before the girl went away Mrs. Lynn took her name and address.

"Margaret Sullivan!" Mrs. Lynn started as she read the name. "Surely that sounds familiar."

"Margaret was my mother's name," the girl said.

"And her former name was Hastings, was it?" Mrs. Lynn asked a little excitedly.

"Yes."

"Child, this makes me very happy. I knew your mother years ago. We were schoolmates at the convent. I knew she had married a Sullivan, but, dear me, so many years ago, I had almost forgotten. Yes, I remember her so well. She was a girl much liked. And so you are her daughter, and left alone in the world to battle with it. Who would have thought all this would have come to pass, when we two stood in our white robes of graduation, the world still untried before us."

In a moment the good woman seemed lost in reminiscence—then she took the girl's hand in her own.

"Margaret, I think God must have sent you to my door. Years ago at school your mother did me a kind service and I have always wished I might repay it in some way."

"And you have done so," Margaret replied. "Your kindness came almost as if in answer to my prayer. I came to your door heartsick and weary. I humbly, earnestly asked for help, and it came in a sweeter way than I had dreamed of, though, a much sweeter way. I am very grateful indeed."

"It is not much," Mrs. Lynn replied. "I would have done the same for a stranger. Yet I am glad the chance kindness fell upon the daughter of one I once loved."

Margaret bade Mrs. Lynn good-night with a grateful heart and hurried home through the darkness. On the way she stopped and purchased the simple supper which was to make the children happy.

The next day she started out bright and early, strengthened for the work by the thought of the encouragement she had met with the day before. Surely Mrs. Lynn was not the only one in the world who might be kind. Other kind hearts might be on the way to cheer her. She hoped for success anyway, and it proved to be the best day she had had.

She had almost forgotten it was St. Valentine's day. She smiled as she saw the host of valentines, comic and otherwise, strung up in the windows down town, wondering vaguely if there was any one in the great city who would have thought of sending her one. A few years ago she had always been remembered. But that time seemed long ago when she had been happy and prosperous.

She was tempted into a little piece of extravagance, though, as she saw the pretty valentines. It had been so long since Nettie and Mary had had any sweet surprises that she determined to give them one now. Besides, she had done so well that day that she felt quite rich. And the valentine-cards were so pretty, and only ten cents apiece. But she felt like a foolish little child again as she flew homeward with the two valentines in her pocket, sealed and addressed to "Nettie and Mary Sullivan" respectively.

Their home was a small one-story affair on one of the quiet back streets. She went up softly and slipped the envelope under the door, then hid herself around the corner of the house, peeping to see the fun.

And such a shout as there was when Mary opened the door and saw not Margaret—whom she expected to see—but the two suspicious-looking envelopes on the door-sill. She called Nettie, and they opened them, quite wild with delight, and Margaret, for the moment, was quite as much of a child as either of them.

She appeared very much surprised, of course, when she went in a few moments later and saw their treasures exhibited. She believed the pleasure was worth the few extra dimes she had thought were so foolishly spent, and she had the consciousness too of having earned enough that day to keep them for a week. Besides, another thing had made her happy that day—the prospect that her brother would soon be at work again with a promise of more wages than he had received before. She thought that she could afford to be a little happy.

And there was still another surprise in store

for her—"a valentine!" the children cried, holding it up to her with great glee.

"The postman brought it this afternoon," Nettie said triumphantly. "I hope it is as pretty as ours. And who do you think could have sent them?"

"This is not a valentine," Margaret said, holding it up to the light curiously; "it is a letter. But who could be writing to me, I wonder?"

Then she broke the seal and read:

My dear Margaret: After you left me last night I fell to wondering about you, and a plan occurred to me by which we might be mutually benefited. I am getting old, and I feel very lonely sometimes. I have a home, and you need one. Why not come and live with me? You can be my housekeeper and I will pay you for your services. The money will clothe yourself and the little girls while they are going to school. I have taken a great fancy to you, and I feel sure that I shall love you almost as a daughter. Since my dear Ethel died, life has held little sunshine for me. In your bright face I shall see it revived. The house will seem cheerful again with the voice of children in it.

If you cannot decide at once, at least come and talk it over with me.

Yours with kindest wishes,

EMILY S. LYNN.

It was a valentine worth having.

Margaret almost danced for joy. It did not take her long to decide.

In less than a week they were under Mrs. Lynn's roof, who felt, as she looked into the bright faces around her, that it was indeed more blessed to give than to receive.

They all grew to love and respect her as a dear mother, but Margaret, so like that dear lost Ethel, was the nearest and best loved of all. In her Mrs. Lynn found more and more comfort as the days and months went by, never having cause to regret that she had taken her into Ethel's place. Indeed she felt that even Ethel could not have been more patient, more loving, more tender, than this same sweet Margaret.

"And what was the service mother did you years ago?" Margaret asked one evening, when the children were safe in bed and she and Mrs. Lynn were busy with their sewing in the cosy sitting-room. She left her work and sat at Mrs. Lynn's feet on a low footstool, looking up into her face with something of a child's curiosity in her eyes.

"It is a long story, but it can be summed up in a few words. She cleared away a misunderstanding between the man I loved and myself. Had it not been for her, my life might never have been as happy as it has been."

For a moment they were both silent, Mrs. Lynn thinking of those happy days long since gone by, and Margaret dreaming of the sweet romance that must have been. Then Mrs. Lynn leaned over and pressed her lips against the girl's smooth white brow.

"Margaret, you know now why it has been such a happiness to me to make your life happy and bright."

Thoughts.

[Written for the RURAL PRESS by CHAS. P. NETTLETON.]

Most people can bear blame from enemies, but few can withstand flattery from friends.

Love is a paradox; beginning with regard for one, it is not diminished but greatly increased by being allowed to overflow on others.

Except love, nothing terrestrial satisfies a man so completely as to have a woman whom he likes jealous of him.

It takes much knowledge to confess our ignorance, yet, in these days, we deserve little credit by being thus humble.

A verbal promise is as binding morally as a written promise is legally.

Make a distinction between inherited and acquired nobility. The one we deserve no credit for, the other we deserve all credit for. Only in so far as we cherish and wish to cherish noble principles are we entitled to praise.

When we look back on ourselves as we were a year ago, we see wherein we were foolish and how often we committed evil. Let us be humble at the present time, for in a year from now we will again reach the same conclusion.

Unapplied wisdom resembles pearls in the mud.

No act is negative; it is either good or bad. The rule, silence is golden, is generally true, but there are times when silence is dishonoring.

One word of appreciation to a living person is to him better than 10,000 words after he has fallen asleep.

The highest test of love is the sentiment expressed by the phrase from Mrs. Browning: "You please me when you please yourself."

The Christian religion is the only religion which recognizes the brotherhood of man.

Throughout nature, as we know it, nothing is lost; opportunities destroyed, the object simply has assumed another form. So it is in the moral world, good words, bad deeds, all leave their weight.

All persons displease me in some way. Shall I, therefore, refuse to love them? Nay; I should rather exert myself to love them so much for the good that is in them all, that my thoughts of their good qualities shall outweigh my thoughts of their bad qualities.

The lightest joys are inseparable from the greatest griefs, and whether or no both shall affect us for good depends on ourselves.

He who never believes the simple statements

of others cannot expect to be ever believed himself.

Kind words and gracious deeds are pearls and diamonds which string themselves on a golden chain that draws us nearer to God because nearer to man.

Paradoxical, but true: The greater the heart, the less room in it for evil.

The heart that beats strongest for suffering man is the heart best capable of loving God most.

Would you have influence? Then be wise. Wisdom is one of the few good things that can sometimes come to man unsought.

True greatness is tolerant of others' scrutiny; the mean soul cannot bear investigation.

A man proud without reason is a most detestable creature; proud with reason, he is acceptable, but negative.

No truly great man ever lived who did not habitually control himself.

The man who is humble enough to acknowledge that others' opinions are sometimes better than his own is wise enough to be seldom wrong.

Woman and Home.

A correspondent of the *Rural New Yorker* having attacked the advocates of woman suffrage as destroyers of the home, Margaret B. Harvey writes that paper in answer:

It is the woman suffragists who, for forty years past, have worked to protect the American home as it has never yet been protected. Little by little unjust laws bearing upon women have been repealed; little by little more opportunities for work and education have been granted women; little by little barbarous social customs have been modified. It was woman suffragists who worked to raise fallen women—to provide honest work for poor women to keep them from falling—to give women their own earnings and the right to hold their own property and be guardians to their own children. From the woman suffrage associations have grown the children's country weeks, the cooking schools, the colleges for women, the kindergartens and kitchen-gardens for the poor, the hygienic lectures for women, the pamphlets on enlightened motherhood, moral education and proper modes of dressing, the peace congresses, the petitions for police matrons, the appointment of women physicians in hospitals and asylums for women. The latest phase of woman suffrage is its identification with woman's temperance work and the movement in favor of social purity. Woman suffragists are always ready to lend a hand to help any good work.

Thanks to this blessed gospel of woman suffrage, the woman who once would have been driven to a vicious life can now earn a respectable living; and she can have a home more artistically furnished, supplied with more hygienic cooking, and better kept in every way than her mother's was. She is better educated, too, than her father was; if she marries, she will know how to rear her children, and if she does not, she will be too busy to have time to grow old maidish.

But suffragists are not content yet. They know that their work cannot be fully done until women have the ballot. Then, and then only, can our homes be safe—then, and then only, can public morality flourish.

The Temple at Jerusalem.

The great glory of Jerusalem was the Temple, a monument rather of wealth than of artistic skill. Like all Solomon's buildings, it was designed by a Phœnician architect; and the skilled workmen who carved the wood and stone, and wrought the gold, and founded the brass, were citizens of Tyre and Sidon, only the rough labor being provided by the hundred and fifty-three thousand Canaanite settlers who were drafted off to the forests of Lebanon to hew timber, and to the port of Joppa to carry the materials from the seaboard to Jerusalem.

Of the architecture of the Temple we know little except its proportions, and that, like most temples of antiquity, it was divided into three courts, called, in this case, the porch, the holy place, and the holy of holies. It was extremely small, measuring only 135 feet in width, while the total length was only 105 feet; so that its impressiveness depended on its golden walls and pillars, floor and ceiling, its precious jewels, and the richness of the embroidered hangings that curtained off the sanctuary. And mingled with all this gold we read of brass, a compound that seems to have been scarcely less esteemed in those days, when the tin mines of Spain and Cornwall were among the recent discoveries of the Phœnicians, and the brass made at Tyre from the tin of Tarshish or Spain, and the copper from Cyprus was still a rare article, commanding a very high price.

The cost of this golden Temple was defrayed by the moneys left by David and by the offerings of the people; but heavy taxes were levied to create funds for the palaces, towns, and fortresses that arose in such ruinously rapid succession. No exchequer could long endure such a drain, no nation support so vast and sumptuous a court without murmuring; and though we do not know what was the relative value of gold and of the commodities of life, the stress laid upon the fact that all the vessels in the palaces were of gold, points to the conclusion that this provision was as sumptuous in those days as it would be in our own.

YOUNG FOLKS' COLUMN.

Nettie's Valentine.

[Written for the RURAL PRESS by REIS SAMSON.]

"Good morning, Valentine;
First 'tis yours, then 'tis mine,
So please give me a Valentine."

"Mary Hopps, Lena, Jennie, all the girls of my class, come here; I want you, every one," cried Stella Hays, standing at the schoolhouse door as the pupils were coming out for lunch.

"I have something very important to tell you," she continued as the girls left their ranks and clustered around her, "so bring your lunch-baskets and come down to the brook just as soon as you can."

"Shall we like what you are going to tell us, Stella?" asked Mary Hopps.

"I guess so. Yes, I know you will."

"Is it good to eat?" asked some one.

Stella laughed, "Not exactly good to eat, Lena," she replied, "but it is about something good enough to eat, anyway."

"Oh! I know what it is," cried Jennie Ashley.

"No, you do not. I am the only girl in the school who does, and I only found it out accidentally. But, girls, do get your baskets, as the bell will ring before I shall have told you what it is."

With a merry laugh the girls dispersed and Stella ran down to the brook. There was an old summer-house near it, which Stella and her friends considered their special property, and they ate their lunches in it every day.

When Stella entered the summer-house she was surprised to find it occupied by Nettie Russell, one of her classmates, but with whom she and her friends rarely played, because she was what they called "a charity pupil."

"Well, Nettie," said Stella rather impatiently when she saw her, "what are you doing here?"

"Either Lake told me that you wanted all the girls of your class," answered Nettie, timidly.

"But I never meant for you to come, Nettie."

"Oh," said Nettie, blushing, "I did not understand that or I should not have come. I can go away, though, and I am sorry I disturbed you."

"Since you are here you may as well stay," said Stella, carelessly, "only what I am going to tell the others will not interest you very much. That is to say, you may not have a part in it, even though it does interest you."

"Why not, Stella?" asked Nettie, curiously.

"Because, because—never mind the reason; you will find out when the others come."

"Is it because I am poor, and dress badly?"

"I wish you would not say such things, Nettie; you know we do not care for your clothes at all; but—ah! here are the girls," she cried, pleased to have the conversation interrupted.

"We thought we should never be able to get here," said Jennie Ashley, throwing herself on one of the benches and fanning herself with her hat.

"What was the trouble?" asked Stella.

"Nothing much, except that we met Madame Marchand in the hall, and she was trying to explain something to us about the French lesson this afternoon, but none of us could understand a word she said."

"The idea! Jennie Ashley. I understood every solitary thing she told us," said Mary Hopps indignantly.

"Well, then, if you did, why did you not translate it for us, instead of making us wait there so long, picking out each word? I am sure Stella must have been tired waiting for us, were you not, Stella dear?"

"Yes, indeed I was," said Stella, opening her lunch-basket and taking out a piece of mince pie.

"Now that we are here, Stella, suppose you tell us what you want us for," said Susie Ellis.

"First, I must see if you are all here," said Stella, looking around. "Mary, Jennie, Susie, Lena—"

"Present, present, present, present," cried the girls together.

"Good," said Stella; "now for my news. I have made a discovery."

"Of what—a passage to the North Pole?" asked Susie Ellis.

"No, but that to-morrow will be Valentine's Day, and—"

"Everybody knows that," said Lena Wallace.

"And Miss Stowe's birthday," continued Stella without noticing the interruption.

"Miss Stowe's birthday!" cried Susie Ellis; "how did you find it out?"

"I am not at liberty to tell, but I thought that since we are all so fond of her it would be a good idea if, instead of buying valentines for one another, we should get them for Miss Stowe. We can buy them this afternoon, when school is out, and to-morrow morning we can put them on her desk and she will be so surprised and pleased."

"It will be lovely," said Mary Hopps; "but, girls, do any of you know why we send valentines on the 14th of February?"

"I don't believe I ever heard," said Susie Ellis.

"My mamma did tell me once, but I have forgotten," said Stella Hays.

"Provided I receive plenty of them, it makes

no difference to me why they are sent," said Jennie Ashley.

"I wish I knew," said Mary thoughtfully.

"If you like, I can tell you, Mary," said Nettie Russell, coming forward. "I asked my mamma last evening and she told me all about it."

"Yes, indeed, I should like you to tell me. You want to know too, do you not, girls?" asked Mary.

"Yes, tell us, Nettie," cried the girls.

"Well, you see," said Nettie, "a long, long time ago, there lived a good man called Valentine. He was quite rich and spent his time in visiting the poor and bringing them presents of things that they needed. He was put to death by one of the Roman emperors, and his friends, wishing to honor his memory, continued the custom of giving presents to the poor, but instead of doing it all the time, as St. Valentine did, they chose one day in the year which they called Valentine's Day, and from that has originated sending cards with pretty love-verses to our friends. But mamma said it would be much nicer if we followed St. Valentine's example and went about doing good."

"I think so too," said Mary, "and I propose, girls, that instead of sending valentines to-morrow, we shall take our money and give it to the Children's Hospital."

"That is a good idea, Mary, and I am willing to do it if the others are."

"You are very unkind, Mary and Susie, to spoil my plan about Miss Stowe," cried Stella angrily.

"I don't want to send my money to the hospital," said Jennie Ashley. "I prefer buying a handsome valentine for Miss Stowe."

"So do I," said Lena Wallace, "and I have ninety-five cents I can spend."

"I want to give Miss Stowe a valentine, too," said Susie Ellis; "so, Mary, suppose we give some of our old toys and books to the hospital."

"All right," answered Mary, "but I have money enough to do both."

"Then, girls, you all agree to give Miss Stowe a valentine," asked Stella.

"Yes, we all agree," answered the others.

"Well," said Stella, "as soon as school is over meet me in the cloak-room and we can go down to Percy's together; but mind, say nothing about our plan to anybody."

"Of course we shall not, or we should have all the girls doing the same thing," said Lena; "but there goes the bell; let us see who will reach the house first."

Mr. Percy was rather astonished that afternoon to see five little girls arm in arm walk into his store and ask to look at his prettiest valentines. Nettie Russell, who had followed her classmates, opened her eyes wide with amazement when she saw the gorgeous pictures Mr. Percy spread upon the counter. There were Cupids riding upon swans and Cupids bearing letters, dainty satin sachets with flowers painted on them, hearts bound together with wreaths of roses; there were valentines like books, others with satin ribbons, which, when pulled, opened and reopened upon half a dozen different scenes.

"Oh!" thought Nettie, "how happy I should be if I could buy one of those for Miss Stowe."

"Well, little girl," said the storekeeper's voice breaking in upon her thoughts, "the other ladies are suited; now what will you have?"

"I was only looking at the valentines, sir," said Nettie in a low voice.

"That is right, perfectly right; look well before you choose and you will be suited. But what do you think of this one?" and Mr. Percy held up a blue satin heart, ornamented with bunches of pink rosebuds.

"I think it is beautiful, sir," answered Nettie, smiling.

"And it is only seventy-five cents. Shall I put it in an envelope for you?" continued Mr. Percy.

"No, sir, I do not wish it, thank you."

"Not pretty enough, eh? I must say you are rather hard to suit, my little lady. How will this do? It is only twenty-five cents, still it is very neat," and Mr. Percy handed her a small sheet of lace paper covered with flying doves, holding valentines in their beaks.

"That is very pretty, too, but—" and Nettie hesitated.

"Surely it is not too dear, but I have some cheaper ones—two for five cents."

"It is not that they are too dear, sir, but I cannot buy them; I have no money."

"No money?" cried Jennie Ashley, turning around; "what did you come here for, Nettie Russell?"

"I wanted to see the valentines."

"The best thing you can do, Nettie Russell, is to go home, if you have no money to buy anything; we do not want you with us," said Stella Hays.

The tears rushed to Nettie's eyes; she left the store and hurried to reach home.

"If I only had something pretty to give Miss Stowe!" she murmured, "a card or anything. To-morrow, when she sees that I have not given her anything, she will think I do not care for her. But I do, I do; I love her more than all the others, she is so kind to me, and I can never forget her."

When Nettie reached home, she ran to her little room and began to look among her treasures to see if she could find something worthy to give to her teacher. But there was nothing; the two or three cards, which were pretty enough, had advertisements of "French kid

boots" or "Eureka stove polish" on them. With a sigh, Nettie closed the box and put it back in the bureau drawer, and then went downstairs to set the table for tea.

"Nettie! Nettie!" cried her brother, rushing into the room an hour later, "I have had the jolliest time imaginable. Dr. Cox drove out to old Mr. Hinkley's this afternoon, and he took me with him to hold his horse while he went into the house. While we were going through Jefferson's woods, I saw a great big patch of the most beautiful violets. I knew how much you liked them and I wanted to pick you a bunch, but Dr. Cox was in a hurry. I'm awfully sorry, sis, because I know they would have pleased you, and they're the first of the season, too."

"You are a real good boy, Dick, and I thank you just as much; but come to tea; we waited for you."

The next morning Nettie awoke just as the clock was striking five. "I am not one bit sleepy," she said, sitting up in her bed and looking out the window. "How funny it looks outside. I wonder how it feels to be up so early. I have a great mind to get up and go for a walk. Some one told me it was good luck to take a walk Valentine's Day before the sun rose. Oh! I know what I shall do," she continued, excitedly, jumping out of bed and beginning to dress. "I shall go to Jefferson's woods and pick a big bunch of violets for Miss Stowe; they will be my valentine to her."

Nettie crept softly downstairs, wrote a few lines to tell her mother where she had gone, and putting a slice of bread in her pocket, she opened the door and started for her walk.

"Let me see," she mused, "I have four miles to go, two each way, and I am sure it will take me at least two hours and a half to go to the woods and back; that will leave me half an hour to pick the violets. I need not arrange them until I reach school."

Nettie munched her bread as she walked, and almost before she knew it she had reached the woods. How dark and lonesome they looked! For a moment Nettie stood still, frightened to go further, then, laughing at herself for being so foolish, she ran along between the trees till she reached the spot where the violets grew. Throwing herself on the grass, Nettie picked a handful of the fragrant blossoms and kissed them, saying: "Oh! you dear, sweet little things, how I love you for blooming so soon! I am sure you are a thousand times prettier than all those old valentines at Percy's, and you don't cost a penny, either. I do hope Miss Stowe will be pleased with you, you darlings."

Talking in this manner, Nettie picked and picked until she had gathered a bunch so large she was scarcely able to hold it in her two hands. After arranging them tastefully with a few sprays of delicate ferns, she tied on her hat and turned her face homeward. She was very tired and the way seemed much longer, but she kept bravely on, humming a little song to cheer herself. When she reached the schoolhouse she found her classmates in a state of great excitement. Hiding the violets under her apron, she slipped into the classroom and laid them on Miss Stowe's desk, tying a card to them on which she had written: "My valentine to my dear teacher."

When Miss Stowe entered the classroom a little later she was indeed surprised to find her desk covered with dainty envelopes, each one containing a handsome valentine, and her pupils felt fully repaid when they saw how pleased she was. She said nothing about the violets, and all the morning poor Nettie struggled to keep back her tears of disappointment; she was sure her little gift had not pleased Miss Stowe. But as the pupils were leaving for lunch at 12 o'clock, Miss Stowe motioned Nettie to remain. When they were alone she put her arms around the child, saying: "My dear little girl, I want to thank you for your beautiful valentine. I know the weary walk you must have had to gather these fragrant flowers, and each one brings me a message of your love and gratitude. I cannot make you understand, dear, the pleasure your violets have given me, nor how much I appreciate the thought which prompted you to bring them to me. I cannot always keep your violets so fresh and fragrant as they are to-day, but in my heart I shall preserve a lasting remembrance of my little Nettie's valentine."

Alameda, Cal.

A Friend.

[Written for the RURAL PRESS by D.]

Is there anything we value more than a true friend? One whom we can look to for sympathy and advice in our sorrows or joys, and feel his interest and love is ever ours. He may sometimes wound us, but it is that his heart is so truly ours, he grieves to let our faults pass uncorrected. It is not always those who flatter us when in prosperity that are our friends, and when in trouble, we find, too late, their professed friendship false and hollow. What a pleasure to share with those we love our joys, and what comfort to take to their true heart our sorrows and know we are ever welcome to their sympathy.

A young man in his wild career too seldom pauses to think how many loving hearts he wounds in his downward course, for surely none are so hardened but the thought of mother's love and prayers would cause them to falter before taking another step.

DOMESTIC ECONOMY.

SPONGE CAKE ROLL.—Take two teacupfuls of sugar, two teacupfuls of sifted flour, two heaping teaspoonfuls of baking powder; into this break six good-sized eggs; beat all well together, turn into square jelly tins, and bake in a quick oven to a light brown. When done, turn out on a molding board, and spread quickly with jelly; roll carefully out, wrap each roll in a clean napkin and serve. The eggs are not beaten separately, and the quicker the cake is put together the better it will be.

FRICASSEED CHICKEN.—Choose a dry-picked young fowl; cut it into joints, strip off the skin, rinse in warm water, dip in cold water, drain and dredge with flour. Put the pieces in a warm saucepan and cover with hot water. Add a bit of lemon peel, salt and pepper and a sprig of parsley; simmer two hours and remove the chicken. Beat up the yolk of one egg with a gill of cream, add the warm sauce and whip thoroughly. Place the chicken on a dish, pour sauce over.

CHEAP CREAM PIE.—One cup of sugar, three coffee-cups of milk and one teaspoonful of salt. Let these get boiling hot. While they are heating, stir free from lumps one and one-half cups of flour into one coffee-cup of cold milk; then pour it into the boiling milk, stirring constantly till it boils again, then add one teaspoonful of extract of lemon, and set it away to cool. This will make three pies; bake six crusts and fill them with the mixture.

STOCK FOR SOUP.—Have a large kettle on the back of the stove, put in lean beef, either cooked or raw, in the proportion of one pound of beef to one quart of water, add pork rinds with all the fat taken off. Let this cook slowly for two or three days. When cold, skim off all the fat and put it in another vessel. By adding either barley, rice, sago, vermicelli or macaroni for thickening, this stock may be used for any soup requiring meat broth.

WHITE FRUIT CAKE.—Two cups of white sugar beaten to a cream with one cup of butter, one cup of milk, two and a half cups of flour, whites of seven eggs, two teaspoonfuls of baking powder. When all has been thoroughly mixed, add one pound each of sliced citron, raisins, blanched almonds and figs.

CHOCOLATE MACAROONS.—Three-quarters pound blanched almonds, one pound powdered sugar, one-quarter of a pound of grated chocolate, the whites of three eggs beaten to a froth; mix all together to a stiff paste; drop them on a sheet of white paper on a pan, and bake in a moderate oven.

SPICE CAKE.—One and one-half cups of sugar, two-thirds of a cup of butter, one cup of seeded raisins, two-thirds of a cup of sweet milk, three cups of flour, two eggs, one heaping teaspoonful of cream of tartar, one-half even teaspoonful of soda, cinnamon, nutmeg, cloves to taste.

RICE FRITTERS.—Boil the rice till perfectly done in water, then put in one-half pint of sweet milk, and salt to flavor, beat flour in milk till stiff enough to drop from spoon; have lard hot and drop this in, a spoonful at a time, frying till well browned.

GINGER POUND CAKE.—Three cups of flour, one cup of buttermilk, one cup of molasses, one-half cup of sugar, one-half cup of butter, two teaspoonfuls of saleratus, two teaspoonfuls of cinnamon, one teaspoonful of ginger and two eggs.

DOUGHNUTS.—One cup of sugar, three cups of flour, a piece of butter the size of an egg, one cup of milk, one half teaspoonful of soda, one teaspoonful of mace. Mix together; roll out and cut in shape. Fry in hot lard.

WAFFLES.—One pint of sweet milk, two eggs, one pint of flour, one-half cup of butter, one teaspoonful of cream of tartar, one-half teaspoonful of soda, a pinch of salt. Bake in waffle-irons well heated.

FRIED EGG PLANT.—Peel the egg plant and cut in slices one-half inch thick, pepper and salt; lay one slice upon the other and let them stand 10 or 12 hours; drain off the liquor, dip in flour and fry brown.

NOODLES FOR SOUP.—One egg, a pinch of salt, mix with enough flour to make stiff like pie crust; roll out very thin; let remain one hour before cutting in narrow strips; put in boiling soup and cook 15 minutes.

CORNMEAL PUDDING.—One cup of cornmeal, one cup of flour, one cup of milk, one cup of chopped suet, one cup of raisins, one-half cup of molasses and a little salt. Mix all together and boil 2½ hours.

OMELET.—Four eggs, yolks and whites beaten separately, and 1½ tablespoonfuls of milk. Mix the whites and yolks together, and add a little salt and pepper, and turn into a buttered spider.

SCRAMBLED EGGS.—Melt a piece of butter in a frying-pan; when it is hot, drop in the eggs, which have been well beaten, season with pepper and salt; stir constantly three minutes.

HOMINY PUDDING.—One cup of boiled hominy, 1½ pints of milk, three eggs, one tablespoonful of butter, one cup of sugar. Pour into buttered pudding dish, and bake 20 minutes.

FEATHER CAKE.—One egg, one cup of sugar, one cup of sweet milk, one-third of a cup of butter, two cups of flour, two heaping teaspoonfuls of baking powder.

Bounty or Protection.

The San Francisco Chamber of Commerce gave considerable time last week to a discussion on whether the beet-sugar interest of California, present and prospective, could be better served by the maintenance of a tariff on sugar or by the removal of the tariff and declaration of a Government bounty on home-grown sugar.

The proposition for removal of tariff and payment of bounty was introduced by R. G. Sneath and vigorously maintained by him and a few other members of the Chamber. The proposition to petition Congress for maintenance of existing duties was supported by Messrs. Gibbs, Rankin and Dimond. After reference to a committee composed of all the gentlemen named above, the matter came up for discussion upon a majority and a minority report, in support of each of which the members were arranged as noted above.

The majority report began with a lengthy preamble, setting forth that the suggested appeal to Congress for a bounty on beet-root sugar was a step in the reduction of the duty on importations into the United States of foreign sugar, and therefore pointed in the direction of free trade, which is regarded as dangerous to the best interests of the country and particularly menacing to the commercial growth of San Francisco. The introduction of a free-trade policy, it was believed, would be an act of bad faith toward the Hawaiian islands, and was not in harmony with the sentiment of the best people of the United States, and would cripple, if not destroy, many important manufacturing industries that have to contend against the underpaid labor of foreign countries.

Mr. Sneath's report was in support of this proposition:

Resolved, That our delegation in Congress be, and they hereby are requested to use their influence to secure the passage of a law, whereby the Government will grant a bounty, not to exceed two cents per pound, on all raw sugar manufactured in the United States for a period of five successive annual sugar seasons.

He took the position that the placing of a bounty on home sugar was in the public interest. Mr. Sneath declared that "it has been essentially proven that white refined sugar can be made in California profitably at five cents per pound, even to the extent of our national wants. If this is correct, then the people are now paying two cents and over per pound more than it cost, including a reasonable profit. Every cent equals \$25,000,000 on the total consumption, and to-day we are paying, at seven cents a pound, a profit sufficient to more than pay a bounty on the whole consumption."

George K. Porter, the leader of the opposition, strongly urged the adoption of the minority report. Wheat, he said, had been the great staple of the State, but it had now ceased to be so, and fruit-growing was going to be the leading industry in future. Sugar was needed in that pursuit, and in large quantities. The possibility of obtaining a bounty on home sugar was remote, but nevertheless we needed it. It was good logic and sound economy to foster these industries. If sugar can be made and sold for five cents, why not do so? And if it comes to a question of employing thousands of people throughout the State in the making of sugar, what objection could there be to doing so?

R. G. Sneath said that if a bounty was established it would be a magnificent thing for the Pacific Coast. Thousands of dollars would be invested, and an unknown era of prosperity ensue. If Congress could be prevailed on to grant a bounty in five years, the population of the State would be doubled. How granting a bounty could affect the tariff he could not see,

when it was asked that the tariff be kept on sugar in order to obtain funds with which to pay the bounty.

The chief speech in support of the majority report was by Gen. Dimond. Among other things he said:

"A movement fraught with much danger to us is the proposed bounty on beet sugar. It is really a sop thrown to compensate us for the protection now afforded by the tariff on low-grade sugar, which is proposed to be removed.

"This bounty is not sought by the beet-raisers of California. It would not be offered if it was not the intention of its proposers to attack the tariff on sugar. We do not want the former, while we must have the latter.

"By means of this tariff and the reciprocity treaty with the Hawaiian islands, the refiners of this coast are enabled to compete with their Eastern rivals, who possess the advantages of cheaper labor and fuel.

"With the continued protection now afforded by the tariff, it is only a question of a few years when the Southern States, with their late improvements in the manufacture of cane sugar by the diffusion process, together with California, will produce enough sugar to settle the question of a treasury surplus from this article.

"The sugar-refining interests of this coast are already extensive. With the expected increased attention to the culture of beets this interest must rapidly develop and add largely to the material prosperity of the State."

Such in brief were the points advanced on the mooted subject of bounty or protection. The decision was reached in a vote being taken on the adoption of the majority report, which

son ever known. It has not been lower than 26° Fahrenheit this season, which, although extremely cold for Pasadena, is not severe enough to injure the oranges. No serious damages result to oranges from cold while the temperature is above 24°. Twenty-four degrees or lower, however, Dr. Congar says is fatal to fruit.

Ivington Wilton.

We give this week a picture of a Hereford bull, owned by T. E. Miller, Beecher, Ill. This animal was dropped May 25, 1880, and was sired by the champion prize bull of England, Lord Wilton 4057, who was sold when ten years old for the most money that was ever realized for a Hereford, viz., \$19,800. Lord Wilton won his first reputation as a sire and attracted great attention by his sons winning as steers the first honors at England's great fat-stock show, held at Smithfield (London). After that his progeny were used as sires in many of the best herds.

Wington Wilton was very successful as a sire in Mr. Miller's herd. The first draft of heifers of his breeding were sold at public sale at Chicago, and averaged \$506 per head. This was one of the first sons of Lord Wilton that ever came to America. One of his half brothers was afterward purchased for \$3500 and brought over. John Price of England paid \$1500 for "Monarch." "Iroquois" was used in the Arkwright herd, "Truro" was used in the Goode

HEREFORD BULL-IVINGTON WILTON 4057, OWNED BY T. E. MILLER, BEECHER, ILL.

was not in favor of asking Congress for a bounty on sugar, which resulted in its adoption by a vote of 34 to 8 against Mr. Sneath's report in favor of a bounty.

DOES NOT RECOGNIZE HIM.—There has been not a little talk about the position of Captain John Mullan at Washington, where he is apparently working to obtain certain plums for California, in the shape of public lands, at a large commission for himself. Our Congressmen do not seem to take kindly to his mission, and Gov. Waterman has done his best to choke him off by writing a letter in which the following occurs: "I wish you to distinctly understand that I do not recognize your authority to act in behalf of California in the premises, you never having been appointed by any competent authority for that purpose and all the necessary care and attention having been paid to the matter by the Senators and Representatives from California. As you are acting entirely in a private capacity, without any sanction from myself, I prefer receiving all further communications in regard to the matter from the duly accredited representatives from California in the Senate and the House." If we had received such a note as that we should consider ourselves sat on somewhat heavily, but what Captain Mullan thinks does not yet appear.

WHEN ORANGES FREEZE.—Dr. O. H. Congar, who has resided in Pasadena for 14 years and kept a careful meteorological diary during that time, tells the *Union* that the mercury has not dropped as low by two degrees this winter as it did six years ago, which was the coldest sea-

son ever known. It has not been lower than 26° Fahrenheit this season, which, although extremely cold for Pasadena, is not severe enough to injure the oranges. No serious damages result to oranges from cold while the temperature is above 24°. Twenty-four degrees or lower, however, Dr. Congar says is fatal to fruit.

The Herefords are a grass cattle which do well upon the range; they are hardy, with short legs and strong constitutions; mature young, and have given good satisfaction in Nevada and Oregon, and are very popular on the range east of the Rocky mountains.

IMMIGRANTS COMING NORTH.—The *Record-Union* learns from Railroad Officer Lee that large numbers of immigrants are arriving in Sacramento from the south. The southern overland train now brings one and two carloads every day, and it is expected that in the near future they will be coming in on a larger scale. They state that their intentions are of settling in Colusa, Yuba, El Dorado, Placer, Amador, Sacramento and other northern counties, and going into either general farming or fruit-raising.

THE PACIFIC LIVE-STOCK COMPANY has been incorporated to buy, sell, raise, graze and otherwise deal in and with cattle, sheep, horses and all other kinds of live-stock, and for that purpose to purchase, or lease, and deal with ranges and pastures. The capital stock is \$1,000,000, of which \$5000 has been subscribed. The directors are N. H. A. Mason of Lyon county, Nev., J. Le Roy Nickel, John H. Bolton, Henry Miller, Jr., of S. F., and Charles Z. Merritt of Oakland.

Anthrax or Something Else

Perhaps nothing shows more forcibly the need of a State Veterinarian in this State than the existing cattle trouble in Contra Costa county. Whenever any such trouble breaks out there should be a competent officer in whose opinion all could have confidence to proceed at once to the place, investigate the evil and report for the public benefit. Our live-stock is usually healthy, and yet there are now and then serious diseases breaking out and destroying much property. We need veterinary advice in the public interest almost as much perhaps as we need health officers and boards of health. As it is, there is very serious doubt whether the disease in Contra Costa county is that most malignant malady *anthrax* or not. On another page we give the opinion of one veterinarian that it is anthrax, and now comes the following in the *Martinez Gazette* of last Saturday:

Dr. A. de Lebrouse of San Francisco, a distinguished veterinary surgeon, speaking of the stock epidemic along the shores of Contra Costa and Solano counties, says that although he has not examined the afflicted cattle, he is of the opinion that from the symptoms described to him it is not anthrax.

"By the symptoms to me reported, I think the stock were affected with blood of spleen, which at the autopsy may present a striking analogy to anthrax. In the blood-spleen there are no tumors, and in the anthrax they always appear hard and painful. This disease, the blood-spleen, is very rapid in its action. The animal stops eating, looks stunned, his lips tremble and he dies in convulsions, with emissions of blood from the mouth and nostrils."

Now we have the decisions of two veterinarians offset against each other, and it does not appear that either has made local study but gives judgment upon manifestations currently reported. This is not the best way to get at the truth, and yet we cannot well expect a veterinarian to leave his local practice and go out to investigate such matters merely for the love of it. We need a thoroughly educated veterinarian in the service of the State to go forth at once when

such appearances are reported, study up the malady on the ground and make a report as soon as possible informing the public of the nature of the disease and proper steps to take to arrest its progress.

Our live-stock growers should have this help from the State just as our fruit-growers have insect inspectors and official publication of effective insecticides. The College of Agriculture through the reports of Prof. Hilgard has emphasized this need and has asked for an officer who could give instruction to young men and at the same time serve the people as indicated in case of emergency. Funds have not yet been available for this purpose, but should be forthcoming. With all the popular ignorance on the subject of diseases of animals, and the amount of quackery in veterinary practice, it is certainly desirable that there should be competent advice in the public interest, and the sooner it can be furnished, the better.

COL. M. L. McDONALD, we see by the *Sonoma Democrat*, has been appointed Forest Guardian for that region. It is his duty to take such steps as may be necessary to prevent forest fires and prosecute those who violate the forestry laws. During the coming season he will cause to be posted throughout the county notices to farmers warning them against carelessness in burning brush and setting forth the penalties attached to the violation of the law in that respect.

MAD and Eel rivers in Humboldt county were very high, early last week, and considerable damage to farm-lands, fences, roads and bridges are reported.

Thermalito Colony Comp'ny

INCORPORATED DECEMBER 31, 1887.

THE HOME OF THE ORANGE, OLIVE, VINE & FIG.

— ONLY —

429 LOTS LEFT. 429 LOTS

In this famous Colony Tract out of 1440 lots offered for sale June 8, 1887, and but 250 lots remaining in the Association in which an investment of only \$360 is SURE to secure you an admirable town lot 50x150 feet, and may secure a HOTEL now being erected at a cost of \$20,000. Eleven chances to secure a cottage worth from \$875 to \$2500; ten chances for 10-acre lots; 90 chances for 5-acre lots; 50 chances for 2-acre lots; 50 chances for 1-acre lots; 100 chances for lots 90x160 feet, and 200 chances for lots 50x150 feet. Terms easy; \$30 cash and balance in monthly installments of \$15.00 per month.

THERMALITO

Offers the following advantages which no other Colony offers:

1. The most healthy location in Butte County, outside of the mountains. This is substantiated by the fact that a location for the Butte County Infirmary was selected there by prominent and well-posted citizens.
2. The soil cannot be surpassed for fruit culture, being a rich, red gravelly loam, strongly impregnated with mineral and from 6 to 20 feet deep, and has 10,000 flourishing orange trees from one to ten years old on the tract.
3. Its water supply and facilities are unequalled, its supply being 3600 inches, and conducted in PIPES on the tract under a pressure of from 75 to 150 feet, which is sufficient not only for irrigation, but for fire and household purposes. This water is furnished FREE FOR THREE YEARS, and after that at the low rate of ten cents per inch (miners' measurement) for 24 hours.
4. The value of the land is rapidly increasing. It is now offered at \$100 per acre, while much of it has been resold at \$150. The owners of the tract cannot raise the price above \$100 without violating their promise made to the public six months ago, and they have steadfastly refused to break any promises, no matter how the boom may affect the land. Terms of sale: One-third cash, one third in one year, and one-third in two years at 8 per cent per annum.
5. The Company is spending over \$100,000 in improvements of their own money, and hesitate at no outlay that will prove advantageous, and FURNISH LABOR on the tract for purchasers, and will plant and care for your groves at cost.
6. The location of the tract for scenery is unsurpassed. It has gained the name of "THE BEAUTIFUL," and justly so; it is also called "Wonderland."

All we ask is to COME AND SEE for yourselves. The Company is at all times ready to take you to the tract, and invites inspection. Address

Subdivision No. 1 of the Palermo Citrus Tract, in the heart of the Citrus Belt, 5 miles south of Oroville, Butte County, Cal., on the line of the Northern California Railroad; Depot on the Tract at the new Town of Palermo.

FOR SALE IN SUBDIVISIONS OF FROM 1 TO 20 ACRES
At \$75 per Acre,

Including FREE WATER for four years to all who settle on the land and improve before July, 1889. The land is level and clear with the exception of some giant live and white oaks interspersed through the tract. The soil is a deep, rich, red, gravelly loam and produces the finest of every variety of fruit. It is particularly adapted to the cultivation of the Orange, Lemon, Fig, Grape, Olive, Peach and Apricot. Water piped throughout the tract. Terms only one-fourth cash, balance in from one to four years at purchasers' option, with interest at 7 per cent per annum. Lots in Palermo City, 50x150 in size, from \$50 to \$225 each; all streets to be graded and leveled. Maps and further particulars of

Aurora, Ill., U. S. A.

SANTA YNEZ,

Santa Barbara County, California.

THE SANTA YNEZ LAND AND IMPROVEMENT COMPANY

Is now offering for sale at low prices and upon very moderate terms the choicest of

Agricultural and Horticultural Lands

Of the famous College Grant, in the aforementioned beautiful valley. The CLIMATE is perfect, SOIL rich and diversified, TOPOGRAPHY unusually varied and beautiful, a park-like growth of Oaks covering the entire valley. WATER SUPPLY more than sufficient for irrigation of all irrigable lands, and no alkali either in water or soil. TRANSPORTATION FACILITIES superior now, and two trunk lines certain to pass through the valley within a year.

43,000 ACRES OF THESE CHOICE LANDS

Are for sale at from \$25 to \$150 per acre; terms of payment being one-third cash, one-third in two, balance in three years; six per cent interest on deferred payments.

To reach the Santa Ynez valley take any transportation line to San Luis Obispo, thence by Pacific Coast Railway to Santa Ynez or to Santa Barbara, thence by stage to Santa Ynez. Persons seeking lovely homes or lands for colonies or quickly paying investments, cannot do better than purchase here. For further information refer to

Opening the Sierra Region.

EDITORS PRESS:—The boom is beginning here. Land has advanced about \$50 per acre in price within the past six months. The newly built branch railroad running from Fresno City has laid out a new town within two miles of us. This will be the terminus of the lumber flume and railroad that will open up the high Sierras, the "Switzerland of America," to the outside world, while a number of large mills are being constructed in the big forests of these mountains that will supply us lumber and timber, and open the high Sierras to tourists and pleasure-seekers—"The High Sierras" of which I wrote in the RURAL years ago—the grandest mountain scenery, the highest waterfalls, forests of the largest trees, blue lakes of transparent water, crystal atmosphere, broad meadows of green grass and beautiful lilies, kalmias and other flowers, rivaling their kind produced by the gardener's skill elsewhere. Trout, grouse, deer, bears in the dense jungles, ice-cold water and the health-inspiring balsamiferous odor of the pines, that makes mere existence a pleasure, these, always heretofore within our expanse of vision, are now to be brought to our

for the future tens of thousands who shall yet make their homes there. W. A. SANDERS.

Make the Hares Pay.

The Visalia Delta again broaches the notion of starting a cannery for the express purpose of preparing jack-rabbits for market. Potted hare

potted hare being something of a novelty, would bring a better price.

At this season of the year jack-rabbits are fat and will weigh four to six pounds each; and they are plentiful in all parts of the valley. If farmers could receive enough from the sale of the slaughtered pests to pay the cost of making and moving the corrals into which they are driven to be killed, they would be satisfied

Butte County.

Description of the Citrus Fair Held in Oroville, December, 1887.

BY M. C. B.

The Citrus Fair recently held in Oroville,

the County Seat of Butte county, has attracted considerable attention and as we understand already placed Butte in a prominent position among the counties of the Golden State. Butte county for years has been known as a mining center, but in consequence of the shutting down of the mines the inhabitants turned their attention to the raising of crops and growing of fruit. The mining days are now almost forgotten and all are busily engaged in the production of citrus fruit. For some years past the more prominent and energetic citizens, by intuition or otherwise, learned, that they were located in land adapted for the growth of the orange, lemon, etc., and having fully realized the fact by repeated tests year

TABLE MOUNTAIN EXHIBIT, BY JOSEPH ENTZMAN, AT OROVILLE CITRUS FAIR.

EXHIBIT OF THE THERMALITO COLONY AT OROVILLE CITRUS FAIR.

very doors, for the enjoyment of our wives and children, without, as heretofore, paying a terrible price in mule travel for the privilege of enjoying them.

Two rival lines of railroad have been surveyed between us and the foothills, nine miles away—verily, the good time of which I've always prophesied is near at hand. In the Sierra foothills there are yet thousands of places of Government land where English walnut, olive and other trees can be made to produce wealth

is considered a delicacy, and this valley, says the Delta, could supply the demand for awhile. Recently when rabbit-drives have been held the slaughtered animals have been shipped to San Francisco, and sold on the ground before being shipped at 30 cents a dozen. In Chicago they are worth three or four dollars per dozen, just as killed, in carload lots. They could be dressed and frozen and shipped East at a profit, or killed and canned. In Chicago canned beef is worth 20 cents a pound, and

that anyone else should make a further and greater profit on them. If such a cannery were in operation there is no doubt that it could be kept busy several months—in fact during the whole time when hares are fat and fit for eating. There must be millions of them in this valley.

A BAND of gypsies, with a herd of performing bears, are making a tour through the northern part of California.

after year, resolved to show others what they themselves could do.

The Citrus Fair duly contemplated for a few months was quickly arranged and held last year in Christmas week. As no building sufficiently large could be obtained a tent was suggested and approved of although the time fixed was midwinter. The pavilion (all sides and roof canvas only) 150 feet long and 50 wide located on the north side of the

court-house, had on its east-side in large evergreen letters the following inscription:

FIRST BUTTE CO. CITRUS FAIR, 1887.

The entrance was an archway covered with oranges and flowers, displaying sufficient indications suggestive of the interior. The displays were by all deemed far in advance of what had been expected, and the people of Butte themselves were agreeably surprised at the result of their own exertions. The decorations were costly and artistic. All around were designs and inclined shelving, and in the center a line of magnificent decorations.

On entering, the first display seen was that of Mrs. H. C. Bell; the next, a remarkable aggregation of fruit and flowers contributed and presided over by Mrs. E. W. Fogg. The exhibit by D. N. Friesleben and Miss Fannie Friesleben commanded much attention. D. K. Perkins represented the Congregational church, which attracted general admiration. The Central house display kept its place well in the midst of many adjoining exhibits, which seemed to vie with it. Chico and Messilla valley were fully represented, but, as we shall specially refer to Gridley, Chico, Messilla valley, and Butte county exhibits generally, we shall confine ourselves to those represented by engravings in our columns this issue.

The Thermalito exhibit consisted of a large palm tree, about 20 feet high, with large spreading leaves, surrounded by hundreds of young, semi-tropic plants taken from the company's nursery in the new colony. The oranges were in profusion, as represented in the engraving, and, with the arrangement of flowers, one might easily per consimself standing in a choice conservatory. The chief promoters of the new colony, E. W. Fogg, Col. McLaughlin and Senator Jones, the manager, informed us that all the exhibits were taken from the colony of Thermalito, and at the time similar trees, oranges, etc., were growing across the Feather river in Thermalito.

The Table Mountain exhibit by Jos. Entzman appears in our columns, and the productions come from the Thermalito locality. Mr. Entzman's ranch sent in for exhibition fruits and vegetables second to none in California. The oranges, like those from Thermalito, were sound and with a clear skin, fit for transportation over the world. He exhibited a variety of fruits and vegetables which seemed very superior. Some of the pumpkins weighed over 200 pounds. Success seemed visible on every side, and we shall have much pleasure in giving more space in subsequent issues and with further engravings, including the miniature church by D. K. Perkins of Oroville.

Containing 7685 acres, situated near Salinas City, Monterey County, is offered for sale. For particulars address J. C. HOAG, 312 Van Ness avenue, San Francisco, or TYLER BEACH, San Jose, Cal.

100,000 Fruit Trees for Sale

At reduced prices, consisting of Apple, Pear, Peach, Apricot, French Prune, Walnut and other trees. Palms, Grevillas, Monterey Cypress, etc. Trees are guaranteed to be absolutely free from scale or other insects. MILTON THOMAS, P. O. Box 304, Los Angeles, Cal.

— THE — New Buckeye Combined Spring-Tooth BROADCAST SEEDER AND HARROW

NO CHAIN GEAR USED.

CANNOT CLOG.

Is the ONLY PERFECT SPRING-TOOTH HARROW and SEEDER MADE.

Having the same feed and driven by gears—same as the well-known "Buckeye" Drills—makes them a perfect Seeder, and the Spring Teeth arranged in sections, as shown in cut, prevents any clogging with trash or stubble, consequently no bunching of grain; makes them a perfect Cultivator or Harrow.

BUCKEYE HOE and SHOE GRAIN DRILLS,
BUCKEYE BROADCAST SEEDERS and CULTIVATORS,
BUCKEYE VINEYARD and ORCHARD CULTIVATORS,
BUCKEYE SULKY RAKES,
LUBIN PULVERIZERS,
KNOWLTON MOWERS,
IRON TURBINE WINDMILLS, and
BUCKEYE PUMPS.

Vineyardists, Orchardists & Farmers!

TAKE NOTICE OF THE

J.A. BILZ 2-Horse Gang & 1-Horse Plow

Which the Cuts Represent. Patented October 19, 1886.

First Premium Awarded at Mechanics' Fair, 1887.

These Plows have been in market for the past two seasons, and those that use them would not do without them at any price. All claim to save from \$2 to \$2.50 per day over any other plow. Not only for orchards and vineyards, but also for field plowing, where a two-horse single plow is used.

The Plow cuts 18 inches, weighs 160 pounds, and two horses will pull it as easily as a 12-inch plow, and does better work than a single plow. No trees are barked and sticks in vineyards pulled over where my Patent Double-trees and Singletrees are used. For Extra Shares send to me.

I ALSO MANUFACTURE ALL STYLES OF

CARTS, BUGGIES, SPRING WAGONS, CARRIAGES

AND ALL KINDS OF

VINEYARD AND AGRICULTURAL IMPLEMENTS.

Send for Testimonials and Circulars. Address

THE IRRIGATOR.

A Great Enterprise in Merced County.

On Wednesday, Feb. 1st, the proximate completion of one of the most extensive and expensive irrigation enterprises ever prosecuted in California was celebrated in Merced county. The affair was of such moment that the Governor of the State participated in the exercises and the whole community took part. The usual concomitants of American celebrations, orations and addresses were not wanting. The history and features of the enterprise are so interesting that we take from the *Spirit of the Times* an account which we imagine was written by Mr. Boruck, the private secretary of Governor Waterman:

About 15 years ago, several farmers of Merced county, appreciating the value of irrigation, undertook the work of building a mammoth canal from the Merced river to Bear creek at a point about seven miles east of the town of Merced. The expense was found much greater than at first estimated for a work of the magnitude contemplated, and 10 years later found the work moving in a very feeble and unsatisfactory manner, the company having expended about \$180,000 and carried a small 20-foot ditch through the first ridge, about two miles from the initial point and under a range of hills two or three miles further on, and dropped the water thus conveyed into Canal creek, which carried it to the railroad seven or eight miles further, and about five miles northwest from Merced. Here the most of the water was utilized by Peters & Milco on their Buhach plantation, which has since become famous as the point from whence comes the insect powder sold throughout the country under the name of Buhach.

From this point a branch canal had been partly constructed to Livingston, some eight miles further north, but for some reason, presumably scarcity of funds, it had been abandoned, and it appeared that the whole outlay was destined to be lost, at least so far as any practical benefit to the immediate vicinity of Merced was concerned, and that that town, commenced under such favorable auspices, would be left to drag on a slow existence, dependent alone on the somewhat precarious grain crop.

At this stage of proceeding C. H. Huffman, an extensive grain-grower and warehouseman of Merced, looked over this ground and decided that an outlay of a million or so of money on the canal could be made to produce a change of conditions in the vicinity of the town which would build up the whole surrounding country, of course, to his own great benefit. With Huffman, to think is to decide, and to decide is to act. He needed capital to accomplish his ends, and to secure this he went directly to Charles Crocker and laid the proposition before him, which he felt assured would pay a fair interest on the investment, besides making the lands owned by Crocker and his associates around the town of Merced, as well as his own possessions, very valuable. Mr. Crocker was impressed with the plan, as well on account of its apparent feasibility as from the evident earnestness of Mr. Huffman, with whose reputation as a keen, shrewd, and far-seeing business man he was quite familiar. He sent engineers on to the ground, looked carefully into all the circumstances surrounding the enterprise, received favorable reports from all sources, and the result was that these two men, with several others associated for the purpose of incorporation, formed a stock company under the name of the Merced Canal and Irrigation Co., bought the franchise and works of the pioneer Farmers' Canal Co., and began operations on a large scale, which have been carried on for the past five years with a force ranging from 150 up to 700 men and from 200 to 500 horses and mules, and is just now practically completed so far as the heavy engineering is concerned, and is prepared to supply water to Merced and the immediate vicinity, and all the territory lying to the north and west of the town.

Five years of steady, unremitting labor; five years of continuous outlay of money; five years of faith in the ultimate success of the great enterprise of his life, a faith which refused to be discouraged at unexpected obstacles which might well have appalled a stouter heart and unnerved a stronger arm. These are what Huffman has stood up to; this is the quality of metal he brought into the work, and nothing less firm would have ever carried the undertaking through. And now that the mental strain is over, with what pride this man must look upon the result of his energy and fortitude.

The works as completed now consist of a dam in the Merced river, about five miles above the town of Snelling, with headgates well protected by rip-raps above the highest water-mark—gates aggregating 100 feet in width, constructed of the best material and costing \$250,000; a canal 70 feet wide at bottom and averaging 100 feet at the top of its embankments, 10 feet deep, with a carrying capacity of 3400 cubic feet of water per second. This canal runs 27 miles through a hilly country, with several deep cuts through sandstone and cement formations; and two tunnels, the first 1600 feet long through a hill of solid rock. This tunnel is the same referred to above as having

been constructed by the Farmers' Canal Company; but the cost of enlarging it to accommodate the increased capacity of the canal was almost as great as if it had all been dug anew. This was also the case with that portion of the old works from the dam to the first tunnel, and at some points the labor required was even greater on account of the wastage of earth from the former cutting. After the successful completion of this tunnel another was determined upon 12 or 14 miles further on, which saved the building of five miles of open canal. This is constructed 2000 feet through ground so unstable that it was necessary to timber the whole length of the tunnel, a work which required over 1,000,000 feet of Santa Cruz redwood, at a cost of over \$20,000 for the raw material, and a total cost of construction of about \$100,000.

Yosemite Lake.

The 27 miles of main canal ends in a grand artificial lake, located about five miles north of Merced, and calculated to hold water enough to supply the town and several thousand acres of land immediately around it for three months of low water, thus securing this section a safe supply even in the driest seasons. This lake or reservoir is formed in a natural basin of the gravel hills lying to the north and east of Merced, and is surrounded on three sides by hills 80 feet high, with a comparatively narrow outlet on the side next the town, across which the company has constructed a dam 250 feet thick at the base, 60 feet high in the deepest part of the valley, 30 feet wide at the top and about half a mile long at middle height, and giving an average depth of about 30 feet of water over 800 acres of land. Just within the

PUBLIC SCHOOL-HOUSE AT LOS GATOS.

breast of the dam a tower rises from the bed-rock foundation, 20 feet in diameter at the base and 9 feet 8 inches at the top, reaching an elevation of 80 feet, or 20 feet above the parapet. This tower has openings at intervals, fitted with pipes and machinery for letting water into the conduits which are to supply Merced, and which leave the foot of the tower by a tunnel constructed through the foundation of the dam. This machinery is so arranged that water can be drawn from any level within the lake. It is believed the purest supply can be obtained at about the middle depth of whatever store may at any time remain within the great storehouse. The 16-inch pipes for supplying the town with water have been ordered from Philadelphia, Pa., and are now on the way by vessels which are expected to reach San Francisco about the last of March, and will be laid as fast as they can be delivered at Merced.

Several thousand acres of land are now ready for irrigation, and before the dry season sets in the company will have branch and lateral canals completed, sufficient to supply all the land that can possibly be prepared for water by that time.

The cost of this great enterprise has been nearly a million and a half of cash, and when it is completed as to necessary distributing branches, etc., it will run considerably over that amount. But as the company and its individual members own or control about 60,000 acres of land under the canal and subject to irrigation, the most of which they propose to divide into small tracts and sell to actual settlers on reasonable terms as fast as it is needed, and without interfering materially with other colonizers, it is plain that their profits in the natural enhancement of land values will go far toward reimbursing them the vast outlay they have made. It is also understood that when the section to be watered demands the service, the main canal will be extended south from the Yosemite lake to Mariposa creek, a distance of 16 or 18 miles. This will almost double the extent of land susceptible to irrigation.

A Fine Section of Country.

A Pen Sketch of Los Gatos and Surroundings.

EDITORS PRESS:—The Santa Clara valley has long been noted as the "Garden Spot of the Pacific Coast." The writer has traveled over a large proportion of the country bounded by the Rocky mountains on the east and the Pacific sea on the west, and is frank to confess that he has seen no district of equal size to rival this valley for beauty, salubrity, fertility and climate. A combination of these advantages were doubtless what led the mission fathers to adopt in this region their first experiments in agriculture over a hundred years ago. It is asserted that since that early period the hand of the husbandman has been constantly blessed with an abundance of the diversified products which the soil is capable of producing—such a thing as a crop failure never having been known. The country of Santa Clara contains nearly a million acres of land, about one-fourth of which is valley, 300,000 acres rolling hills and mountains, well adapted to fruit, the residue valuable, principally for pasturage. The warm belt is a tract upon the slopes of the hills that environ the valley, the altitude of which is between 250 and 800 feet.

During the past week or two I have been sojourning in the neighborhood of Los Gatos, laboring to extend the circulation of your journal and gathering data of interest to the many readers acquainted with the resources, advantages and attractions of this portion of

tion of the last two years. The location of the town is quite picturesque. To the eastward stretches out the charming valley dotted with the thousands of homes in the midst of the vast orchards for which the county is becoming famous. To the right and left, the once useless hills are rapidly undergoing transformation into vineyards and orchards, while in the background rise the Santa Cruz mountains, which are dotted to the very summit with homes.

The citizens feel a just pride in the social condition of their new town. The public-school building, which is represented by an engraving on this page, is one of the institutions that marks the public spirit of the place. Ample church privileges are provided, and most of the fraternal associations have organizations here. The Odd Fellows have a neat hall and a membership of 60. The present Noble Grand is E. A. Kennedy, and Permanent Secretary, A. E. Wilder. The Ancient Order of Workmen claim a membership of 67. The Master Workman is Thos. W. Cox and the Recorder, R. F. Robertson. The Masons, I am informed, are about to take steps to institute a Lodge here also.

The town is well provided with hotels, the principal of which is the Los Gatos house, which is ably managed by C. W. Holden, the proprietor. For plain, good living, the Central house, conducted by Mrs. Parr, is popular.

The Ice Manufactory

Is another of the enterprises of which Los Gatos boasts. The ice has given such great satisfaction that the capacity has been increased to ten tons per day. As the cost of freezing is merely the expenditure of abundant water-power, ice can be manufactured cheaper than it can be cut from a pond, and it can be furnished at any season of the year. Some time ago the company purchased the right for the United States and for England and her colonies, in view of which the plant at Los Gatos is likely to work a revolution in the ice business and become the beginning of a vast industry. The Los Gatos Co-operative Winery, of which John Cilker is president and W. B. Rankin secretary and superintendent, is located near the center of the town. The company manufactured 125,000 gallons wine and 4500 gallons brandy last season. It is proposed to more than double their output this year.

Located on the road between Los Gatos and Saratoga, about two miles north of the latter, is the Los Gatos and Saratoga winery, inaugurated in 1885. The product of the first year was 8000 gallons; in 1886, 80,000 gallons; in 1887, 110,000 gallons. The capacity of the winery is 192,000 gallons. All the stockholders are vineyardists, while the section in which the winery is located is conceded to be among the best for the raising of grapes suitable for clarets. A. Malpas is the business manager, and H. A. Merriam the superintendent.

It is impossible for me to notice but a small per cent of the objects that suggest themselves as worthy of attention in this beautiful and productive district, for it is almost a continuation of orchards and vineyards in all directions. The land is being divided up into small tracts and sold to new-comers, who at once fall into line planting it to fruits. Thus old settlers confess themselves to be strangers in their own neighborhood.

I lately visited the comfortable homestead of the Kennedy brothers, one mile south of Los Gatos. They are among the old-timers of the country, and are extensively engaged in fruit-culture and the nursery business. Their plantation is admirably located for fruit, and they make a specialty of producing citrus trees. The nursery contains 5000 marketable orange trees and a general stock of 20,000 seedlings. Some of the tips of the leaves showed slight effects of the frost, but no serious injury is apprehended from it. One variety, the Emperor Mandarin, which the gentlemen pointed out, did not show a particle of injury from the cold weather. They think that this orange will become quite popular among orchardists, as it is one of the earliest and best flavored, as well as the hardiest that has been experimented with in the country. The Queen Olive of Commerce was imported by the Kennedys from Spain a few years ago. It is one of the most popular varieties of that country.

Another of the enterprising gentlemen whose place I visited is A. N. Van Fleet, who is making the fruit-drying and canning business a specialty. With Waiter's patent drier he dried 1300 tons of various kinds of fruits last year, and employed 85 hands during the season. All his fruit has been marketed and brought handsome returns.

I neglected to state in the proper connection that as a health and pleasure resort, Los Gatos also claims a share. The place is abundantly supplied with clear, cold, and delicious water; is connected by the narrow-gauge railroad from your city to Santa Cruz; and, except on rare occasions, is free from fog. The tourist will find in addition to this a hospitable and intelligent community, among which to while away his dull hours. The writer acknowledges favors from many, among whom, Mr. Hughes, editor of the *Mail*, and Mr. Trantham, editor and associate proprietor of the *News*, to whom the *RURAL* is indebted for the engraving of the Los Gatos school-house, which I send with this communication.

F. B. LOGAN.

THE Siskiyou County Jail is empty; there is not a pauper in the county, not a single individual is being cared for at the county expense.

GOOD HEALTH.

Cure for Dandruff.

EDITORS PRESS:—One of your "Constant Readers" asks for a dandruff cure. If the directions I am about to give be faithfully carried out, dandruff will disappear at short notice. My wife being troubled considerably that way, I applied to Dr. L. W. Case, professor of skin diseases at the Rush Medical College of Chicago, and he prescribed as follows: At night before retiring rub the scalp, in fact, saturate it with oil (hair oil, lard, olive oil), anything will do. Spend 15 minutes in rubbing it well into the scalp, tie a towel around your head and retire. Next morning wash the scalp with sulphur soap thoroughly, then rinse off every particle of oil and soap with clean, warm water, rub dry and comb. After the head is perfectly dry and all soap and oil have disappeared, make a mixture of four ounces of rose-water, one ounce of glycerine and five drops of carbolic acid, and use this once a day for a week, in place of hair oil, rubbing well into the scalp, and thereafter as often as you like in place of other hair oil, but not less than twice a week. This mixture can be perfumed to suit. Friction keeps the scalp healthy, and at least five minutes should be spent every morning rubbing the head with the tips of the fingers. If these directions are followed, dandruff will disappear and the hair will stop coming out. Wash the head once a month with sulphur soap, after saturating with oil the day before.

Chicago, Ill.

WILLIAM WEHNER.

PHTHISIS AND THE HOUSE FLY.—The mosquito's share in the economy of nature, says the *Medical Record*, has always remained a mystery, except that it seems to bring out an interesting cutaneous eruption and reduce the price of board in certain districts of New Jersey. The house fly, however, has been credited with some general usefulness as a scavenger. This important function, if it really exists, is offset by the facts now accumulating which show that the fly is at times a carrier of contagion. M. M. Spillman and Haushalter, in particular, have recently shown at the Academy des Sciences the important role which the house-fly may play in the dissemination of tuberculosis. The intestines of flies that have fed on phthisical sputum, and the excreta of these insects, are found to contain the bacilli of tuberculosis. Flies that have fed on such infected matter may deposit the bacilli on windows, tables, food, and indeed may spread potential infection everywhere throughout an apartment. When the fly dies its body desiccates, setting the bacilli free and still capable of growth. The house-fly has thus an immortal part in the shape of pernicious microbes. The idea that this insect may carry contagion is not a new one. The contagious ophthalmia of Egypt is believed to have been spread largely through the flies. Bacteriologists have noticed how readily cultures may become infected by flies, and Koch admits that these insects may be the vehicles for the distribution of cholera. Yellow fever has been spread, it is thought, by mosquitoes, and perhaps also by flies. Facts are accumulating to show that the fly may be not only an annoying but a dangerous factor in a household.

OATMEAL AS A FOOD.—Oatmeal as an article of food is fast becoming popular with the English-speaking races, as rice is with the Orientals. It is deservedly popular because it contains nearly all the elements that make perfect nourishment for the physical nature. It has 65 per cent of starch, 20 per cent of the nitrogenous principles, and some sugar, gum and oil. But little more is needed for developing a healthy body, and, as an example of its use, we have the yeomanry of Scotland, with whom oatmeal is almost exclusively the article of diet. As a result, we find a people possessing all the characteristics of perfect health and vigor of body and mind. The firm, well-rounded muscle, the clear complexion, the silky glossiness of the hair, are more the result of their oatmeal diet than of any other one thing. Years ago, when Dr. Johnson first published his dictionary, he defined oats as a grain, which in England was fed to horses, in Scotland to men. An old Scotchman foundly remarked: "And where else do you find such horses, and where else do you find such men?"

BOVINE VIRUS, or that taken directly from the cow, is undoubtedly the best that can be used as a preventive from smallpox, where proper precautions and arrangements are made for obtaining it, and where it can be obtained fresh and pure. Such virus is always reliable and is to be recommended. But there is strong reason to believe, and such is the opinion of the highest authorities on this subject, that humanized virus, obtained from the arm of a healthy child, loses none of its protective efficacy, even when propagated through generations.

LONGEVITY.—The three most remarkable cases of long life are those of Thomas Parr, Henry Jenkins, a Yorkshireman, and the Countess of Desmond. Parr lived to be 152 years old; Jenkins is said to have reached 169 years, though the case is not so well authenticated. The Countess of Desmond reached 142 years. It would appear from the recent reports of individual cases that the present was about to become a special era of longevity.

Pomologists at Glendora.

The Los Angeles County Pomological Society held its eleventh quarterly meeting on the 12th ultimo at Glendora, in the San Gabriel valley, 27 miles from Los Angeles. The hall wherein the meeting was held had been tastefully decorated with evergreens and flowers, and excellent music was furnished by ladies and gentlemen of the local glee club. Fine exhibits were made of oranges, lemons and apples from Duarte, Covina, Azusa, Gladstone and Glendora. The visitors were many and attentive, and 15 new members were added.

An interesting address of welcome was given by Geo. D. Whitcomb, and responded to by Hiram Hamilton, president of the society.

The first subject discussed was "Crystallization and Evaporation of Fruit." It was thought much greater attention should be given to the drying, canning and crystallizing of our fruits. Let the fruit-growers combine, build their own canneries and reap what profit there may be in that industry.

"The Curing of Lemons" was next considered. The Eureka, Lisbon and Genoa were thought especially desirable. The Eureka is a thornless, sweet-rind, seedless lemon, and seems preferable to all other varieties. Lemons should be picked before they are fully yellowed, placed in piles on the ground under the trees, and covered with alfalfa hay, or straw, until they have passed through the sweating process. They may then be carefully packed with an assurance that they will keep well for months.

"Fertilization of Orchards" was discussed at some length, and the prevailing opinion appeared to be that there is little danger of getting any soil too rich, especially for citrus culture.

The president and secretary of the society were deputed to request our Senators and Representatives in Congress to give their earnest aid toward the establishment and generous support of agricultural experimental stations in the various States, as contemplated under the Hatch bill, and that an especial effort be made in behalf of such a station in Southern California.

The people of Glendora entertained their guests so hospitably that it was voted to hold the next (which will be the fourth annual) meeting at the same place on Thursday, April 5th, when papers are to be presented as follows: "Irrigating Vines and Deciduous Trees," by Milton Thomas of Los Angeles; "Alkali in Soils and Methods of Reclamation," Hiram Hamilton of Orange; "Cold Storage," W. R. Barbour of Azusa; "Best Varieties of Citrus Fruit and the Best Methods of Culture," T. A. Garey of Los Angeles.

After taking measures to have the county's splendid fruits worthily represented at the fair in Riverside this week, the meeting adjourned.

"Can't Afford to Do Without it."

We received the following, last week, from a gentleman in Contra Costa county:

Please find inclosed \$3 for the RURAL PRESS for 1888. My father (recently deceased) has been a subscriber since its beginning, and pronounced it the most valuable agricultural paper on the coast, and I can't afford to do without it. Please send Dewey's Patent Elastic Binder, also.

Black Scale.

December 29, 1887.
Messrs. Woodin & Little, 509 and 511 Market St., S. F., Cal.—GENTLEMEN: Referring to Prof. Ongerth's Liquid Tree Protector, I desire to say that about two months ago I found quite a percentage of my olive trees infested with the black scale. In some instances the tree was entirely enveloped by a black smut, while the branches, to the very extreme tips of the tender shoots, were covered with the young scale. I sprayed my trees once only with the Tree Protector. The effect was wonderful. It not only completely and entirely destroyed the scale, but it seems to have invigorated the growth of the tree. It is all and more than all you claim for it.

Very respectfully,

THOMAS BECK, U. S. Appraiser.

Buena Vista Rancho.

This fertile tract of land, containing 7725 acres, has been platted into 60 farms suitable for mixed farming and fruit growing. It is four miles from Salinas City, Monterey County, and will be sold at low prices and on liberal terms. Address J. C. Hoag, 312 Van Ness avenue, San Francisco, or Tyler Beach, San Jose, Cal.

Consumption Surely Cured.

To the Editor:—Please inform your readers that I have a positive remedy for the above named disease. By its timely use, thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy FREE to any of your readers who have consumption, if they will send me their Express and P. O. address. Respectfully,

T. A. SLOCUM, M. C., 181 Pearl St., New York.

SAMUEL WILSON, Seedsman, Mechanicsville, Pa., whose advertisement appears in this issue, is not only a large grower of flower and vegetable seeds, but makes a specialty of introducing new and good varieties of corn, oats, potatoes, etc., besides dealing in all the best and finest breeds of poultry. His illustrated 100-page catalogue will be sent free to a 1 who apply for it.

THE WOODBURY TREE CLEANSER FOR WINTER AND SPRING.

After two years' experience, I have to announce that there has
not a single case come to my knowledge where the Woodbury Tree
Cleanser has not fully and satisfactorily accomplished everything
that has been promised.

By reference to a late report from Prof. Klee, I observe he
states that he has found very good results from it in almost every
case, and that he has encountered no occurrence of any injury from its
use. I am informed that it has his recommendation as a thorough-
going, successful and cheap Winter Wash; and it is certainly in-
dorsed by the leading orchardists in the State. [Please send for
their published letters.]

It has had an unexampled success in exterminating Scale on
all kinds of Fruit Trees. It is sent all ready for use, and instruc-
tions which are very simple, are furnished with every package.

Price 3½ cents per pound in cases, 80 pounds in a case; in
8-pound cans, same price, 15 cents extra for can; 3½ cents per
pound (10 per cent off) in barrels; about 400 pounds in a barrel.

I also make a fine

ROSIN WASH,

Containing no Kerosene, perfectly harmless and thoroughly suc-
cessful. This is the valuable remedy strongly recommended by
Prof. Klee for the Cottony Cushion Scale or "Icerya." Price ½
cent per pound higher than the Woodbury Tree Cleanser. I also
manufacture the fine Anti-gumming Farm Machine Oils and gen-
eral Lubricating Oils. I respectfully solicit correspondence.

Labor and the Laborer in California.

A Report to the State Board of Trade.

The California State Board of Trade recently appointed a committee, of which Hon. M. M. Estee is chairman, to prepare a report on labor and the conditions affecting the laborer in California. The following report was submitted at the meeting on Tuesday of this week:

We know of no place where the man who seeks employment can do better than in California. The success of men who toil depends largely on the three questions of, first, steady employment; second, good wages; third, cheap living.

Steady employment is all-important. The opportunities that laborers have in California to get work and the facilities for doing the work they have make this the best place for the bread-winner to live in. In this State and in almost every field of industry where skilled or unskilled labor is employed, the worker gets a fair reward; for the labor market of California has never yet been fully supplied. Owing to the salubrity of the climate a man can work more days in the year and accomplish more in a given number of days than in any other place, for the heat is never oppressive and the cold is never severe.

And if he can work here more days than elsewhere, he necessarily receives more wages, because the employer can afford to purchase labor the year around if the work can be well done and seasonably done, in winter as well as in summer. There is nothing in the climate of California to prohibit even farm work from being done during all the winter months.

Then we submit that as steady employment is of the first importance to the man who must work even at the wages paid elsewhere, he can earn more and save more here.

The bricklayer in California can work at his trade at least ten months in the year; the plasterer can work every day in the year; cold weather never impedes or interferes with the exercise of his trade. The carpenters and builders construct houses in all of our cities and towns the year around, and although during the rainy season they may be obliged to stop work for a week at a time (if the building is not inclosed), yet, as a rule, building goes on in California from one year's end to the other without any permanent or marked intermission.

The farmer in California commences plowing the moment the rain falls, say in November, and plows and sows until his grain is all in, say in February. Then if he has a vineyard or an orchard, he commences to prune and cultivate, and continues to plow and cultivate them until about the time haying and harvesting begin, which is in May of each year. From that time on he harvests his grain until the last of October. Rain never injures his crop or stops his work.

It will thus be observed that the laborer who does any portion of his work outdoors has more time to do it in California than in any other part of the United States. That the farmer has more time to sow his grain and a longer time to securely harvest it than in any other place in the world. This is attributable to the fact that we have no severe winters or heavy frosts, and that the summer is rainless and warm with cool nights. To be exact, our winter is simply a rainstorm and our summer is rainless.

Wages.

The wages of unskilled farm-hands in California is from \$20 to \$30 a month. The average wages is \$1 a day and board. This includes ten months of the year. The other two months of the year during the harvesting the same man gets from \$1.50 to \$2.50 a day and board.

Lumbermen and loggers receive from \$40 to \$90 a month and board, depending on what they do. Mechanics in every branch of skilled labor receive in California from \$3 to \$6 a day.

I have been informed by the officers in charge of the railroad works shops at Sacramento, where nearly 2000 men are employed, that the mechanics there receive from \$3 to \$5 a day, depending on the department they work in and their ability to do.

It is stated by the heads of the Educational Departments in this State that the average salaries paid female teachers throughout the State is from \$60 to \$85 per month. As a rule they board themselves. Girls as house-servants receive from \$20 to \$30 a month and board. Good teamsters are never paid less than from \$25 to \$40 a month. And the demand for all of the above classes of labor has never yet been fully met.

Price of Labor East.

The most instructive lessons as to the advantages of our State over any other State of the Union, relative to the labor question, can be obtained by comparing the prices paid for labor in other States of the Union with the prices here, the amount of time in each year that the laborer here and there can work, the opportunities to get work in the two sections and the prices paid for living here and there.

In New York, Boston and Philadelphia, wages of skilled laborers in all the various trades practiced in these cities average from 10 to 35 per cent less than they do in California, and except only in large factories these skilled laborers cannot get work at their trades but a part of the year.

It was officially reported by the heads of some of the industrial societies in the East that carpenters did not average to work more than seven or eight months of the year; plasterers

not over six months of the year; bricklayers not to exceed six or seven months of the year, and it is a well-known fact that farm hands only get employment, as a rule, from six to eight months of the year.

We learn from official sources that in all the great Central and Northern States of the Union, farm laborers receive not to exceed from \$14 to \$20 a month for a term of six to eight months of the year. In the Southern States labor is not near so high. Female house-servants get from \$8 to \$12 a month in New York, Boston and Philadelphia, and female school-teachers throughout New England and the Central States of the Union receive only from \$16 to \$50 a month, and that for but a part of the year. Not one of the above list of toilers has continuous employment except the house-servants.

There is a large class of people working in factories in New England, New York and Pennsylvania, who mostly work by the piece, and who have continuous employment, but they labor for such small wages that continuous employment only serves to give them continuous bread.

Cheap Living.

California is especially a food-producing country. The supply of all the breadstuffs, fruits, meats and fish far exceeds the demand. The result is that all the foods are cheaper in San Francisco by from 10 to 50 per cent than in any seaport town of the United States.

Good meats are cheaper in San Francisco, according to the published schedules of prices, than they are in New York by 30 per cent. Fruits are cheaper in San Francisco than anywhere in any of the large cities of the Eastern States by over 50 per cent. And so along the entire list of what man eats, California furnishes the necessities of life cheaper than any other State of the Union, excepting possibly Oregon.

To show the condition of the laboring classes of California, we refer to the report of the Bank Commissioners of this State, in which it appears there are on deposit in the banks of savings of California, sixty-two millions of dollars. The population of our State at this time does not exceed 1,150,000. The population of the whole Union has been estimated at 65,000,000 of people. By returns from the proper authorities it appears there are less than \$1,200,000,000 in all of the savings banks of our country. It will thus be seen that California has one-twentieth of all the money deposited in the savings banks in the country, and yet our population is only about one fifty-sixth of the population of the whole nation. And although this is a new country, and isolated from the great populous and monetary centers of the world, yet our laboring people—those who make deposits in savings banks and who live by their toil—are better off by a vast percentage than any other like number of people in the United States or in the world.

Our products here are so varied, and the lines of labor so many, that the opportunities for every man and woman who wishes to toil to get remunerative employment surpass any other place within our knowledge.

In this connection, and to add to what has been already said, we may observe that as grain is sown at a different season in this State than in any other State in the Union, and that harvesting continues for a much longer period here than elsewhere, the interval between the sowing of the grain and the harvesting of it is so large that the intermediate time is filled up and more than filled up by the use of labor in the great and growing industry of horticulture and viticulture.

To repeat, our grain-fields are sown and cultivated in the winter months. Our orchards and vineyards are cultivated during the months of March, April and May. Our harvesting and haying are done chiefly during the months of June, July and August, while our vintage is carried on during the months of September and October.

Thus every hour may be well employed, and for these reasons. There is not a day in the year when there is not a demand for farm labor, and this demand is increasing most rapidly. The unquestioned salubrity of our climate and our freedom from malarial diseases gives to the laboring man a greater certainty and stronger probability of continued health and the physical ability to work than in any other place. Add the further fact that men of families require less fuel here to supply their homes and less clothing to secure warmth to their children, makes California the most attractive place on the face of the globe for a poor man to live in.

Our productions are so varied, the establishment of new industries is so rapidly increasing, that the chances for a poor man to establish a business for himself and his family are greater here than in most countries. For be it known that the public lands of this nation are nearly all occupied, so that now when one undertakes to make a home of his own, or build up a business for himself, he must do it outside of the generosity of the nation or the liberality of the land laws of the country.

The great ranches of California are now being divided up and sold in small parcels, and on long time and liberal terms, so that men of small means can find favorable investments for the little they now have, and for the accumulations they hope to have in the future. Small fruit farms pay in California because more fruit, and as a rule better fruit, is produced from the same amount of land here, and by a like amount of labor than anywhere else.

In conclusion we say: If a genial climate, a

fertile soil, sunny skies, a balmy, health-giving atmosphere, and scenery of unsurpassed beauty are useful and attractive to any man, they ought to be to the man who lives in their presence, he who toils.

M. M. ESTEE, Chairman.

D. B. WIER of Lacon, Ill., is well known among the fruit-growers of the United States for the interest he has taken in developing native plums. He was at the San Jose session of the American Horticulturists, and on Friday of last week made a short call at the PRESS office, accompanied by Mrs. Wier. They then expected to attend the second meeting of the society, and we trust they are now enjoying the session and show at Riverside.

COMMISSIONERS AT MELBOURNE. — Under recent Act of Congress, the President is to appoint the Chief Commissioner and four Assistant Commissioners to take charge of the American exhibit at the Melbourne Exposition. Representative Morrow has been consulted respecting the choice of a man for Chief Commissioner, and it is possible that Wm. T. Coleman may be selected.

HE DID NOT SAY IT.—An erroneous statement, ascribed to Prof. W. G. Klee, State Inspector of Fruit Pests, has been going the rounds of the papers to the effect that all orange trees under four years of age in the Sacramento valley were killed by the cold snap of last month. We understand that Inspector Klee has stated no such thing.

ANNEXATION OF CANADA.

The Disastrous Attempt to Accomplish It by Force—A Famous Retreat.

The present agitation concerning the relations between Canada and the United States recalls the time when the annexation of that country was proposed to be brought about by force of arms. The project was intruded to the brave General Montgomery, assisted by the famous patriots, Colonels Ethan Allen and Seth Warner. While engaged in this invasion Ethan Allen was taken prisoner by the British and sent to England, where he experienced very harsh treatment.

It was Colonel Warner who twice conducted his men safely home, though the march was constantly surrounded by dangers. Once Montgomery sent them home because their time was out, and though they were willing to continue in service, they were without sufficient clothing, and none could be had in that country.

Colonel Warner had hardly arrived home before he heard that Montgomery had been killed, and the cause, as well as the lives of the men, were put in great jeopardy. He collected his men again and at once started for Canada to assist his countrymen in their extremity. But his efforts were of no avail, and it was soon found necessary to take up the line of retreat.

It was the dead of winter, and only necessity sanctioned moving the troops. The terror of pursuit, and the rigor of the season, furnished sufficient cause for alarm and haste. Colonel Warner remained with the rear of the army, and aided them in many ways most effectually, as he was a man well posted in caring for the sick, and this knowledge now came into excellent use.

He must keep the army in motion, not a day must be lost, and yet he was without any chest of medicines. But he understood the medicinal use of roots and herbs, and of proper care at critical times, and with these allies he made an effectual fight against disease among his men.

When Ticonderoga was reached and the roll called, thanks to Seth Warner, but few vacancies in the ranks appeared.

Colonel Warner saved the lives of hundreds of men in this way, and he did a noble work, but it remained for his namesake, H. H. Warner, head of Warner's Safe Cure establishment, to give the same kind of remedies then used to the people of to-day, in "Warner's Log Cabin Remedies." These remedies have been adopted after thorough trial and investigation, and they are remedies of established reputation. Being wholly vegetable, they can be used without any fear as to the results.

Among the new remedies is a Sarsaparilla for the blood, Hops and Buchu for the stomach and digestion, Cough and Consumption Remedy, Scalpine for the head and hair, Rose Cream for that terrible disease, catarrh, a Log Cabin Liver Pill, a Log Cabin Plaster and an Extract for internal and external use. Our readers may rest assured that there is merit in every article.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING JANUARY 31, 1888.

377,352.—HAND-CAR—Deodatus Chapel, S. F. 377,007.—HARVESTER—J. B. Gemmill, Red Bluff, Cal.

377,115.—TESTING THE FAIRNESS OF ENGINE CRANK SHAFTS—John Paterson, S. F.

377,272.—AMALGAMATOR—N. L. Raber, Corvallis, Ogn.

377,274.—TRACTION ENGINE—D. L. F. Remington, Woodburn, Ogn.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

C. E. WILLIAMS—Yuba and Sutter Co.'s.
R. G. HUSTON—Montana Territory.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

BONNIE BELLE THE SECOND is the name of a notable cow owned by Col. A. Younger of San Jose, the portrait of which was painted by A. P. Hill, and appropriately exhibited at the Citrus Fair at San Jose. The animal is a fine thoroughbred, and Hill's painting a remarkably good counterfeit.

CORRECTION.—By a very annoying blunder in our article headed "Cook Stock Farm," our types last week spoke of "Steinway," at a four-year-old, showing 2:51, when the figures should have been 2:21. We desire to take off that half minute!

THE SEED AND PLANT CATALOGUE of Sevin Vincent & Co. (whose advertisement may be found elsewhere in this issue) contains, besides many well-executed cuts, two full-page colored plates of vegetables and Trimardean pansies in variety.

The Woolly Aphis.

WALNUT GROVE, CAL., Jan. 5, 1888.

Mr. Charles J. Woodbury, 123 California St., S. F., Cal.—DEAR SIR: Yours of the 3d inst. to hand last evening. In regard to the Woolly Aphis, I can only give you my experience. When I came here, my apple trees were badly infested with Aphis, so I washed them thoroughly to exterminate and have not seen any signs of the Aphis since, which has been over two years. Yours respectfully, L. D. GREENE.

I will remark that I have known of no case where my tree-cleaner has not been perfectly successful as an antidote for the Woolly Aphis.

Full directions accompany its use. Price, 3½ cents per pound in cases, 80 pounds in a case; in 8-pound cans same price, 15 cents extra for can. In barrels, 3½ cents per pound, 10 per cent off, 400 pounds in a barrel. I also manufacture the fine Anti-Gumming Farm Machine Oils and General Lubricating Oils.

Address CHARLES J. WOODBURY, 123 California St., S. F., Cal.

Ongerth's Tree Protector.

WOODIN & LITTLE, Agents, 509 and 511 Market St., San Francisco, Cal.—GENTLEMEN: In reply to yours of the 29th ult., as to effects of your Liquid Tree Protector on the tree you treated for me last April, I would say that where the wash was applied the insects of all sorts are certainly killed. The wash is still on the tree, and the bark under it shows a healthy and lively appearance. I was afraid for awhile that owing to its gummy feeling and appearance the pores of the bark might be closed to the great detriment of the tree, but so far I am glad to say there have been no indications of any ground for my fears. I am so well satisfied of this that I shall entirely paint the trunks and larger branches of all my trees with your preparation this winter.

I would add that your Grafting Compound is the best preparation I ever saw for covering wounds on trees, and it is apparently not affected by any sort of weather. Yours very truly, R. D. FOX, Proprietor Santa Clara Valley Nurseries, San Jose, Dec. 5, 1887.

THE reader will observe a change in Mr. Atherton's advertisement of lands to be leased in Monterey county. While some portions of the tract are suitable for grazing, others can be rented for cultivation, if desired.

Now is the time to subscribe for the RURAL PRESS, the best agricultural paper published on the coast. It is worth \$10 a year to every farmer.—Shasta County Index.

better each year, is the problem for the farmer.**FERTILIZE!****FERTILIZE!****NITROGENOUS SUPERPHOSPHATE.**

UNIVERSITY OF CALIFORNIA, Nov. 3, 1886.

Dr. J. Korb—Dear Sir: I have analyzed your sample
of "Nitrogenous Superphosphate," with the
following result:Soluble Phosphoric Acid.....12.90 per cent
Reverted Phosphoric Acid......95 "
Insoluble Phosphoric Acid......2.83 "
Potash......2.23 "
Ammonia......1.87 "
Nitric Acid......2.95 "The above amount of Nitric Acid is equal to 0.85
per cent Ammonia, therefore, total of Nitrogen calcu-
lated as Ammonia, 2.72 per cent.This Fertilizer is a Valuable Manure for vine-
yards, orchards, gardens, farms, and I recommend its
use by the cultivators of the soil generally, in Cali-
fornia. Yours truly,
DR. E. A. SCHNEIDER.University of California, College of Agri-
culture.

BERKELEY, Nov. 20, 1886.

Dr. J. Korb—Dear Sir: I take pleas-
ure in adding my testimony to that of Dr. Schneider as
to the high quality of the "Nitrogenous Super-
phosphate" Fertilizer, analyzed by him at your re-
quest. It is a high-grade article, and as such re-
turns the user a better money value than a low-grade**H. M. NEWHALL & CO., Agents, 309 and 311 Sansome St., San Francisco.**fertilizer. It is especially well adapted to use in
California, on account of the predominance in
it of Phosphoric Acid, which is generally in small
supply in our soils. Yet it is desirable that "com-
plete" fertilizers be used in our orchards and vineyards,
and yours is of that character in furnishing
Potash and Nitrogen as well. Very respectfully,
E. W. HILGARD.The value of this Fertilizer consists in the large per-
centage it contains of Phosphoric Acid—the chief
element of all plant food—in combination with the
necessary quantities of Potash and Ammonia, and
the ease and cheapness with which it can be applied.In ordinary soils the following quantities will be found
sufficient: For Wheat, Barley, Corn and Oats, 300 to 350
pounds per acre. For Grass, Sugar Beets and Vege-
tables, 250 to 300 pounds per acre. For Vines, Fruit
Trees, from 1 pound to 5 pounds each. For Flower Gar-
dens, Lawns, House Plants, etc., a light top dressing,
applied at any time, will be found very beneficial.**FOR SALE IN LOTS TO SUIT,**On board cars at Sbranto, Station of the C. P. R. R., 20
miles north of San Francisco, at \$30 per ton, by the
MEXICAN PHOSPHATE & SULPHUR
CO., H. DUTARD, President, room 7, Safe
Deposit Building, or**Booth's Sure Death Squirrel Poison**

S. F. MARKET REPORT

Weekly Market Review.
DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 8, 1888.

Fine weather the past week allowed of active outdoor work, which was taken advantage of in all parts of the State. There was more trading the past week in farm products, with considerable fluctuations in some lines. The Eastern and European wheat markets advanced under war rumors, up to Monday, when they eased off, owing to Prince Bismarck's peace speech. To-day's cable from England is as follows:

LIVERPOOL, Feb. 8.—Wheat—Depressed. California spot lots, 6s 5d @ 6s 8d; off coast, 33s 6d @ 33s 9d; just shipped, 33s 9d; nearly due, 33s 6d; cargoes off coast, slow; on passage, very dull; Mark Lane wheat, quiet; French country markets, turn dealer; wheat on passage to Continent, 169,000 qrs.; wheat and flour on passage to U. K., 1,385,000 qrs.; wheat and flour in Paris, firm.

Local Markets.

BAGS—The market for Calcuttas is not so firmly reported by the pool. The demand is slack. Quotations given are 7½¢ to 7¾¢ for June-July delivery.

BARLEY—Under continued hammering of bears on Call, and freer offerings of poor feed, at almost any price, buyers are trying to get choice feed down, but as yet without success. Both brewing and malting are stronger. On Call, trading the past week was fairly active. Futures advanced 1½¢, which was lost on Tuesday and today. To-day's sales are as follows:

Morning Session: Buyer season—100 tons, 85½¢ @ ctt. Afternoon Session: Buyer season—100 tons, 85½¢ @ ctt. 200, 85½¢ @ ctt. 400, 85¢ @ ctt. 600, 84½¢ @ ctt. Buyer 1888—600 tons, 90½¢ @ ctt; 100, 90½¢ @ ctt.

BUTTER—The market is easy at the lower quotations. Some very choice western in tubs is on the market, which finds good custom owing to the low prices and actual weight given. Receipts of Californian are increasing.

CHEESE—New is in better receipt, but prices are unchanged, owing to a good demand in a small way.

EGGS—Heavy receipts of good to choice eastern and freer receipts of Californian have caused the market to shade off, with a weak closing.

FLOUR—The market is steady with a good demand reported.

WHEAT—Choice grades of wheat are scarce and in good demand so as to bring cargoes up to a certain standard. The bulk of the wheat now offering is only fair. The engaged tonnage in port is quite large, notwithstanding the free loading that has been going on the past two months. On Call, futures have been more active with more fluctuations. They advanced up to Monday, then fell back 20 per cent, closing steadier to-day. To-day's sales on Call are as follows:

Morning Session: Buyer season—300 tons, \$1.40; 1500, \$1.40½ @ ctt. Afternoon Session: Buyer season—100 tons, \$1.39½; 1300, \$1.39½. Buyer 1888—200 tons, \$1.40½ @ ctt.

Foreign Review.

LONDON, Feb. 6.—The *Mark Lane Express*, in its weekly review of the British grain trade during the past week, says: During the past week the price of native wheats continue against sellers. The sales of English wheat during the week were 60,747 qrs., at 30s 8d, against 44,371 qrs. at 34s for the corresponding week last year. Flour dull, and country markets depressed by the immense quantity of foreign products. Foreign wheat keeps weakening and sellers have accepted 6d less. Liverpool quotations are 1d @ ctt lower. Corn, lower. Barley, oats and linseed, dull.

Eastern Wool Markets.

NEW YORK, Feb. 7.—The supplies of wool are not oppressive, especially of clothing grades. Buyers seem satisfied with prices and take samples in an earnest way. The sales include 20,000 lbs on private terms; 5000 ¼ blood clothing, 37¢; X Ohio, 30¢; 10,000 New York and Michigan, 29¢; 20,000 X and XX, 31¢ @ 32½¢; 10,000 unwashed ¾ blood combing, 28¢; 25,000 Oregon, 19¢; 50,000 Territory, 17¢ @ 24¢; 50,000 fall Texas, 17¢ @ 18¢; 84,000 do., 15¢ @ 17¢; 249,000 domestic, 33¢; Noils, 12,000 Mexican; 10,000 foreign clothing; 250,000 Mediterranean carpet; 184 bags foreign on private terms. Philadelphia reports a good market for a broken line of stock. The Boston market is very active, including sales of 350,000 lbs California on private terms. London cables report that the attendance at the wool sales is large, bidding active and prices very firm, especially for cross-bred merino and Cape of Good Hope and Natal. Continental buyers took the larger proportion, though home operators bought more freely. American buyers were reserved.

Eastern Grain Markets.

CHICAGO, Feb. 8.—Wheat, steady; cash, 75¢; March, 75½¢; May, 80½¢. Corn, easy; cash, 45½¢; March, 46¢; May, 50¢ @ 11-16¢. Oats, steady; May, 31¢.

NEW YORK, Feb. 8.—Wheat, 90¢; cash, 88½¢ for Feb., 89½¢ for March, 90½¢ @ 90¾¢ for April, 91¢ @ 91½¢ for May and 91¢ @ 91½¢ for June.

New York Raisin Market.

NEW YORK, Feb. 8.—A canvass of the raisin market at this port indicates still great opportunities for California raisins. A statement of the foreign crop shows that on Dec. 31 there were 42,000 boxes of Malaga raisins, crop of 1887, on hand here, and 500,000 boxes were received in January. There were 100,000 boxes Valencia raisins, crop of 1887, on hand Dec. 31, and 122,600 boxes were received in January and 74,000 boxes are on the way to this port. It is believed here that California could market this additional amount of raisins here, 350,000 boxes, under favorable circumstances.

California Products in Chicago.

CHICAGO, Feb. 4.—Prices in oranges from California show no special change to-day. Receipts as yet are very light. Prices range from \$3 @ 1.50 @ box, according to quality. Moderate business is being done in California dried fruits. There is a liberal stock

still in first hands. Holders are steady, and former prices are maintained. Peaches and raisins are in fair request, and small lots of other lines are also selling. Peaches, sun-dried, in sacks, ½ lb, 10½¢ @ 12½¢; do, evaporated, unpeeled, in sacks, ½ lb, 12½¢ @ 16¢; do, boxes, ½ lb, 16¢ @ 17¢; do, peeled, in sacks, ½ lb, 20¢ @ 22¢; do, in boxes, ½ lb, 22¢ @ 25¢; apricots, sun-dried, in sacks, ½ lb, 10¢ @ 12½¢; do, evaporated, in sacks, ½ lb, 13¢ @ 16¢; plums, pitted, in sacks, ½ lb, 12½¢ @ 14¢; prunes, small, ½ lb, 12½¢ @ 14¢; do, fancy large, ½ lb, 13¢ @ 14¢; nectarines, according to quality, in sacks, ½ lb, 13¢ @ 16¢; raisins, loose Muscatels, 2-crown, ½ box, \$1.60 @ 1.65; do, 3-crown, ½ box, \$1.90; do, London layers, ½ box, \$1.90 @ 2.40. Beans remain firm. There are none of consequence on the market, except such as are in second hands. Choice beans will sell readily. California, according to quality, \$2.30 to \$2.50.

Hops were ruling at previous prices. Good brewing hops are selling fairly, and they rule quite firm. Strictly choice hops are also firm, because there are few of them. Common quality do not improve. They remain slow. Choice Pacifics, 12 @ 15¢; common to prime, 8 @ 12¢.

Honey is selling slow and there is a large supply on the market. California strained honey, 7 @ 8¢.

Miscellaneous.

NEW YORK, Feb. 6.—Salmon is in good shape, with Lent close by to help sales. Store rates are: Columbia, \$1.90 @ 2; Oregon and other brands, \$1.65 @ 1.75.

A carload of strained honey here is held rather above the market rates, but its fine grade will invite buyers. Store is quoted at 8¢; for Pacific Coast, 9½¢ is asked.

Raisins are firm, and something better for selections. Crowns range from \$1.40 @ 1.90. Boston paid for 3-crown layers \$2.20 @ 2.30. Other dried and California fruit was quiet.

Hops are dull, locally, with some better export on Call at last week's prices. Old hops are getting bids of 3 @ 4¢ for quality.

Lima beans are firm at \$2.30. White California are quite attractive, with sales at \$2.40 @ 2.60, including Lady Washington and Pea. The latter have obtained real New England favor.

Mustard seed is dull. Yellow, 3½ @ 4½¢; brown, 4½ @ 5¢ from store.

[COMMUNICATED.]

Market Information.

Receipts of Domestic Produce.

The following are the receipts of the principal items of California produce at San Francisco, from the beginning of the harvest year to date, compared with the corresponding period in the previous harvest year:

	July 1 '86 to Feb. 5, '87.	July 1, '87 to Feb. 4, '88.
Flour, gr. sks.	2,903,506	2,256,051
Wheat, cts.	9,854,929	5,841,983
Barley, cts.	1,859,939	1,698,274
Oats, cts.	109,415	135,075
Potatoes, sks.	629,086	772,845
Corn, sks.	62,309	142,925
Rye, sks.	17,749	15,109
Buckwheat, sks.	5,282	2,582
Beans, sks.	376,151	342,758
Bran, sks.	307,463	314,117
Hay, tons.	66,677	77,615
Salt, tons.	14,693	10,680
Wool, bls.	45,107	39,422

Hides, No.	20,502	20,596
Potatoes, sks.	57,014	9,400

Cereals.

H. Kains Jackson writing in the *Farmer and The Chamber of Agriculture Journal*, of London, on January 16, says: At the beginning of a new year we turn with interest to our principal sources of wheat supply, with a view of seeing from whence our home deficiencies may best be supplemented. In the first place stand the United States, a combination of commonwealths, growing wheat under widely differing methods of long passages by Cape Horn, or short, rapid, frequently steamer, transit across the Atlantic. The United States, of which the area exceeds that of Europe, have come to require, agriculturally speaking, at least a four-fold division—into Eastern, Southern, Western and Pacific commonwealths. The Eastern commonwealth is the earliest wheat-growing district in America, but population has overtaken production, as in England, and this district is now beginning to figure as an import power. The Southern region grows but little wheat, and eats but little. This small production is due neither to discouragement nor dislike, but simply to the fact that the crops which are only to be grown in a very warm climate pay better, generally speaking, than those cultivable over the whole temperate zone. Oranges, cotton, and so forth, the special productions of the South, crowd out the wheat, but, in case of any important rise in wheat prices, the South could largely increase its wheat area. For the time being, however, it may be put on one side as a wheat-producer. The third great group of States is that of the West, and here the wheat acreage is still increasing. Production per acre, however, is diminishing on all the older lands, and so the net out-turn year by year is about the same. The Pacific States show a small increase in wheat cultivation, but while the yield in a good year allows of handsome profits, there are heavy losses sustained in seasons of deficient rainfall. This tends to the extirpation of small farmers, and to the concentration of stocks in the hands of a small number of firm holders. The United States on the whole, therefore, do not threaten any increase in exports, but rather the contrary, and the large Californian surplus is likely to be kept back whenever there is a fair chance of higher prices in Europe following on such policy of reserve.

San Francisco only.

Compared with Dec. 31, 1886, the stocks at the close of 1887 were, in round numbers, 11,750,000 bu., but compared with the stocks on Dec. 31, 1885, they were, in round numbers, about 10,250,000 bu. more. This season the corn crop was below an average, which is an important factor in promoting the consumption of wheat.

Eastern mail advices report as follows: The receipts of wheat at Atlantic ports are very small. The price of wheat in the West, plus the transportation, is much more than the market price of wheat at the seaports, and wheat consequently does not move to seaboard markets except at the western shippers' loss. In the winter-wheat regions the millers find it difficult to obtain what wheat they want, and consequently have to draw to some extent on the Northwestern spring-wheat States.

Oregon advices again report an active movement in wheat on export account. Vessels on berth are receiving quick dispatch, while there is a steady chartering of others, the low charters ruling being in favor of shippers. California millers are buying freely of the more choice grades at from \$1.26½ @ \$1.30 at Portland.

In this city the market has ruled fairly steady, with good export inquiry. The offerings of the better grades of shipping are light, causing buyers to bid up so as to receive round parcels. A parcel of 350 tons fair to good, in the Grangers' warehouse at Port Costa, was taken at \$1.36½, equal to \$1.37½ to \$1.38½ afloat here. The quantity of wheat in the Port Costa and city warehouses by March 1st will be very greatly reduced, for free chartering of vessels continues in order. The rates of charter are slightly lower than last week. Millers have considerable trouble in finding choice grades of wheat suitable for their purposes. They bid \$1.40 for choice, with a gilt-edged article fetching a slightly higher price.

There has been free buying of choice brewing barley for shipping to the East and better grades of Chevalier to send abroad. Eastern advices report a strong market for choice barley, owing to the light obtainable supplies and also the malting season being near at hand. Brewers in this State are picking up choice parcels. They expect to consume fully 25 per cent more than they did in 1887. The consumption of feed barley continues large. Considerable is being bought in the interior by railroad contractors. It is claimed that several counties are importing quite freely. Bright choice feed is scarce and wanted. A vessel is loading barley at this port for Melbourne, Australia. She will take Chevalier.

Oats are in liberal supply, with freer receipts looked for from Oregon now that navigation is resumed. The demand with us is only fair.

Corn appears to be in a peculiar position. To force sales a shading in prices is necessary, but to buy, full rates with perhaps a slight advance for choice would have to be paid.

Rye is easier under more liberal offerings of eastern. Choice California is not being put on the market at present bids.

Buckwheat is without essential change.

Fruits.

Apples are in good supply. The more choice fetch good prices. There are considerable specked, which are sold at low prices. Receipts from Oregon have been very light, while the East is not sending so many, the extreme cold weather being against shippers.

Oranges are coming in freely, but as the demand is better, prices are steady. The quality is greatly improved. Free shipments to the East from the various orange districts are being made. The upper coast is drawing more freely.

Limes and lemons are in good supply, with prices favoring buyers.

The market is bare of choice London layers. The sole kind of layers are only fair to good, and even these are in light stock, not enough to meet the usual spring trade. Loose Muscatels are also in light stock. It is now conceded that a still higher range will not only obtain for raisins before the new crop season, but shipments will have to be made to this market from the East.

The past fortnight has witnessed an unusual free call for dried fruits, the call being chiefly from the East, although Idaho, Montana, Colorado and Utah are taking quite freely. Sales have aggregated larger than ever before at the like time. As high as 10½¢ was paid for a carload of bright, sun-dried peaches. Parcels that would not be looked at two months ago found purchasers. The demand was not confined to peaches, for all kinds of dried fruits shared in the call. The stock here is very light, not enough for the usual spring trade.

Feedstuff.

Bran is slightly higher. Middlings are stronger. Ground barley is steady, with a good call for the season. Feed meal is quiet, but firm. Oil cake meal continues to meet a fair call.

Hay is without essential change. Very little choice is to be had. That called choice is coarse and of such quality as is only called fair to good in the forepart of the season. The consumption is very large, and with continued unseasonable cold weather the crop this year will be late.

Live-Stock.

Choice bullocks continue in light supply, but poor to fair are in liberal offering at low prices. Stall-fed are taken at 9¢ to 9½¢, the latter price for medium-sized bullocks that cut up without much wastage. Mutton sheep are higher and firm. The

general quality is improving, but offerings are light. Veal is unchanged. Milch cows have been sold in a small way at from \$30 to \$50, the higher prices being choice for family use, although some dairy-men are said to have good prices. The high price of butter and better pasturage cause the better feeling. In horses, there is nothing new to report. There is some inquiry for single-footers, with good prices obtainable for gentle but good steppers. The inquiry for general utility horses is good, as it is also for matched teams. Work horses continue slow.

Hogs are scarce and wanted for the block, as the prices are too high for packers.

The market for dressed meat is quotable as follows by slaughtering to butchers (to get the price of stock on foot, take off one-third of the price for stall and grain-fed, and one-half from the price of grass-fed, that is, animals running at large).

BEEF—Stall-fed, 9 @ 9½¢ per lb.; grass-fed, extra, 8 @ 8½¢ per lb.; first quality, 7½ @ 7¾¢ per lb.; second quality, 6½ @ 7¢ per lb.; third quality, 5½ @ 6½¢ per lb.

VEAL—Choice, 10 @ 12½¢ per lb.; fair to good, 7½ @ 9¢ per lb.

MUTTON—Wethers, 9½ @ 10¢ per lb.; ewes, 9 @ 9½¢ per lb.; lamb-spring, 15 @ 17½¢ per lb.

HOGS—On foot, grain-fed, 6½ @ 6¾¢ per lb.; dressed 9 @ 10¢ per lb.; soft, 5½ @ 6¢ per lb.; dressed, 7½ @ 8½¢ per lb. Stock hogs, 4 @ 5¢ per lb.

Vegetables.

Frosty mornings the past few days have cut down the more tender plants that were set out, besides interfering otherwise with gardening. In the warm belt there is an absence of frost, but still cold nights are experienced which are against growing vegetation.

Some cucumbers came in the past week, and sold at from 12½¢ to 20¢ each. They were grown in a warm place.

The low, declining market for onions lessened receipts and caused a firmer market yesterday, with a slight advance to-day. The demand for choice is good. A shipment was made to the East the past week.

Potatoes are steady for the more choice. Some off qualities are selling at shaded prices. Choice good-keeping are in request for distant orders. Seed varieties are higher.

Cabbages are strong, with receipts only fair, while a good shipping inquiry is reported.

In root vegetables, the market is reported weaker.

Miscellaneous.

Poultry ruled fairly steady throughout the week. Dressed turkeys from Nebraska continue to come in and sell at low prices, as do dressed chickens.

Beans are strong at another advance. Whites are very scarce, and wanted even at the higher quotations. The demand is chiefly from the East. The stock here is hardly enough to meet the coast trade.

In hops, the call is fair, but the light supply of choice restricts trading. The bulk held are poor and undesirable. In wools, there is nothing new to report. Scourers continue to draw on the market. The stock is greatly reduced. Clean, well-conditioned, fine wools are wanted at good prices.

The tonnage movement compares with last year at this date as follows:

	1888.	1887.
On the way.	268,189	211,377
In port, disengaged.	81,274	87,273
In port, engaged.	43,230	25,572

Totals. 392,693 324,222

To obtain the carrying capacity, add 60 per cent to the tonnage.

San Francisco, Feb. 8, 1888.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

LAND & WATER FREE!

800 Acres Rich, Level Land.

To some one who will summer fallow and cultivate well, will be furnished free water and use of 160 acres of good land (S. E. Sec 13, T. 21, R. 23) within 9 miles of Tulare, S. W. Forty acres formerly plowed. Land on all sides cultivated and pastured. Water for irrigation (if needed) free. Also (without water) 640 acres (Section 13, T. 23, R. 24), four miles westerly of Tipton and S. P. R. R., all in Tulare County and the Artesian belt. For particulars call on E. M. DEWEY, 7 miles S. W. of Tulare, or A. T. DEWEY, 220 Market St., San Francisco.

LITTLE'S CHEMICAL FLUID

NON-POISONOUS

SHEEP DIP.

One gallon, mixed with 60 gallons of cold water, will dip thoroughly 180 sheep, at a cost of 1 cent each. Easily applied; a nourisher of Wool; a certain cure for SCAB. Also,

LITTLE'S PATENT POWDER DIP.

(POISONOUS.)

Mixes in t-n'ly with water. Prevents the fly from striking. In a 2 pound package 6 are sufficient to dip twenty sheep, and in a 7-pound package there is sufficient to dip one hundred sheep.

EXPLANATION.—C. l. for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall.

Jackson Centrifugal Pumps.

JACKSON

Automatic Expansion

SELF-OILING ENGINES.

Made in ten sizes, from two to sixty-horse power, and carried in stock for prompt delivery.

"ECONOMY" PORTABLE BOILERS.

BYRON JACKSON,

625 Sixth St., San Francisco, Cal.

For quantities of water not less than 100 gallons per minute, and for lifts not exceeding 100 feet, there is no better pump than that illustrated in the annexed engraving. It is very simple, durable, and economical. I make them in sizes from 2-inch, 100 gallons per minute, to 24-inch, with a capacity of 14,000 gallons per minute, and am prepared to build larger sizes to order. They must be set within 20 feet of the water; will draw it that far and force it up 90 feet. They are very satisfactory in wells not over 100 feet deep.

Power and Pumping PLANTS

A SPECIALTY.

WEST COAST LAND COMPANY.

CONTINUED EXTRAORDINARY SUCCESS. 26,000 Acres sold in 17 months in subdivisions averaging about 80 acres, to over 300 families, and amounting to \$700,000. 38,000 acres to be closed out this year without any general advance in prices.

Location—San Luis Obispo County, at present terminus of the Southern Pacific Railway. A GRAND NATURAL PARK, and in climate, location, quality and price, far surpassing any other section of the State. Specially adapted to the production of wheat, oats, barley, olives, raisins, wine and all deciduous fruits.

RICH SOIL, NO WASTE, SUFFICIENT RAINFALL, NO IRRIGATION.

Average price \$25 an acre; terms five years, 6 per cent. These lands are selling rapidly, and parties interested in having a home in one of the finest sections of the State and on the through overland railway, should examine and select at once. Take S. P. Railway at San Francisco, to Templeton in 8 hours. Apply to or address

Send for Catalogue and Maps.

Dewey & Co.'s Scientific Press Patent Agency

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S.F.

LIGHTNING HAY KNIFE

This OLD and RELIABLE KNIFE continues to gain in public estimation, and is

POSITIVELY THE BEST

Hay Knife known for cutting HAY and STRAW from the Mow, Stack or Bundle. It is a rapid, easy cutter, the blade of the best quality of cast steel, spring tempered, and it is easily sharpened by grinding on the corner of a common grindstone. The invention patented by WEYMOUTH is a sword-shaped blade provided with operating handles, the edge of the sword blade being provided with knifed serrations or teeth. We hereby CAUTION all persons interested against buying or selling knives bearing above description, other than the genuine "Lightning," as we shall prosecute all persons guilty to the full extent of our ability and the law.

For sale by the Hardware trade generally.

Warranted Seed.

I have founded
my business on
the belief that
the public are anxious to get their seed directly from the
grower. Raising a large proportion of my seed enables
me to warrant its freshness and purity, as see my Vege-
table and Flower Seed Catalogue for 1888, FREE
for every son and daughter of Adam. It is
liberally illustrated with engravings made directly
from photographs of vegetables grown on my seed
farms. Besides an immense variety of standard seed, you
will find in it some valuable new vegetables not found in
any other catalogue. As the original introducer of the
Eclipse Beet, Burbank and Early Ohio Potatoes, Hubbard
Squash, Deephead Cabbage, Cory Corn, and a score of other
valuable vegetables, I invite the patronage of the public.

HAWLEY BROS. HARDWARE CO.

SOLE AGENTS FOR THE

HOOSIER GRAIN DRILL.

(10, 12, 16 and 20 Hoe 6-Inch Drills.)

The Best
DRILL
Ever Made!

Especially
Adapted
FOR USE IN
CALIFORNIA.

The HOOSIER Force-Feed Grain Drill is universally acknowledged to have no superior. It is strongly built, handsomely finished, and has many improvements which no other Drill possesses. A positive Force-Feed, regulated without change of gear wheels or stoppage of Drill.

Every Drill has a Force-Feed Grass Seeder Attachment, constructed and regulated on the same principle as the Grain Feed.

The Hopper is placed so as to balance weight that would otherwise rest on the necks of the team. This, in connection with the double-tree, being attached beneath the tongue, so that the pull is inclined upward, makes the weight very light on the horses.

All HOOSIER Drills sold by us are especially constructed with heavily built wheels, with three inch tires, which is of great advantage for the soft soil of this section.

For Prices and further information send for Catalogue.

Also Agents for the JOHN DEERE MOLINE GANG, NEW DEAL, SULKY and SINGLE PLOWS, South Bend Chilled Plows, Schuttler Farm and Spring Wagons, Perkins' Windmills, Keystone Disc Harrows, ALL KINDS OF LARGE AND SMALL FARMING IMPLEMENTS, HOWE SCALES, ETC.

The Botan Plum.

The success attained in the growth of the Kelsey Japan plum in this State ministers to the interest in other Japanese varieties. We have in earlier issues given the history of the introduction of the Kelsey and engravings showing its characteristic form and growth. Upon this page we give a handsome engraving, reproduced by courtesy of our excellent cotemporary, the *Florida Dispatch*, of a variety grown by P. J. Berckmans of Augusta, Georgia, President of the American Pomological Association, and one of the foremost horticulturists of the country. This variety Mr. Berckmans considers the Botan. There is some confusion in the names of these Japan plums in this country, but time will no doubt clear it up. Mr. Berckmans writes to the *Dispatch* as follows:

"Botan, Chabot, Musu and Longfruited are of the same general character as Kelsey's. Some are stouter growers and foliage broader. Several trees are bearing fruit, although imported in December, 1885, but we are so far unable to report upon their season of maturity, which will likely correspond with that of the Kelsey. Our California correspondents indorse the good qualities of these varieties."

In Florida on pine land the *Dispatch* says the Botan is a vigorous grower, resembling the Kelsey, but even stronger.

H. H. Berger & Co. of San Francisco, the well-known importers of Japanese fruits, etc., after study of the Japanese plums, write as follows: "The only varieties of the plum native of Japan, and worthy to be exported, are the Botankio, or best known as Kelsey's plum, and the Hattankio, both varieties similar in every respect except the bloom, which in the first named is of a rich red; the last named, a yellow. The Nagate, which again has two varieties—the large red round, called Botan, and the more egg-shaped yellow plum, called Ogon (by some nurserymen misnamed 'Ogden'). The Urvase, a rather large, [globular, greenish red plum, and the Shiro-Sinomo, meaning white plum (shiro white, sinomo plum), a medium-sized, sweet, whitish-yellow, round fruit. These are the only varieties which, under good cultivation, produce a fine fruit." In their catalogue, Messrs. Berger & Co. describe the Botan as "round, red," and the Ogon as "oblong, yellow." The *Dispatch* says: "We believe all authorities agree that this is correct so far as color is concerned, but it will be observed by our illustrations (the Ogon is to appear shortly) that the Botan is oblong and the Ogon round."

It is evident that we need a better acquaintance with these fruits, and descriptions should include growth of tree, form and color of fruit, and the characteristics of flesh and pit. As we have said, this better knowledge will, no doubt, come in time if the varieties are as valuable as they now seem likely to become.

TAKING UP GOVERNMENT LAND—The demand for cheap Government land is steadily increasing, and every day brings scores of letters of inquiry to the S. F. Land Office and dozens of applicants in person.

UNCONSTITUTIONAL.—The Supreme Court of California has decided that the Act of April 15, 1880, entitled: "An Act to provide for the protection of lands from overflow, other than lands recognized as swamp lands," is unconstitutional. This Act provides that such protec-

THE STANFORD UNIVERSITY.—It is announced that six of the stone class-buildings at the Leeland Stanford, Jr., University are to be up and roofed in by May 1st, and nine of the buildings are to be finished by July 1st. There are 125 workmen now employed, 60 being stone-cutters.

Beet Sugar at Alvarado.

In our last issue we gave an outline of a discussion on whether the beet-sugar interest would be best served by bounty or protection. The discussion excited considerable interest in the city. One of the most interesting features, and one which we have reserved for this special mention, consisted in the facts brought out concerning the continuation of operations at Alvarado. Though there are greater enterprises now on the ground and in the air, the experience at Alvarado will, it seems to us, always hold a most important place in our agricultural history. Mr. E. H. Dyer and his associates manifested their faith in beet sugar at a time when it was not fashionable and when great sugar capitalists were expending their energy and means on foreign-grown sugar. They labored against the most serious obstacles, they sought out inventions which enabled them to surmount difficulties. In fact they demonstrated the profit in beet sugar in California when few besides themselves even thought about it or believed in it. For this reason we claim they are entitled to honor and their deeds to remembrance.

The special point of interest to which we refer is the assurance that the Alvarado enterprise is going on in spite of the destruction of the works by fire some months ago, and that next August the extraction of sugar will recommence, with far better facilities and appliances than ever before. Mr. Dyer in a recent letter states that the company was reorganized under the title of the Pacific Coast Sugar Company and is now engaged in enlarging the works to a daily capacity of 200 tons of beets. The main building, 60x130 feet, and five stories high, is completed, and a large portion of the machinery is now in place. The balance of the machinery, which is of the latest improved type, is all being made in this country, and will be all ready to run by the first of next August. Contracts are already made for a full supply of beets, and they have just received a large quantity of superior beet seed from Europe.

The new factory will be capable of producing 20 tons of white refined sugar a day, or about 5,000,000 pounds in a campaign of 160 days. This amount, with the output at Watsonville, will give us a good figure for 1888 to start with, and thereafter it may be that the California sugar product will advance in a rapidly ascending series.

A GOOD MOVE.—Representative Hatch of Missouri is making for himself a most excellent name for his legislative work in the agricultural interest. We notice that he is endeavoring to secure a law against the abominable gambling in agricultural products which so unsettles values and makes a football of legitimate trade. We hope he may succeed.

A BOAT constructed to receive the machinery for dredging the Carson river was launched at Dayton, Nev., Saturday, in the presence of 300 invited guests. The company will begin dredging on the 1st of April.

A HORSE worth \$500 was lately found dead impaled by a post in a Carson stable.

THE BOTAN—A JAPANESE PLUM.

tion was to be paid for by assessments upon lands within a certain district. It also provides that three trustees of the district are to be elected. It was argued that the owner of the land assessed has no opportunity under the Act to be heard in regard to the assessment, and that on non-payment his land will be sold without any opportunity to be heard as to this charge, which is declared to be a lien on his land, and that he will thus be deprived of his property without due process of law. The Supreme Court found that no provision is made anywhere in the statute for any hearing by the land-owner whose land is to be charged, and for this reason it decides that the assessment is arbitrary that its collection is summary, and that in consequence the Act is unconstitutional.

The south side of the quadrangle begins to assume a massive and imposing appearance. Several of the stone arches forming the line of the quadrangle are completed, being grand in conception and commanding the admiration of all visitors. The buildings now approaching completion are one story high, and being constructed of light-yellow stone, with red-tile roofing, will form a very noticeable feature of the landscape. The style of architecture is a modification of the Moorish, many features of which were also somewhat rudely reproduced in the buildings of the old California Missions.

THE PIUTE INDIANS, who revel in a diet of grasshoppers in summer, are just now feasting on rabbits and pine-nut soup. The Piutes declare it makes them "heap fat."

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

January in the Santa Ynez Valley.

EDITORS PRESS:—Midwinter in the Santa Ynez valley is a delightful experience. There are none of the valleys along the Pacific Coast which can furnish so much comfort and enjoyment through the entire year as this locality, and as a winter resort for invalids this is to be in the future one of the most valuable and noted. I have just returned from there, where I enjoyed most delightful winter days. While there I took thermometrical observations at the coldest and warmest hours of the day, and was not at all surprised to find that my most sanguine expectations of that climate were borne out by the registrations of the thermometer.

The air there in winter is very mild, and is soothing to throat and lung troubles, being dry and clear, and is at the same time invigorating to the system, so that new energy is infused and the body given strength while the mind naturally regains its cheerfulness. I was so delighted with my sojourn there that I could with difficulty make up my mind to leave that charming valley, which at this season of the year is most beautiful in its adornment of living green. Particularly beautiful is the immense olive orchard of Selby's, the trees in which have made a wonderful growth this past season. No snow has been seen upon the ground there this winter, nor has it ever been seen in the valley there. Those who have gone there to make their homes cannot be induced to depart from those pleasant surroundings. Some Eastern friends of mine who three months since arrived from Massachusetts and at once settled down at Santa Ynez are so infatuated with the climate and the beauty of the valley that they say they never will go back East to live, and as an earnest of their feelings have already purchased largely of the lands of the Santa Ynez Land Co. They are building already fine residences, one on each of two 40-acre tracts. The most magnificent live-oak trees are here to be found. At Lyman's, the home of Mrs. Lyman, I had the curiosity to measure the ground covered by one of these noble trees and found that the diameter of the spread of the foliage was 85 feet, and with a girth of trunk three feet from the ground of 18 feet.

This present year's grain crop there promises to be fabulous in yield, while much of this will speedily give way to tree and vine-growing.

On the evening of my arrival there, Jan. 27th, I noted the thermometer registered, at 10 P. M., 25° above zero. At Santa Ynez and at other points in the valley I made careful observation to ascertain the differences, if any, of various localities. And to illustrate this I started out on the morning of the 29th of January, before daylight, in a buggy, with fast horses and a fast driver, to make a circle of some 15 miles, visiting localities which would give a fair test of temperature on the mesas and in the valleys. I can best present this in the shape of a brief table, the object being to show the very favorable conditions of climate prevailing there in midwinter. These observations represented the coldest portion of the 24 hours and I will give it as morning temperature. Other observations were made at noon at different places on a day as unpleasant as any which occur in this valley just preceding a rainstorm:

Santa Ynez.....	62
Jan. 31st, a rainy day, Santa Ynez.....	52 53 52

I have here noted average winter weather a fair pleasant day, a cool day preceding a storm, and a rainy day in January. It will be seen that the temperature runs remarkably even. I should judge that the mean average winter temperature would run very similar to that of the City of Mexico, which has a mean in January of 52°. While the degree of temperature in itself is not a sure guide as to comfort and health, the remarkable mildness and balminess of the air here is very noticeable.

Sufferers from asthma gain great relief here very speedily, and almost at once begin to

reath without effort and wheezes, and those who suffer from irritable throats and irritable coughs experience a quieting and soothing effect upon the air passages, so that they imperceptibly lose their hacking coughs, and hardly know where and how the change occurs. I speak of this from my own personal experience. Also the air is so comfortable to well persons that to illustrate it I will mention that I saw on the Llano Grande Jan. 30th, when I took a temperature of 62°, men sitting quietly and riding gang-plows in their shirt sleeves.

With this delightful winter climate the resident here may look forward to an equally delightful summer season, when the warm air is tempered by the gentle and grateful sea breeze which possesses the qualities of mildness and invigorating effects. Louis Janin, Esq., kindly gave me the thermometer readings taken at his ranch-house in the year 1882, daily for the months of August and September, thus getting the hottest weather. The readings at 7 A. M., 12 M., and 7 P. M. gave an average for August of 63° morning, 85.6° noon, and 68.8° evening. For September the average of the day for all the days was 70°.

The journey from Santa Ynez by stage over the Santa Ynez range to Santa Barbara via the San Marcus pass, a distance of 45 miles, is one that no tourist should fail to take. I had that pleasure in returning, and would not have missed that trip, although generally not given to enjoying stage rides. We leave Santa Ynez at 9 A. M., Feb. 1st, and, driving over the best roads to be found in the State (which is a characteristic winter and summer) for many miles up the valley, cross the Santa Ynez river, and begin the gradual ascent of the range. All this is heavily timbered and covered with wild shrubbery and vines. After a nice dinner near the old San Marcus ranch-house, we enter more especially upon the grade up to the summit. All along may be seen patches of many acres of wild plums, the trees being of a most beautiful evergreen and producing, as I was told by Mr. Patterson, the genial stage proprietor, who almost invariably accompanies his patrons in their ride over his line, a very pleasant fruit about the size of a cherry plum.

Here at an altitude of 1300 feet I observed that the shrubs were already in full bloom. I gathered from here to the summit (altitude 2244 feet) and also on the Santa Barbara side the wild currant, wild lilac, manzanita, and other handsome floral specimens. Before reaching the summit at an elevation of some 1300 feet may be seen some of the grandest scenery, and crossing over Dead Horse rock—named from the fact that a stage-horse once fell dead on that rock—we see an immense elephant sculptured out of the sandstone rock by the wear of the elements, and making a most perfect likeness—body, limbs, head, ears, trunk and eyes; and on the south side of the road may be seen a similarly good sculpture of a huge turtle. Right on the summit of the mountain is a fine vineyard belonging to Mr. Marshall, where the choicest grapes are grown. The air was so mild and pleasant to a Minneapolis gentleman who was traveling with his wife that he gave us his views of comparative temperature. He said "they left Minneapolis just in time to escape the cold weather. On the morning they left home the thermometer was 36° below zero, but it soon began to grow cold and afterward it got down to 48° below zero." They were glad to get out here where it was 60° above zero.

The panorama bursting into view as you descend the mountain on the Santa Barbara side is one never to be forgotten. The whole seacoast, mountain-side and valley are spread out to view, with the Santa Rosa and Santa Cruz islands in the distance some 30 miles at sea. On this mountain-side the rocks are filled with petrified seashells of various kinds. Down on the mountain slope at three houses we passed, the children were running around barefooted with apparently no fears of croup and pneumonia. Soon we begin to pass fine orchards as we emerge into the valley. After an eight hours' ride we reach our hotel, wishing we could take that ride over again in the near future. S. F. CHAPIN, M. D.

Auburn, Feb. 4th.

SHEEP AND WOOL.

Changing From Goats to Sheep.

N. S. Coles, an Angora goat-breeder of Nevada, takes rather a blue view of the Angora outlook, and, according to the Examiner, has come to San Francisco with five carloads of goats for sale. He told this story:

"I am selling them out," said he. "There is no money in them now. The wool has dropped from 70 cents a pound, six years ago, to 28 cents now, and they are no longer profitable. Their wool is used in the manufacture of all sorts of mohair goods and for mixing with short wool. The climate of Nevada is well adapted to them, and there are about 10,000, I should judge, in the State. My ranch is in Spanish Springs valley, ten miles east of Reno.

"The greatest foes to the Angora goats there are the coyotes and the mountain wildcats. They are very plenty, and they kill a great many kids and old goats. They are fondest, however, of the former. There are a few mountain lions there, but they do not bother the goats there as they do in Idaho. That Ter-

ritory, like Nevada, is well adapted climatologically to them. Oregon, however, is too damp, and they die off quickly and seem unable to be bred up to a point where they will stand the chilly air.

"What do they do with these goats here, having bought them of me? Eat them. They make good mutton—better than sheep, really. It is free from disease. The goats never have any disease of any sort. However, there is a sort of prejudice against goat mutton. People don't like it as well as sheep mutton. I don't know why. But ever since Abraham, Isaac and Jacob and all the other patriarchs of Bible times lived in tents, and their servants cared for their flocks, there has been a prejudice against goats. They can't get over it.

"So, while the meat is really better than mutton, it is worth but from eight to nine cents a pound, while the former is worth two cents more. Last fall I sold three cars, and now I have sold 550 more, and I am going to sell out the whole 1500 and go into sheep.

"Growers in the Sagebrush State, generally, have come to my opinion, and most of them are going out of the business."

CURTAILING COYOTES.—The Lander, Wyo., Mountaineer gives an account of a pair of superb stag-hounds, which Richard Ashworth, a noted Big Horn stockman, selected during a recent visit to Scotland, from their native kennel at the foot of Ben Nevis, and has domiciled on his Gray Bull cattle-ranch. The female weighs 150 pounds and the male 176 pounds. Their docility, intelligence, fleetness, stanchness and strength are wonderful. Victorious foes of the marauding wolf, they have developed a peculiar and amusing method of dealing with the common coyote. "For this cowardly and despicable animal to show himself in sight is to invite certain capture; but the gallant hounds disdain their base quarry too much to take its worthless life. They merely bite its tail off close to the rump, or pull it out by the roots, as the case may be, and having thus set their mark on Mr. Coyote, let him go. The trophy of the chase so obtained, the hounds invariably carry home with them, and to such an extent has this contemptuous depredation on the coyote race been carried that Mr. Ashworth's ranch fairly bristles with caudal appendages, and bobtail coyotes are the rule on the ranges."

THE VINEYARD.

Grape-Growing East and West.

The following extracts are taken from the essay read at the meeting of the American Horticultural Society in San Jose by Prof. George Husmann of Napa:

When I left Missouri in 1881, I was conversant if not identified with the progress that had been made there with new varieties of native grapes as they appeared and were tried, and could speak more understandingly than I can to-day. Here, while still cultivating many American varieties, I found different climatic conditions which evidently have an unfavorable influence on the fruit of most of the American varieties, while their influence on European varieties is highly favorable. Such varieties as were our mainstay in Missouri and the East, as for instance Norton's Virginia among the Aestivalis, and Elvira and Missouri Riesling among the Riparia, are valuable here only as stocks for grafting the Vinifera and almost worthless for direct production. Yet it is from the native American stock that you, east of the Rocky mountains, must obtain the elements of your grape culture and base your hopes for success. You cannot grow the Vinifera species in open air, as they are too much subject to the changes of your summers, the cold of your winters, to plan with any reliance upon them. With such men as Munson and Ricketts, Campbell, Rommel, Jaeger, and a host of others directing their best energies to the production of new seedlings from Aestivalis, Riparia, Cinerea, and Rupertia with the encouraging progress already made, the day is certainly not far distant when you will have varieties that will be productive and good enough both for table and wine to fill your markets with desirable table grapes, and also furnish wines good enough and cheap enough for home consumption. I have faith in the future of the American grape and believe that it will not take as many decades to develop desirable varieties as it has taken centuries to develop the best Vinifera species. But the climatic conditions of the Eastern continent seem to be constantly changing; varieties considered entirely reliable only five years ago now seem to be failing, and many Eastern brethren are better competent to judge how far they can hope to compete with foreign productions, or the product of the Western coast which must place its main reliance on the Vinifera class. That each locality will have to experiment for itself until it finds the varieties entirely suited to it, seems to me self-evident. In any event, the present time would seem the most propitious. When France has dwindled, through the ravages of phylloxera and from other causes, from a production of over 2,000,000 gallons of wine to not enough to supply her home demand, and must rely on Italy, Spain, Hungary, and still more on the skill of the wine doctor to keep up her trade, while the ravages of the insect are felt in all the wine-

producing countries of Europe, it would seem a good time for the universal American nation to step in and assume its part of the world's wine market.

And every locality at least should grow its own table grapes. The grape is the healthiest of all fruits, and should be eaten and enjoyed by every one in this nation, which threatens seriously to become a nation of dyspeptics. We want grape cures established throughout the land just as they are on the Rhine and other streams in Germany, where the tired city merchant and his family can go from the heat and impure air of the cities to recruit up in pure air and on a daily diet of fresh grapes. While horticulturists, as a rule, are among the healthiest of men just because they have more or less of fresh fruit every day, the nation as a whole is perhaps the most dyspeptic on the globe, and were it not for the constant admixture with foreign elements who bring new life to it, it would become hopelessly so. It is therefore not a question of profit to the grower, merely, but of vast national importance and welfare, that we should have grape cures established in every grape-growing community, and these alone would use up a large amount of fresh grapes.

When we come to the consideration of the question here in California and on the Pacific Slope, I am more at home and can speak more understandingly. I know what I say when I claim that we can raise grapes profitably at \$15 to \$18 per ton and can make wines good enough to compete with the choicest European brands—nay, even surpass them. If our best brands have not been so generally produced or disseminated as to establish the name and fame of California wines as they deserve to be, it has been simply because the industry is very young yet; it was commenced with inferior varieties manipulated with little or no skill and our wines came upon the market in an immature condition. Our industry is too young yet to have come near perfection. We need better average wines than we have had so far; we want different methods than have been employed to bring them before the public; we want wine-storage houses, which will enable the vintner to put his product where it can be matured and a more uniform grade established. We must come to the conviction that our inferior wines had much better go to the still, or be manufactured into vinegar, than be imposed upon the public as California wine and ruin its reputation. But we have already enough of really good wine to stand upon its own merits, and we should despise the trickery of sending it under French and German labels which so far has mostly been done with our best products, for which France and Germany receive the credit while we receive the blame for the inferior article.

When we come to look at our raisin industry the case is still more simple. Here we may say we have a monopoly. From the small beginnings years ago we have worked up to the production of a million 20-pound boxes in 1887, and the brands of California pickers are now preferred to the foreign products, not because it is American product, but against all the prejudice engendered by long usage for the foreign article. Now our raisins are driving the finest of foreign manufacture from our market and are sold almost before they reach the Eastern market. If we once meet the day that all this immense country uses California raisins, because they are cheaper and better in preference to the imported, what an immense field is open to this industry! Here is an area which even all those may enter who have conscientious scruples against wine-making. They can thus dry their fruit and find a ready market for it in this country as well as on the continent.

You are aware that we are now supplying the Eastern States with table grapes to a large extent, and with our increased shipping facilities we can continue to do so. I need not say they are larger and sweeter, and many also prefer their flavor and their firmer and more pressed meat than the American varieties. This is a matter of taste, and we also can keep them longer, and many of our mountain districts are so free from frost that they can remain on the vine until January. Thus again occurs a large field for grape-culture. We have hardly begun to develop all of our resources, and can hardly tell yet how far this may become a profitable and pleasant industry. But there seems to be little doubt that the supply of fresh grapes can be kept up until March or even April.

I have tried to give you a brief outline and some of the reasons why I believe the outlook for American grape-culture a bright one; but to develop all these branches of our young industry they need the fostering care and protection of our Government. While we can be more sure of a crop and of a more uniform product than the European vintners, they have the advantage of us in cheaper labor, and although we have brought the ingenuity of the universal Yankee to assist us in labor-saving machinery, yet we can justly ask a remunerative price for better and purer goods than they can and will supply us with; and we can only obtain this if we are protected against foreign importations by a tariff, not exorbitant, but sufficient to put us at least not at a disadvantage with foreign importations.

SPEED FOR A GRINDSTONE. — A grindstone with 4-inch face, 40 inches in diameter, with 2½-inch shaft and 10-inch collar on each side may be safely run at 75 revolutions a minute.

SWINE YARD.

Bogus Lard.

We recently alluded to the vast amount of bogus lard which is being placed upon the market, and now the subject comes up in another form. A dispatch from Washington February 8th is as follows:

The inquiry with regard to lard and its compounds by the Senate Committee on Agriculture was continued to-day, and interested parties to the number of 25 or 30, comprising manufacturers, attorneys and experts, were present. Samples of various compounds in tin pails were produced, which had been purchased in the open market and chemically examined by Professor Sharpless of Boston, who testified that samples bearing the stamp of Armour & Co., "Pure refined family lard" were found to contain about 60 per cent hog's lard, with 20 per cent each of cotton-seed oil and beef fat.

A sample of Fairbanks & Co.'s Chicago "Prime refined family lard," was made of the same elements, but had a greater proportion of beef fat and cotton seed oil.

A sample bearing the stamp of Halstead & Co., "Pure family lard," and another from the same firm stamped in Spanish, "Pure lard, registered," contained, so far as the tests have been carried, not a particle of hog's lard, but were made entirely of beef fat and cotton-seed oil. "With regard to cotton seed oil," Professor Sharpless says, "its healthfulness as an article of diet is still a mooted question. It is not a matter for chemists but for medical men to decide."

Mrs. Fairbanks of Chicago described the history of the modern lard project. Twenty-five years ago lard oil was pressed from the hog product, leaving the stearine a hard, waxy substance, for which there was little demand. Then a firm in New York conceived the idea of mixing stearine with ordinary lard and formed a compound which gave better satisfaction, especially in warm countries, than pure lard. The packing-houses in making lard got dumping into cans everything—heads, feet, etc.—and made a product which was offensive, having, as the witness said, a "hoggy taste." Refiners cast about for something to neutralize this and found it in cotton-seed oil. Out of a hundred tierces of packers' lard the refiners got about one tierce of mud and filth "as black as your coat." To the refined product they now added 25 per cent of cotton-seed oil and 15 per cent of stearine, which compound comprises seven-eighths of the lard now on the market. Once or twice when the compound ran short pure lard had been supplied to customers and witness was overwhelmed at once with complaints that the consumers were dissatisfied. The trouble with Squire, witness said, arose from the fact that witness's firm had secured a large part of Squire's trade, especially in New England, and that gentleman had agitated the passage of the bill because small dealers would not take out a license to sell the compound as required by the bill, and as no license would be required to sell pure hog-fat lard they would resume the purchase of lard manufactured by Squire. The demand for legislation did not come from the people. The constantly increasing sales of lard made by witness's firm proved that the public wanted their lard. When asked why he did not label it as compound lard, he said the American people were not educated up to the use of oils yet. He objected to being compelled to change the brand "refined lard" because that label was part of his stock in trade.

Judge Wilson, attorney for Squire & Co., read a petition signed by a large number of manufacturers and dealers in pure lard, urging the passage of the bill; also letters from two cracker manufacturers of St. Louis and Omaha, stating that crackers in which was used lard compounded in part of cotton seed oil would become rancid in a few days; also a clipping from the New York Journal of Commerce in which it is stated that exports of lard from the port of New York have fallen off 56,000,000 pounds in the year 1887 as compared with the year 1886. Mr. Cromwell, attorney for "refined" lard manufacturers, said he had a petition from over 5000 persons, stating that "refined lard" was not an injurious article. He said it was not claimed that cotton-seed oil could be used for every purpose, and he would admit it was not fit for crackers.

Cromwell argued at length against the bill, and after further addresses the hearing was adjourned.

Artificial Lard in San Francisco.

A quarterly meeting of the California Pharmaceutical society was held Feb. 9th in the college building on Fulton street, F. C. K. I. W. presiding. A communication from Prof. I. W. Runyon, entitled "Lard for Pharmaceutical Uses," was read. He stated that there has been considerable discussion lately in relation to lard adulteration, and the question naturally arises, "What is the quality of the so-called refined lard as sold in the San Francisco markets, and do druggists use it for pharmaceutical purposes?" Recent experiments have shown that one of the brands of highest-priced lard in packages is not pure lard, but a compound, and is objectionable for the making of ointments and other preparations. The investigations now going on in Washington develop the fact that the commercial refined lard subjected

to analysis shows 40 per cent adulteration, consisting of cotton-seed oil stiffened with beef-fat stearine. An editorial in a prominent Eastern newspaper stated as a fact that one of the largest hog-fat dealers in the country asserted that he used in his factory one-fifth of the entire cotton-seed oil product of the United States, this being equal to 3,000,000 gallons. The professor suggested that the chair should appoint a committee of three to make an analysis of the several lards in the market and report at the next meeting.

POULTRY YARD.

Eggs in Great Britain.

The following statements are from a lecture recently delivered in England by Prof. Simmonds, and reported by the London Standard: In France alone the wine clarifiers use more than 80,000,000 eggs a year, and the Alsations consume fully 38,000,000 in calico printing and for dressing the leather used in making the finest of French kid gloves. Finally, not to mention various other employments for eggs in the arts, they may, of course, almost without trouble on the farmer's part, be converted into fowls, which, in any shape, are profitable to the seller and welcome to the buyer. Even eggshells are valuable, for allopath and homeopath alike agree in regarding them as the purest of carbonate of lime.

In the face of these facts, it seems almost incredible that an article of commerce, to produce which requires hardly any capital, and is salable in any quantity, is so little attended to that the supply is in England altogether unequal to the demand. How many eggs are laid within the British islands can only be calculated with an approximate degree of accuracy. According to the latest agricultural returns, there are at present in the United Kingdom something like 20,000,000 of barn-door fowls, though, as the poultry in possession of the cottagers were not, except in the case of Ireland, taken into account, the return may be regarded as much under rather than over the mark. Twenty-five millions would be nearer the real number. Now, if we deduct from this the "permanent non-layers," in the shape of male birds, and the 11,000,000 which reach the market in the form of poultry for the table, the remainder will represent setting hens and mere chickens.

Some fowls will lay as many as 220 eggs per annum, while others do not yield one-third of that number. But if, according to the calculation of a correspondent, whose figures we printed some months ago, each hen is credited with 100 eggs, there would be at least 600,000,000 of eggs of our home fowling. This supply, prodigious as it seems, is, however, a mere trifle compared with the quantity required. For if the egg-eaters of the kingdom are put at 25,000,000, the number mentioned would not admit of each of them consuming more than about 24 per annum. That, of course, is far below the mark.

Many middle-class families use for the breakfast-table and for cooking fully 100 per week, while confectioners, hotels, restaurants and others must consume every day four or five times as many, to say nothing of the cratefuls absorbed by various arts and manufactures. In one photographic establishment alone 2,000,000 are used every year, while the amount required for various processes in calico printing, leather dressing, and, we believe, in book-binding, must exceed the number employed in food. From what quarter, then, are the wants of Britain supplied? Our eggs are not manufactured in America, as an ingenious myth circulated some years ago affirmed to be the case. The simple truth is that the eggs are imported.

The extent to which they are brought across the sea is proved by the fact that last year we paid £3,000,000 to the foreign farmers for eggs, every pound of which might have easily remained at home for the enrichment of the British landholder. A payment of £3,000,000 per annum means that the eggs for which this sum was paid must have come into our ports at the rate of more than three million and a quarter on every working day. To this branch of the British commissariat France contributes most largely, Germany and Belgium coming next. Every year these importations are increasing, the number brought from the continent in 1865 being not much more than a third of the amount entering last year. And this enormous number does not include the eggs of ducks, geese and turkeys, or those of plovers and other wild birds, for which high prices are invariably given.

Altogether, calculating one penny as the average price given for one egg, the correspondent, whose statistics we quote, reckons the total cost of our egg supply at nearly £6,700,000. Now—leaving out the tons of fowls which are imported—it is perfectly certain that if our farmers choose to bestir themselves, not one farthing need go out of the kingdom for the purchase of eggs, and that they might profitably pocket the £3,000,000 which the peasants of France, Germany, Belgium and Holland draw from the British people.

WM. T. COLEMAN has positively refused to accept the appointment of Commissioner of the American exhibit at the Melbourne Exposition, for which position his name was prominently mentioned.

THE STOCK YARD.

The Beautiful Steer.

[Miss E'la Paxton, known as the "Cow-Girl of the Panhandle," recently favored an enlightened Western audience with the following original production, which, in her introductory remarks, she styled a "paradox" on "Beautiful Snow." She also stated that it was "paradoxed" while sitting on her horse on herd-day on her father's ranch in the Panhandle, situated about three miles from Mobotio, Tex.—Exchange.]

Oh, the steer, the beautiful steer,
Kicking the fleas from the point of his ear,
Flapping its tail in frolicsome glee,
Hopping about like a Snake river flea,
Bellowing!
Roaring!
Thundering along!
Filling the air with his steerial song,
Till the rumble from his lung-laden pits
Scares timid jack-rabbits and wolves into fits.
To me there is nothing on earth half so dear
As the long-horned, slim-bodied Texican steer.

How often I wish that I was a steer
With a long shiny horn at the butt of each ear.
With a clear, fearless eye, and tapering tail
That would snap like a whip in the maddening gale.
How I'd beller!
And roar!
And paw up the ground!
And lope over the hills with a thundering sound,
And snort like a terror, and hump up my back
When I saw the wild cowboy pursuing my track;
And I'd laugh at his oaths as he fell to the rear,
Oh! I'd be a Jo-dandy if I was a steer.

I once roped a beautiful steer—but I fell,
Fell from my pony with ear-piercing yell!
Fell with the lariat fast to my wrist!
Fell to be dragged through the grass wet with mist.
Bumping!
Rolling!
Grunting I went!
At full mile a minute, or I don't want a cent.
The gravel and grass yanked the skin from my nose
And ruined a pair of forty-cent hose;
Aye, even my bustle was thrown out of gear
By the frolicsome freaks of that beautiful steer.

Ayrshire Milk Record.

C. M. Winslow of Brandon, Vermont, secretary of the Ayrshire Breeders' Association, sends us the following milk record for 1887 of the Ayrshire herd on Adams' farm, Milton, Mass.:

Name.	Age.	Days Dry.	Lbs. Milk.	Largest Amt. for 365 consecutive days.
Queen of Ayr 2d.....	14	161	3955	9105
May Moon 3d.....	11	69	5884	6345
Miss Briar.....	9	96	6928	6928
Alice Douglas.....	9	143	4524	12617
Orion.....	9	57	7325	7769
Zilla Douglas 3d.....	6	97	777	9161
Mary Douglas.....	8	27	7369	7369
Ellen.....	6	—	10823	10823
Lady Milton.....	6	92	7165	7496
Mary Gibb.....	5	31	5658	6866
Lillian Clyd.....	4	81	6437	6437
Qriosity.....	4	20	5971	5971

Average weight of milk, 6646 lbs.

The cows have been well fed—good hay twice a day—three quarts ground oats and one quart corn-meal daily, besides a half bushel of brewers' grains. Summer pasture very poor.

GEORGE A. FLETCHER.

The above milk record has been sent to Mr. Winslow, and he adds to it the following taken from previous records:

1884.	Average for 10 cows.....	Lbs.
1885. <td>" " 6 ".....</td> <td>6534</td>	" " 6 ".....	6534
" " 17 ".....	" " 6 ".....	6319
" " 17 ".....	" " 17 ".....	5422

One of the above cows is Alice Douglas, 4398, officially tested by the association, and giving record as follows: 62½ lbs. in 1 day, 407¾ lbs. in 7 days, 1695 lbs. in 30 days, 4997 lbs. in 90 days, 12008 lbs. in 365 days.

The cow Alice Douglas has enjoyed the distinction of having her portrait in the RURAL PRESS, Feb. 12, 1887.

Pleuro-Pneumonia.

In response to a request from the Senate Committee on Agriculture and Forestry, Commissioner Colman has written a letter to Senator Palmer, chairman of the committee, setting forth his views with regard to the suppression of pleuro-pneumonia. He reviews at some length the history and method of the work of the Bureau of Animal Industry, and says that Congress should clearly understand that this method of work is absolutely essential to wipe out the disease, and that any law that falls short in any one particular will fail of its purpose and the money expended under it will be thrown away. The commissioner expresses the belief that a plan of State co-operation is preferable to one which relies solely upon national authority, and says that the work of extirpating pleuro-pneumonia, which is now being done by the Bureau of Animal Industry, is going on smoothly, harmoniously and effectively by means of State co-operation. He thinks that this work should be continued upon the same lines where it is now moving and that it will be unfortunate and ill-advised if any new and untried plan be adopted.

FORESTRY.

What Becomes of Our Timber Lands?

You are part owners of about 70,000,000 acres of land, more or less stocked with timber and not considered agriculturally valuable, held by the General Government and lying mostly on the western mountains.

There are five ways in which a citizen may acquire either the land or the timber on it:

1. In California and on the Pacific Slope generally, we allow him to get as much as 160 acres "for his own use," at \$2.50 per acre, a price from 10 to 30 times less than the true value. The use to which most owners put their purchase is to relinquish it to some large lumbering corporation, which, in fact, has paid men to perjure themselves in taking up such lands.
2. In the Southern States you can buy at \$1.25 per acre, in any quantity, as much Government timber land as you may still be able to find, the most having gone at that price to speculators and lumbermen.
3. Every land-grant railroad, in addition to its share of the land grant of 75,000,000 acres and the right of way, is permitted to cut timber "for first construction" "adjacent to the line of its road." But the railroads don't construe "construction" and "adjacent" exactly in the sense in which the lawgivers did, and they have cut wherever, whenever and for whatever purpose they chose.
4. Those who take up a homestead or pre-emption claim upon timber land are also given the right to clear as much timber as is necessary for the development of their claim and improvements before they have acquired title. We are told that most settlers on such lands do not exert themselves to procure the title after they have got the timber off.
5. Lastly, any resident citizen may cut all the timber he needs for mining and domestic purposes upon lands which are designated as "mineral lands." Oh for the power to know what "mineral lands" are!

Shall we pride ourselves on our liberality? Or shall we rather feel ashamed of our niggardliness? Not only have we allowed the most valuable part of this class of our property to be fooled away to a few speculators, largely upon fraudulent entries, but we have criminally permitted the depreciation of the remainder, and, besides, have compelled the population of two States and seven Territories to become trespassers and criminals on account of taking the timber they needed, because we would not sell it to them. In the years 1881 to 1887 there was reported timber stolen from the public domain to the value of \$36,719,852, probably a small fraction of the actual depredations; there were recovered, mostly by compromise, \$478,073, and expended for protection \$455,000. To this add an annual loss from fires, valued at \$8,000,000.

The charity which we have extended to the pioneer settlers, in allowing free use of our property under certain conditions, has worked more harm than good; the settled community would gladly exchange the privilege for a fair bargain in which the consumer pays for what he uses.

The present settlement and disposition laws are the cancers that destroy the public timber lands, leaving a sick—dying—dead mountain desert, and impairing the agricultural and industrial interests adjoining.

If you feel an interest in having this property administered in a more reasonable manner, for the benefit of the settler as well as for the rest of the nation, write to B. E. Fernow, Secretary of the American Forestry Congress, at Washington, D. C., for Memorial and Bill to be presented and urged in the 50th Congress.

What the Interior Department Proposes.

WASHINGTON, Feb. 9.—In answer to a House resolution, Assistant Secretary Muldrow sent to Congress to day a communication respecting legislation necessary to protect the forests surrounding the sources of streams that provide the water supply for agricultural territory. He recommends:

- First—That all timber lands at or near the sources of streams be withdrawn from sale, and that replanting of denuded tracts be at once proceeded with.
- Second—That a Forestry Division be established in the Interior Department with full control over all lands so withdrawn.
- Third—That all timber lands be accurately surveyed and registered.
- Fourth—That additional timber agents be appointed.
- Fifth—That on all such reservations no timber shall be disposed of except as may be determined by the Secretary of the Interior, and only on such proposals as will settle beyond all question that such land is more valuable for agricultural purposes. In all other cases the Secretary shall be authorized to order the disposal of the timber at public sale to the highest bidder. Bonafide settlers should pay a price in proportion to the appraisement, but only for their own use. Persons actually engaged in felling timber for sale should pay the market price on a stumpage basis.

In conclusion, the Assistant Secretary recommends that the law allowing citizens of Colorado, Nevada and the Territories to cut timber on public lands and the Act placing the timber lands in California on sale be repealed.

PATRONS OF HUSBANDRY

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Experiment Stations and the Grange.

[By MORTIMER WHITEHEAD, W. L. N. G.]

Without a single dissenting vote the legislation needed to secure the appropriation under the Hatch Experimental Station law was obtained in the National House of Representatives, last week. It is probable that ere this is read it will have passed the Senate also, and this advance step in the interest of agriculture will have become a fixed fact. The measure was hindered, and even endangered for a time while on its passage in the House by some attempted amendments, but over the wires went the alarm and back again from the Masters of State Granges, and other officers, in all parts of the country, speaking for the tens of thousands of organized farmers they represented came the words, asking the immediate appropriation, without additional condition, of the money required to make the law effective. And it was done. A glance at the printed pages of the *Congressional Record* will show how bravely and unitedly farmers in the Grange spoke through their leaders.

As is well known, this Experimental Station bill provides for establishing and maintaining in the interests of agriculture an experiment station in each State of the Union with an annual appropriation of \$15,000. The Grange can justly claim a good share of the credit for securing the law. It was a number of years ago that the National Grange first talked on the matter of having several national experiment stations located in the different sections of the country, and in the interest of their special soil, crops, climate, etc. It finally took definite form in a station for each State, and each year since the National, various State and Subordinate Granges, and individual Patrons have advocated and urged the measure.

Now that the experiment station matter is settled, there remains a plain duty not only for farmers in the Grange, but all farmers in every State of the Union, to see that the stations are established and that the money appropriated is spent in the interest of agriculture. We all know how the Agricultural College land-scrip of years ago was squandered in some States, and in others absorbed by colleges who even disowned the name agriculture; and it will be the fault of farmers themselves if this new appropriation in any State goes the same way. Several State Granges this winter have taken prompt and careful action in the matter. Others should do the same, and do it at once.

Let every Subordinate Grange in the United States, at its next meeting, take up the discussion of the experiment station, have the law read that all may learn its provisions and know exactly what it is intended to do. Interest farmers and Patrons in it. Create a public feeling and sentiment in the matter. If State legislation is needed, see that it is secured. Let it be known that the farmers of your State are awake in this matter. Don't put it off.

"Trust no future, however pleasant;
Act, act in the living present."

Land-Sharks Beaten.

A righteous decision was recently rendered by Judge Spencer of Santa Clara county, in a suit brought by Mrs. J. G. Lemmon of Oakland against J. E. Rucker & Son of San Jose. The *Oakland Enquirer* gives the history of the case as follows:

Some months ago Mrs. Lemmon, acting through a Mr. Field, put a piece of property in the hands of Rucker & Son to sell, giving the minimum price at \$2800, but they were to get as much more for it as they could. In a few days they reported they had sold the property for \$2800, and a settlement was made on that basis with Field. But subsequently it was learned that the property had really been sold for \$3225, and, furthermore, that Rucker & Son had a customer at the latter price when they took the land to sell. When they found that they were caught they blamed their clerk for the affair, saying that he had been speculating in their name, but they refused to make restitution. So Mrs. Lemmon, through Field, brought suit for \$425, and has now obtained judgment.

In rendering his decision, which gave Mrs. Lemmon \$425—allowing Rucker & Son no commission on that amount—Judge Spencer says: "The transaction cannot be upheld upon any standpoint, and the Court of Equity would almost be *particeps criminis* if it even for a moment hesitated denouncing a transaction of that kind. It is perfectly bald and bare, and when the firm undertook to father this transaction, or to shield their clerk, they made themselves a party to it. They have no earthly excuse to come into court and make a defense, and they will not, under the circumstances, be allowed a commission for the excess, because where they deal unfairly with their principal, they are to be allowed no compensation for that kind of dealing; their unfairness comes in not remedying and correcting the wrong and error of their servant when it was brought to their attention, and being responsible for upholding it as they do, they must bear the brunt of it and make the amend."

Farmers' Organizations.

A proposal having been made that the agriculturists of Kansas organize under the name of a State Farmers' Association, Wm. Sims, Master of the Kansas State Grange and Secretary of the State Board of Agriculture, replies as follows:

"I think your suggestion timely and worthy of the thoughtful consideration of agriculture, and well calculated to induce that consideration of the subject presented which its importance demands. But in view of the thorough and complete organization of the Order of the Patrons of Husbandry, now well established, growing stronger yearly, and to which, during its 21 years of continuous work, is due more of the important reforms secured in the interest of agriculture than can be attributed to all other influences combined, and which is now able to furnish conclusive evidence of its nearer approach to the requirements of the agricultural classes than any other association of like character yet presented to the American farmer, I beg leave, very respectfully, to question the propriety of diverting attention, by the formation of another organization of the same general character, with like aims and purposes, the effect of which, if consummated, must of necessity divide our forces, weaken our influence, and lessen our chances for final success.

"Our Order teaches, and history proves, that successful results of general welfare can be secured only by general effort; that unity of action cannot be acquired without discipline, and that discipline cannot be enforced without organization, and that every advance in the world's progress, pertaining to the general welfare, or affecting directly the interest of any considerable number or class, has been made by the combined effort of men and women exerted through organization. We therefore hold concert of action on the part of those engaged in any given industry to be necessary to success, without which general progress cannot be counted upon with reasonable certainty and individual effort, however well directed, must of necessity fail of its just reward, and that the farmers' calling, though much longer neglected than other interests, is no exception to the rule; in short, that organization and co-operation is the demand of the times, and that the future of agriculture will depend largely upon the ability of its votaries to comprehend and intelligently apply the true principles of co-operation as suggested in your article and taught in our Order, not only to the work of the farm, but also to questions of public policy, in which all have a common interest.

"It therefore seems that we agree fully as to the importance of systematic working together on the part of those engaged in agricultural pursuits, and differ only as to the methods best calculated to accomplish desired results; and for our Order, or the Grange, if you please, I only claim the advantage of being now well established—one of the fixed institutions of the country—upon whose foundation, so well laid, it would be easier to continue to build than to construct another of the same general character. The Grange brings farmers, their wives, sons and daughters together at stated periods; relieves the monotony of the isolated condition in which they generally live; enables them to extend acquaintance; to cultivate the social amenities of civilized life, and to consider in a friendly manner, and to the fullest extent, all questions relating not only to the farm, but of general public interest as well, in which every citizen should, to the extent of his ability, take an active part."

Grangers Petitioning Congress.

The Virginia State Grange is exerting itself, through its legislative committee, to have petitions circulated in all parts of the Union, signed and forwarded to U. S. Senators and Representatives, respectfully demanding (1) the creation of a Department of Agriculture, with its head in the Cabinet and ample funds to sustain its various bureaus; (2) the guarding of all moneys appropriated under the Hatch bill, so as to insure their strict devotion to purposes of practical agricultural experiment; (3) free course for the useful working of the Interstate Commerce and Oleomargarine Acts; (4) repeal of the Internal Revenue tax on tobacco; (5) due regard for the American Farmer in revising the tariff, and (6) such amendment of the Patent laws as shall make the seller, not the innocent buyer, liable for infringements.

Blank forms can be had of A. J. Wedderburn, box 318, Washington, D. C.

THE "TRUST" ABUSES.—Washington dispatches state that Representative Rayner addressed the House Committee on Manufactures the 10th inst., in support of his bill to prevent the creation of trusts. The greater part of his speech was devoted to an explanation of the different sections of the bill and the constitutionality of the legislation proposed. He said that the bill declared it unlawful for individuals, companies or corporations doing business in any State or Territory to make contracts or agreements or arrangements with individuals doing business in another State or Territory, by which the price of an article dealt in shall be fixed at any standard or figure by which its price to the public shall be established. Under that provision of the Constitution

which gives Congress the power to regulate commerce between the States, Congress had authority to enact such laws as would prevent the formation of these trusts and combinations doing interstate business. If it was conceded that this constitutional authority could be so exercised, it followed that Congress could prohibit the trust from making agreements to fix the prices of the articles they produce to preclude free competition. He contended that Congress had authority to prohibit the formation of these pools and to declare it unlawful for them to make contracts or agreements not to compete with or undersell each other, and to regulate prices to the detriment of the public welfare.

A Cruel Swindle.

One who appears to have had a long experience in boarding-houses narrates, in the *New York Mail and Express*, the following story, as told him by a very delightful old lady who has been in the boarding-house business for years, and has had under her roof everybody, from the relatives of the richest people in town down to the youthful clerks in the neighboring bric-a-brac establishment.

A very polite individual called on her the beginning of last summer in answer to an advertisement which she had printed in a morning newspaper, and told her that he was an English physician who, with an associate, wished to open an office in New York. He was perfectly willing to pay a handsome price for a suite of rooms with the use of the general reception-room for patients who were waiting to see him. He entered into a contract and a few days thereafter moved in with his daughter. As soon as he was established in the house he advertised through various mediums that a staff of English doctors and surgeons, 14 in number, had located themselves at this house, and as it was their first visit to N. Y., they were willing, in order properly to introduce themselves before the public, to give medical advice free. Having spread this announcement broadcast, the polite gentleman, who had as yet no associates whatever, went to the front door and nailed a large tin sign in a conspicuous position.

The magical promise of medical advice free had its natural effect. The door-bell of the old lady's boarding-house was pulled and jerked and tortured into a condition of unremitting activity. The girl whose duty it was to open the door became an involuntary professional pedestrian, and walked against time between the kitchen and front stoop, making innumerable laps to the hour. The handsome parlor was overrun with crowds of poor, sick and many times hopelessly diseased people. As many as 300 people a day rang the bell, and the staff of 14 hospital surgeons, consisting, however, of the polite gentleman and one associate who finally appeared upon the scene, talked with all of them.

There were all kinds of chronic invalids, but the invariable representation of the Gilbertian staff of 14 was that each case would be cured in six months if such medicine was taken as the English physicians would furnish. Of course, the various miserable specimens of suffering humanity declared that they would take the medicine, and when they were informed that the cost of it was so much they paid for it then and there, or, if they had no money, went around among their friends and borrowed it. In this way the alleged staff of 14 sold hundreds of bottles of their so-called medicine, collecting from the miserably poor patients who came to see them all the way from \$5 to \$50 each. Within a comparatively brief period the collections of the polite gentleman aggregated hundreds of dollars, all of which came out of tenement-houses and the poorest and most wretched hovels in the upper part of the city. As he always told his patients that nothing could be effected under six months' time, no awkward questions were asked by the miserable people who were scraping together a few dollars from week to week wherewith to pay him, and no complaints were made over the fact that no favorable changes in their condition had been accomplished.

At the end of a month, long before the time had elapsed for the medicine to work its beneficial results, the polite gentleman and his associate left, saying that they were imperatively called to Montreal.

They left hundreds of bottles of their medicines behind them and scores of wretched victims, who crawled, crept, limped and dragged themselves for weeks afterward to the house where the staff of hospital surgeons had held forth, asking piteous and plaintive questions as to the staff's present whereabouts. Nearly every visitor had some heartrending tale to tell, and at least half of them related how he or she had borrowed the money wherewith they satisfied the polite gentleman's demands or had used the hard savings of many long months, with the hope of re-establishment of health heartlessly held out to them.

SANTA ROSA GRANGE is reported by "Occasional" as meeting regularly and promptly, with good attendance, rain or shine. The new officers are evincing lively interest in their work, and but a single absence has been noted among them since the year commenced. The members have been divided into two sections, which take turns in furnishing entertainment at successive meetings, and strive to outdo each other in enlisting good recruits.

Temescal Grange.

This Grange at its last meeting discussed with considerable animation the resolution presented by Bro. Coulter and recently adopted by the Santa Rosa Grange, opposing a reduction of the National tax on whisky and tobacco. The resolution was adopted by a large majority.

At the meeting to be held to-day at 2 P. M. there will be work in the first and second degrees. It is hoped a large attendance will be present.

Grange Election.

SIERRA VALLEY.—N. N. Strang, M.; Geo. P. Haines, O.; Mrs. Geo. P. Haines, L.; Mrs. R. Weed, S.; A. Hubbard, A. S.; Mrs. M. Prichard, C.; Mrs. R. L. Olsen, T.; B. F. Lemmon, Sec.; J. Hubbard, G. K.; Mrs. Maxwell, Ceres; Mrs. B. F. Lemmon, P.; Mrs. A. S. Nichols, F.; Mrs. N. N. Strang, L. A. S.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Grange and the Order.

CONGRESS AND THE LIQUOR TRAFFIC.—On Friday of last week, after listening to an argument from A. M. Powell, president of the Washington Temperance Society, the Senate Committee on Education, by a unanimous vote, instructed Senator Wilson of Iowa to report favorably the bill providing for the appointment of a commission of five persons, all of whom shall not be advocates of total abstinence, to investigate the alcoholic liquor traffic, its relations to revenue and taxation, and its general economy and criminal and moral and scientific aspects, in connection with pauperism, crime and social vice, public health and the general welfare of the people; and also to inquire and take testimony as to the practical results of license and prohibitory legislation for the prevention of intemperance in the several States of the Union.

BACK TO CALIFORNIA.—The kindly countenance of Bro. Daniel Field of Maine, whose fraternal visits last year many Granges hereabout will recall with pleasure, beamed upon us in our *sacrum* one day this week. Our venerable friend, it may be remembered, went home to the Pine-tree State last spring, but, like so many others who have once enjoyed a winter on this coast, he felt the irresistible impulse and must needs return to the Golden State. He and Sister Field are staying with their son in this city, and it is hoped they will meet with neighboring Granges as often as possible.

BRO. J. V. WEBSTER is on a short visit to East Oakland, on account of the illness of Judge Howard, his father-in-law, but expects to return to Creston next week. This afternoon he will visit Temescal Grange, where he is always welcome.

THE Butte Mountain Pomona Grange meets in Yuba City to-day, 18th. All those desiring to become charter members must be present on this occasion to sign the roll.

From Vacaville.

Brush-Hauling—Gophers.

EDITORS PRESS:—After quite a rainstorm, the weather is bright and sunny. Grain and grass are growing very fast. Some young orange and blue-gum trees were killed by the cold, but I cannot find any fruit buds on the trees that are hurt.

People on the ranches are very busy now; when the weather is too stormy to work outside, they are fixing boxes, trays and other things necessary in taking care of the coming crop; when the ground is fit to work, they are setting out trees. A great many are digging out every fourth vine and planting trees. The grape-vines are dying very fast, and it will be but a short time before they are all gone, unless some remedy can be found for the phylloxera. Some have tried resistant vines and grafting, but have not met with much success. If vines are to be grafted, I think it will have to be done in a nursery.

China New Year commenced Saturday, and is over to-day for the working classes, judging by the strings of Celestials going home from town.

One of our orchardists has the boss way of getting the brush out of his orchard. He piles the brush in the middle between the rows of trees and then hauls it out with a "go-devil," the same as he would shock hay. The brush can be hauled off and dumped into a creek or on an open piece of ground much faster than it can be put on a sled or wagon.

Mr. Dobbins, near Vacaville, had a piece of sandy ground that was full of gophers. They killed his trees as fast as he set them out. Last year he set it out to pear trees and put several handfuls of bonemeal near the roots of the trees, and not one of the trees has been gnawed by the gophers.

Mr. Donahue of Vacaville is making some of the best implements for smoothing ground and cutting up the clods that have ever been tried in this part of the country. In addition to a clod-masher, he puts two or three rows of knives, which draw over the ground and cut it as fine as cube sugar.

Vacaville, Feb. 13, 1888.

OWING to a stringent paper famine the San Diego Union is published on buff wrapping-paper.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

ABOUT HAYWARDS.—*Cor. Chronicle*, Feb. 9: Almond and apricot trees are beginning to bloom, and the prospects were never better for a heavy crop of all kinds of fruit. The cold snap caused some of the oranges to drop from the trees in the Meek orange orchard. Grain is looking well, and nearly all our ranchers have put in their crops. Cattle and sheep in the hills are doing well, as the green grass is already good and abundant.

Amador.

NOTES FROM PLYMOUTH.—*Cor. Jackson Dispatch*, Feb. 9: Large bands of horses and cattle are being driven to the valleys below here, to feed on the alfalfa-fields until the grass is good in the mountains. The farmers are beginning to plow summer-fallow land. The prospect for a crop was never better than at this time. Grass is getting up so that stock can begin to nip it. Hay is selling at \$17 per ton. It is strange that our farmers don't make more hay, as there is always a ready market, and the hay crop is easier to take care of than grain, and more expensive to haul, when it has to be brought from below.

DISTRICT FAIR.—The Board of Directors of the Amador and Calaveras Agricultural Association met in Ione last Saturday and decided to hold the fair this year Aug. 7th to 10th. The old officers were re-elected as follows: U. S. Gregory, president; Geo. Woolsey, treasurer; Clovis T. LaGrave, secretary. The time selected for the fair is rather early for a good display of fruits, but the directors thought it better to select this early date than to come in conflict with the numerous other fairs that will be held in different parts of the State after that time.

Colusa.

FLOODS AND GOPHERS.—*Colusa Cor. Sutter Farmer*, Feb. 7: The high water in the Sacramento river has caused the levees to break in many places, flooding a number of acres and causing the grain to be drowned. The levee near R. Jones' place, on the east side of the river, broke last Tuesday. The Henry Klewe alfalfa field, on the same side of the river, was also flooded. During the high water J. B. De Jarnett, who resides a mile above town, by means of his irrigating ditch, turned the water into his alfalfa. In a few hours thousands of gophers appeared. About 10 or 12 men went to work killing these pests, and in a few hours had slaughtered between 1500 and 2000. One of the men killed nearly 200 and hung them to the barb-wire fence by their stumpy little tails.

Kern.

MORE RODENT RODEOS.—*Bakersfield*, Feb. 13: A rabbit-drive took place yesterday eight miles south of here. About 200 people were present. The ground was favorable for the purpose. The first roundup in the corral was about 4000. They were all dispatched with clubs, counted, and thrown in a large pile in the center of the corral. The crowd then adjourned to a barbecue, and many brought lunches and mild drinkables. After the feast another drive over the same ground took place and resulted in adding about 2000 more dead rabbits to the pile. They were very large and fat.

Los Angeles.

FIRST ORANGE TRAIN.—*L. A. Times*, Feb. 7: Yesterday W. R. Strong & Co. of Sacramento, who have established branch shipping-houses at various points in this section, for the purpose of packing and shipping oranges to the East during the season, started the first special full orange train of the season. The shipment consists of 14 cars, and goes via the C. P. and U. P. roads, and will be run on special fast time. At Council Bluffs the train will be distributed, and cars of the fruit sent to various cities. The oranges were picked in Los Angeles, Downey, Riverside, San Gabriel and other points, and all sent in so as to reach Los Angeles, the proper shipping point, together. When the train was fully made up it was photographed. These photographs will be sent by the firm to their Eastern friends and customers, and will prove a valuable and attractive method of advertising Southern California.

Marin.

A THING OF BEAUTY.—*Marin Co. Journal*, Feb. 9: Mr. Bogue of the Batavia, N. Y., nurseries, who visited San Rafael with his brother horticulturists, said that the handsomest thing he had seen on his journey was a *Cameilia Japonica* in Hall McAllister's grounds. The shrub is about seven feet high, symmetrical and robust, and literally covered with its wax-like flowers.

Mendocino.

FLOCK AND ORCHARD.—*Dispatch and Democrat*: J. B. Hoss has a double Hungarian prune on his place, one mile south of Ukiah, that made a growth of nine feet last year. . . . Some of our sheep men have lost a fourth of their flocks this winter, and most of their lambs. . . . A. G. Goddard, one of Mendocino's new citizens, who has located on a piece of land near Low Gap, has received a goodly number of orange, lemon and olive trees and set them out. Mr. Goddard displays the right spirit.

Monterey.

CHUALAR ITEMS.—*Cor. Democrat*, Feb. 8: Farmers in the vicinity are nearly through seeding. All available land that can be is cul-

tivated this year, and from present prospects a very large yield is anticipated, nearly three-fourths being in barley. Abernethy Bros. have rented the Bidache ranch, opposite here, and intend to use it for a dairy. Piazzoni Bros. have leased the Malarin tract rented by Mr. Alex. Ruine and have part of it under cultivation, while the rest is used for dairying purposes.

Nevada.

SHELLBARK HICKORY NUTS.—*Tidings*: Peter Johnston has on his residence-lot in Grass Valley a hickory tree that bore last year for the first time. There were about 50 nuts on the tree—the largest of that kind of nut. The tree grew from a nut brought some 20 years ago from Missouri by Billy Bailey, a former well-known resident of this town. There is another hickory tree in Grass Valley that bears, and that belongs to Mr. Thomas Othet, but it is not the shellbark variety. The hickory flourishes in these foothills and "hickory wood is the best of wood."

BEDROCK SOIL.—*Nevada City Transcript*, Feb. 4: It has generally been supposed that when our gravel hills were sluiced away to the bedrock, and the latter thoroughly scraped for the last traces of the precious metal, the ground was of no further service to man. But after all, this seeming desolation that comes from gravel mining is more apparent than real. With a little exertion the bedrock can be made fruitful as the best alluvial soil. It needs but slight fertilizing to make it productive. It retains moisture much better than the gravelly loam or the red surface soil of the hills, and to commence with is entirely free from noxious weeds to interfere with its cultivation. The value of the bedrock soil (for soil it is) is no longer a matter of speculation. Its productiveness has been fully tested, and may be seen on some of the best vineyards and orchards, including those of Samuel Allison, J. B. Ducary and the Rogers ranch for instance. If the bedrock exposed by the miners can thus be utilized and made subservient to the horticulturist or the husbandman, then the labors of the surface miners will not have been so destructive to the soil as has been imagined. All localities that have been disfigured by mining operations are destined to resume a more comely appearance and rejoice in fruitfulness.

San Benito.

HORSE MARKET.—*Free Lance*, Feb. 10: That the Board of Trade was wise in its suggestion that a regular monthly Horse Market be held in Hollister was proved by the success of its first meeting. Seven of the 31 horses registered were sold last Saturday. At the sale the buyers became acquainted with other horsemen, and on the next day eight more were sold, making a total of 15 horses sold. The prices obtained averaged \$135. This means that a total of \$2025 was brought into the county as a direct result of this first meeting. The Board of Trade, and particularly Mr. Leggett, its secretary, is to be congratulated on the success of its undertaking. Horses are already being registered for the next meeting. Those desiring to enter horses must register them one week before the next sale, which will be held on Saturday, March 3d. This will give opportunity for sending a list of horses registered to San Francisco and other points.

PUMPKINS.—Samuel Balch has raised 35 tons of pumpkins on three acres of ground on his ranch, situated four miles south of Hollister. No irrigation.

San Bernardino.

POTATOES AT CUCAMONGA.—*Ontario Record*, Feb. 8: Potato digging has been occupying the attention of quite a number in this vicinity the past week. The potatoes raised here are of excellent quality and find a ready sale in the surrounding towns. Mr. Cooke has been making sales in Riverside at \$1.75 per cwt.

ARTESIAN WATER IN RIVERSIDE.—*Press*, Feb. 11: On Wednesday Wm. Elliott, who owns the old Mercer & Backman place, put down a pipe to secure, if possible, a supply of flowing water. At a depth of 18 feet a flow was obtained, and at a depth of 25 feet the water spurted up three and a half feet above the top of the two-inch pipe, and continues to flow to this height up to date.

San Diego.

FRUIT TREES FOR THE BACK COUNTRY.—*San Diego Union*, Feb. 9: Said J. M. Brooks, nurseryman, to a reporter, yesterday: "Trees are being sent to places many miles distant from the city, where it is claimed by some there is no arable soil. Hundreds and thousands of acres are being set out in orchards in all directions. This year I bought 25,000 more trees than the regular orders, and they were all sold in a few days. It is impossible to get many kinds of trees, and for that reason tree-planting will necessarily be more limited than it would otherwise have been. The principal scarcity is in French prunes, plums, peaches and apricots. It is also impossible to get any olive trees, and there is a brisk demand for them. Walnut trees are likewise in great demand, but they cannot be supplied. I bought 1500 English walnut trees, but that was not half enough to fill orders. Those who plant trees in this county demand the very best varieties, so that fruit of the finest qualities will be the result. Assorted fruits are being set out, principally peaches, apples, plums, pears, olives, oranges, lemons and walnuts. Around Julian in the mountains thousands of apple trees of the finest varieties will be planted. Thousands of trees are every day being shipped to Murrieta, Poway,

Escondido, Julian, Otay, El Cajon, Elsinore, Oceanside, Fallbrook, Tia Juana, Temecula, Perris, National City, Mesa Grande, Encinitas, De Luz, Del Mar, Carlsbad, Campo, Barham, Banner and Ballena. A carload of trees was sent to Escondido last Saturday, and Colonel W. G. Dickenson is setting out 8000 trees at Chula Vista. Orange trees are in demand, but they are scarce and high in price. Prime native trees are worth \$2 to \$2.50 apiece. Florida trees are being planted, but it is very questionable whether they will do well or not. They are selling for \$1 apiece."

SOUTH CHOLLAS ITEMS.—*Cor. Record*, Feb. 8: We are having a spell of Indian summer—cold mornings and nights—regular growing weather. The grain is coming along finely about here, but much more should have been sown all around us. The Shaw brothers have cleaned the brush and stuff off of 60 acres or more, and sown all to barley which promises well.

San Joaquin.

STOCKTON FAIR.—*Independent*, Feb. 10: The Board of Directors of the San Joaquin Valley Agricultural Association have decided to open the Stockton Fair on Monday, Sept. 17th, two days after the close of the State Fair. The racing will continue for six days, ending on Saturday, Sept. 22. The pavilion will be open two weeks, until the 29th.

Santa Cruz.

A ROOSTER ON THE RAMPAGE.—*Santa Cruz Sentinel*: While Lawrence Lorenzen's little two-year-old boy was playing in the yard Saturday afternoon, he was attacked by a large rooster. He was struck by one of the spurs, in front of the right ear, with such force that the wound extended to the bone, severing a branch of the facial artery, which bled profusely, and required the attention of a physician.

Solano.

PROLIFIC PEAR TREE.—*Dixon Tribune*, Feb. 11: There is a farmer living near Dixon who has one pear tree from which he picks all the fruit he needs for canning and drying purposes, sufficient to supply a large family, and usually has a few boxes of green fruit for market; and yet he persists that it won't pay to plant any more.

RECLAMATION.—*San Rafael Journal*, Feb. 9: Warren Dutton of San Francisco has just completed a construction dam across one of the principal forks of Suisun bay, Solano county, which is 150 yards wide and 30 feet deep. It was at first considered by many a desperate undertaking, but Mr. Dutton felt sanguine of success, and after two unsuccessful attempts, it was last Friday pronounced waterproof. He has had 150 men employed on it for the past six weeks. The object of the dam is to do away with miles of difficult leveeing, which would have taken months of hard labor to complete. [The *Dixon Tribune* says that this dam crosses an arm of Montezuma slough, and adds that Mr. Dutton is a firm believer in the value of the tule lands.]—*Eds. Press.*

Sonoma.

SALE OF A STALLION.—*Santa Rosa Republic*: The fine black Clydesdale stallion "Triumphette," formerly the property of the Sonoma County Stock-Breeders' Association, but recently bought by Geo. Guerne, has been again sold to a horseman from Carson, Nevada, for \$1800.

MERCHANT'S CANNERY.—*Healdsburg Enterprise*, Feb. 10: T. S. Merchant arrived this week from his Eastern trip, and has already done much to further his cannery enterprise. He let a contract to E. G. Hall of this city, to build a brick addition at the west end of the main building, to be used as a store-house. It will have a frontage of 84 feet, a depth of 50 feet, and the walls will be 20 feet high. A frame addition, fronting on Fitch street, has also been contracted for, to be used as an assorting room. The large, main, concrete building will be used exclusively for the packing business. A new floor, with just enough incline for drainage, will be laid and skylights will be put in. Work on these improvements will go forward at once. The machinery for the plant will be all modern, and will arrive in good season to be placed. Mr. Merchant has let a contract for 10,000 boxes, and will contract for 20,000 or 30,000 more. He brought with him from S. F. a large stock of tomato seed, also string beans. He will himself plant a large field to these vegetables, and has already supplied many farmers with seed. John Daly is his agent for the sale of seeds, and those who want to plant vegetables for the cannery may be assured of a market there if they but raise the varieties desired.

Tulare.

ROVING SHEEP.—*Kernville Cor. Delta*: I may mention the surprise which the recent storm gave the sheepmen on the desert. Many French and Portuguese drove their herds through Walker's pass and out on to the desert, where they camped at some spring at the base of some isolated little hill. The recent storm covered that whole country with snow as well as nearly all of California. For eight days after the storm, sheep came pouring into the valley through the pass in one continuous stream, and finding no available feed here, i. e., no Government land except what was covered with snow, they kept on across the Caliente mountains, obstructing the stage-road for miles and for days. . . . The temperature has moderated, and vast herds of sheep are (Jan. 25th) returning to the desert again. Some 50,000 of them were un-

able to get further west than this place on account of the private pasture-lands in the canyon of Kern river; and for about a week their owners were compelled to resort to the use of alfalfa hay; one man sold over 1000 tons.

ABOUT VISALIA.—*Delta*, Feb. 9: Contractors and farmers are having some difficulty in securing help. This is a busy season and there is work for all who want it. . . . Orange trees between Visalia and Tulare, unprotected in any way from the recent cold weather, were uninjured. The same may be said of other trees in the valley, even in places where a few trees were grown solely for ornament. . . . The warm weather of the last two weeks has caused the snow to melt more rapidly than it has before this winter, and the several streams issuing from the mountains are carrying good bodies of water in consequence. . . . There will be a rabbit drive the last of the week in the country west of the railroad and north of Elk bayou. The wire fence for the corral and wings has been purchased for the purpose. Jacks are very numerous there and thousands should be slain.

Yolo.

CANAL EXTENSION POSTPONED.—*Woodland Mail*, Feb. 11: In pursuance to call of the committee appointed by the projectors of the Colusa canal, quite a large meeting was held at Blacks Tuesday, to discuss the proposition of forming an irrigation district in northern Yolo, to unite with Central district of Colusa county and extend the proposed canal on down through northern Yolo to Cache creek. The only representatives that came from Colusa county were W. S. Green and W. J. Clark. There were about 80 Yolo land-owners present. A vote taken upon the sense of the meeting in regard to uniting with the Colusa district resulted in three votes for and 38 against the proposition. While it was universally conceded that it would be of immense benefit to the general, and particularly the farming and fruit interests of Yolo county, the necessary tax of from \$5 to \$7 per acre to secure the canal was more than taxpayers felt inclined to stand. "But," remarked a prominent farmer, who had spoken against the proposition, "the time will come when there will be a navigable canal down through Colusa and Yolo to Suisun bay, and the day is not very far distant."

OREGON.

ADVERTISING BY MEANS OF PRUNES.—*Portland Oregonian*: Not long since a gentleman in this city sent his sister, living East, a small package of Italian prunes. In acknowledging them she said: "The prunes are delicious. It is the finest sauce I ever tasted. I would like to live in a State that produces such fruit." This was mentioned to a well-known real estate man, who hit upon the idea of advertising Oregon by means of these prunes. As a result the Portland Real Estate Co. has sent an advertisement to an Eastern weekly of large circulation, offering a little basket of prunes, sent postpaid for 25 cents. This sum will just cover the cost of the fruit, a neat Japanese basket, the postage and a pamphlet descriptive of Oregon. Incidentally the advertisement means that a man can make \$300 an acre raising prunes.

Live Poultry Overland.

Our poultry and egg producers are continually having their calculations interfered with by the receipts of eggs by the carload, products of the cheap labor of the hens of the great West. Were it not for this supply our producers might, however, become too wealthy and proud, so the shipments overland may be of value as a lesson in humility, though it is hard to consider them as of any other benefit to our local poultry interest. The bringing in of dressed poultry can be classed in the same way, and considerable amounts may be expected at certain seasons of the year. They have usually come by freight, but are now arriving in refrigerator cars, these cars, without ice, being admirably adapted to excluding cold.

Just now the tidings of special interest is concerning the arrival of Eastern turkeys alive. They come from several points, but chiefly from Kansas City, which serves as a collecting point for California shipment. The birds come in a sort of palace-freight car, properly warmed by stoves, and with arrangements for feeding and watering. They come through then on passenger time, and have the usual treatment of second-class tourists. The time from Kansas City is four or five days. Live chickens are also enjoying this mode of transit, and if freights are cheap enough it seems as though this traffic might have considerable influence on local poultry prices.

THE AGRICULTURAL EXPERIMENT STATION IN OREGON.—The telegraph announces that Gov. Penoyer has addressed a letter to the Secretary of the Treasury, giving his assent to the grant of money made in the "Hatch bill," to establish agricultural experiment stations in connection with the Agricultural College of Oregon as soon as the proper board to which the fund should be paid is organized. This board by law consists of the State Board of Education, the Master of the State Grange, and nine others who were appointed by the Governor on Monday. Owing to there having been no acceptance as yet of the college building at Corvallis, it is feared that only \$3000 will become available to Oregon for this year.

The Teacher's Visions.

And then she lifted up her face,
But started back agast;
The room, by strange and sudden change,
Assumed proportions vast.

It seemed a Senate hall, and one
Addressed a listening throng;
Each burning word all bosoms stirred,
Applause rose loud and long.

The 'wildered teacher thought she knew
The speaker's voice and look,
"And for his name," said she, "the same
Is in my record book."

The state's Senate hall dissolved,
A church rose in its place,
Wherein there stood a man of God,
Dispensing words of grace.

And though he spoke in solemn tones,
And though his hair was gray,
The teacher's thought was strangely wrought;
"I whipped that boy to-day."

The church, a phantasm, vanished soon;
What saw the teacher then?
In classic glooms and alcoved rooms
An author plied his pen.

"My idlest lad!" the teacher said,
Filled with a new surprise;
"Shall I behold his name enrolled
Among the great and wise?"

The vision of a cottage home
The teacher now described;
A mother's face illumined the place
Her influence sanctified.

"A miracle! a miracle!
This matron well I know
Was but a wild and careless child
Not half an hour ago.

"And now she to her children speaks
Of duty's golden rule,
Her lips repeat, in accents sweet,
My words to her at school."

—W. H. Venable, in Boston Budget.

Working and Waiting.

[Written for the RURAL PRESS by C. F. Y.]

Early in 1876 a family from the coal mines of Pennsylvania arrived in Nevada county—father and mother and five children, the eldest a girl of nine years. They brought a small sum of money and the baggage allowed to emigrant passengers.

They purchased a miner's claim of 40 acres, only to learn a year later that the title was worthless. Wild land could have been had for the taking; but this claim had a cabin ready to shelter them from the storm, and a spring of water, grapes yielding fruit, a peach and apple tree, also some small fruit; a bit of garden fenced. They thought it cheap at \$300.

With money to buy six months' food, a cow, a pig and poultry, a rake, spade and hoes and tools for grubbing out roots, seed wheat and potatoes, they were hopeful, happy and contented, even though their \$500 was all expended.

The next fall a neighboring miner, by a survey of his claim, included the best half of theirs. Without cash to defend or contest by suit at law, they were compelled to vacate the premises, with the acre of wheat and truck patch so laboriously cultivated by hand. They were allowed to remove the cabin, but denied the right to take a length of the wicker-woven fence.

The board part of the cabin, two small rooms, was taken apart and carried a board at a time to a sunny knoll on the rocky 20 acres left to them. But the home part, roses, grapevines and peach trees, was left behind. The 20 they had lost lay convenient to a water ditch, and those patient toilers, by spade and pick, had constructed the sub-ditches to irrigate garden and patch of wheat. Besides this, in the first year they had thoroughly cleared five acres, grubbing out the roots and utilizing the brush by weaving it into a pig-proof wicker fence around the whole. This five acres had its water ditches built and the plats between were to be sown with wheat raked in and cultivated by hand the second year. All this hard labor was lost, but energy and hope with which to commence again remained. At this point the average American would have left the place in disgust; but not so these slaves of old country, and new country, coal mines. They knew that poorer lands in colder climates could not be had in England at any price, and in Pennsylvania were far beyond their means.

To raise vegetables for daily food, water must be had on their rocky twenty, hence the hill must be leveled. To do this they carried the loose red dirt with which to fill up the old wash from the hill. First of all the piles of rock left by the miners when they cleaned up the bed-rock and abandoned their sluice-boxes had to be leveled and the whole triangular acre made as smooth as possible.

Next, a system of wickerbrush gates put in,

to prevent the rapid carrying off of loose soil by the storm-waters of snow and rain. Then commenced the systematic daily work in which the youngest child could help a little. A rude, home-made wheelbarrow for the father, baskets for the mother and children to carry dirt and cover the rocky foundation, to a depth equal to the nurture of a crop of turnips and potatoes, early and late, in fair and cloudy weather, the whole family toiled to level the hill and fill up the waste places.

The rains came and supplemented their work by washing down more dirt in a night than their united work could carry in a day, and the rain settled it. To the credit of the people be it said this poor family did not starve, though they did work barefoot the most of the time. They had a young cow and some poultry and pigs. Fruit could be had within two miles for the taking. Credit for flour and salt was given by grocers.

In the spring a half acre of potatoes and a half acre of wheat were planted, weeded and cultivated by hand. Turnips and lettuce grew rapidly where the soil was too thin for potatoes.

When the wheat was a foot high and the lilybells along the trails were the sweetest, we walked across the country three miles to see these struggling people, and from their lips learned these facts.

By the cabin door wild roses were blooming. Cuttings of Muscat grapes were growing. Peaches from pits, winter-planted, showed vigorous life. Everything they touched prospered. We walked with them to the daily work and saw a four-year-old baby carrying a little basket of dirt on her head to help papa and mamma cover the rocks where next year potatoes could grow.

"The young mother said, with tears on her face: "O madame! in this strange country men have been very cruel and have defrauded us out of money and hard work, but God blesses us with the sun and the rain. We do not freeze. We do not work in the dark, deep coal mine, but up in the blessed sunshine and pure air, where birds sing and flowers bloom. See how strong my babies are! Please God we will have a home for our old age, and land enough for our children. Twenty acres, cultivated as in the old country, will make us very comfortable."

Late in the autumn we saw them again. They had sold \$60 worth of potatoes, paid up their flour and salt bill, and had good seed left for next year's planting, and all the small ones for home use.

Their wheat was cut with a sickle and sharp knives, and carried on sacks to the threshing ground, where it was beat out and winnowed by hand; then exchanged for flour, with seed reserved for a whole acre the next year.

The work of cutting and filling continued until the whole wash was reclaimed and as much more had been leveled.

We came to Berkeley and lost sight of them for several years. In '85, returning to the neighborhood, we found the old trail over hill and ravine, past the debris of abandoned quartz-mills and placer mines, and followed it again. The once barren knoll was transformed into a bower of beauty and bird-song by full-grown peach, plum, pear and young apple trees.

The man of the household had a team and wagon; a plow and harrow had superseded the spade and rake.

The cabin had been raised and placed on a rock wall, making a cool cellar beneath. A lean-to addition added two rooms. A wide porch extended back and front the whole length of the house, over which hopvines, roses and grapes grew in wild luxuriance. Rich purple and amber clusters, finer than any grown in hothouses of England, tempted the birds and the visitors to pluck and eat.

The eldest daughter had married an orchardist near by. Two younger girls were "working their board and attending school in town and learning nicer methods of housekeeping at the same time," the mother said. The younger children were at the district school.

White curtains were at the windows. The beds were clean, garments were well patched, and the floors were bare. The china closet consisted of rude shelves only in the kitchen, but it was a HOME with plenty of food and brightening prospects for the children.

The little mother still rejoiced over her escape from the dismal coal mines—with their low wages, poverty and hardships—to a home and fertile acres in sunny, beautiful California. In our 700 miles of foothill country there is room for a million such homes. With equal perseverance they can be made with one-half the labor. People foreign-born appreciate these opportunities, and are coming by thousands to occupy the land. When too late, native-born Americans will wake up to lament over what they have lost.

ABOUT 2500 words are all that are used in ordinary talking and conversation, although there are some 20,000 words in the English language. Different authors vary in the number of the words they use, but the difference is but slight. Shakespeare found 4000 words sufficient for all his works.

SIGNALING BY CLOUDS.—Quite successful attempts have been made by British officers at Singapore in signaling by means of electric lights flashed on cloud. A message of four words read from an outgoing vessel at a distance of over 60 miles, but the reply escaped notice.

The Ballot for Women.

By One Who Does Not Want It.

EDITORS PRESS:—I inclose a clipping from *The Interior* of Chicago, "The Ballot for Women," which I would like to see in the RURAL PRESS, believing it will be a help to many who are, as yet, undecided on the woman suffrage question.—HENDER A. HARRISON, Vacaville.

(United States Senator Blair of New Hampshire made the report of a select committee of the Senate, in favor of woman suffrage. In doing so he quoted from a pamphlet entitled "Letters from a Chimney Corner," written by Mrs. Caroline F. Corbin of Chicago. Mrs. Corbin, in an open letter to Senator Blair, refers to her doctrine in the pamphlet quoted by him, and proceeds to differ with him in conclusions, as follows:)

The argument, briefly, is that neither the man nor the woman is individually the representative of the genus homo, but that, according to nature and revelation, the two united make one, and that to each constituent of that union certain distinct powers and properties belong, each dependent upon the other, in a minor way, for proper fulfillment. You say, "If upon this account woman is to be denied suffrage, then man equally should be denied the ballot, if his highest and final estate is to be something else than a mere individual."

Now, marriage is that partnership upon which the right order of society and the right perpetuation of the species depends. The question is whether each partner shall keep to that line of labor which nature has marked out, or whether of woman shall be demanded not only her own share of the labor but also a large part of that which belongs to man. For let us notice, that while it may be granted that woman has the physical capacity to bear and nourish children, Nature has made it forever impossible that he should perform that office. If therefore he demands of her that she shall participate in those external and general duties, such as labor for the support of the home and for the direction of the state, which his natural constitution, physical and intellectual, fits him for, while he cannot by any possibility relieve her of those most necessary offices and duties which nature demands of her, he commits a palpable and monstrous injustice.

Nor does it help the matter to say, as you do, that because woman's nature is purer and nobler than man's the State would be benefited by her participation in political affairs. If men are not capable of managing the affairs of the State according to the highest and best ideas of the race—that is, of both men and women—will you permit me respectfully to inquire what proper and adequate share of this world's work they can perform? What is their natural place in the order of society? Are they mere hewers of wood and drawers of water? They cannot bear citizens; they cannot care for them in infancy and rear them to manhood. If they cannot govern them with wisdom and justice when they are produced ready made to their hands, what is their reason for being? When a man stands up in the United States Senate and makes such a statement as that in regard to the men of this Republic, it appears to me that he compromises his own self-respect and the respect due to the dignified and honorable body to which he has been elevated.

You say that you have only proposed the measure because women have asked you to do it. The same plea was made by your great progenitor in the Garden of Eden; but it did not avail him. Moreover, in the case of Adam it was true. In the present instance the plea contains but the minimum of truth. There are 15,000,000 of women in this country (I quote your own statistics) of voting age. Will you kindly inform us what proportion of that 15,000,000 you have heard from? You say that these women are being governed without their consent. Is it possible that you can sincerely believe that 15,000,000 of American women could be governed without their consent? Do you not rather feel assured that if a bare majority of that number did not consent, for what appear to them to be good and sufficient reasons, to be governed by indirect rather than direct representation, there would be a revolution within 24 hours? With every right of agitation at their command which man possesses—free speech, free assembly, the right of petition, a press ever ready to disseminate their views, and many privileges of courtesy besides that men lay no claim to—what power could withstand the moral force of any demand which these 15,000,000 should unitedly make?

With what show of reason do you compare free-born American women to the degraded and ignorant slaves on Southern plantations, and speak of men as their masters? As a matter of fact the power of men over women is not greater than that of women over men. Nature lays the infant man a helpless creature in the lap of his mother. He is in her power for life or for death, and for the first 10 or 15 years of his existence, and that during the forming and determining period of his career—a period, too, in which he is answerable to no other law than that of his home—her power over him, physical, intellectual and moral, is so nearly supreme that no power which he can arrogate over her in later years can overbalance it. Under ordinary circumstances the faithful, intelligent mother may make of her son, in all the essentials of manners and morals, whatever she will. If American men were to-day the narrow-minded, tyrannical, vicious creatures they are charged with being by the woman suffragists, unfitted to be legislators for the whole nation,

it could only be because their mothers had misunderstood or neglected the opportunities which nature put into their hands. Such a charge is a tremendous indictment against the motherhood of the nation, and if it could be sustained, ought of itself to bar women from all legislative functions until they can better fulfill that which nature demands of them in child-bearing and rearing. Moreover, it is the function of slaves to labor; but it is this nation's pride and boast that in no other country that the sun shines on are there so many homes supported by the loyal and untiring industry of men, where women are kept in ease and comfort, in order that they may give their time to the higher duties of rearing children and planning and carrying on enterprises of charity, philanthropy and reform; and the influence of these homes upon public sentiment is the one irresistible power in American social and political life. Plainly, if any portion of the American people are slaves it is not the women.

But let us return to the physical adaptability of women to the duties of voters. If women vote, they must also hold office and assume the working duties incident to political campaigns. It appears from the published record of your life that you commenced your political career at about the age of 30. For the next 10 or 15 years you were actively in politics. Now, will you tell me if you think it would have been convenient or agreeable, during those years when you were laying the foundations of your political success, to have been also engaged in bearing and rearing a family? Could you have done what you found it necessary to do politically, and at the same time have attended properly to your duties as wife and mother? You will say that the very suggestion is indelicate, and I agree with you, but the fault is in the situation as proposed by you. The duties and offices of motherhood are all sweet and pure and holy, when kept within the sacred precincts of the home. Brought out into the garish light of publicity, what do they become?

Nor will it avail you to say that some part of these offices may be delegated to servants. There are too many mothers of that sort in the country now; no political measure can be a wise one which tends to increase their number.

You say in your report that there are many women who are not wives and mothers. Very true, and when women vote and hold office there will be more of them. A true regard for the best interests of society demands that their number shall be reduced by all natural and reasonable means; but when political rewards are offered as the price of services in public life, do you not believe that many, and those not of the weak and ignorant, but of the more gifted and intellectual, will be tempted to forego marriage and motherhood for the sake of winning them? Woe betide the land which thus offers its political trusts as premiums for childless women! The morals of society are corrupt enough now. What do you suppose they will become when not to be married not to be a mother, is the prerequisite for a woman's success in a chosen and tempting career? History gives abundant evidence that women are not naturally of purer instincts or more capable of self-control than men. It is only as they are subject to men, as in heathen countries, or yield themselves to the elevating and purifying influence of Christian teaching concerning marriage and the home, that they rise to a higher moral level. Emancipated from these restraints, the intensity of their nature often betrays them into surpassing depths of depravity. I speak advisedly, therefore, and in the light of 30 years' profound and prayerful study of social problems, when I say that the direct tendency of woman suffrage would be to form a class of women such as held high court in Greece in the days preceding its downfall—women brilliant and intellectual, but wholly wanting in that steadfast faith and abiding virtue which characterizes the Anglo-Saxon ideal of womanhood—I may say the Christian ideal as well, the wife and mother. Are American men prepared to relegate the wives and mothers of this Republic to a secondary and subservient place, and share the political leadership of this great and free country with an oligarchy of Aspasias?

You say that the passage of the proposed resolution would not commit any person to the support of woman suffrage in the end. But what does it do if passed by both houses? It sends the discussion of this question, backed by the authority of Congress, into every State of this Union. A score or two of the professional advocates of woman suffrage will beat up the entire territory, and by their noisy persistence will necessitate either that women shall take the field upon the other side or else let the question go by default. Home-loving women—the women who stay in their homes and fulfill the duties of their vocation—and these women are in the great majority in all the States and Territories—have little taste for public strife and few gifts with which to win battles in the public arena. Still, if needs must, they can and will defend their homes; but, believe me, they will not exonerate from blame those legislators who, by the advocacy of measures like this which you propose, have thrust the hard necessity upon them.

Do you ask me, then, what shall men do in regard to this cry, which is coming up all over the land, for purer politics, a worthier conduct of affairs? Men know very well what they ought to do about it. They ought to live daily and hourly in the fear of God and for the honor of good women. They ought steadfastly to practice those principles of purity, honor, up-

rightness and patriotism which it is the duty of every Christian home to inculcate. It is very true that the duty is now too often imperfectly performed in our homes; but, believe me, the remedy for this evil does not lie in the direction of woman suffrage. It is by inciting and helping woman to the more faithful discharge of her own duties that legislators will honor her far more than by dragging her out of the quiet of her own domain and setting her to perform their neglected and unfulfilled duties.

Instead of 15,000,000 of women voters vainly trying to do the work which God demands of men, there should be 15,000,000 of happy homes in this broad, fair land; homes supported by the father's labor, made to glow with heaven's own light by the mother's tender love and care; homes where children are reared who shall become just and upright men and faithful, conscientious women; where those virtues are being taught which are the only enduring bulwarks of a free republican government. It is to build up such homes, not to break down their walls and quench the light upon their hearthstones, that legislation ought to be directed.

There are other and weightier arguments against woman suffrage, but these are such as are suggested by the text of your report. I commend them to your earnest consideration before you again address the United States Senate as the champion of women. Very respectfully yours,

CAROLINE F. CORBIN.

Art and Its Counterfeit.

[Written for the RURAL PRESS by I. H.]

It was in a farmhouse not a hundred miles from San Francisco that three friends were discussing a certain exhibition of pictures which they all had seen. For be it known to you, oh gentle reader (as the writers of a past generation used to say), that in these rural homes of ours, conversation does not always confine itself to the price of eggs and chickens, the best way of rearing a calf and fattening a pig. "Taste, Shakespeare, and the musical glasses" claim a share of the thoughts and interests of many a woman who is not ashamed of the fact that she "does her own work," including cooking, washing and ironing, sweeping and scrubbing, making butter and raising fowls.

Of the three, one was an enthusiastic and conscientious art-student, whose work attests her thoroughness as well as her ability; another was evidently familiar with all that is to be seen of artists' efforts in San Francisco; the third, though using neither pencil nor brush, had looked upon many of the world's most famous paintings, and so had something to judge by.

The unanimous decision was that in the whole collection there were scarcely a dozen pictures to which one would willingly give house-room. And then came the explanation and excuse—the larger number were the work of amateurs. A somewhat lamentable conclusion in view of the great art revival of these latter days. Never was the magic word in such constant use before; it meets us at every turn, it is on all our lips. This one means to devote herself to the study of art; that one is to have an art-room added to her house; half the girls we know are taking painting lessons, and most of our neighbors have their walls covered with paintings executed by members of the family.

And yet it seems no matter of surprise that an exhibition consisting chiefly of the work of amateurs should also consist very largely of trash! What is the reason? It may be well worth while for any of our young art aspirants to pause and inquire.

The answer will surely lead one to question the methods of instruction very largely pursued outside of the schools of design in the large cities. With too many teachers, the first principles of art are entirely ignored. Drawing is considered unnecessary, tedious, tame; the beginner, ignorant of the first rules of perspective, seizes a brush and aspires to "paint a picture," paints it, too, under the teacher's guidance, and with the teacher's aid, and is perfectly content with the result. Alas, alas, for the conscientious soul not wholly ignorant of what a picture ought to be, when called on to admire this caricature of nature by the self-satisfied artist or her proud and delighted mother.

"What is worth doing at all is worth doing well." If this old-fashioned axiom has any application it must be in matters belonging to the higher arts, to music and painting, and all that ministers to our love of the beautiful. The work of the untrained painter is very apt to be like the musical performances of those who play by ear, highly gratifying to the perpetrator and to a small circle of admiring friends, but full of glaring errors and absurdities to any one "who knows."

None of us like to make ourselves ridiculous, and the best advice to any young person ambitious of becoming an artist would be to "hasten slowly." There are careful and competent teachers to be found who will lead the beginner in the right path if only he or she has modesty and patience enough to follow. But it will not be by neglecting the elementary training which alone can insure final success; it will not be by encouraging the idea that a dozen lessons will enable the pupil to paint a picture worthy of the name, or of any value beyond the cost of the canvas and the frame which protects it.

YOUNG FOLKS' COLUMN

Miss Edith's Beau.

I.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

The girls all loved Miss Edith, but it is a lamentable fact that the Madam did not. Whether this was because Miss Edith was young and pretty, with a bright smile and a kind word for all, while Madam was old, ugly and rather too fond of scolding, I cannot say, but it is certainly true that the elder woman's heaviest scowl and sharpest words were reserved for the younger. Perhaps the old lady envied the other her influence with the girls, for one grave, sweet look from Miss Edith's gentle eyes did more toward the subjugation of the most refractory pupil than all Madam's coldness and severity.

Nothing could have been more in contrast than the appearance of these two. Madam's small blue eyes were almost absorbed in her large, gold-mounted spectacles. Her whole face was "one big frown"—as little Pinkie Black used to say, it was fretted into a thousand wrinkles. Her nose was hooked like an eagle's beak, while her thin, shapeless lips betokened greed as well as cruelty.

Miss Edith's eyes were wide and brown; her nose slightly *retroverse*—"a love of a nose," the girls said; her skin was as smooth as a baby's, and her mouth like a half-open rosebud. Pinkie's father, who was a widower and who visited the school every fortnight to see after his little daughter, once asked Madam if she were not afraid of losing so pretty an assistant, upon which she had informed him with a glance of withering scorn that she had other things to consider than the pretty looks of ladies.

Madam was coarse and not very well educated, but she employed excellent teachers and was a good manager, so her school flourished.

Miss Edith's history was the repetition of an old story. Her parents were dead. She was alone in the world and obliged to teach for a livelihood. Madam gave her scant compensation for her services and she often ate the bread of bitterness under the old lady's harsh and exacting rule, but many of the girls had become endeared to her and she hesitated to change her condition lest it should not be for the better.

There were but ten of us "boarders." The day pupils numbered nearly forty, and there were several teachers besides Miss Edith. These all received larger salaries than she did, however, and they were not compelled to live beneath Madam's inhospitable roof.

One evening late in October, about sundown, we "boarders" were seated in the school-room laughing and talking nonsense, most of us, as girls will do. Eppie Holmes, the genius of the crowd, had a small, complete edition of Shakespeare, and was endeavoring to decipher the microscopical text in the fast-fading light. Mildred gazed abstractedly out of the window, dreaming perhaps of her country home, and Polly and Pinkie, our youngest, were munching two hard red apples which Pinkie, who was a favorite with the cook, had coaxed from that functionary. I have often wondered what there was in Madam's wretched little apples which made them seem superior to all other apples. Never since have I tasted fruit half so delicious!

Pinkie Black was the pet of the whole school; even Madam was almost kind in speaking to her, though Eppie, who was astute beyond her years, said this was only because Mr. Black was rich and paid for half a dozen extras. Pinkie was a pretty child and looked her name. Pink of cheek and black of eyes was she, somewhat mischievous and altogether warm-hearted.

"Mildred," I called across the room, "what do you see in the clouds and the house-tops to interest you? Why don't you turn your attention to the rest of us?"

"I was just thinking," said Mildred, "how hard those shabby-looking sparrows, going to roost in that dusty tree, are trying to imagine it is summer in the country."

"Something like you, eh, Milly?"

"Am I a shabby-looking sparrow?" she asked with a smile. "Thank you for the compliment."

"Now I didn't mean to say that, Milly. You know I didn't. I meant—"

"Hello!" interrupted Milly, "Here comes Miss Edith with a man. Such a thing was never heard of before!"

Of course there was a wild rush for the window at this, and there below, at the front gate, stood our sweet young teacher, leaning on the arm of—Mr. Black!

"Well!" exclaimed all the girls in a breath. We watched her disappear one way, him another, and heard the hall door closed, but we had no time to talk it over before Miss Edith herself walked into the schoolroom, looking very pale and faint. I thought she would fall. Eppie placed a chair for her and she sat down mechanically, but did not seem to realize her surroundings at all.

"I have seen a ghost—a ghost," she said, and swooned outright.

"No, don't call Madam," said thoughtful Eppie, as some one made a movement in that direction; "she would only be cross and ask questions. Open the window and fan her gently. There! She's all right now."

The color swept slowly back into Miss

Edith's pretty cheeks, and with a return of consciousness came her self-control, for with all her soft words she had plenty of character.

"Girls," she said, "don't be alarmed. It was a sudden dizziness, I think. It attacked me on the street, and just then Mr. Black came up and offered to see me home," which was all the explanation we had of it.

II.

On the left of Madam's house, off from the dining room, was a small conservatory—a glass inclosure quite destitute of plants, one end of which opened into the garden, where a few forlorn geraniums and scrubby-looking pinks were struggling to maintain an existence, though for the most part Madam's "garden" consisted of brick walks and empty flower-beds. Here the afternoon sun lingered longest, and Miss Edith liked, when her schoolroom duties were concluded for the day, to bring her chair out and sew or read for an hour. Sometimes one of the girls would be allowed to accompany her.

The day after the occurrence described above, she and I were together in the conservatory. It had been a tiresome day for her, and she looked worn and tired, but so pretty!—her brown eyes shining softly, as if there were tears hidden in them, and her little white hands, from which her work had fallen, lying idly in her lap. She seemed absorbed in thought, and I, not wishing to disturb her, was as quiet as a peeping mouse. Presently I heard the click of the gate latch, and glancing through the open door I saw a man approaching rapidly along the brick walk. He had evidently caught sight of us. "Miss Edith," I said, "who can that be?" Like a flash she arose and stood in the doorway.

"Jack! Jack!" she cried, as he drew near, "have you come back to me from the grave?" and she threw herself into his outstretched arms.

"No, my darling," he answered, "not from the grave, but from the ends of the earth."

"O Miss Edith!" I exclaimed in a terrified whisper, "here is Madam!"

But it was too late. Madam had seen it all.

"And so, miss," she said sardonically, "it seems you have a beau. I tolerate nothing of that sort in this establishment. You artful creature," she continued, raising her voice to a shriek, "hugging and kissing a man under the very shadow of this select seminary for young ladies. Pack up your trunk and march!"

"Madam," said Miss Edith, with the calm, sweet dignity that so well became her, "permit me to introduce—my brother. He was explaining when you spoke that he had come to take me to his home. O Jack!" she cried, turning to him, "I did see you yesterday, then. I thought you were an optical illusion, dear boy. I am not strong, and I have been overworked lately." And then he clasped her in his arms again, under the very spectacles of Madam, and told her tenderly that he, in future, should work for both of them.

Miss Edith's brother had been wrecked at sea, two years before. But three other men had survived to tell the story of the lost vessel, and one of these had seen, he said, Jack Atterbury sink. By some miracle, however, the young fellow was saved, and after wandering in strange parts for some time, he found means to return to his native land. He had met with friends, and was now in a condition to support his sister and himself.

And this was Miss Edith's beau? Not a bit of it. She is to-day Mrs. Leonard Black. I have not time to tell you all the particulars, but he says he fell in love with her at first sight, and she says she married him to please Pinkie.

GOOD HEALTH.

To Save Doctors' Bills.

Never go to bed with cold or damp feet. Never lean with the back upon anything that is cold.

Never begin a journey until the breakfast has been eaten.

Never take warm drinks and then immediately go out into the cold.

After exercise of any kind, never ride in an open carriage, or near the window of a car for a moment; it is dangerous to health or even life.

Never omit regular bathing, for, unless the skin is in regular condition, the cold will close the pores and favor congestion or other diseases.

When hoarse, speak as little as possible until the hoarseness is recovered from, else the voice may be permanently lost, or difficulties of the throat be produced.

Merely warm the back by the fire, and never continue keeping the back exposed to the heat after it has become comfortably warm. To do otherwise is debilitating.

Never stand still in cold weather, especially after having taken a slight degree of exercise, and always avoid standing on the ice or snow where the person is exposed to the cold wind.

When going from a warm atmosphere into a cooler one, keep the mouth almost closed so that the air may be warmed by its passage through the nose ere it reaches the lungs.

Keep the back, especially between the shoulder blades, well covered, also the chest well protected. In sleeping in a cold room establish the habit of breathing through the nose, and never with the open mouth.—*New York Mail and Express.*

CONDIMENTS AND INDIGESTION. —Cayenne pepper may be selected as a typical example of a condiment properly called. Mustard is a food and condiment combined; this is the case with some others. Curry powders are mixtures of very potent condiments with more or less farinaceous materials and sulphur compounds, which, like the oil of mustard, onions, garlic, etc., may have a certain amount of nutritive value. The mere condiment is a stimulating drug that does its work directly upon the inner lining of the stomach, by exciting it to increased and abnormal activity. A dyspeptic may obtain immediate relief by using cayenne pepper. Among the advertised patent medicines is a pill the active constituent of which is cayenne. Great relief and temporary comfort are commonly obtained by using it as a "dinner pill." If thus used only as a temporary remedy for an acute, and temporary, or exceptional attack of indigestion, all is well; but the cayenne whether taken in pills or dusted over the food, or stewed with it in curries or otherwise, is one of the most cruel of slow poisons when taken habitually. Thousands of poor wretches are crawling miserably toward their graves, the victims of the multitude of maladies of both mind and body that are connected with chronic incurable dyspepsia, all brought about by the habitual use of cayenne and condimental cousins. The usual history of these victims is that they began by overfeeding, took the condiment to force the stomach to do more than its healthful amount of work, using but a little at first. The stomach became tolerant of this little and demanded more; then more, and more, and more, until at last the inflammation, ulceration, and torpidity, and finally the death of the digestive powers, accompanied with all the long train of miseries to which I have referred.—*Knowledge.*

DOMESTIC ECONOMY.

Tested Recipes.

EDITORS PRESS:—I send a few good recipes: *Pudding.*—One egg; one-third cup of N. O. molasses and enough sugar to make out the cup; two-thirds of a cup of sour milk; tablespoon of butter; one-half cup of raisins; teaspoon of soda; spices to taste; flour enough to make a thick batter. Steam two or three hours.

Sauce.—One cup each of boiling water, sugar and vinegar; nutmeg to taste; one tablespoon flour.

Marble Cake, Good and Light.—Whites of four eggs; one-half cup butter; one cup sugar; 1½ flour; one-fourth cup milk; baking powder.

Dark Cake.—Yolks four eggs; one-half cup butter; one-half cup milk; one-half cup molasses; one cup brown sugar; all kinds of spice.

Vinegar Cookies.—Two cups of N. O. molasses; one of butter; two eggs; two tablespoons of vinegar; one of ginger; one of soda and enough flour to roll.

Will some lady give me a good recipe for orange cake and ginger snaps?

MRS. W. C. BUCKNALL.

Guberville, Cal.

BREAD PUDDING.—One quart of grated breadcrumbs, one quart milk, yolks of four eggs, well beaten, butter size of an egg, one cup of sugar, two teaspoons baking powder and two teaspoons extract of lemon, mix all together and bake; beat the whites of the eggs with a cup of powdered sugar, flavor with one teaspoonful extract of lemon or orange, cover the pudding with it and bake until browned a little.

EGGLANTINE PUDDING.—Cut thin slices of light white bread, and line a pudding-shape with them, putting in alternate layers of the bread and orange marmalade or any other preserve, till the mold is nearly full. Pour over all a pint of warm milk, in which four well-beaten eggs have been mixed. Cover the mold with a cloth, and boil for an hour and a half.

LEMON PIE.—To one teaspoonful of white sugar, add the juice and pulp of one lemon. Mix well, put evenly over bottom of crust; finish filling crust with water (do not fill too full or it will run over top and spoil pie). Now, with a fork, mix in 1½ teaspoonfuls flour. Put top crust on neatly and carefully and bake.

GRAHAM GEMS.—One egg, well beaten, one cup of cold water, one cup of sweet milk, a little salt. Stir into these enough graham flour to make a stiff batter. Put in gem pans and bake from 20 to 30 minutes in a very hot oven.

POTATO ROLLS.—Five large potatoes mashed while warm. Add one quart of flour, salt to season, one teacup of milk, stir until light, make into rolls, let stand two hours, then bake.

FRIED EGGS.—To fry eggs tender, put one spoonful of meat drippings in the pan, break and drop in the eggs, salt and cover close with a lid until they get white on top.

TARTLETS.—Line patty-pans with pie crust; bake until nearly done, take from the oven and fill with jelly or any kind of preserve, and finish baking.

CUP CAKE.—One cup of sugar, two eggs, one-half cup of butter, one-half cup of milk, two cups of flour, two teaspoonfuls of baking-powder.

SUGAR COOKIES.—One and one-half cups sugar, one cup butter, one cup sour cream, one egg, one teaspoon soda, one teaspoon baking-powder; mix soft.

The Week.

Rains have continued—in fact the elements have become so melting that a downpour comes without apparent effort. The distribution of rain this year and last affords many opportunities for interesting contrasts. At some points the records for the two years are nearly alike, and in others this year's figures are about double last year's. In a general way it may be said that the doubling comes in the right places and just where most needed to insure production, while the points of equality are those which did not grievously lack last year. This year's distribution is about as good as could be asked, and indications still are that the year will be one of great things in the orchards and fields and of comfort in the homes.

The meetings of the American Horticultural Society have closed, and most of the excursion-

ists have taken up their homeward journeys. In this week's RURAL we give a sketch of the leading features of the great citrus fair at Riverside, and reserve for future publication such parts of the society's proceedings as seem to us of interest to California readers. The visit of the Horticulturists was, on the whole, a success throughout. The next sensation in the form of a welcome invasion will be the coming of hundreds of Eastern school-teachers to attend the meeting of the National Educational Association in San Francisco next July. Lonely swains who desire to capture the pretty school-maams for residents of California should send to State Superintendent Hoitt liberal contributions to the funds for ministering to the success of the meetings.

George Washington.

We go to press on the eve of the anniversary of Washington's birthday. Among all our national holidays, this one calls for special grateful and thoughtful remembrance. History groups itself around great central figures, whose words, noble deeds, and fragrant names become to the people what the pillar of cloud by day and fire by night were to the wandering Hebrew clans in the desert. Our national gallery is becoming rich in historical figures, illustrious names, that silently mingle with all that is great, grand and glorious in our free institutions. In the center of this group are the grave features of the man who was "first in war, first in peace, and first in the hearts of his countrymen."

An English writer says that Washington was not a genius; that he was only a good man of rare common sense, who has been hoisted upon the pedestal of history by a happy combination of circumstances. It is true that in military movements he was slow, cautious, and conservative, not much inclined to dramatic movements and dashing ventures, but he had the genius of success which is far better than pyrotechnical display. He inspired confidence in the darkest hour. He was the soul of the Revolution. His personal magnetism was felt from the center to the circumference of the land. When called to the command, he found a people who had resolved on independence, but possessed no coherence, no unity of action. The Colonial Congress was a noisy, debating society. It had no power to levy armies, raise money and prosecute a war with vigor. The army was a tumultuous crowd of volunteers, enlisted for a few months. It had no military chest, no organized commissariat. Washington looked over this chaos and said: "Let there be light," and light arose.

The name of Washington has become a synonym for patriotism. In his bosom there always glowed one paramount sentiment from the hour he took the first inaugural oath to the hour he wrote his farewell address, and that was the glory and perpetuity of the Union. He foresaw all its danger. He warned the people against the heat of party strife and sectional feeling. And now, after all the experience of these years, all we need to complete the glory and prosperity of our country is a revival of the patriotism, the honor, honesty, unselfishness and unpartisan spirit that characterized Washington.

Imports of Foreign Grapes.

We are indebted to Sgobel & Day of New York for the following statement of the importation of foreign grapes at the port of New York from September 18, 1887, to January 20, 1888:

Whence shipped.	Barrels	Half barrels	Qr. barrels	Bxs.
From Am'r. direct...	88,237	2,408	309	216
" " via Liverpool	88,415	60
" " via Glasgow	7,769	30
" " via London	7,141
" Malaga direct...	18,404	476	103	...
Totals.....	209,996	2,974	412	216

From the above the average daily arrival during the dates given was equal to a little over five carloads. This statement should give some idea of the Eastern capacity for grapes of the vinifera class in spite of Eastern grapes from cold storage, etc., of which we hear so much. The facts are suggestive.

HON. HORACE DAVIS, president-elect of the University of California, is to be inaugurated on University Charter day, March 23d.

Forestry Memorial.

The State Board of Forestry has done a timely act in the publication in neat pamphlet form of a Memorial to the Fiftieth Congress. It contains the resolutions adopted with much enthusiasm by the meeting of the American Horticultural Society at San Jose, and which we have not hitherto found space to publish, so we present them in this connection:

WHEREAS, It is now known that a due proportion of forest varying from one-fourth to one-fifth of the area of a given locality is estimated to secure the largest agricultural returns and the maintenance of the largest population in the whole district, and that deforesting exceeding this proportion diminishes the total output of crops, even though the cultivated area be increased, and consequently diminishes the capacity of the land to support population;

Whereas, Excessive tree destruction without regard to the maintenance of the reproductive power of the forest causes irregularity and uncertainty in the rainfall, diminished wood and timber supply for the future, diminished humidity in the air, diminished health of the people especially through the production of malarial diseases, diminished summer flow of streams used for navigation and irrigation, increased extremes of heat and cold, of drought and flood, and in mountainous countries like California causes the production of torrents that carry debris from the watersheds to cover and destroy fertile valley lands below;

Whereas, The present Government land laws furnish neither an adequate means of carrying on the timber industry nor any means for protecting the watersheds and consequently the irrigation and inland navigation, nor the climate nor crops of the country; and

Whereas, Timber lands are being taken up by questionable means frequently in the interest of foreign capital. Therefore be it

Resolved, That the American Horticultural Society in convention assembled call the attention of Congress to this subject of vital importance to the country, and request that all Government timber lands be at once withdrawn from sale or entry, and that the Mining Act granting timber to locators be repealed, until a definite survey shall have determined what portions of the public forests shall be permanently reserved for the best interest of the nation, and that when such forest areas shall be definitely ascertained, they shall be set apart and managed in accordance with such regulations as have been suggested and verified by European and other nations.

The questionable means necessary to obtain large bodies of timber land now so energetically practiced, together with the waste and destruction and fires, makes this or a similar measure one of urgency. Abbott Kinney, T. S. Hubbard, J. M. Smith, J. V. Munson, J. Clark Ridpath.

Following these resolutions, the pamphlet gives a "presentation of facts" by the State Board of Forestry, concerning the defects in existing land and mining laws of the United States, which states in forcible form the many facts concerning tree destruction by cutting and firing, which have already been given from time to time in our columns. This statement is enforced by a statement by E. L. Collins, special agent of the board, concerning his observations while securing evidence which it was hoped would lead to the conviction of trespassers on the timber lands of the State. There is also a statement by H. S. Davidson, engineer of the board, presenting facts of the same nature, more in detail. All these matters presented between one pair of covers, and in the direct form of a memorial to Congress, will tend to make our local forestry problems much better known and appreciated than they have been hitherto, and for this reason we characterize the publication as both important and timely.

Grain Bags May be Bought Direct.

It is an interesting announcement to grain-growers that they may purchase the State Prison bags without employing an intermediate. This is what was contemplated originally by Gov. Perkins, and it was hoped the prison manufacture, by not being subject to cornering, would stand as a check upon the evil work of bag rings, etc. This idea bids fair to be realized, for at the meeting of the Prison Directors on Tuesday of this week Director Luttrell proposed the following resolution, which was adopted:

WHEREAS, It is desired to give the farmers all the benefits resulting from operating the jute-mill at the State Prison; and whereas, it may not be generally known that the small farmer can order such grain sacks as he needs by writing to the Warden of the prison at San Quentin, without the intervention of a middleman as broker; therefore be it

Resolved, That the newspapers be requested to announce that orders from farmers for grain bags will be received at the prison by the Warden, and the orders will be filled in regular sequence by shipping direct to the farmers so ordering at the rates current at the time of receiving the order.

Warden McComb, who had suggested this course, said that during the coming harvest season the jute-mills can produce from 1,500,000 to 2,250,000 sacks. He has already received written requests asking him to fix a price for sacks next June, but thought it best not to do

so, as if a figure be fixed it will have to be the price for all that the purchaser may deposit the coin for. As it now is, the farmer can be sure to have his bags in June at the price prevailing now if he sends his order now. We are not informed whether the deposit for the amount ordered is required or what other security would be accepted. By addressing Hon. John McComb, Warden State Prison, San Quentin, Cal., full information can no doubt be had.

The Natural Man.

Man was made to work. In fact all things that live were made to work. They must work or die. Everything attacks the still, the lazy, the immovable—insects, disease, the elements. The very lice will kill those who will not move in self-defense.

Then we have wants. We must eat and drink. We must rest and have a secure place to do so. Betake yourself to any lonely place and see how much leisure you will have when you have supplied all these wants by your own exertion. You will find yourself a laborer indeed, for eight, ten, and twelve hours a day, and then often be poorly supplied. You will go many times supperless to bed, and the storm will make an uneasy couch.

But society, science, invention and discovery have lightened all these labors, and beautified all the results. They give regular food in good shape, safe houses and good beds. The lone savage knows no such things. But you must work for them. Unless born to them you must work till you earn them. You must do hard labor unless you have skill to acquire all you need with ease, shorter hours, or none at all.

If you have this ability you soon rise into a foreman, an employer, a capitalist and a man of leisure; you may become very rich and leave all your children wealthy and comfortable. If you have not the ability, you may have to work hard and fare ill all the days of your life. But so did your fathers. You have lost nothing. It is only that you have gained nothing. Society and science keep a railroad train, as it were, on which thousands ride through the journey of life in a palace car, and never soil their fingers. But they must first find the train and get their tickets. You plod through life and never find the train—never; you die a poor laborer and leave your children to do the same. But so did your fathers and their fathers from the beginning. They never found the train. It may have been just an accident. Your neighbor saw it and you did not, or you may have been drunk or asleep or too slow to catch it. But there it goes and he rides and you still walk—work.

Has he robbed you? Not at all! Have you lost anything? Certainly not! You are just where all men are and have been who have not found the train that science has sent for all who can get on board. It is just as though you and your brother purchase tickets for the lottery. He draws a prize and gets his carriage. You draw nothing and must still work at your trade.

You feel bad, truly. If you are of an envious disposition you may feel hateful. But it is all wrong. You are only where man has always been. He has met with a good fairy, and the train.

It is said that certain shepherds of old regarded themselves as the happiest people under the sun. They ate their mutton, made their wool coats, made love and sang pastorals all day long. Once upon a time a great king passed that way, and when the shepherds had seen his fine courtiers they became melancholy and deemed themselves the most miserable among men. It was the contrast that made their misery. They were as happy as before—as ever.

And so it is with many poor laborers at this day. They see others riding on the train, while they must walk. Their walking is easier and therefore is better than ever before; but they have seen others in carriages and they are discontent.

They should reflect that labor is the lot of man, and no one is entitled to avoid it till he shows a special ability to live without it. And the lottery tickets never can be all prizes.

ASPARAGUS.—The first box of asparagus in the S. F. market this season came from Wm. Boots' Alviso ranch last week and brought 40 cents a pound.

Death of Prof. Asa Gray.

[Written for the RURAL PRESS by J. G. LEMMON.]

Prof. Asa Gray, the most distinguished of American botanists, was stricken with paralysis soon after his 77th birthday, and expired January 30, 1888, at his home in Cambridge, Mass.

Prof. Gray was born in Paris, Oneida Co., N. Y., Nov. 18, 1810. Obtaining a good education at the Clinton grammar school, he then, without entering college, began medical studies in the College of Surgeons of Western New York, receiving his degree in 1831. Becoming early interested in the study of nature, particularly of botany, he left the practice of medicine to prosecute the study of botany with great assiduity under the immediate instruction of the great master Dr. John Torrey.

In 1842 he was elected professor of natural history in Harvard, but during the six years previous he had distinguished himself by the publication of several elementary works in botany that are still models of precision, simplicity and comprehensiveness.

As early as 1838 Dr. Gray with Dr. Torrey began the publication of a "Flora of North America," and ten years after "Genera of the Plants of North America," also "Manual of Botany of Northern United States." Since 1861 he has written many profound articles relating to the evolution theories of Darwin, which he accepted with great caution and with unshaken religious belief. As he himself said: "I am a Darwinian, scientifically and in my own fashion, philosophically a convinced theist, and religiously an acceptor of the Nicene creed;" in these respects resembling Prof. Agassiz and Joseph Henry.

So great has been the devotion of Dr. Gray to herbarium studies that he was able to make comparatively but few explorations. Twice, however, he escaped to Europe for the better study of certain difficult families, and he made three brief visits to the Pacific Slope. On the second occasion he was accompanied by the most renowned botanist of Europe, Sir Joseph Hooker, and it was the good fortune of the writer to receive an invitation to meet them at the State line and become their guide to several of the most interesting points for the study of trees in the high Sierra. Soon after Dr. Gray's return to Cambridge, a very valuable paper appeared on the "Vegetation of the Rocky Mountain Region," followed by several profound papers on "California Forestry."

These, with a few hurried flights into the Alleghanies, to Florida, and to Canada, were all the vacations he gave to the most wonderful mental activity, including 30 years of college lectures, the administration of a botanic garden, the forming of a great herbarium, added to frequent and often very considerable contributions to various publications, notably the proceedings of the American Academy of Sciences, over which he presided for many years, and the American Association for the Advancement of Science, of which he was also president. His able and voluminous contributions to other journals, magazines and newspapers are almost incredible in number and value.

But the great botanist was much more than an ardent, clear-sighted and profound scientist. He was a genial, social, witty, urbane, hospitable

gentleman. His great amiability of character was exhibited not only to his neighbors and other visitors to the herbarium, but appeared as well in his life-long personal attention to a large correspondence, which ever increased and became more and more exacting to the last. He employed no amanuensis, writing all letters with his own hand, never left one unanswered, and seldom sent one out without an appropriate statement or a pleasant allusion.

In the year 1885 a portrait in bronze of Dr. Gray was devised by his intimate friend, Prof. Sargent, and presented to Harvard College, accompanied by a carefully prepared epitome or resume of the most important labors of the great scholar. After 15 pages of such condensation, Prof. Sargent writes: "Prof. Gray in 1872 was relieved of college duties beyond the care of the immense herbarium and noble botanical library which he had formed and some time previously had presented to the University. He was now free to take up the 'Flora of North America' and continue the work which the force of circumstance interrupted 30 years before. A flora of North America, however, in these later days is a very different thing from the floras of Michaux and

pendent. And what other hand could take up this work if Prof. Gray's should lay it down? Who, in a lifetime of study, could grasp the details of the great edifice which, for 50 years, has been slowly growing under his hand?"

Alas! These grave apprehensions, uttered only three years ago, are realized, and the great work is now suspended by the removal of the directing hand.

Of the high attainments of Prof. Asa Gray, the records of foreign societies bear even ample testimony than our own. He was a member of the Royal Society of London, a member, one of the "immortal eight" of the celebrated Institute of France; and long ago he was welcomed into many of the less exclusive bodies of European savants.

Prof. Gray, from an early day, was most intimately connected with the botany of California and the Pacific Slope generally. Every exploring expedition, every railroad survey, every private explorer, acquired materials that were sent to Harvard for study and determination. Owing to the peculiar and varied soils and climate of the region west of the Rocky mountains, a much larger number of species and more peculiar

Pacific Coast join their expressions of esteem and grief with those of the great world of naturalists that are saddened by this sudden departure of their leader in science, and their loving, helpful friend, the good Dr. Gray.

[We have in preparation a portrait of the late Dr. Gray from an excellent photograph in the possession of Prof. Lemmon. It will soon appear in our columns.—EDITORS PRESS.]

Baron Valiant.

The engraving on this page gives a portrait of the celebrated Angus bull, Baron Valiant 1964 (4052), owned by A. B. Matthews, Kansas City, Mo., proprietor of the Bonnie Blue Angus herd, at the head of which this animal stands. The drawing is a fine specimen of the engraver's art, but, we are told, hardly does the animal justice, particularly about the hind quarters.

Baron Valiant was personally selected by Mr. Matthews, when in Scotland in 1882, to head his herd, and since his arrival in the United States has been famous both as a calf-getter and as a show animal. The breeding of Baron Valiant is very choice, and among his

ancestors are to be found some of the most noted animals known in the history of this breed of cattle, all of which were famous prize-winners. He traces back to that noted cow, Old Grannie (1), which lived till she was 36 years of age, and produced to her owner 29 living calves, being one of the most extraordinary cases of longevity and fecundity that has ever been instanced. Baron Valiant's show-yard career has been a marked one, dating from 1882, when at the Bismarck Fair, Kansas, he stood at the head of the Angus class in the West, and also won grand sweepstakes over bulls of all breeds, down to the present time, when at the Iowa State Fair held at Des Moines,

ANGUS BULL BARON VALIANT, IMPORTED BY A. B. MATTHEWS OF KANSAS CITY.

Pursh, or even of Torrey and Gray. The field had widened immeasurably with the strides of discovery and the development of the science, and it demanded closer and more careful research.

"As an example of the knowledge of American plants reached during the present century, it will only be necessary to point to the family of *Compositae*, which is believed to comprise from one-eighth to one-tenth of our whole flora. Michaux knew but 193 species, while Gray, 75 years later, published with elaborate descriptions 1610 species, divided among 237 genera.

"Two parts of Gray's 'Synoptical Flora of North America' have now been published; the middle part of the entire flora, to wit, the *Gamopetalae*. These volumes comprise 850 closely printed pages, upon which fully ten years of excessive and seldom interrupted labor was required.

"They are masterpieces of clear and concise arrangement and of compactness and beauty of method. There will hardly be found in any work of descriptive botany a greater display of learning, clearness of vision, and analytical powers, and few works of systematic botany have ever treated of a broader field." "Their very excellence," Prof. Sargent continues apprehensively, "increases the loss which botanical science would suffer if any other hand were called upon to complete a work now only half finished, and upon which, at least, ten years more of constant and severe labor must be ex-

pendent. And what other hand could take up this work if Prof. Gray's should lay it down? Who, in a lifetime of study, could grasp the details of the great edifice which, for 50 years, has been slowly growing under his hand?"

Though receiving at the Harvard Herbarium from time to time the collections of botanists from all parts of the world where exploration is going forward, yet Dr. Gray often declared that nothing caused him such a glow of pleased expectation as the reception of a package of nicely prepared specimens from California or the Southwest; and it is pleasant to recall that the enthusiastic closet-botanist was kept at this welcome occupation much of the time during the past two decades.

Being thus intimately connected with our flora, aiding on its discovery, studying and naming our plants, writing to and encouraging each of our collectors, it is with especial and poignant sympathy that the botanists of the

flora is found here than in all of the rest of the continent combined. And, until within a few years, much of it was unknown. With the rapid settlement of the region, and the advance of detailed exploration, there was a mutual relation of absorbing interest maintained between the Pacific Coast botanists, who hastened into the forbidding, unknown regions of mountain and desert to seize the strange plants, prepare them carefully and then forward to Dr. Gray, who as eagerly and assiduously studied and described them for publication, always mentioning with pleasant comment the collector, and also giving in his correspondence warmer commendation and encouragement, thus maintaining a close bond of sympathy and co-labor between collector and author.

The Bonnie Blue herd is well and favorably known in the Eastern States, and the demand for animals from it has been greater than the supply. The second bull in service is the famous Pride bull, Valerius 7656 (2382), which has for his dam the noted cow Vine 2d of Skene 3947 (3329), one of the best cows of the breed ever brought to this side of the Atlantic and which is still owned by the Hon. M. H. Cochrane, Hillhurst, Canada.

Our stock-growers and others interested in the improvement of the beef supply of the country would do well to inspect the animals from this herd, which are on exhibition in this city, as has already been stated in the RURAL. The animals were brought down Market street to the RURAL PRESS office one day last week and paraded as a compliment to the leading live-stock journal of the Pacific Coast. They attracted much attention and were generally admired.

Owing to the destruction of timber in the Northwest, the South has become the chief source of supply for pine, poplar and oak. Virginia, West Virginia, Tennessee, Arkansas, and Kentucky are now resounding with the ax of the lumberman.

HORTICULTURE.

The Citrus Fair at Riverside.

Riverside is in her glory. Under the stimulus given her ambition by the expected visit of the American Horticultural Society, and with the experience gained in making such displays during the past decade, she went to work this year to get up a citrus fair which should outdo her former successes, and it appears from all accounts that she has done it.

The committee sent out betimes a stirring summons to fruit-growers throughout the southern country, that the different districts might be worthily represented by their products, and the interior of the pavilion, erewhile unsightly, was fitted up in attractive style to receive the coming exhibits. The side-walls were covered—windows and all—with white cloth, and large booths were built out from them, four on a side. Each of these structures consisted of a table surmounted by a canopy, all neatly draped in white and paneled in gold-leaf. In the middle of the hall were four rows of tables, with an octagonal "pergola" on a plan similar to the booths. "Above this central figure," says the *Valley Echo*, "spreads out the largest star it has ever been our privilege to inspect at close quarters. It shines down with a breadth of 26 feet, and is covered with the most lavish coating of cobwebby gold-leaf we ever saw. From the center of this star streamers of the national colors radiate to all quarters of the room. The rafters of the roof are hidden to a large extent by festoons of cypress and drapery of heavily trimmed netting, with patches of the aforesaid gold 'butterfly-wing' material liberally laid on. The effect is very pleasing and does our artist credit."

There were also three booths in the gallery. Every booth had a shield and flags over its front; the vacant spaces on the walls were covered with palm fronds; and evergreen foliage, twined and interwoven everywhere by lavish hands, transformed the old pavilion into a bower of Pomona. And after the wealth of citrus fruits had been stacked upon the tables, or skillfully disposed in many and unique designs, the electric lights were turned upon a scene whose brilliant and transcendent beauties filled reporters with mingled rapture and despair.

From voluminous and glowing tales in the local and Los Angeles journals, we condense a description of what was to be seen at this Tenth Annual Citrus Fair. The visitor was met at the entrance by the hospitable greeting of an arch with "Welcome" in great letters inscribed upon it. From the corners of the arch streamers of red, white and blue stretched up to the overhanging eaves of the pavilion, and in front upon the top stood a huge gold eagle with wings outstretched. On either side of the entrance hall, committee-rooms had been handsomely fitted up for the comfort and convenience of the visitors. Passing between these into the main hall of the building, you found yourself in the midst of bewildering richness, where the splendid fruit made the decorations, showy as they were, look insignificant. The masses of bright oranges flashed all over the room in a blaze of golden glory. The various pyramids, temples, banks and trays of the citrus beauties gleamed out from behind silver-spangled posts and dark-green foliage, till the perspective left an impression of unlimited piles of rotund yellow fruit, dotted with occasional heaps of pale lemons, and flecked with blood-red Tangerines and Malts.

The first booth to the left as you enter was that of S. C. Evans' ranches, arranged by W. T. Simms. Here were three large pyramids of oranges, one consisting of Konah and seedling, the other two of Washington Navels, all festooned with cypress and pepper leaves. Between the pyramids were rows of Paper-rind St. Michaels, Australian Navels, Mediterranean Sweets, Seedlings and Lisbon lemons, all very large and handsome.

A. D. Haight's booth, which stood next, held one of the daintiest groupings of fruits in the pavilion. In the center was a sort of summer-house or grotto, its roof composed of small St. Michaels oranges, bordered and corniced with Tangerines and Mandarins, and intertwined with ivy and orange leaves in most artistic fashion. On either side of the grotto were pyramids of assorted oranges, and in front of it some enormous China lemons.

The third stall—that of Thacker Bros. & Mann—contained a huge bank of oranges, six feet high, surmounted by a gray eagle from whose beak and talons streamers stretched to every corner of the booth. Evergreen trimmings and festoons of Tangerines gave a very pretty effect.

Fourth and last on this side came J. D. McNab and W. E. West. On two inclines in this booth were excellent displays of Riverside Washington Navels. Between the two pieces was an olive branch loaded with ripe and partially ripe fruit—an unusual thing to see at this season, even in Southern California.

The space in front of the stage for a length of 20 feet was occupied by a design gotten up by the ladies of the W. C. T. U. It represented two schoolhouses, each on a hill, with a grassy vale between. The motto, "A Schoolhouse on Every Hill, but No Saloon in the Valley," explained the meaning, and tells exactly the state of things in Riverside.

One of the most pleasing displays was made

upon a large easel by the Misses Gilliland and Robert Bettner. The easel was decorated with Pampas plumes, dwarf Mandarins, lemons nestling in foliage, and date-palm fronds. The picture on the easel comprised oranges of varied hues.

The Inter-Ocean Cold Storage Co. had a fine showing of grapes, which were picked and placed in storage Aug. 16, 1887, but looked as if they had just been taken from the vines. Oranges and lemons also kept by their process two months came out sound and bright.

Turning from the cold-storage exhibit, the eye was caught by a large pyramid of Navels. Half the fruit in this piece was raised in A. P. Combs' orchard and the other half by L. C. Pattee. Upon their table there were also displayed Seedlings, the Japanese Unshiu, the Japanese potato orange, Japanese grape fruit, Malta Blood, Mediterranean Sweets and Pomolos. Here, too, were raisins packed by Mr. Combs in 1882, which took the first premium at the Citrus Fair held in that year, and are still in a state of excellent preservation.

In E. G. Brown's pyramid of Navels, there was gracefully interlined an anchor of Lisbon lemons, in allusion to the name of Judge Brown's home—"The Anchorage."

E. W. Holmes' exhibit of Lisbon lemons was perhaps the finest in the pavilion. The fruit was uniform in size and color, evincing great care in their selection. He also had plates of choice Malta Blood, Tangerine, Paper-Rind St. Michael, Navel and Sweet Seville oranges.

The output of W. H. Backus, on the same table, embraced a large, oblong pyramid of solid oranges, like Mr. Holmes' lemons uniform in size and color, plates of selected Navels, Paper Rind St. Michaels, lemons and limes, choice clusters of grape fruit and large and elegant Pomolos.

The arrangement of Hon. A. P. Johnson's oranges was highly artistic, and several stars composed of Navels and Paper Rind St. Michaels, the foundations of which rested on layers of orange leaves, were thought remarkably pretty.

On the same table was R. A. Saunders' display. One plate of his lemons was unsurpassed by any on exhibition.

The fourth table from the stage in this row (opposite to the Evans booth) bore the exhibit of B. B. Barney—a pyramid of Navels, very smooth, topped with kid-glove oranges, and flanked with other varieties on plates. Overhead hung from the ceiling a monster crown, gilded and stuck round with oranges, and above it the motto, "The Riverside Washington Navel Wears the—(crown)." Mr. Barney's orchard is the first budded Riverside Washington Navel orange in America.

On this table there was also a fine show of Seedling oranges by J. H. Roe.

On the right side of the hall a booth and a table were given to the East San Bernardino valley exhibit, representing the four settlements, Lugonia, Redlands, Old San Bernardino and Crafton.

Lugonia's groves furnished choice Seedlings, Konah, Mediterranean Sweet, Navel, Malta Blood oranges and Lisbon lemons. Redlands sent fine Washington Navels, Eureka lemons and Mediterranean Sweets in great abundance. Crafton came to the front with Navels, Paper Rind St. Michaels, Eureka lemons, limes, and orange marmalade, while Old San Bernardino sent in choice Seedlings, Navels, Malta Bloods, and Mediterranean Sweets. We may not name all the many orchardists who contributed to this combined exhibit.

Shugart & Condon's display was remarkable for the many varieties of citrus fruits which it embraced.

W. S. Wilson made the exhibit of Malta Blood oranges.

Boyd & Devine, the fruit-packing firm, had a table, near the entrance, piled with handsome specimens of their packing.

The central stand, termed the "pergola," was octagonal in shape. It was floored with a mosaic of lemons and oranges, out of which rose a great citrus cone, capped with a dish of Black Morocco grapes picked Feb. 6th in B. B. Handy's vineyard.

Beyond the "pergola" J. G. North showed five pyramids of nice, marketable oranges, selected with singular good taste as to uniformity of size and appearance. Twogood & Cutter, Puls & Moore and others had some magnificent fruit. J. E. Cutter called his grand design in Navels "Las Sierras de la Riverside"—the mountains of Riverside.

Mrs. L. C. Tibbetts made a very interesting little exhibit—a bamboo basket of fruit from the original Riverside Washington Navel tree!

F. R. Hall's display of raisins was much admired. It was elaborate in design and comprised fancy pack Dehesas, London Layers, Seedless Sultanas, Muscatels, three and two crown loose.

While thus briefly noticing the more prominent Riverside exhibits, we have been obliged to forego the pleasure of even naming others, and must defer to our next issue all mention of what came from the outlying districts, San Diego, Los Angeles and Ventura counties.

The pavilion has been crowded, and the managers of the exhibition were wise in deciding to keep the fair open during the present week. Our report will be continued later.

At the Empire ranch, near Tucson, 150 cattle have died, having been poisoned, it is thought, by drinking water impregnated with mineral from the tailings of the Total Wreck mill.

THE IRRIGATOR.

A Great Enterprise in Nevada.

T. D. Parkinson of the Nevada Land & Cattle Company of Elko county, Nevada, is one of the most stirring men in his State, and is doing much to demonstrate its capability for agricultural development. He recently gave the *Bulletin* an account of a great enterprise which he is now carrying forward, from which we condense the following statements:

Mr. Parkinson was a civil engineer, connected with the Land Department, in the State of Nevada. In the course of his duties he saw all those large bodies of land which were apparently so rich, and yet perfectly valueless without irrigation. He saw, too, that in many places in the mountains dams could be constructed at small expense, capable of storing immense bodies of water. He associated with himself Robert N. Graves, a mining man, and they built a dam on Willow creek. That dam was washed away, on account of a fault in its construction, and they found themselves without sufficient capital to rebuild it. They endeavored to interest capitalists on this coast in the matter, and failed. They met with no better success in the East, and then went to London, where they found all the assistance desired and went on with the work.

The following is given as a personal statement by Mr. Parkinson:

"We purchased from the State Government a block of about 10,000 acres of land lying below our reservoir, carried the water on and planted alfalfa. We have raised large crops, and by this means are able to feed our poor cows and young calves and thus make a safe and profitable business out of one which was growing more and more hazardous every year. It was two or three years before we were sure that our enterprise would be a success. We had to encounter various obstacles, but having overcome them we are now perfectly satisfied not only that ours is a success, but that there are various other points where similar dams could be constructed and equally good results obtained."

The Dam.

"The dam that we have built lies upon Willow creek, in Elko county, about 30 miles from the railway. At the point where the dam is built the bluffs join each other within 175 feet and are 75 and 100 feet high, the channel of the creek passing between. The first thing was to secure a permanent foundation, the dam that we put in some years before having been washed out by undermining. We secured a permanent foundation by sinking some 20 feet below the bed of the channel, and from that we commenced building up with timber and rock. The embankment itself is built of rock, about 250 feet wide at the base, 75 feet high to the parapet and 25 feet wide on top. The upper or water side is sheathed with 3-inch plank, tightly calked with oakum and painted. About 100,000 feet of lumber was used in that portion of the dam."

"Now to guard against overflow, which is always the most disastrous thing in connection with dams, we tunneled one of the bluffs and have a water passage through sufficiently large to carry any freshet that will ever occur. The water is conducted 100 feet away from the foundation of the dam, consequently there is no danger of any undermining ever taking place. At the head of the tunnel two large gates are placed, for the purpose of lowering at the time when the storage of water commences. These are so well arranged that in case of cloud-bursts or freshets the raising of the gates will lower this enormous volume of water in sufficient time to prevent an overflow."

"Immediately above the canyon is a large valley, embracing some ten or fifteen hundred acres. The present dam is only 50 feet high and the water-storage area is 500 acres, with an average depth of 25 feet. This, however, is not the capacity of the reservoir. With comparatively little expense it can be doubled, or even tripled. We find that as we fill up the land with water very much less is required, and we expect to see the time when we can irrigate ten to fifteen thousand acres of alfalfa lands with not much more water than is being used now."

The Irrigable Capacity of the Dam.

"The present capacity is considered equal to about 5000 acres, but still, as each year passes and these dry plains are irrigated, the valley is filled up with water, and every year less is required. For instance, at one of my camps I had to sink 50 feet for water, and within a week after irrigating a tract of land that was half or three-quarters of a mile away the water rose in that well to within eight feet of the surface, and there it has remained up to this day. This I consider one of the most valuable points in the irrigation system. The first water you pour upon your land is to all appearances wasted. That is to say, it requires a great deal more water to irrigate an acre of land than nature ever intended. For instance, the first year of my experience I put four feet of water on the land. Not knowing what was going on, this was very discouraging to me, and I thought I should need a storage capacity of 20 to 50 times as much as I had; but when I came to examine the sloughs, and this well, I saw it was filling up the whole country, and

this very water that I thought was going to waste was finally to be a great point in irrigation, especially for alfalfa."

"The water from this reservoir is conducted in a canal down to our main valley, which is 20 miles long by about five miles wide, and there it is distributed over the plains. As our business is entirely the raising of live-stock, particularly cattle, we do very little in grain, though we raise a very fine quality of grain, sufficient for our own use. Our principal aim is to secure hay enough for the feeding of beeves and poor stock during the winter season. Alfalfa is the principal hay we raise. The lands that the Government, a few years ago, would not allow to be surveyed, as they were not considered valuable enough to pay for the expenses of surveying, which can be proven by reference to the Government maps of the early days of the surveys of Nevada, are returning our company four tons of alfalfa to the acre. The value of this alfalfa to us can hardly be estimated, especially in such a season as this. I was offered \$15 a ton for all the hay I could spare, in the stack, for the purpose of feeding starving cattle. Hay has been shipped from Reno to the ranges at an expense to the stock-owners of at least \$20 per ton. Its value can be readily understood when it is known that perhaps one ton of hay will pull through a season like this three or four animals."

The New Plan With Cattle.

"There was a time, under the old system of carrying on cattle business on the ranges, that they could afford to lose one-half of the stock and still make money, but that day is over. The range is no longer what it used to be. The expense of handling cattle on the ranges is far greater than it was a few years ago, and if no care is taken of these cattle on the elevated lands of Nevada during these hard winter months, it will be but a short time before there will be no range cattle. A year ago, at the Cattle Convention at Chicago, I had interviews with many of the ranchmen of the plains, and they had all come to the conclusion that we must adopt a very different system from that of the past. The losses have been beyond estimation. As the population increases the ranges are being built up and the business cannot be conducted as it has been."

The Future of the Beef Business.

"What do you think of the future of the beef business?"

"I may say that I consider the beef industry of America as important as the bread question. If the great losses of the past are to continue, what is the result? Has America got to come down to be less of a beef-eating country? Beef must certainly become scarce. There will not be this surplus of beef in the country, as there has been during the past ten years, for the reason that these ranges are all giving out, immigration increasing and the range decreasing. No person in the industry need be discouraged, however. The demand for beef is increasing, and with the enhanced value of beef greater care will be taken of the cattle and a higher grade raised. Such enterprises as ours will be engaged in and they will be remunerative."

Senator Stewart's Proposition.

"Senator Stewart has taken quite an interest in this enterprise and it has been often talked about and watched by him with a great deal of interest. He has introduced a bill for the purpose of making Government surveys and explorations in the mountain districts, topographical and hydrographical, to find out where such natural advantages lie. The old system of Government surveys is practically useless in our mountain lands. The rectangular system adopted by the Government is all right for the plain lands, but it is not at all adapted to mountain lands. If I understand Senator Stewart's bill, it is to make these surveys like the system adopted by the Mexicans, or the old Mexican league system of metes and bounds, showing the topographic and hydrographic characteristics of the country. It is proposed to make the water-storage question, for the purpose of reclaiming arid lands, a great feature. Few persons are aware how many such advantageous localities can be found. In the little district where our enterprise is located I can point out three or four admirable locations for water storage. Large as ours may be, it is very small compared with many others that can be found."

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. GREAT JOINT PUBLIC SALE OF IMPORTED FRENCH DRAFT STALLIONS and POLLED ANGUS CATTLE

To be held at Bay District Park, San Francisco, Cal., on
Wednesday, March 7, 1888.

I will sell at public auction, on above date, ten head of choice Imported French Draft Stallions. These horses are of the same quality as I have shipped to this State for the past ten years, and the satisfaction which my previous sales have given is sufficient guarantee to the public for the future.

JAMES A. PERRY,
Riverview Stock Farm,
Wilmington, Ill.

At above time and place I will offer twenty-five head of choice Thoroughbred Registered Polled Angus Cattle, consisting of Bulls and Cows, being a selection from my herd, which has been awarded more Premiums at the Fairs and Shows in the East than any other herd in the United States. Parties desiring the best beef breed will do well to inspect this offering, which has recently been shown on the streets of San Francisco, and attracted so much attention.

Ants, Woolly Aphis and Scale Washes

EDITORS PRESS:—I would like to ask your correspondent, E. H. Schaeffle, who wrote about the ants exterminating the woolly aphis in the orchard of T. T. Rodda of Grass Valley, if he intended to convey the impression that ants really "exterminated" this pest on the roots as well as branches of the trees? If Mr. Rodda's ants will burrow after the aphis on the roots of apple trees, where they do the most harm, he can find a ready market for all of them that he can raise. It would hardly pay to import ants to fight the pest on the branches of the trees, as a simple wash, in fact any of the washes used to kill the red scale, will clear the trees of the aphis.

Writing of fruit pests reminds me that I have a letter on file which I have not found time to answer, from C. M. C. of Vacaville, who asks a number of questions about the "scale bug." He wishes to know the best wash for white cherry trees. I have found the whale-oil and soda wash quite effectual on all my trees and shall continue its use. It is made by dissolving 25 pounds of sal-soda in 25 gallons of hot water and adding one gallon of whale oil. Mix thoroughly and spray while warm.

Mr. C. also asks about the Edgar process of introducing poison into the tree to kill scale, and the length of time before the scale will kill peach or cherry trees if not washed.

I know nothing about the poison process. I have known trees to be killed in three years when not washed, but much depends on circumstances. Pruning and cultivating are progressing rapidly this fine weather. Many new orchards are also being planted. I have noticed that many of the apricot scale are dead, evidently killed by the cold snap.

San Jose, Feb. 6th. H. G. KEESLING.

[The sal-soda and whale-oil remedy for scale was fully described in the RURAL of Dec. 10th, from the Bulletin of the State Board of Horticulture.—EDS. PRESS.]

Ticks in a Horse's Ear.

EDITORS PRESS:—In your issue of Feb. 4, 1888, I noticed a statement regarding disease of horses' ear—described as "granulations." It is evidently ticks. Use bacon grease in a fluid condition, but not warm enough to burn. Hold the ear with the hand for a few moments after the grease is poured in. Use about half a pint to each ear, and after being applied several times the "granulations" will drop off and disappear. At Fort Craig and vicinity, in Colorado, the Government lost a great many horses and mules from ticks.—J. DOWNING, Denver.

We imagined that the granulations were ticks. A bad case was reported from Tulare county a few years ago in which the animals were supposed to be "locoed" until the ticks were found in the ear. The remedy described by Major Downing is an excellent one.

Water for Cabbage Lice.

EDITORS PRESS: Mr. Berwick wishes to know what will cure cabbage lice. Mr. B. once stated that when we became acquainted with agricultural chemistry we would become wiser, &c. So if he will consult Johnson's "How Crops Grow," he will find out that cabbage is composed of 90 to 93 per cent water. Now for the cure: Water, water, apply it large by bucketful if you have no hose, and when dry hoe up, etc. Don't be afraid of water; use $1\frac{1}{2}$ to 2 gallons to each head if large. I have tried everything I could think of, soot, salt, lime, ashes, etc., till I inquired of a young man who was here on a visit. His father had gardened all his life in England, Baltimore and Iowa, and he told me just as Johnson does—use water and don't be afraid of it.—M. S. H., Soledad.

Drenching with cold water is a discourager of aphis. Rose bushes can be swept nearly clean with a forceful drenching with garden pump or hose with pressure. Such vast numbers are dislodged that the foes of the aphis often complete the work.

A NEW WORK ON THE OLIVE.—We understand that a new work on the olive is now in course of preparation by a gentleman who

A NEW WORM.—We receive with thanks from Dr. Gustav Eisen a copy of Vol. II No. 1 of the Memoirs of the California Academy of

Butte County.

Other Glimpses of the Oroville Fair.

(By M. C. B.)

Sketch of Recent Progress in the District.

We give herewith two more views from photographs taken during the famous citrus fair in Oroville. The first engraving shows the accurate miniature model of the Oroville Congregational Church, clad in oranges and evergreen, the structure being large enough to contain an organ and choir whose music was heard from time to time. The exhibitor was D. K. Perkins, one of the leading actors in the present progressive era in the life of the Oroville region.

The other view on this page gives a general glimpse of one of the main avenues of the pavilion. The fair, it will be remembered, was held in a tent 150 feet long by 50 feet wide, and all around this great room, from the floor to the eaves—16 feet vertically—were sloping piles of fruits, vegetables and other products, while the middle of the hall, saving an aisle on either side, was occupied with numerous and beautiful citrus designs. Space had been assigned to every town in the county, and in some instances to individuals who desired to make separate showings. The engraving shows something of the taste employed in the decoration and the wealth of material on exhibition.

The New Era in Butte County.

Our representative, who has recently visited the Oroville region, furnishes the following general notes:

To fully realize the beauties of Butte county, they must be seen and the starting-point commenced at Oroville, the county-seat. Until the recent Citrus Fair, many Californians, particularly in the southern part, knew little more of this county beyond its location in the Golden State. For all this they cannot be blamed more than the people of Butte, who, for some strange reason yet unexplained, expressed no desire of advertising either directly or indirectly the advantages peculiar to their section of the State. This prevailing sentiment, happily, has been unhinged, and prudent men have at length been heard and sustained in their opinion, the first sign of reform having been the opening of the recent Citrus Fair in Oroville. For all this many thanks are due to Messrs. E. W. Fogg (the banker), D. K. Perkins, A. F. Jones, with the Executive Committee of citizens who, regardless of time and expense, decided to let the world know and see the products of Butte county. This first step was only a very small beginning toward a great end which must soon be realized. The natural advantages peculiar to Oroville are many. The location is convenient to the San Francisco market and within easy reach of the Northern and Eastern States, where there is full demand for all the products which can be raised. Oroville is immediately connected with Sacramento

in latitude "37°" north. The Northern California railroad allows a very fair service, and if the present intentions are carried out the county will be soon crossed and recrossed by three separate railroads.

Viewing the surroundings of the county-seat, one is struck with Nature's grandeur. Peak after peak divided by tablelands arrest the attention of the observer and afford ample scope for the pencil and paintbrush. The Feather river furnishes water facilities for extensive manufacturing purposes and separates Oroville from the newly arranged colony of Thermalito, which has recently occupied marked attention as one of the best adapted locations for citrus fruit.

The climate has been considered all that could be desired for years, particularly since the shutting down of the mines, and there is not the

least trace of the visionary malaria so often hinted at. The people live long and happy, the children are ruddy, fat and fair, and, having carefully consulted the death rate from the most authentic sources, find it as low as 7 per 1000. In this are included those who came from Kansas, Chicago and Missouri to die among their friends.

ORANGE ARCHITECTURE AT THE OROVILLE FAIR.

INTERIOR VIEW OF CITRUS FAIR AT OROVILLE.

is familiar with the subject by research, observation and practical experience. The design is to prepare a work more comprehensive than others in the English language. We have no doubt such a work will be greeted with an appreciative welcome, now that the interest in the olive is running so high and its outlook is so promising.

Sciences, containing a paper by Dr. Eisen naming, describing and picturing a new annelid of the family lumbriculina, which he names *Sutroa rostrata*, in honor of our liberal patron of science and literature Adolph Sutro. Dr. Eisen's work is a valuable contribution to the knowledge of the interesting class of annelids, and it is a field in which he is a master.

FLORICULTURE.

The Limitations of Suburban Gardens.

(Written for the RURAL PRESS by I. G. W.)

Amateur gardening should possess a certain largeness of domain, unfettered by narrowness, to make it at once a pleasure or a success. There should be no question of front feet to hamper it, neither of a measured depth—as well limit the song-bird to the atmospheric accommodation of a bell-glass in which to trill its roundelay, as to circumscribe the true flower-lover to a 40 foot frontage by a hundred in depth, premising at the same time that room be reserved for a spacious residence. A tempest in a teapot is not more unavailing than to bring this fragment of territory under the domain of "Goodyear's patent." It is a Procrustean bed, and its occupants must be trimmed accordingly. To solve this problem is the purport of this article.

At the first outlook, any attempt at lawn culture seems impracticable, and yet as well might one attempt hanging unframed pictures on the wall as to dispense with an emerald setting for our floral treasures. A most helpful arrangement is the popular habit of laying the space on either side of the walk in front to grass. This, added to what may be spared in the garden for this purpose, most effectively gives a background for color in bud and blossom. One must prune most severely—the best of beautiful things that suggest themselves to fill the limited spaces remaining. Curving walks, cemented, if possible, in front and on one side of the house, will give double borders extending to the rear. On the other, laid to grass, a single border next the house will add convenient space for perennials, alternating with shrubs and low-growing plants.

A choice must be made as to the leading plants to be grown and closely adhered to in the future arrangements. Perhaps nothing will be found to give more satisfaction than roses, tea-roses mostly, though a few hybrids, those nearest allied to the tea family, as La France and kindred varieties, will give most satisfactory return, taking the entire season into consideration. These will not command the room that should be given in our limited space unless the soil is kept very highly enriched. It can hardly have too much for roses, if of well-decayed compost. The last of November should find a warm bed of six inches of compost spread evenly over the rose-beds, and if these are set in spaces in the lawn, should have no grass within 15 inches each way.

A liberal coating of the compost should be spread on the lawn two inches in depth and occasionally raked over to avoid smothering the grass, and left there until the warm February showers start the blades upward in their springtime freshness and vigor. At this point transplanting may be commenced, or before the swelling buds announce that nature has business on hand and rosebuds to introduce by the thousand. The time for this ceremony varies with the year, and eternal vigilance is as valuable here as elsewhere.

From 40 to 50 varieties of roses may be safely grown in such a garden if lawn spaces are utilized. A preference is given to standards, budded two feet from the ground for small gardens and for most varieties. La France, Perle des Jardins, Catherine Mermet and many others take kindly to this habit of growth and give better results than upon their own root. Most climbing varieties are more satisfactory budded also, though La Marque is used largely by English florists as a favorite stock for budding climbers, especially for the Marechal Niel, the most fastidious of all our pillar roses, as well as thus far the most magnificent. A most useful climber among the newer ones is the William Allen Richardson, a most industrious producer of delicate orange buds, very popular as *boutonnieres*.

The high fences in the rear of our suburban gardens afford vantage-ground for pillar roses. An effective combination would be those already mentioned interspersed with Marie Henriette, Claire Carnot, Climbing Devonensis, Reve d'or, Ophir, Solfaterre and many others. Among the newer standards, the Puritan, Bride, Princess Beatrice and Hon. Edith Gifford are promised as satisfactory out-of-door bloomers. Many of the new ones are only fine under glass, notably American Beauty, Her Majesty, W. F. Bennett and others. It is safe to allow our leading florists to try experiments.

Valuable varieties doing well near the coast, either budded or on their own roots, are Niphetos, Comtesse Riza du Parc, Madame de Watteville, Bon Silene, Mlle. Cecile Bruner, Camoens, Comtesse de Nadaillac, Madame Kuster, Madame Lambard and Marie Van Houtte. Many of the noisettes are very desirable as pillar roses.

Another valuable class of plants for limited gardens are carnations, coming as they do in so wide a range of color and always in bloom. After the first year they should be cut down in January, within six inches of the ground. Apparently this is severe pruning, but nothing less will make long-lived valuable plants. A border of these at intervals of 12 inches will show finely against a background of standard roses.

For some years the more venturesome of florists have invaded the domain of semi-tropical and even tropical plants, and with marked success.

Just now these optimists are under a cloud, but they see a silver lining and will not be deterred from ventures in this direction, having abounding faith that more kindly temperatures await us in coming cycles. We shall see stove-plants surreptitiously making their appearance again as the springtime opens, and the debris of the battlefield strewn with the dead gives place to flowering bulb and many another bud and blossom.

To avoid the unsightly decay of the numerous bulb family, plant them in pots, singly or in groups, and if this is done late in the autumn and kept in a dark cellar or shaded corner of the garden until early springtime, they will fill the pots with roots, and when sunk in the border will soon give a fine display. This is also true of annuals; a succession of these may be kept at a fine point of brilliancy all the season through, removing them when past their best, thus avoiding unsightly borders.

A shaded locality should always be reserved for native ferns. Woodwardias and smaller varieties are always in demand for home decoration, and they may wisely be intermingled with bigonias—a fine pansy bed is always in order. Bouvardias fill up a vacant corner, a grouping of which is very ornamental. Nothing has stood the wintry test better than camellias, blooming as brightly as if thermometers were unknown.

Each florist will have his own list of favorites, and by high culture, fertilizing every three months at least, will find room for the several treasures. Such a garden is very like an omnibus, always finding room for one more.

Fruitful Areas.

Then there remains a possible space in the rear, hopefully not of the typical back-yard order—a receptacle for everything not in Noah's ark. "Scattered o'er with wrecks of time," what would one give for the privilege of freeing one's mind to the owner of the typical back-yard unfettered by legal possibilities or one's own self-respect. A scrap of earth possibly 15 by 35 feet in dimension contains 200 plants of Longworth's Prolific strawberry and 100 of Cuthbert raspberry, which have supplied a family table abundantly for five months this season. The ground is kept very rich, as the plants are much closer than ordinary, but they are doing admirably. A border in the rear of the house has a dozen Black Cap raspberry, and another of like space the same number of Lawton blackberry. Space is also found for a half-dozen Berkeley gooseberries, all of which is considered a decided improvement on the usual adornments of kindred localities. Such are the limitations of one suburban garden.

Oakland

The Woolly Aphis.

WALNUT GROVE, CAL., Jan. 6, 1888.

Mr. Charles J. Woodbury, 123 California St., S. F., Cal.—DEAR SIR: Yours of the 3d inst. to hand last evening. In regard to the Woolly Aphis, I can only give you my experience. When I came here, my apple trees were badly infested with Aphis, so I washed them thoroughly to exterminate and have not seen any signs of the Aphis since, which has been over two years. Yours respectfully,

L. D. GREENE.

I will remark that I have known of no case where my tree-cleaner has not been perfectly successful as an antidote for the Woolly Aphis.

Full directions accompany its use. Price, 3½ cents per pound in cases, 80 pounds in a case; in 8 pound cans same price, 15 cents extra for can. In barrels, 3½ cents per pound, 10 per cent off, 400 pounds in a barrel. I also manufacture the fine Anti-Gumming Farm Machine Oils and General Lubricating Oils.

Address CHARLES J. WOODBURY,
